APPENDIX

TO THE

CONGRESSIONAL RECORD.

Election Contest—Smith vs. Jackson.

SPEECH

OF

HON. JONATHAN H. ROWELL,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 1, 1890.

The House having under consideration the following resolutions:

"*Resolved*, That James M. Jackson was not elected as a Representative to the Fifty-first Congress from the Fourth Congressional district of West Virginia, and is not entitled to the seat; and

"*Resolved*, That Charles B. Smith was duly elected a Representative from the Fourth Congressional district of West Virginia to the Fifty-first Congress, and is entitled to his seat"—

Mr. ROWELL said:

Mr. SPEAKER: I am glad that we and the country have at last been told the reason for this prolonged resistance to a consideration of this election contest. The gentleman from Georgia [Mr. CRISP] tells us that it was the intention of the minority of the Elections Committee to consent to the consideration of this case without resort to dilatory tactics until they read in a Republican newspaper statements purporting to give the actions of the Republican caucus and the purposes of the Republican side of the House, the statement being substantially that it was our intention to go on and force the consideration of all contested-election cases before the adoption of rules and thereby strengthen our majority without being hampered by rules of procedure other than such as the Speaker might determine as being the rules of general parliamentary law. And therefore, because of such newspaper statement, we have had three or four days of delay in the transaction of public business and the country has been regaled with the choicest excerpts from the Democratic hand-book of polite expression. [Laughter.] And yet the gentleman who stands at the head of the minority of the committee admits he was promptly informed by his associates on the committee that there was not a word of truth in the newspaper statement. Still he prefers to take the report of a newspaper correspondent, who was not present at the caucus, to the statement of a colleague who was. And this is the justification seriously given to the House and the country for the remarkable proceedings witnessed in the House for several days past. If the gentleman is satisfied with such an excuse we certainly ought not to complain.

Let me call the attention of the House to some other newspaper statements. Months previous to the meeting of this Congress the newspapers carried to every section of the country on the authority of the Democratic leaders of the House the statement that it was the intention of the minority side to resist by every means known to parliamentary law the unseating of any Democratic member whose seat was contested, and that, too, without reference to the right or wrong of the case. Before a single case had been submitted to the committee, before the evidence was printed or the briefs filed, before it was possible to form a correct judgment upon the claims of either contestant or contestee, we were given due notice by those who had a right to speak for the minority that these contested-election cases should not be heard if it was possible to prevent it by resorting to the obstructive methods, so effective in the past, in the hands of a determined minority. We were further told that no legislation of any sort should take place during this session except by the consent of the minority.

None can affect ignorance of the intent covered by such a programme. It meant: Though the people have selected one man to represent them and the seat is wrongfully occupied by another, that other shall continue in a position to misrepresent his constituency, although the lawful majority of the House stand ready to award the seat to the rightful claimant. I remind gentlemen that this took place before the question of rules was under discussion, before it could possibly be known when a code of rules would be prepared for our consideration; and I place the fact against the present excuse of the gentleman and I remind him of the further fact that this contest has come before the House in an orderly way, and without undue haste.

I do not intend to go over the argument so lucidly and so ably presented by my colleague from Pennsylvania [Mr. DALZELL], upon the *prima facie* rights of this case, but I call the attention of the House and the country to the fact that this edict went out to the country and was made with reference to a case where it is now admitted that the sitting member, instead of being the contestee, ought to have been the contestant; who has enjoyed the emoluments of office since the 4th day of last March; who has participated in the proceedings of this House since the first Monday of December, in violation of the law and in violation of right, and by the usurpation of a governor, who, thank God! is the only one that could be found in America who has been able to hold for a year the gubernatorial chair after his term of office had expired, and capable of issuing a certificate of election under such circumstances.

Mr. BOATNER. Will the gentleman permit a question?

Mr. ROWELL. Not now.

What I am now saying is that you have resisted for days the consideration of a case in the interest of the sitting member admitted by his party friends, the minority of the committee, to be holding a seat that ought not to have been awarded to him on the *prima facie* case, that he held a certificate by virtue of which he was sworn as a member of this House, that he had no right to have, and that was issued to him without justification, and that therefore and of right under the law Mr. Smith, the contestant, ought to have been here on the first Monday of December, taken the oath of office, and participated in the affairs of this House, and if Mr. Jackson, the sitting member, desired to contest his seat, he should have come here with a record as contestant to prove his seat, in place of occupying the position of advantage as sitting member.

I only call attention to the fact, Mr. Speaker, in order that this House and the country may know that on such a case the Democratic edict went forth, promulgated to the whole world as early as September last, that there was to be no unseating of members here until every possible scheme known to parliamentary skill and parliamentary law had been called into requisition to prevent it.

I shall not dwell, Mr. Speaker, at any great length on the apparent reflection upon the majority of the committee in the way this case was considered, found in the report of the minority. Before the holidays this case was set down for hearing at the head of the Calendar. It was orally argued before the committee on the 9th day of January. Every member of the committee had ample time and opportunity, extending over several weeks, to examine the evidence touching the illegality of every one of the two hundred and odd votes which have been challenged. I do not hesitate to affirm that every member of this committee, both the majority and the minority, had investigated the evidence with reference to each one of these votes and arrived at definite conclusions before the day when it was finally called up for determination. Then it was gravely proposed that the committee should sit down for three weeks—because it could not have been done in less time than that—and consider vote by vote every one of the questioned votes in so peculiar a case as this in order that we might possibly enable the minority to discuss this question with a little more light than they claim to possess now.

It was proposed, "Will you be bound by the decision of the majority?" And the proposition was not only promptly rejected, but laughed

at. It was then asked, "Will you show us the minority report?" and answered, "The majority can not dictate a report for the minority." Is it any wonder that we came to the conclusion that delay, and not light, was what was wanted? No one supposed that an agreement could be reached. The necessity of the minority of the House stood in the way and the large number of challenged votes furnished the excuse. Now, Mr. Speaker, it is my purpose to review very briefly the evidence bearing upon the votes called into question by the reports of the majority and minority of the committee; and that the House may understand the rules adopted by the committee in considering the evidence I refer to the report of the committee upon the questions of law. This portion of the report was carefully prepared after a review of the authorities was submitted by me to the whole committee and with but slight criticisms was accepted as the law by which we would be governed. It is as follows:

To qualify one to vote in West Virginia he must be a male citizen of the United States, twenty-one years of age, must have resided in the State for one year next preceding the election, in the county sixty days, and must be a bona fide resident of the election district in which he claims the right to vote. Paupers, convicts, and persons of unsound mind are not voters.

By the record and briefs filed in this contest, a large number of votes are attacked by both parties. In considering these votes so attacked the committee deem it proper to state generally the rules by which they have been governed in determining the question of legality or illegality, and for whom the votes were cast.

First. A vote accepted by the commissioners holding the election is *prima facie* legal. Before it can be thrown out for illegality it must be satisfactorily shown by the evidence to have been cast by one not legally qualified to vote—that is to say, the presumption of legality must be overcome by a clear preponderance of competent evidence.

By competent evidence we mean such evidence as would be admitted on the trial of the issue before a judicial tribunal, except where a relaxation of the rule is made necessary by the nature of the issue.

No provision is made by the statutes of West Virginia to ascertain what particular ballot any voter has deposited after it has been once placed in the ballot-box. Therefore in this case it becomes necessary to ascertain for which candidate a vote was given by other means than the ticket itself.

It seems to have been taken for granted by both parties that the voters themselves could not be compelled to disclose how they voted. It may be remarked in this connection that one who would knowingly cast an illegal vote ought not to be regarded as the most reliable witness. On the other hand, when he has been honestly mistaken, we can see no reason why such voter ought not to be trusted as a witness.

In order, then, to prevent illegal voting with impunity, it becomes necessary to determine what kind of testimony shall be received in ascertaining which candidate got the benefit of the illegal vote. The committee have followed the rule which appears to them to be the most reasonable, as well as the best sustained by authority.

In the absence of direct proof, evidence showing to what political party the voter belonged, whose election he advocated, whose friends maintain his right to vote, and kindred testimony have been held admissible. Of course what the voter said at the time of voting is admissible as a part of the *res gestæ*.

But what a voter said after the day of the election, either as to his qualifications, or how he voted, or whether he voted, the committee hold to be inadmissible in the absence of other testimony on the point. If such testimony can be admitted at all, which we do not concede, it certainly ought not to be received when the statement of the voter is made after the legality of his vote has been called in question. To admit this kind of testimony is to place it in the power of one not entitled to vote to have his illegal vote counted twice against the party he desires to defeat, without subjecting himself to cross-examination and without even the formality of testifying under oath.

Again, one legally qualified may, by statements after he has voted, make himself out to be disqualified without incurring any penalty, and in that way have his legal vote given to one party counted as illegal against another party. One who has not voted at all may in the same way be proved to have voted. In a close contest, with party feeling running high—perhaps party control involved—the admission of this kind of testimony would be doubly dangerous. It has nothing to commend it except a class of decisions whose authority has been weakened, if not destroyed, by later and better considered adjudications. The committee reject all such testimony as being mere hearsay of the most dangerous kind when standing alone. When the only evidence of how a man voted, or whether he was a legal voter, is the unsworn statement of the voter after the election, we have let the vote stand.

In regard to what constitutes a person of unsound mind we have adopted the rules substantially as laid down by American courts and text-book writers, and hold that a person having sufficient intelligence to make a valid will, or to bind himself by ordinary contracts, or to be criminally responsible for his acts, is a person of sound mind. One whose will would be held invalid, for no other reason than mental incapacity, is a person of unsound mind.

In the record we find the oft-recurring question "Was the voter in your opinion a man of unsound mind?" put to a non-professional witness without any attempt to define what was meant by unsoundness of mind. To the answer to such question, unaccompanied by any explanation of what the witness understood by the term, we attach very little weight.

The condition of the voter, his acts and speech, how he is regarded by those who know him, as to his competency to contract, judicial determinations, and the like evidence, has been given due weight. The term idiot is so well understood that the statement of a witness that a person is an idiot is given more weight, as being the statement of a fact within the knowledge of the witness, and not a mere opinion.

With these rules in view the determination of the legality of a vote only requires a fair and intelligent consideration of the evidence. Upon the question of what constitutes a pauper, there is some disagreement in the authorities, but we think the following may be taken as a fair definition: A pauper is one who is continuously supported in whole or in part out of funds provided by the public authorities for that purpose. One who has been a public charge and afterwards becomes self-supporting for a sufficient time before the election to show that his ability to support himself is not a mere temporary condition, may legally vote.

One who, under temporary misfortune or sickness, receives public aid, but is ordinarily self-supporting, is not a pauper.

The law which determines the question of residence is so well settled that it does not need a restatement by the committee; the difficulty is in the application of the law to the evidence.

Absence from the place claimed as a residence, for temporary purposes, does not work abandonment, but in this case some of the witnesses and some of the commissioners of election seem to have had the view that a voting residence might be retained by the simple statement of intention to retain a certain place as a voting residence, although an actual residence had been taken up elsewhere, with no fixed intention of ever again actually living at the place where the right to vote is claimed. Others seem to think that they can establish a new residence by intention before actually and in fact moving to the new place.

We do not concur in these views. It takes both act and intention to establish a residence, and an intention to retain a residence which has been left must be an intention actually to return to it and reside in it.

On the face of the returns, as claimed by the committee and conceded by the minority, contestant was elected by a plurality of 12 votes. Upon these returns, certified to the governor, he ought to have received a certificate of election, and is now entitled to be awarded the seat unless contestee has shown by competent evidence that illegal votes were counted for contestant outnumbering his conceded plurality, and in addition outnumbering the illegal votes counted for contestee. The first thing to do is to find out wherein we agree, and so narrow the discussion to matters of disagreement. In the brief filed with the committee by counsel for contestee in pursuance of the law governing the practice in such cases it is substantially conceded that 20 named votes cast and counted for contestee were so cast by persons not qualified voters and are therefore to be deducted from the whole number of votes returned for him. So well satisfied were the attorneys for contestee that they declined either to discuss or to refer to the testimony bearing upon them. Now, when the attorney of a party makes such a concession it would seem at least fair that the committee should accept it and the client be bound by it.

The majority did not, however, charge the whole 20 to contestee. One voter, named Frederick Schwall, is taken from the list because the committee believed that the concession of this vote was made under a different view of competent evidence from that taken by the committee. In addition to these 19 conceded illegal votes for contestee the majority of the committee, as shown by this report, find 26 other illegal votes that ought to be deducted from contestee's vote, making 45 in all, which, with the 12 votes with which contestant started, makes 57 to be overcome by illegal votes cast for contestant. Otherwise he is entitled to take his seat as a member of the House. This, of course, provided the committee have made no mistake in judgment in regard to these votes. In the report of the minority we find that 4 out of the 19 conceded by counsel are not admitted. Their names are: Ephraim Hensley, W. J. Gilmore, Grant Griffith, and Michael Hobart. Of the remaining 26 charged as illegal by the committee, the minority concede only 14, leaving 12 in dispute; but they concede 2 not claimed, 1 of which was left out of the report by mistake; the other, H. G. Armstrong, was left out intentionally and will be referred to later on. In the report the committee find that 19 illegal votes were cast and counted for contestant.

This concession should have been 17 instead of 19, Christian and Dotson having been by mistake placed in the list conceded as illegal by counsel for contestant, when in fact they were not conceded. The mistake grew out of taking the column of "not proven" in a tabulated statement for the column of "proven." The votes were clearly legal, and so admitted by the minority. The minority concede 31 illegal votes cast for contestee and claim 66 illegal votes cast for contestant. They also give another list of 21, which they say are not so clearly proven, and which, therefore, we shall not consider. Of the 66, 15 are in the committee's conceded list, leaving 51 in dispute out of this list. I shall take these votes up in the order of the reports, and now ask the attention of the House to the 4 conceded by counsel for contestee and not by the minority of the committee.

The first is Ephraim Hensley. The evidence in regard to this vote is on page 59 of the record. He moved from Ohio to West Virginia in August, 1888, having previously moved from Kentucky to Ohio. He was a Democrat. No attempt is made to contradict this evidence. He had not lived in West Virginia a year and his vote was clearly illegal.

The testimony in regard to W. J. Gilmore is on page 60 of the record. It shows that he moved with his father's family from West Virginia eight years before, and returned to West Virginia shortly before the election. He was a Democrat; he voted and had no right to vote.

In regard to Grant Griffith, I read from the contestee's brief, page 28, and make no further comment. It says:

The evidence tends to show this vote illegal.

No reference is made to the testimony.

The next one of the four is Michael Hobart.

As to Michael Hobart, I shall not stop to read from the testimony, but the contestee in his brief, on page 48, says in regard to him as follows:

This vote—

Speaking of Michael Hobart—

is not challenged by Smith, but challenged by Jackson and proven to have voted for him.

Mr. O'FERRALL. Where do you read from?

Mr. ROWELL. I am reading now from the contestee's brief. Let me continue this reading.

This vote is not challenged by Smith, but challenged by Jackson and proven to have voted for him. It is submitted whether under this statement of facts, the vote being proved to be illegal, it can avail Smith or not by having the same deducted from Jackson's total vote in the county. It seems to us it should not avail.

In other words, Jackson challenged this vote in his answer. It was not one of the votes challenged by Smith in his notice of contest, and, therefore, Jackson says it ought not to be charged against him, while admitting its illegality and that the vote was cast and counted for him.

Let me direct the attention of the minority to the vote of M. E. Polsne, claimed by them, and admitted in the report of the majority as an illegal vote, cast and counted for contestant under precisely similar conditions, challenged by contestant, proven to have voted for him, and admitted against him. But I will not stop to read that.

Mr. OUTHWAITE. May I interrupt you to read from the bottom of the twentieth page, and that will show whether you conceded that Polsne should be charged against the contestant?

Mr. ROWELL. You have not read all that was said about Polsne. I will:

M. E. Polsne is another voter challenged by contestant. Placed on the stand by contestee to prove himself a legal voter, on cross-examination he stated such facts as showed he was not, and then volunteered the statement, not in response to any question by either party, that while voting the Democratic ticket he nevertheless voted for contestant, and upon that testimony it is now insisted that his vote ought to be charged against contestant.

This testimony was peculiar, to say the least, and is subject to grave suspicion, but as the witness was not impeached by subsequent testimony we allow the charge and count the vote as illegal.

Mr. OUTHWAITE. Did you make the deduction?

Mr. ROWELL. Yes, sir; you will find it if you follow it up in the report.

Here is a Democrat, charged by contestant to have voted illegally for contestee and testimony introduced by him proving the charge. Whereupon contestee calls Polsne himself to sustain the legality of his vote, with the evident understanding that he had received it. Questions were so put to the witness on his examination-in-chief that he was able to answer them in a way to sustain his right to vote, but on cross-examination by contestant he was forced to admit facts which proved him a non-resident of the State. Both counsel stopped asking questions; it appeared that the vote must go out as a charge against contestee, and then the witness volunteers a statement, which stands in the record, that though a Democrat he voted for Smith. Having been trapped into an unwilling admission that he had voted illegally and that Jackson was about to lose a vote, he volunteers the statement. If he did not tell the truth, he has succeeded in having an illegal vote by the concessions of the committee counted twice for Jackson. I do not hesitate to say that I seriously doubt the truthfulness of this witness.

I next take up the list of votes charged by the committee to contestee and not admitted by the minority.

First in the list are William Gibson and John Starcher. The minority claim that they were not proven to be minors. Let us examine the facts. It is agreed that there are but four days' difference in the ages of those two boys. John Starcher is the illegitimate son of Jane, a daughter of Jacob Starcher. On page 63 of the record Peter Goff testifies that he moved to the State of West Virginia in September, 1867. Now, Mr. Speaker, there are some events that fix themselves upon the memory, and one of them is the date of emigrating from one section to another, and is an important era in a man's life. This is one way by which Mr. Goff fixes the date. He further says that he purchased a farm shortly after he got there, and obtained his deed for it on the 4th day of November, 1867; the deed shows the date. Human recollection may be uncertain, but a written document does not forget. The same witness say that he visited the house of Jacob Starcher in the month of September, 1867, saw and talked with his daughter, and that she showed no indication that she was about to give birth to a child. In the following winter of 1868–'69 he was frequently at the house of Starcher; Jane then had a baby about six months old, the boy John. During the same winter he was frequently at the house of Mr. Gibson and dandled the boy William upon his knee. He was not then to exceed seven or eight months old. Goff is a man of intelligence and character.

Another witness, a former member of the county commissioners' court, testifies that Gibson and Starcher were born in the spring of 1868. He fixes the date by an official document which he held in his hand while testifying. How is this testimony met? By an old midwife, seventy-two years old, who says that instead of the spring of 1868 it was back in September, 1867, when the boys were born, at the very time when Goff was visiting Starcher's and says that Jane had no child and showed no indication of being about to have one. The midwife kept no record, depends entirely upon recollection; she had attended the birth of a great many children, and now, by her simple memory going back twenty-one years, you seek to overcome recollections sustained by documentary evidence. There is one other witness who agrees with the midwife; he was not present and has no personal recollection of the ages of these boys. He fixes their age by the age of a child of his, as he says, born the following winter. He knows the age of his own child, not by memory, but by a record which he says his wife read to him. He can not read and only knows what his wife told him. The record is neither produced nor offered to be produced. Now you have the whole evidence. Is there a gentleman on that side of the House claiming to have any knowledge of the law of evidence or who ever sat upon the bench that would hesitate a moment in deciding that these boys were minors and their votes illegal?

I now pass to O. J. Simmons. My friend from Georgia forgot a little of the testimony bearing on this vote. A year before the election Simmons went to the State of Ohio and returned subsequently to West Virginia and set up a claim that he had never lost his residence. He had voted at an election in Ohio. All the law books hold that no man shall be permitted to set up intention against the solemn act of voting. There is no variance in the decisions upon that question. And how does he get around it? Why he says: "My vote in Ohio was illegal; I intended all the time to keep my home in West Virginia."

In other words, gentlemen, you refuse to acknowledge that this man lost his residence in West Virginia, although he left the State, took up his home in Ohio, and while there exercised the highest right of the citizen, the right to vote; because you say that his vote then was illegal on account of his secret intention to retain a residence in West Virginia.

I pass now to Reese Stratton, who some of my colleagues on the committee think ought not to be charged against the contestee.

Mr. Carrol, a witness who had more knowledge of Stratton than any one else, says, "He is not very far from an idiot. He understands a few simple things." Take it and weigh it.

I come now to W. A. Palmer, and I want the gentlemen on the other side to stop at W. A. Palmer, his vote is so vigorously defended. He moved with his father's family to West Virginia in March, 1888. He did not become of age until May, 1888, by his own testimony.

Do you recognize the legal proposition that a boy's home is with his father until he reaches the age of twenty-one unless he has been emancipated from parental control? Do you claim that a minor has any right, while under his father's control and living in his father's house, to form an intention and to make it effective to become a resident elsewhere than in his father's house? In the fall of 1887 his father rented a farm in West Virginia with the intention of moving there in the following March. The father and the boy went to the farm and put in fall wheat, and then went back home, and the boy lived at home all winter and went to school, still living in his father's family. In the March following he moved with the family to West Virginia, and in the following May he became twenty-one years of age, and claimed the right to vote because he had become of age in West Virginia; and finally, finding that that did not stick, he claimed that when he went over with his father to West Virginia to put in the fall wheat he then and there fixed the intention to become a resident of West Virginia. Now he had no legal right to fix that intention, and he did not carry the intention out, as a matter of fact or of law. In fact, he lived with his father all winter and went to West Virginia in the spring.

Mr. KERR, of Iowa. What length of residence is required in West Virginia for a voter?

Mr. ROWELL. One whole year. Now I come to Oliver Burns. He was a resident of Ohio when he voted. His vote was clearly illegal by your own proof, and the only dispute is which candidate he voted for. You got up a little dispute by sending a leading Democrat to him the day before he testified. The man said to him: "Of course I know you are a Democrat." "Yes." "Of course you voted the Democratic ticket." "Of course I did." "Do you recollect the names on the ticket?" "No, I have not a very good recollection; I don't remember the names." "Well, was Smith's name on the ticket?" "Yes, I think it was.

A MEMBER. What proof is there on the other side that he did not vote that ticket?

Mr. ROWELL. There was plenty of proof on the other side that he voted the Democratic ticket. Several witnesses testified that he was a well known and strong Democrat.

A MEMBER. Did anybody swear that he voted for the contestee?

Mr. ROWELL. It is admitted by both the majority and the minority of the committee that where in a State there is no means of ascertaining what ballot a man has cast by opening the ballot-box, in order that illegality may not prevail it is competent to prove to which political party he belongs, which political party he advocates, who attended him at the polls, who advocated and who resisted his right to vote, as a means of determining how he voted.

I come now to John Stinson. He lived in Logan County and voted in Wayne County. He was a tenant farmer. He had rented a farm over there in Logan, and he voted in Wayne under the claim that he hoped to rent another farm back in Wayne County next year. He lived in Logan County, and the question was how he voted, and it was proven by the witness that he was a Democrat. That ends that.

Now, I am going to say a word about Dr. Reese. There is something peculiar about Dr. Reese. He moved over into Ohio before the election with his family. He was called as a witness himself. He was asked, "Where do you live?" "In Ohio." "How long since you became a permanent resident of Ohio?" "A few days after the election. I moved with my family over there before, and I was there a few days with them." Other witnesses swore that he was there continually with them. But he says, "I did not make up my mind to become a permanent resident of Ohio until the election was over, though I had moved there with my family. I had a land contract that if I did not forfeit I intended to carry out and finally come back to West Virginia; but a day or two or three days after the election I forfeited the land contract and then I became by intention and act an actual citizen of the State of Ohio."

The fact that he did not move back to West Virginia, the fact that in June following he acknowledged himself then a bona-fide citizen of Ohio, the fact that this land contract was forfeited immediately after election, must show that it was a pretense and that he was not only in law but in fact a resident of the State of Ohio.

Here is another voter—Ali Artrip. He was both a minor and a non-resident. He is proven by his guardian to have been only twenty years old; he did not reach twenty-one until the following April or May, as testified by his guardian, who fixes his memory by a written document. Ali Artrip's father was sent to the insane asylum before Ali was born; he died there and this guardian purchased the mother's dower in a piece of land. He fixes his knowledge of this boy's birth by the deed to the land; and only a few months before the election the ward in conversation told him that he would be of age the May after election.

Boys know the anniversary of their birthday. How does the other side attempt to contradict this? Ali Artrip was living with his mother in Kentucky and ran away to escape imprisonment; he came over there and voted. His minority and non-residence are proven by his own statement, made several months before the election, proven by the statement of his guardian, who also says that in the whole community where Ali was raised everybody agreed as to his age. They bring in two witnesses who heard about the father's going to the insane asylum, and they thought it must have been some time in the winter of 1866-'67, so that it was physically impossible for this boy to have been born later than November. All they know is by hearsay; and one of the witnesses said his mother was accused of having been "a little frisky." [Laughter.]

George Cox is another voter who moved to Kentucky from West Virginia and engaged in business there, discharging the duties of citizenship in working the roads and paying taxes. He and his family lived in Kentucky with his mother, and to all outward appearances he was as much of a citizen there as any other voter. He came back to West Virginia before the election because his wife's father had purchased and presented to his wife a piece of land. His claim is that he expected that his wife would receive a gift of land from her father, and in that case he intended to return. His intention to return was conditional, and therefore not within the rule.

Joseph Starling, a clearly illegal voter, the only dispute being how he voted; and we do not think there is any doubt about that. He was a Democrat.

E. D. Lewis is a voter about whom there is a good deal of conflict in the testimony. Two witnesses testify to his minority from personal recollection. Another that he read in the family Bible the date of his birth as September 3, 1868; that the boy's mother told him that was the correct date. The mother, however, testifies that he was born a year earlier, and that she has a record, which she fails to produce, to that effect. An old gentleman eighty years old—the same who took the boy to the polls and voted him—brought in a Bible with the age recorded September 3, 1867. This Bible, by a memorandum written upon it, was presented to one Susan Washington in 1873, and the husband of Susan Washington at the time this evidence was taken was living with this boy's mother, a family record of one family fixed up, as it seems to me, to suit the purposes of another's family, to be used in evidence in this case in place of the record which was seen and read by one of the witnesses.

Now, I have gone over every one (or I have missed only one) of these 16 votes that they say are not to be counted against the contestee; and I have correctly abstracted the evidence and shown that every one of these voters, except one, about whom there is a question of doubt, ought to be counted.

I call attention to the vote of H. G. Armstrong, whose name was left out of the report intentionally; but it was a mistaken intention resulting from the desire to be fair. H. G. Armstrong was appointed to office under the Cleveland administration. He moved with his family from Charlestown, Kanawha County, to the city of Washington and remained here during that Administration. Charlestown was in another Congressional district. He returned to West Virginia, going to Jackson Court-House, in this district, and voting there. He never had a home there, but he went back there two years before and voted. In the haste of preparing the report we did not stop to examine the law on the question whether a man by casting his vote at a particular place while in Government employ may not thereby fix his residence there. But, of course, both act and intention are to be considered; the single act of voting did not enable him to set up his right to vote there; therefore your concession is right.

I now come to the list of 66 votes which you say are illegal, and I take up the case of William Wix. He was charged in the notice of contest as a minor and as having voted for the contestee. You charge that he voted for the contestant and was a minor, and that his vote ought to be deducted from the contestant's vote. Now, what is the evidence? On the day of the election he attempted to vote; his vote was challenged by a Republican; he went away from the polls, and when his Republican adversary was out of the way he slipped up and got in his vote and afterward he boasted—this is part of the *res gestæ*—that he had got in a Democratic vote. That is the evidence on the one side. On the other, his mother and sister testify that he was not of age. His mother says she had told him he was of age in order to make him take hold and support the family, because his father had died. His sister says:

> On the morning of the election I urged him to go and vote the Democratic ticket, because his father was a Democrat, I was a Democrat, and his mother was a Democrat; but he said he was going to vote Republican.

His sister, claiming to know that he was a minor, swears that she sent him off to the polls and urged him to cast a Democratic ballot. She further swears that when he came back home he said he had voted the Republican ticket. Now, you have on one side the evidence of the sister who sent him off as a voter to the polls to vote the Democratic ticket.

A MEMBER. But did he not refuse to comply with her request?

Mr. ROWELL. Yes, she says he did; she says that when he came back he said he had voted the Republican ticket. The further proof is that he was a poor boy and wore a Harrison cap. Now, here at the polls were Republicans trying to prevent his voting, knowing he was going to vote the Democratic ticket; he dodges the Republican challenger, gets in his vote when the challenger is out of the way, and then while at the polls boasts—this is a part of the *res gestæ* and is legitimate and proper testimony—he boasts that he had got in a Democratic ticket.

What do we do with this vote? We say that the evidence is evenly balanced; that it was an illegal vote; but there is not sufficient evidence to justify us in saying whether he voted one way or the other, and we simply let that question alone. That is the way we deal with it.

Now, I take the vote of John Brannon, jr. Gentlemen on the other side have overlooked some of the testimony about John Brannon, because the attorneys who briefed the case for that side did not index the testimony; and it is the testimony of the man with whom John Brannon, jr., lived. His name is Bates, and you will find his testimony on page 729. He says he came to his house on the last day of August; that he went back to the county where he formerly lived, and came back on the 6th day of September, and lived there continually up to the following spring. That was sixty days before the election; that is uncontradicted proof, and that is the kind of vote you charge as illegal.

Next I take John Sheets. One witness testified that John Sheets had not been in West Virginia for a year and that his name is John Sheets. That is all the oral evidence in the case. Discussing the question whether he had the right to vote and discovering he had not the right he told the witness he would not vote. The poll-book is introduced, and it shows a man by the name of John L. Sheets had voted. No witness called anywhere to identify John Sheets as John L. Sheets. It was competent to prove it if it were true. It looks like a trick to deceive the committee. The witness said he never heard of a middle letter in the name of John Sheets. Yet that you charge as illegal.

I take the vote of C. M. Messerly. He was a merchant tailor. On the 13th of September he came to West Virginia and entered into the business of merchant tailoring. He brought his apprentices with him. He left his family behind, but he came with his men and engaged in the tailoring business. This involves a legal question. Ordinarily a change of residence is not completed until the family moves. The exception is when business is engaged in and an interest manifested to change residence, as was decided in an early Missouri case. But it is not shown that Messerly voted. The only evidence that he voted or how he voted is his statement to the witness after the election was over.

I take up the case of Henry Dye. Henry Dye lived in West Virginia. He told one witness he was going to Kentucky to live. He told another witness, the man with whom he lived, he was going to Kentucky to collect some money and that he was coming back. He did come back and voted. One witness on one side and one on the other; yet you say there is a preponderance of evidence which overcame the presumption as to his vote, and I deny it.

Let me take the next case, J. C. Leonard. He voted in Jackson County. His vote is challenged, and his father is called as witness. His father testified his son went to Kansas City and remained during the spring and summer and then came back; that on the morning of the election the father, being a Democrat and supposing his son was a voter, never having lost his residence because of his tramp out West to Kansas City, urged his son to vote the Democratic ticket; but the son said no, he would vote the Republican ticket. The father never thought but that he was a voter, never thought he left the State for other than temporary purposes. He is the only witness examined on either side. Yet that vote you charge as an illegal vote for the contestant.

Let us take the next vote, John Davis. What is the circumstance about John Davis? He owned property where he voted. A year before he hired out to work at Huntington. He rented a house there. In July, previous to the election, he moved with his family back to his father's house. He brought back his things. He remained until the spring of 1889. His family still remains. In the spring of 1889 he went back to work in Huntington; but from July, 1888, to the spring of 1889 he and his family resided at his father's house. Yet you say, because he formerly lived in Huntington, therefore his vote should not be counted as a legal vote. And this is a fair sample of your rulings.

The next one is William McCoy, in regard to whom one witness testifies that he had not seen him in the county for sixty days before the election, while another man, his brother, testifies that he saw him, knew where he had been at work down in the district, and that he had been there for more than sixty days. He was a widower with one child, and his only home is where he works. Now, there are the two witnesses. You can select between them which testimony you choose.

I will next come to the case of Israel Cullens. It is printed "Isaac" Cullens, but that is a mistake; his name is Israel. He had lived in West Virginia for years. He sold his farm, stored his goods, and went on a

visit to Indiana, but before going had negotiated for the purchase of another farm adjoining the old farm and in the same district. Subsequently he bought this farm, came back to it, took his goods which had been stored, went there and made his home. The testimony shows that he went off on this visit after he had sold his farm, being then at leisure, and had found another which he afterwards purchased, to which he took his wife, but that in the mean time he had visited friends in Indiana; and this ballot is also held by you to be illegal, because of the mere fact that he had made this visit.

William Lee comes next. He is charged with being a pauper. The overseer of the poor says that he furnished Lee with a coffin to bury his little child a month or so before the election, and that he had to the extent of some $18, including the coffin, aided him about that time. William Lee came into the court, however, and showed himself to be self-supporting; that at one time, when he had been so unfortunate as to lose his child, he went to the overseer of the poor, assuming him to be a friend of his, and got a coffin for the child, but expected to pay him for it and did not get it as a pauper. He further testified that the same overseer at the election had undertaken to compel him to vote the Democratic ticket, and threatened if he did not his vote should be thrown out, and for the reason that he had furnished him this coffin. Now, I hold that he is no pauper under the rules which the committee have agreed to adopt on both sides.

The next case is that of Ezekiel Fletcher. There is only one witness, Gilman, who testifies about Ezekiel Fletcher. He swears that about five or six years before he had known him in Tyler County; that he saw him some three weeks before the election, and he did not believe he had been in the election district over six weeks; and he is to be declared an illegal voter for the reason that the witness had not seen him. Is that testimony worth anything with regard to this man's vote? But upon that sort of testimony you undertake to overthrow the presumption that he was a legal voter. I did not see him there; neither did you see him there. Does that disqualify him?

Mr. OUTHWAITE. Is that all the evidence?

Mr. ROWELL. Yes, that is all the evidence on that point.

Now I take the case of Elijah Kiggins, and the testimony in that case will be found on pages 376, 386, 746, and 748 of the record. He had lived at Raven Rock for several years and worked at the cooper's trade there at the time of the election. About three weeks before he was married in Ohio, but did not lose his residence, unless getting married works disfranchisement.

Next I come to the case of J. Luh. I have gone far enough, Mr. Speaker, already to overthrow the claims of the minority of the committee and upon the votes already considered to leave a clear majority to contestant, even conceding all the remaining votes claimed by the minority. Now, here is this case of J. Luh. It involves a legal question already discussed. He bought a farm in the district in August, 1888, and moved onto it. He went to work on the farm and made it his home. His wife, however, did not join him for some time afterward. She did not come down immediately to stay, but came down every day or two to see him. It seems that she did not move down permanently until October. If, then, you throw out this man's vote, you make the man's residence dependent upon where his wife lives, instead of making the wife's residence dependent upon the home of her husband.

Now, there is a question of law involved which applies to this vote and to that of Messerly, which I leave for the consideration of the House. Leaving out fourteen of these names, to which I shall return hereafter, I take the case of Thomas Burt.

Mr. MOORE, of Texas. You say you will not discuss the question as to the fourteen?

Mr. ROWELL. I say I will not just now.

Mr. MOORE, of Texas. I hope the gentleman will do so, because there has been no discussion in regard to them.

Mr. ROWELL. I will come to them presently. I have already shown, Mr. Speaker, enough legal votes that the minority fail to overcome to offset their claim to a majority; but I come to the case of Thomas Burt. In this case there is but one witness. His testimony is to be found on page 420 of the record. He lives some 10 miles from where Burt lives. He disputed with Burt on election day as to whether he had been a resident of the district for sixty days. Burt claimed that he had been, and that is all there is of the testimony. There is no testimony to show that he had not. That is the whole of it.

It seems that Burt was employed by some company, and the witness claims that the secretary would not say that Burt was on the pay-rolls sixty days. Thereupon the secretary, being spoken to on the subject, said that his name was on the pay-rolls, and that it had been there for over sixty days, and witness says "So far as I know, he had been a resident there." That is all the testimony against the right of this man to vote, and yet this is held up as an illegal vote cast for the contestant. I say that I have carefully made an abstract of that testimony. I have given you the page on which you can read it yourselves. And it shows, Mr. Speaker, how very far from judicially the minority of the committee have made up their report.

Now I come to the next case, that of W. S. Bird, and I shall not stop to comment on the testimony in that case, because there is some doubt in regard to whether he lived on one side of the line or the other. There was a question there as to the boundaries. He thought he voted in the right district; but inasmuch as there is some doubt about it I will not stop to argue that point.

Next I come to the case of George F. Jones. He was examined himself. His testimony is set forth in the evidence furnished by the committee. It shows that he had lived in the State for two years and in the district from the 23d day of August, 1888. What is the objection to that vote?

Why, the contestee put a witness on the stand who stated that on the day of election Jones said he had been in the State a year and in the district thirty days. Supposing that that was the legal requirement of a voter and being asked the question how long he had been in the State, he said: "I have been in the State one year and in the district thirty days:" and that is the evidence against his vote: that he had said he had lived in the State one year and in the district thirty days; and they throw that vote out on this testimony.

Now, as to the case of James Parr, which is given on pages 436 and 761 of the record. That is just as clear a case of legal voting as any other one. This man raised a crop in the summer in the county where he voted. He was a single man. He flitted between that county and Wirt County, but that summer had his home in this county and raised a crop there. It is undertaken to throw out his vote because some witness testified that he had his washing done over in Wirt. It is therefore endeavored to be made out, according to the views of the minority, that a man's home is where he gets his shirts washed, and not where he lives. I have given you the testimony in that case. I claim that a man's home is not necessarily with his washerwoman.

Now, we take the case of Samuel Gray. That is a peculiar case. Samuel Gray is charged with being a minor. He is put upon the witness stand and is asked:

How long have you lived in West Virginia?

He says:

Fifteen years.

Q. Did you vote at the November election?—A. I did.

Q. For whom did you vote?—A. I voted for Smith.

Those are all the questions asked him. Then they put in, from the records of the county, a record of the issuing of a marriage license to some Samuel Gray; and in the marriage license it is said he was eighteen years old. Note, they do not ask this witness if he is a married man; they do not ask him if he got his marriage license in that county. No witness testifies that this Samuel Gray was the same Samuel Gray who got the marriage license. It looks like a trick to deceive the committee and it seems to have deceived the minority.

Now, I come to the case of William L. Johnson, whose father says that he lived in West Virginia, that in 1887 he moved to Texas and worked there for some time, that in the following August he returned to West Virginia and claimed West Virginia was his residence, and that he only went to Texas for temporary purposes. He voted, and subsequently he went back to Texas to work again, a very common thing among laboring men. There is some doubt about this vote, and we leave that without argument and submit it to you, and you can do as you please with it.

The next is Frank Bratton. It is claimed that he is an insane man. Now, let us see what is the evidence. One witness testifies when he voted two years before the judges commenced to ask him questions and he commenced to answer the question, but his father was with him and answered it. He answered the question for him, and so witness concluded that he must be of unsound mind. Another witness, a doctor, was asked the question: "Do you think he was of unsound mind?" and he said "Yes" and gave no reason. The committee have determined that you must define what you mean. You have got to show the facts upon which your judgment is made. He voted in 1886. He voted again in 1888—a strong presumption in favor of his vote. The proof is his father was a strong Republican and in 1886 he went to the polls with his son; and now it is claimed that he was of unsound mind; but a man of unsound mind can not have any politics. Nobody proves who went to the polls with him in the election of 1888 how he voted or what his politics were. You have no evidence as to how he voted and no sufficient evidence that he was of unsound mind. I have given you the whole of that.

Now I come to these twins, the Greathouse boys. They are charged with being minors. Now listen, gentlemen of the minority of the committee, while I recount the evidence in regard to their minority. The boys' father, mother, grandfather, grandmother, and aunt, as well as the family Bible, all state they were born in October, 1867. You have got the father and the mother, who keep the anniversary of the birthday of their children, especially if they are twins, and you have got the grandfather and the grandmother, both of whom were present at the birth, and an old aunt, who was also present at the birth, and you have got the family Bible, a record, all showing that they were born in October, 1867. What have you got on the other side? You have a doctor, who attended at the birth and whom the witnesses say was drunk on that day. He says they were born in November; and he knows that because the father paid him a dollar in November, and subsequently paid him $4 more, and finally the balance of the fee; but he does not show how he knows the date of the payment, or that he kept

any book account, or that he has any recollection that the first payment was made on the day of their birth.

And there is one other piece of testimony. The assessors of West Virginia each year are required to bring in a report of the births and the date of the births. They go out into the country, inquire of somebody respecting the births in the county, and put them on a slip, and come in and make a record. I do not know how they get it in this case, but they have it at November. This record at best is but secondary evidence, good only in the absence of anything else. All the evidence they have with that is that of a drunken old doctor, and they put it against these five witnesses and the family record. This fair minority think that that is sufficient proof that these two voters were minors and their votes were illegally cast for the contestant. That is a fair sample of more than half of the list of 66 votes.

Now I come to the case of William Bradshaw. He lived four years in West Virginia. He worked in West Virginia constantly. Some time in the spring he could not get a house that was cheap enough to live in, but he continued to work in West Virginia and moved over the line for about six weeks, until he could get one that was convenient enough for him to live in. He worked there all the time, and you say that that cost him his residence. I say you can not find a declaration in any law book that was ever printed in America that will throw that vote out. I see I have used the wrong name. George Anderson, and not Bradshaw, is the voter I am talking about. Bradshaw is the voter who was in Ohio a short time to avoid arrest.

Now I come to J. D. Dickson, a peculiar Democrat, a very vicious Democrat, who refused to vote for Jackson because he said he was a Know-nothing and no Irishman could vote for him. Dickson held office under the Cleveland Administration, and he was sent out to Dakota, and on his return, not being ready to go to housekeeping, he sent his wife over into old Virginia for a time, taking up his residence with a friend, and subsequently, when he got ready in the fall, he went to keeping house, so they claim that he was a non-resident and that his vote was illegal. His own testimony shows the facts.

Now I take Jesse Morris. It is claimed that he voted twice. What is the proof? The proof is that they find on the poll-books "Jesse Morris" and "J. W. Morris," and they assume that Jesse Morris and J. W. Morris are the same person. Nobody swears to it. The ground for the inference is that Jesse got pretty drunk on election day and went up and asked to vote, and the judges told him he had voted and he said he had not voted "this ticket." The proof is that he was there at the polls, doing his best to get the candidate for sheriff on the Democratic ticket elected.

I take now this man Shearriffe. He voted in Wirt County. Formerly he lived in Marshall County. In June, 1888, he came to his father-in-law's, in Wirt County, worked there all summer, had his clothes there, continued to live there, then went up into the other county a little while before election, and then came back and voted, his residence being there. That is all about him.

Next I take Austin Tafferee, who voted in 1886 and 1888 in this district. One witness thinks he was of unsound mind. No; I have mixed up two cases of unsound mind. This is the one where it was thought that he was unsound because his father answered questions for him. I pass that case without saying anything more about it. What I said of Bratton should have been said of this voter.

Next I come to W. H. Mamel. They charge that this voter was not of age and there was some hearsay proof to that effect. They forget that his father comes upon the witness stand (if you want the evidence it is on pages 841 to 844) and swears to the boy's age and brings in the family Bible showing his age, the record kept by the good old German mother now dead, and he testifies that very soon after the birth of each of her children she made a record of it in the Bible. There is the evidence of this boy's age which you overlooked, gentlemen, because it was not briefed for you.

Here is another case, George Anderson. He was over in Ohio six weeks during the summer, and hence you say he has lost his residence.

Now I come to old Israel Taylor. I am suprised, gentlemen, that this minority of the committee should take old Israel Taylor and attempt to throw out his vote, cast in Parkersburgh, because if there was anybody in Parkersburgh that was a voter it was Israel Taylor. He owned a life estate in a little farm a few miles outside of Parkersburgh. He was a brick-worker.

In January, 1888, he moved what things he had from the farm down to Parkersburgh and continued to work at his business in Parkersburgh, and lived with his son-in-law there from January, 1888, to December, 1888. He swears to it and his son-in-law swears to it. You have got one witness who undertakes to mix up the time between when he moved the son-in-law's goods and when he moved his goods, but the case is as plain as any case that can be made. There is no more question about his right to vote than there is a question that I stand here.

Now, I come to Robert Alexander. You say his vote ought to be thrown out. He voted at Volcano. He had voted there for twenty-two years. He was secretary of two incorporated companies that had their headquarters there. He was secretary of the school-board of Volcano. Two years previous to this election his wife, not liking to live in the town, asked the privilege of setting up business for herself out in the country. So he rented a little farm for his wife and children and they ran the little farm and the little business at their own expense and had the proceeds of it. He continued to do business in the town, but his wife, for health and because she thought she could make a little money, as I have said, asked the privilege of setting up in business for herself and he aided her to do so. And yet you say that this man, who for twenty-two years had lived there, who held a public office there, and who had never moved away from there, was obliged to follow his wife out into the country, where he never had resided, and vote out there. That is the kind of voters that you want to throw out.

I come now to Oscar Cunningham. You had a little more excuse for throwing out Oscar Cunningham's vote. There were two brothers of them who lived in Parkersburgh. Oscar was the single one, living with his brother, having moved from some other place two years before with his brother to Parkersburgh. His brother was married. He went over into Old Virginia and worked a few months at the iron works in Old Virginia during the summer. He came back and voted; and you throw him out. There is some little excuse for the action in this case, more than in the other; but there is no excuse for it in the law.

Here is William White, a colored horseshoer. You undertake to prove by a couple of colored "strikers" for the contestee, one of whom handled the whisky for that campaign, that White had said that his home was over in Ohio. White worked for a man in Parkersburgh, lived with his family, shod horses for him, having come there in the spring. On election day the question came up as to whether he had the right to vote. He told this man, as he had told him before, that he had lived in Wheeling, W. Va., for nine months, and, as he had lived in Parkersburgh for seven months, that made more than twelve. Then he went out and consulted with one of the leading men, telling him how long he had lived in West Virginia.

And he was advised, of course, that he had a right to vote; and he did vote. You undertake to throw out his vote on the evidence of these two colored men, one of whom, I say, handled the whisky for the Democratic campaign—set up the drinks everywhere. You propose to throw out this man's vote because this "striker" of the contestee says that this man calls his home over in Ohio, said that he went around at the State fair shoeing horses.

I now come to the vote of J. B. Nettleton. He was a school-teacher; had taught school five years in the precinct where he voted and had been in the habit of voting there. He came from Ohio. Like every other young man, he called the State from which he came his home; but by the solemn act of voting and by the fact of five years' residence he had become a voter in West Virginia. You throw him out. Only one witness testifies on this point, and that witness said he had not any doubt about his right to vote when he tried to get him to vote the Democratic ticket.

Now, I have gone through, I believe, with all but one of the 66 votes not admitted. I can not stop to go through with that one, inasmuch as I have not a memorandum upon the point. When I came to examine it I thought the vote possibly doubtful. The name is John Parkins. John was an illegitimate son. There was a dispute about his age. He was proven of age; but he lived on a boat; and the question was where he hitched his boat oftenest along the Ohio River, whether at Parkersburgh or at the Kanawha River or somewhere else. That is all there is about this vote. Like a great many other votersin West Virginia, he was the inhabitant of a boat which was hitched along the river.

Now I come to the 14 votes, commencing in the minority report with No. 24 and going down to 37. I shall stop only a minute to consider them. These fourteen men were colored employés, working on a construction or repair train which went through four counties in West Virginia. They voted at Hurricane, the headquarters of their division. The witness that testified about them was their foreman or boss, a leading Democrat, who also voted at Hurricane. He said he was in the habit of voting there, although he called his home Old Virginia, whence he came, and paid his taxes in another town; but because it was the headquarters of their business, where they came to get their supplies, where they got their washing done, where they got their pay, it being the headquarters of the business, he fixed his residence there and voted there. He was a leading Democrat. But it is claimed that these fourteen men could not fix their residence in West Virginia. Some of them had voted there the year before; all of them had been in the State working on the train more than a year; and for the year previous nearly all of them had been working on the train that went through the headquarters at Hurricane. To say that they are not legal voters is to say that men so working can not acquire a residence, and you will find no law that sustains that proposition.

Mr. MOORE, of Texas. The gentleman does not pretend to give the evidence; he only states the result.

Mr. ROWELL. In the short time I have I can not do anything but give an abstract of the evidence. I can not stop to read it.

Mr. MOORE, of Texas. Were these men, or was either of them, within any of those four counties, except when they came in there on this construction train? Did they not board on the train? Did they not get passes from Mr. Goodwin, the contractor, to go home, as they said, on Christmas?

Mr. ROWELL. Now, if you will possess your soul in patience——

Mr. MOORE, of Texas. Is not that in the record?

Mr. ROWELL. I will talk about that very point, because I had just reached that part of the testimony.

The law of West Virginia says that a man shall not acquire a residence anywhere by virtue of his working for the State or of working for the corporation. The courts time out of mind have said that while that does not make him a resident it does not prevent him from becoming a resident; and I refer you to the celebrated decision in the cases of the students of the university in the State of Michigan. These men, some of them, had been there without reference to working on the train; others were trainmen. They had a right to fix a residence. They fixed it at Hurricane, the headquarters. They had been at the headquarters going in and out, not sixty, not ninety, but one hundred and sixty days. But they lived in the cars of the repair or construction train. That is the exact fact; and at Christmas time they took passes to visit Old Virginia, just as in summer time you, if you do not get a pass, pay your way to go to some watering place to take a rest. You seem to assume that because a man speaks of the home of his boyhood as "home," therefore, no matter how long he may have lived away from there, that must continue to be his home. It is neither good law nor good sense nor anything reasonable to present in an election contest.

I have gone over this evidence; I have demonstrated, with two exceptions, all of these 66 votes as claimed, and which have not been admitted, are plainly, clearly, and unmistakably legal. I have demonstrated the votes charged by the contestant as legal are unquestionably legal. I have repeated the testimony to you, but it does not change the majority which the majority of the committee reported in favor of the contestant.

One word, Mr. Speaker, and I shall close my remarks. The contestant comes here as a contestant when the law, and right, and the concessions of the minority place him in the position of contestee. From the vantage ground of a seat unlawfully obtained this contestee is seeking, by refusing to count clearly legal votes, to retain the seat the emoluments of which he has drawn without right since the 4th day of last March. He does not present himself—I do not mean personally—he does not present himself before the House with that kind of a case, with a case that appeals to the generosity of this House. On the contrary he accepted a certificate with the knowledge of how it was issued and upon what basis. And he refuses to stand before this House and rest his case in its very inception upon his *prima facie* right to a seat, thereby confessing it was his intention to participate in the affairs of this nation so far as they come before the House of Representatives by virtue of a title tainted by illegality and wrong and usurpation.

I trust, Mr. Speaker, gentlemen of the minority, having been able to present before the whole country the tactics of resistance for so many days to prevent the consideration of such a case, will be willing finally to concede it is neither partisanship nor prejudice that compels the Committee on Elections to present in this House the report they do. When that committee presents a partisan report it will be time enough to arraign it. As far as I am concerned, this House will come to the day of final adjournment before my name will be signed knowingly to a partisan report.

Now, in this case, Mr. Speaker, I hope and trust that at least the minority of the committee will not claim as a justification for the spectacle that has been presented to the country and the House that this report is either partisan or unjudicial. It was simply impossible out of the record to overthrow the solid array of facts which gives the right to this contestant. [Applause on the Republican side of the House.]

The Silcott Defalcation.

SPEECH

OF

HON. JOHN F. ANDREW,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 15, 1890,

On the bill (H. R. 4539) making an appropriation to supply the deficiency occasioned by the defalcation in the office of the late Sergeant-at-Arms.

Mr. ANDREW said:

Mr. SPEAKER: This bill differs from an ordinary appropriation bill, as in this case we are called upon to act in a judicial capacity in regard to a claim in which we ourselves are pecuniarily interested. And as fair-minded men have questioned the legality of such a claim as this, it would seem that if this claim is to be entertained at all it should be by a disinterested tribunal. It is argued by the advocates of the bill that the Sergeant-at-Arms, whose clerk has absconded with these funds, is a disbursing officer of the Government, and that consequently the Government should suffer this loss. This view is not at all clear. In the Forty-sixth Congress when the rules of the House were under discussion, Mr. Garfield used this language:

Now, the Sergeant-at Arms of this House is not a disbursing officer of the United States. He is only our agent, and if he should be robbed of or should make away with the money in his possession, we, as members, would have no recourse whatever, for the Treasurer of the United States holds our receipts.

In the Forty-seventh Congress a bill was passed by the House making the Sergeant-at-Arms a disbursing officer but was not acted upon by the Senate. Had that bill become a law we would not now be called upon to discuss this question. It, therefore, seems that the liability of the Government in such a case as this is no new question and that it has been seriously doubted. And under such a condition of facts I do not propose to act as an arbitrator, and furthermore, I am not clear in my own mind that we have not caused this loss by our own carelessness. This appropriation of $75,000 will, of course, use up the surplus in the Treasury by just that amount, and for that reason may be favorably received in some quarters. While I do not know that it is possible to prevent extravagant expenditures of the public funds by this Congress, I do know that I can prevent any of those funds from improperly getting into my possession.

The Silcott Defalcation.

SPEECH

OF

HON. SAMUEL W. PEEL,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 15, 1890,

On the bill (H. R. 4539) making an appropriation to supply the deficiency occasioned by the defalcation in the office of the late Sergeant-at-Arms.

Mr. PEEL said:

Mr. SPEAKER: The question under discussion is a very embarrassing one, embarrassing because the members of this House are called upon to act as attorney, witness, court, and jury in their own case, something all men dislike. That many members have lost their month's pay for November last and some have lost much more in pay, deposits, etc., there is no doubt. With each of them I deeply sympathize. I am amongst those that lost one month's pay; I lost all of it. But, Mr. Speaker, this is a question too grave to be governed in our official action by sympathy or our personal necessities.

That the late Sergeant-at-Arms, John P. Leedom, was a disbursing officer of the House of Representatives I have no doubt, made so by frequent acts of this House and a continuous custom for nearly fifty years, practiced for the convenience of the individual members; but that, Mr. Speaker, does not necessarily make him a disbursing officer of the United States, and many members overlook the fact that Mr. Leedom has not stolen or run away with our money; he is here doing all he can to capture the rascal and repair the wrong as far as he can. The man who has run off with our money is Mr. Silcott, the late cashier to the Sergeant-at-Arms, the man from whom we have received our pay for the last six years, the man to whom we have intrusted our blank receipts to enable him to get our money from the Treasury Department of the United States—this we did at our peril; no one to blame for this but ourselves—without which he could not have drawn our pay.

This kind of slipshod business has been practiced for over forty years by both sides of this House, and for which both political parties are alike responsible, and for our own neglect of duty we ought to bear the loss, and learn by the lesson and correct the practice.

Some say as a reason for supporting this bill that the Treasury had no right to pay our November salary to Mr. Silcott until it was due (December 4, last). This is all very true, Mr. Speaker; it was not due until December 4, and the Treasury Department ought not to have paid it until that day, and ought not to have paid on that certificate; but the trouble comes back on us again for giving Mr. Silcott our blank receipts for our November pay before it was due, thereby enabling him to secure the payment from the Treasury Department and each being a party to the wrong; our mouths are again closed.

So, Mr. Speaker, entertaining the views I do I can not support the bill, and shall vote against it. I do not think the House can afford to take $75,000 out of the common Treasury to make up a loss to ourselves, that has been stolen at least partly through our carelessness. It is a matter, however, that addresses itself to the conscience and good judgment of each member for himself, and I concede perfect honesty and sincerity upon the part of all gentlemen who differ from me upon this subject. But I must act for myself, and I oppose the bill from a sense of duty.

The Silcott Defalcation.

SPEECH

OF

HON. CHARLES J. BOATNER,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 15, 1890,

On the bill (H. R. 4539) making an appropriation to supply the deficiency occasioned by the defalcation in the office of the late Sergeant-at-Arms.

Mr. BOATNER said:

Mr. SPEAKER: The course which this debate has taken renders it necessary that I should briefly give the reasons which will control my vote on the bill under consideration.

The gentleman from Illinois has kindly drawn a distinction between the old and new members of this House. I do not think the new members desire to be put upon a plane different from that occupied by their associates. All or none are entitled to be paid.

If the Sergeant-at-Arms of the late House was a disbursing officer of this House, the Government has not discharged its obligation to pay Members and Delegates their salaries. If, on the contrary, he was not a disbursing officer, but the mere private agent of members, his defalcation is a loss to his principals, and not to the Government. In order to arrive at the conclusion that he was not a disbursing officer of this House we must decide that every House of Representatives which has sat since 1838 has been guilty of the asinine stupidity of adopting a rule which it had no right to adopt, which was beyond its powers, and therefore null; that all of the distinguished members of the House of Representatives who have preceded us, many of whom have ascended to the highest pinnacles of power and honor in American politics and in official life, were so ignorant of the Constitution and laws of the land as to impose duties and responsibilities on an officer of this House which they had no right to impose, and which created no other responsibilities in the officer than those of a private agent of the several members. I have a high respect for the abilities of the gentlemen who maintain this proposition, but they must admit themselves that a large number of very eminent gentlemen who have preceded us have held a contrary opinion.

In 1838, a similar defalcation having occurred, a committee of the House, as shown by the gentleman from Mississippi [Mr. CATCHINGS], considered that they had fully provided against a repetition of it by reporting to the House the rule which substantially has been in force ever since. That rule provided that the Sergeant-at-Arms of the House "should keep the accounts of members, and pay them their salaries," and to the end that the United States, whose disbursing officer he was thereby declared to be, should be secured in the faithful discharge of the trust imposed upon him, he was required to give bond in favor of the United States in the penal sum of $10,000, conditioned for the faithful disbursement of all moneys intrusted to him by virtue of his office. As the membership of the House grew in numbers and the amount of money falling under the control of the Sergeant-atA-rms increased, the amount of his bond was raised from $10,000 to $50,000, and a bond for this sum was executed by the late Sergeant-at-Arms.

We find that the Treasury Department, notwithstanding the present denial of such a course, has consistently treated and dealt with the Sergeant-at-Arms as a disbursing officer, because, if not such an officer, payment in money would not have been made to him, even on the express and notarial power-of-attorney of each member of the House, authorizing and requesting him to do so. As shown by the gentleman from Mississippi, the statutes of the United States declare that any power-of-attorney or authority to draw money from the Treasury of the United States shall be null, and the Treasurer, therefore, in all cases, as I am informed, makes payment to the attorney or agent by issuing a Treasury warrant, drawn to the order of the principal, and which the agent is therefore powerless to collect. Had the Treasury Department considered Mr. Leedom as a private agent of the members, a warrant in favor of each member for the amount due him would have been issued.

It is, in my judgment, absurd to give more force and effect to the receipt affixed to the certificate of the amount due each member than to an express authorization to the Sergeant-at-Arms to collect the amount thereof. As I have previously shown, if a member had indorsed on the back of his certificate an order, or request, directing the Treasurer of the United States to pay the amount thereof to John P. Leedom or any other named individual, the Treasurer, if he obeyed the order at all, would have done so by issuing a Treasury warrant in favor of the member, thus putting it beyond the power of the agent to collect until it had gone into the hands of his principal and received his indorsement.

The receipt can be considered as nothing more than an authorization to the Sergeant-at-Arms to collect the money. Although that officer is not named in the receipt or in the certificate, he is the only person who could have collected it. And, though there is an acknowledgment at the foot of the certificate that the member has received the amount thereof, yet the Treasurer knew when that receipt was presented to him that it was not an acknowledgment of payment, but merely a compliance with the rule established by the Department in its dealings with the disbursing officer of the House.

I repudiate the suggestion that Mr. Leedom was my agent. Such a relation exists only by contract. I made no such contract. I did not intrust my receipt to Mr. Leedom. I intrusted it to the Sergeant-at-Arms of this House, as an officer whose duty it was, under the rules of the House and the law of the land, "to keep my accounts and pay me my salary."

I find by Rule II of the last House, which is also a statutory provision, that, among other officers, a Sergeant-at-Arms shall be elected, who shall hold his office until his successor is appointed.

Section 5 of the Constitution of the United States declares:

Each House may determine the rules of its proceedings.

In accordance with this authority, it has established the following rule, which has been in force with very slight variations more than forty years:

RULE IV.

1. It shall be the duty of the Sergeant-at-Arms to attend the House during its sittings, to maintain order under the direction of the Speaker, and, pending the election of a Speaker or Speaker *pro tempore*, under the direction of the Clerk; execute the commands of the House, and all processes issued by authority thereof, directed to him by the Speaker; keep the accounts for the pay and mileage of Members and Delegates, and pay them as provided by law.

* * * * * * *

3. He shall give bond to the United States, with sureties to be approved by the Speaker, in the sum of $50,000, for the faithful disbursement of all moneys intrusted to him by virtue of his office and the proper discharge of the duties thereof, and no member of Congress shall be approved as such surety.

Some gentlemen seem to think that because the bond which was executed by the Sergeant-at-Arms limited his liability and that of his sureties to the salaries of members of the Fiftieth Congress, instead of being conditional, according to the rule, which is the law, that the status of the case is altered, and because the Comptroller of the Treasury has furnished the form of a bond which is invalid the members, and not the Government, must bear the consequence of this negligence. The argument is so purely a quibble that no answer to it seems necessary.

The gentleman from Arkansas [Mr. MCRAE] is kind enough to warn us of the danger we incur in passing this bill. He declares that members of this House have not conducted themselves as prudent business men and says it is hard for members to lose their salaries. I am at a loss to perceive wherein the danger lies, unless, indeed, it be that the House would be disgracing itself, as he intimates, should it pass the bill. Whenever it becomes dangerous for a member to vote according to his convictions on a matter which involves only a question of giving to the members of this House that which rightfully belongs to them under the laws of the land, a seat here will be no longer desirable. I apprehend that it would be no very great hardship for the members to lose the portion of their November salaries which was stolen, because it is only a portion, and therefore no question of the hardship of the case arises.

I deny that the members of this House, in acting on the faith of the rule, which has in my judgment the force and effect of law, have been guilty of imprudence as business men. On the contrary, I maintain that in acting upon that rule they had the right to suppose that a legal bond had been given and that both the Treasurer and the Sergeant-at-Arms would do their duty.

According to the provisions of the rule, the Sergeant-at-Arms should have been under bond for the sum of $50,000, conditioned for the faithful disbursement of all public moneys coming into his hands. It was the duty of the Treasurer to see that this condition was complied with; according to a regulation of the Treasury Department, no amount exceeding the bond of a disbursing officer is ever paid to him at any one time or is left in his hands for disbursement. Had this salutary rule been observed and had the bond exacted of Mr. Leedom been in accordance with the rule of the House, he could not have received more than $50,000 until he showed that he had disbursed all previous payments, and had he defaulted for this sum his bond would have covered it, and neither the members nor the Government would have been losers by the defalcation. The gentleman from Arkansas is only exceeded in his magnanimous generosity by the individual who proposed to sacrifice all his wife's relations in his country's cause.

With an interest at stake, as he says, of only about $60, he reads those who have both greater and less sums involved a lecture on their duty to the Government, and expresses his willingness to stand his loss "like a little man." I could stand mine, which is a trifle, with perfect equanimity, but the question is not what we shall do with our own, but what is our duty to others.

There are members of this House who have allowed large sums to accumulate in the office of the Sergeant-at-Arms. None of this money is gone.

Shall those whose salary for November has been stolen recoup themselves from the money which justly, lawfully, and equitably belongs to their associates? I think the acute sense of official honor which forbids a "recoupment" out of the public Treasury ought to embarrass

the gentlemen when they proceed to prorate the funds of private individuals among themselves.

So far as I am concerned, I should feel disgraced were I to yield to the clamor raised against this bill and vote against what I believe to be an honest and proper payment of members' salaries.

I may add, in conclusion, I have no personal interest in the question at issue, because if the views of its opponents prevail the small balance ($67) which is due me on my November salary was collected by the Sergeant-at-Arms, placed in his safe, and is now in the funds taken charge of by the Treasurer. Had I sought to pose as a political virtuoso I could have done so at a very slight expense, and I do not fear but that my constituents will smile with derision at the supersensitiveness of those members of this House who are afraid to take what is due them because they fear some one will impugn their motives. I do not refer to those who honestly believe that the Sergeant-at-Arms was their private agent, but to those who repudiate any such relation, but declare they prefer to lose their salaries rather than to explain their votes at home.

The Silcott Defalcation.

SPEECH

OF

HON. MARRIOTT BROSIUS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 15, 1890,

On the bill (H. R. 4539) making an appropriation to supply the deficiency occasioned by the defalcation in the office of the late Sergeant-at-Arms.

Mr. BROSIUS said:

Mr. SPEAKER: The course of this discussion has uncovered the main difficulties members encounter in reaching a conclusion upon the matter before us; and as it is a subject upon which there might be some misconception of the motives of members in supporting one or the other of the measures proposed, I desire to avail myself of the permission of the House to place upon record a statement of the views which impel me to support the majority report.

If there was in my mind a doubt upon the question, I would withhold my support, in view of the character and purpose of the bill; but I have a firm conviction of the validity of the arguments which sustain and the entire justice and propriety of the measure. Under these circumstances I feel that my duty is as clear as sunlight and my path as straight as a line.

The views I formed upon a cursory examination have undergone ome modification. The discussion has developed entire agreement among us that there is no statute which in terms charges the Sergeant-at-Arms with the duty of drawing the salaries of members from the Treasury and paying it over to them. The practice in vogue for many years rests solely upon the rules of the House and the usage of the Treasury Department. The only contention developed by the debate is whether under the rules and usages referred to the Sergeant-at-Arms is the agent of the Government or the private messenger of members of the House.

It is entirely obvious that Congress and the Treasury Department have both regarded the Sergeant-at-Arms as a public officer charged with important public functions, among which is the payment of the salaries of members of the House. In 1856 Congress passed an act which not only proceeded upon the assumption that he was the disbursing officer of the Government, through whom alone the members of the House could obtain their salaries, but distinctly recognized him in that character by imposing upon him duties which could only be performed by a disbursing officer, duties utterly at variance with the idea of his being the private agent of members.

The act authorized him to deduct from the monthly pay of members a portion of their salary for every day's absence from their seats. Upon the theory proposed this presents the anomalous spectacle of the Government exercising over the private agent of another a control superior to that of his principal; nullifying his commands to his agent by requiring him to withhold money from his principal which the latter commanded him to pay over. No agency could exist in such a clash of authority. A man can not serve two masters.

That he is a public officer—charged with duties of a public character—and responsible to the United States is further shown by the precautions taken by the latter to protect itself against his official delinquencies. He is required to execute a bond to the United States in the sum of $50,000, conditioned for the faithful performance of his duties. The members are protected by no bond—they have no redress for any losses from his breach of duty. No statute enables them to sue upon the bond to the United States. The duties he performs are necessary means of transacting the business of Government. It is public official business and he is employed by the Government, paid by the Government, and responsible to the Government.

Furthermore, the Constitution provides that members of the House shall receive a compensation for their services, to be ascertained by law, and paid out of the Treasury of the United States. It further provides that the House of Representatives may determine the rules of its proceedings. Under these constitutional provisions the rule of the House requiring the Sergeant-at-Arms to keep the accounts for the pay and mileage of members and pay them as provided by law, acquires the force of law, and as effectually constitutes him a public disbursing officer as if he had been made so by a statute of the United States in express terms. His authority is derived not from individual members, but from the rule which possesses all the potency of public law for the purpose intended. He does not bring our salaries from the Treasury because we individually send him for them, but because the House of Representatives in a constitutional manner imposed that duty upon him. He can not decline to perform the duty. It is not a privilege granted that he may enjoy or not at his option; it is an official duty imposed by constitutional authority.

The House of Representatives is one of the public official agencies for carrying on the Government. It is a familiar principle of law that public officers are not responsible for the delinquencies or misfeasances of those employed under them, if due care has been exercised in the employment of them. The doctrine of *respondeat superior* does not apply to such cases, and if it did few persons would be willing to assume the responsibility of public duties. But the House is more than a public agent; it is a part of a co-ordinate branch of the Government. Its constitutional act, as already observed, possesses the force of law within the scope of its operation.

If we concede, for the purpose of the argument, that the mode of paying salaries of members is derived entirely from the rule of the House, and that the House selects the officer to make the payment, it still remains that his appointment was made by constitutional warrant in a constitutional mode and for a constitutional purpose, and that an individual member who did not even vote for his election can personally share none of the responsibilities of his official delinquencies. As well attempt to hold a member responsible for the consequences of legislation or a judge for the results of his judicial decisions.

The members of the Fifty-first Congress knew nothing of the Sergeant-at-Arms of the Fiftieth Congress. They regarded him as an officer of the Government, authorized to pay them their salaries, possessing the same official character and authority as any other fiscal agent of the Government; that money in his hands for payment of salaries was in Government custody, so much so as in the hands of a clerk in the Treasury Department. We had no agency in his selection; no responsibility therefor; no opportunity to object to or means of preventing.

The inexperienced new members found this official agent of the Government and inquired of him how the Government transmitted our salaries to us, and was informed that the only mode established was through him as a disbursing officer, and that if we desired our salaries paid monthly, as provided by law, we would have to sign blank receipts and leave them with him, one for each month, and when the money was due he would send us a draft. We must sign the receipts or we can not get our salaries. We thus conformed to the established mode of receiving our salaries. The blank receipts were not available for any authorized use until the maturity of the salary, and when the Treasury Department accepted them as vouchers he knew that the money he paid was not due and the payment not warranted by law.

The House in its collective official capacity as a legislative body, acting under warrant of the Constitution, authorized the Sergeant-at-Arms to take my receipt in blank and bring my money from the Treasury, and provided no other means of my getting it. The House has the power, and it is its duty to provide a convenient means of transmitting the salaries to the members, but it has no power to constitute any officer of its choosing the agent of an individual member and compel him to intrust his money in his keeping whether he is trustworthy or not, and take the chances, against his will, of losing it. Had I been a member of the Fiftieth Congress I might have voted against Mr. Leedom, and made every exertion to prevent his election, under the belief that he was not to be trusted. Yet I am compelled to trust him, and make him my personal agent and place my money in his keeping and lose it if he steals it, because a legislative body whose will expressed by a majority of votes has the force of law, chose him as the officer who was to be charged with the duty of disbursing the salaries of Representatives.

Illustration is not needed to unveil the hideous deformity of such a proposition. It is not possible to conceive of injustice more flagrant and cruel, and no honest mind can rest with satisfaction upon the idea of inflicting it upon members of Congress who are not only guilty of no negligence or wrong but are powerless to employ safeguards of any kind or to protect themselves, for they are under a compulsion to conform to the rules of the body to which they belong. If there was any negligence anywhere it was in a former Congress and not in this; and if such a thing was conceivable as the punishment of a collective body of legislators it could not go to the length of punishing this Congress for the delinquencies of its predecessors.

Under these views, which I do not care further to amplify, I can not but regard the withholding of the salaries of members for services ren-

dered, because a public official of the Government, with whose appointment we had nothing to do, stole the money before it reached our hands, as adding another robbery to the one already perpetrated. In this matter we are as innocent and blameless as a saint, and in the hands of the Government we ought to be as safe as an angel in the court of heaven. But there being a deficiency, the money can only be made available for our payment by an appropriation bill. The report of the majority of the committee therefore presents the only possible mode of securing the salaries due us; we have no alternative but to vote for it.

Mortgage Indebtedness.

SPEECH

OF

HON. JOSEPH D. TAYLOR

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 15, 1890,

On the bill (S. 1181) to require the Superintendent of Census to ascertain the number of people who own farms and homes, and the amount of mortgage indebtedness thereon.

Mr. JOSEPH D. TAYLOR, said:

Mr. SPEAKER: This bill had its origin in numerous requests and resolutions from farmers, laborers, and farmers' associations of various kinds, sent to the Senate and House of Representatives, asking that this information be ascertained in connection with the taking of the Eleventh Census.

The Senate bill now under consideration is the result of a conference between the Census Committee and the Superintendent of the Census. In the first place it was thought that this information could be obtained through the enumerators of the census in connection with the population schedule at an expense of $200,000 or $300,000. It was shown by the Superintendent of the Census that this method would be unwise and unreliable, and would delay the taking of the census, and render it, when taken, less valuable.

In the first place it was shown that the enumerator only sees one out of five or six of the persons who could answer questions pertaining to indebtedness, mortgage liens, and titles of this kind, and could not gather trustworthy statistics of this character. In the next place if the head of a family were seen he might regard such questions as inquisitorial and refuse to answer them, and if the wife or son or daughter were seen they might not know, as a matter of fact, whether the property were mortgaged or not, and if mortgaged they might not know for what sum or for what purpose.

It being the intention of the Superintendent of the Census to ascertain the population accurately and quickly and to publish this information at the earliest possible date, it was agreed on all hands that this method be abandoned, and that the Superintendent be authorized to get this information in his own way, and an appropriation of a million dollars is made in this bill for this purpose.

This matter was given a great deal of time and consideration in the Senate. The first report of the Census Committee, which was really a report in relation to the first plan named, was adverse. The matter was re-referred to the committee, and a bill in substance the same as the one now under consideration was reported to the Senate, and it passed with only a few dissenting votes.

The Senate was unwilling to endanger or delay the taking of the census, as provided in the law which passed the last Congress, but the members on both sides, in the main, agreed that this information ought to be gathered in some other way, even if it does cost a large sum of money. And it should be remembered by the friends of this measure, and it has been mainly urged by the Democratic side of this House, by whom all of the bills have been introduced, I believe, that it may cost over a million dollars. The Superintendent of the Census gives it as his opinion that it will cost more rather than less.

It is well that the House and the country understand what the passage of this bill means. The law passed by the last Congress, under which the Eleventh Census is now being taken, provides that the indebtedness of the country shall be taken by counties, that the recorded indebtedness, as shown by the records in each county, shall be ascertained, the indebtedness of corporations and individuals to be separately taken. The objection to this method is that the records are unreliable, as very many of the mortgage debts have been paid, in part or in whole, and nothing in the records shows this.

This objection, however, has been largely overcome, and this method of taking the records as a guide has been made more valuable by a test adopted by the Superintendent of the Census. This test consists of the appointment of three skilled experts, who have gone to four remote parts of the country and taken the indebtedness as shown by the records in a county in each locality, with a list of the debtors and creditors, and then by visiting the debtors and creditors ascertained the actual amount remaining unpaid on each mortgage of record. Or, in other words, the Superintendent of the Census has done already in four counties, selected in different States and in different parts of the country, just what this law requires to be done in all the counties of all the States in the Union.

In this way the ratio between the recorded indebtedness and the actual indebtedness is ascertained. This was done in order to show, as nearly as possible, the actual indebtedness of the whole country under the law now in force; and I understand that the ratio ascertained by this method is nearly the same in each of the four counties chosen as a test. It was supposed by the Superintendent of the Census that this estimate would give to the country all the information necessary, and I do not know why this plan is not satisfactory.

It seems, however, that the people, or many of them, insist on a house-to-house canvass, which will extend to all of the thirteen million farms and homes in the United States, where it is to be ascertained whether the occupant is the real owner or a tenant, whether the premises are mortgaged or not, and, if mortgaged, for how much and for what purpose, the rate of interest paid, etc. This is an immense inquiry. It involves an inquiry into the financial condition of every home in this country.

How much these inquiries may infringe upon the personal liberty of the American people I shall not attempt to discuss. There will probably be some objection to these inquiries by the very people who now ask for the passage of this act. Some men will not care to make public their private affairs or impair their credit by what they may regard as unnecessary disclosures. Be this as it may, the determination to pass this bill seems to be a foregone conclusion, and I do not feel like opposing a measure which the people so urgently demand, even if my judgment should be against it.

All I propose to do is to explain somewhat this measure. Having been the chairman of a subcommittee to whom were referred all of these bills on this subject, as well as the petitions, memorials, resolutions, etc., I am familiar with the facts which surround this proposed bill, which only lacks the consent of this House to become a law.

I will call the attention of the House to the following letter from the Superintendent of the Census, showing the impropriety and impossibility of obtaining this information from the enumerators of the census while taking the enumeration and gathering certain facts under the present law, and also his estimate of the expense of this method in case it were adopted:

DEPARTMENT OF THE INTERIOR, CENSUS OFFICE,
Washington, January 22, 1890.

MY DEAR SIR: In estimating the cost of ascertaining the mortgage debt on farms through the census enumerator, as requested by you yesterday, I presume it would be fair to assume that there will be returned in June next something like 7,000,000 farms. There were in 1880 a trifle more than 4,000,000 farms, representing an increase in number, as compared with 1870, of 50 per cent. Applying the same percentage of increase to the number returned in 1880, there would be, on this basis, something more than 6,000,000 farms in 1890. The immigration during the decade has been very large, however, and it is reasonable to suppose that there will be actually returned very close to 7,000,000 farms.

If the enumerator was allowed additional compensation at the rate of 5 cents for each farm, for obtaining the data concerning mortgage debt, the cost would be at least $350,000.

It is not a question of cost, however, nor, indeed, of providing extra compensation for the enumerator, but rather as to the effect that such a line of inquiry would have on the general work of enumeration. The inquiries to be made would relate to the fact of mortgage, the amount of mortgage debt at present, the reason for making the mortgage, and the rates of interest paid. These questions would be asked in connection with the ownership or rentals of farms, and naturally would be among the first inquiries made by the enumerator. The antagonism and opposition which would be thus created in the mind of the farmer interrogated would operate seriously against securing by this means accurate information.

Another reason why the farmer would object, if not refuse absolutely, to supply this data is contained in the fact that he would be called upon to expose his financial condition to the enumerator, who is a local man and presumably known to every farmer in his enumeration district.

Furthermore, of the whole number of farms in the United States returned in 1880, fully one-fourth were rented, while in some of the States, notably South Carolina, Georgia, Alabama, and Mississippi, almost one-half of the farms were rented. So that the visit of the enumerator to the tenant farmer would not reveal the true condition of affairs so far as one-fourth of the farms in the United States are concerned. In very many cases the owners of the farms would be non-residents, and the statement could not be secured from him by the enumerator. If we assume that of the remainder, that is, those owning farms, at least one-third would refuse to give the information, it will be seen that any statement concerning farm mortgages gathered by the census enumerator would represent scarcely 50 per cent of the total farms in the country.

Very respectfully,

ROBERT P. PORTER,
Superintendent of Census.

Hon. JOSEPH D. TAYLOR,
House of Representatives.

The question, and the only question, which seems to influence some of the members of the Senate and House in supporting this measure is the urgent demand for it. Most of the members of both Houses have received resolutions, memorials, and requests from individuals, organizations, and societies of different kinds. Aside from the importunities and requests sent to the Senate and aside from those coming to members, I will present the following list of those referred to our committee:

Petitions and resolutions asking that the next census show percentage of farms clear of incumbrance, and mortgaged, and occupied by owners.

Alabama: Resolution of Calvary Alliance, No. 12; petition of 21 citizens of DeKalb County.

Illinois: Memorial of Knights of Labor, 852, Chicago; memorial of Board of Trade, Chicago; memorial of York Lodge, No. 953, F. M. B. A.; memorial of Amity Lodge, No. 257, F. M. B. A.
Indiana: Twenty citizens of Indiana.
Kansas: Resolution of Alliance No. 25, Cowley County; resolution of Alliance No. 7, Kansas City.
Kentucky: Petition of 125 citizens of Louisville, Ky.; petition of 44 citizens, Knights of Labor; resolution of Logan County Wheel, 1,800 members.
Louisiana: Petition of 206 citizens of East Baton Rouge, La.; resolution of Crescent Local Assembly 2049.
Maine: Petition of assembly of Knights of Labor, Bath.
Massachusetts: Resolution of Assembly No. 7189, Knights of Labor, North Leominster.
Missouri: Resolution of Excelsior Wheel, No. 1048; resolution of Agricultural Wheel, No. 1611, Cedar County; petition of 42 citizens, State of Missouri; Resolution of Doylsport Farmers' Alliance.
Michigan: Resolution of Marathon Association of Patrons of Industry.
New Jersey: Resolution of Local Assembly Knights of Labor, No. 5578; petition of 44 names, Williamstown; petition and resolution of Farmers and Laborers' Union; committee Labor Association, No. 1281, Vineland.
New York: Resolution of Lodge No. 5660, Knights of Labor, Fort Edward; petition of 52 members of Local Assembly, No. 5945, Knights of Labor; petition of Waverly Assembly, No. 4966, Knights of Labor, Waverly; petition of Barnett Grange, No. 577; petition of 38 different assemblies Knights of Labor, New York; memorial of Northern New York Protective Association; petition of Coleville Grange, No. 518; petition of Knights of Labor of Oswego District Assembly, No 44.
North Carolina: Petition of Rich Fork Alliance, No. 1127.
North Dakota: Resolution of mass-meeting of farmers of Walsh County.
Ohio: Memorial Local Assemblies No. 120 and No. 6172, Knights of Labor; memorial Local Assembly No. 5143, Knights of Labor, Galion; resolution of Local Assembly No. 5853, Knights of Labor, Napoleon; petition of River City Assembly, Knights of Labor, Madeira.
Pennsylvania: Resolution of Local Assembly, Division No. 27, Knights of Labor.
South Dakota: Petition of Highland Alliance, South Dakota.
Tennessee: Resolution of Georgetown Farmers' and Laborers' Union; resolution of McMorin County Farmers' and Laborers' Union; resolution of Riverside Farmers' and Laborers' Union; resolution of New Warren County Farmers' and Laborers' Union; petition of 13 farmers and laborers of subdivision No. 168, Benton County; petition of 45 farmers of Talbott, Tenn.; resolution of Farmers' and Laborers' Union, Howardsville; petition of Agricultural Wheel, Madison County; petition of Farmers' and Laborers' Union No. 466, McNairy County; resolution of Farmers' and Laborers' Union No. 387, Gibson County; resolution of Farmers' and Laborers' Union No. 276, Obin County; resolution of Farmers' and Laborers' Union No. 1178, Obion County; resolutions of Farmers' and Laborers' Union of Haywood County; resolution of Farmers' and Laborers Union, Double Bridges; resolution of Farmers' and Laborers' Union, Loudon County; resolution of Farmers' and Laborers' Union, Double Springs, No. 740.
Texas: Resolution of Llano County Alliance, Texas; resolution of Kendal County Farmers' Alliance, Texas; resolution of McCulloch County Farmers' Alliance, Texas; petition of 73 citizens of Palo Pinto County, Texas; petition of Assembly 2969, Knights of Labor, of Gainesville, Tex.
Virginia: Petition of Farmers' Alliance, Fauquier County, Virginia.
Wisconsin: Petition of farmers and laborers of Oconto County, Wisconsin; resolution of Dells Assembly, Knights of Labor, Eau Claire, Wis.
Minnesota: Petitions of 119 citizens, 63 citizens, and 101 citizens of Rochester and vicinity.

These memorials, coming as they do from the farmers all over the country, and from Knights of Labor, and from Farmers' Alliances and farmers' clubs, and from labor organizations, can not be denied favorable consideration, and if the law of March 1, 1889, the law passed by the last Congress, is not satisfactory to them, this law ought to pass; but I do not see, I must confess, what good its passage will do.

Agriculture is everywhere depressed, and farms and farmers are suffering the consequences of a great wrong not to be found, in my judgment, by this inquiry. The reduction of the duties on wool and woolen goods made of American wool in 1883 is the principal cause of the present depression in agriculture. From that time to this agriculture has gone down and down, pasture land has been turned into plow land, the wool industry has given way to corn and wheat and cattle, and prices have grown less and less, until we are now realizing the depth of our folly in importing wool that we ought to grow and woolen goods that we ought to make. Scarcity of money in the rural districts can only be accounted for by the fact that we are now sending out of the country annually $240,000,000 of money for wool, woolen goods, glass, iron, steel, and other articles which ought to be furnished by our own country and our own people.

Mortgage Indebtedness.

SPEECH
OF
HON. JOHN A. PICKLER,
OF SOUTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 15, 1890,

On the bill (S. 1181) to require the Superintendent of Census to ascertain the number of people who own farms and homes, and the amount of mortgage indebtedness thereon.

Mr. PICKLER said:

Mr. SPEAKER: I am in favor of this bill. It is asked for by the farmers and by the farmers' organizations, by laborers and by the mechanics of this country, and I know no reason why this request should not be heeded. There is a growing feeling in this country to squarely meet this question of the mortgages and incumbrances upon the homes of the people.

There is a very strong feeling of dissatisfaction and unrest among the producing classes, a feeling that the agricultural and producing classes of this country are not deriving the legitimate results of their labor. They behold the corporations and trusts of the country prosperous and growing rich with fabulous rapidity, while the producer is unable to hold his own, and is compelled to mortgage his home and encumber the roof over the heads of his wife and children to meet his present necessity.

He desires to know the weight of this incubus, the danger of this indebtedness that hovers over his land and his home and that threatens with its high rate of interest to ruin him and his family and pass title to his possessions into the hands of the money loaner and leave him penniless. He desires to ascertain the grasp of this debt, that he may if possible devise means of discharging it, as well as to trace the general features of its cause and origin.

It is claimed on this floor that this is useless; that the men who are demanding it do not know what they are asking or what they want. I deny this proposition, Mr. Speaker.

I have the honor to represent a constituency very largely agricultural, men who have dared to brave the hardships and privations of a new country, who have had the courage to forego the comforts and advantages of the older countries, to acquire homes for themselves and children in the great West. No more industrious, intelligent, and progressive people are found anywhere. They are fully competent to determine what they want, and they are a thinking people, and are determined to ascertain, if possible, the cause of the great depression of the producing interests of the country, that they may devise some means of relief.

They believe the millions of indebtedness, with its great drain of yearly interest, is intimately connected with the future welfare of themselves and families, and realizing that they must face the situation they desire to do so in an intelligent manner. They believe that the transportation companies, the money-loaners, the combinations and trusts of this country, are amassing fortunes at their expense, and they are organizing and determined, as American citizens and freemen, that they will not quietly longer submit to such injustice.

And further, Mr. Speaker, they believe that the information that will be obtained by the provisions of this bill will tend in the direction of their inquiry as to their surrounding conditions and will be thus beneficial.

In this, Mr. Speaker, I believe they are right. I am for the bill.

Code of Rules.

SPEECH
OF
HON. WM. C. P. BRECKINRIDGE,
OF KENTUCKY,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1890,

On the report (No. 23) of the Committee on Rules.

Mr. BRECKINRIDGE said:

Mr. SPEAKER: Under the peculiar circumstances which surround this discussion, by which the introduction of this code of rules was preceded, and which have marked the entire proceedings of the House up to this point, I feel that it is proper to put on record some of the reasons I have for my earnest opposition to those parts of this code which are entirely revolutionary, which I am firmly convinced are unconstitutional, and which reverse the practice of the House during its entire history.

The tendency for many years has been to render this House less and less a deliberative body, to diminish constantly the importance of the individual Representative, to make the debates on this floor less important, and to turn over the real power of legislation to the respective committees to which are assigned the different branches of legislative duty. This is an unfortunate tendency and necessarily lowers both the dignity and influence of the House. It makes the House the mere follower, and not the leader, of public opinion. It transfers the true responsibility of action from the publicity of the floor to the privacy of the committee-room, and gives advantage to every form of doubtful approach possible to the individual member.

This proposed code greatly intensifies this tendency. In almost every change reported by the Committee on Rules, the publicity of the House, the value of debate, the action of the individual Representative, give way to the power of the Speaker in his room and to the committees on the floor. For example, an individual Representative, under clause 3, Rule XXII, must obtain unanimous consent to correct the erroneous reference of a bill, while a committee claiming jurisdiction can do it by a simple majority on motion; by clause 1 of Rule XXVIII,

it requires only a majority to suspend the rules to fix a day for the consideration of a bill or resolution favorably reported by a committee; and by clause 5 of Rule XXIV, it is only when authorized by a committee that it is in order to move to go into the Committee of the Whole to consider a particular bill.

These are merely illustrations of the carefulness with which this proposed code has been constructed to give to the Speaker and the committees the power of legislation, and to deprive the individual member, so far as it may be possible, of the power to interpose and affect the order or current of legislation. This is still more forcibly illustrated in the change which gives to the Committee of the Whole the power to limit debate, and to limit it with a rule so narrow as practically to prevent debate when the committee so desires. I think it unwise to intensify this tendency. It lowers the dignity of this House and gives to the Senate increased power and dignity.

For the last quarter of a century, except on great occasions when there have been great debates, there has been a sensible decay of the esteem in which the lower House has been held by the people, and an increase of the esteem in which the Senate is held, until to-day it is considered a most decided promotion to be transferred from this Chamber to the other wing of the Capitol. It is not the longer term of service, nor the greater ability, nor the larger experience, but it is that the Senate is really a deliberative body, where debate is encouraged, where popular opinion is created, where time is given for the consideration of public measures, and where the individual Senator is really superior to the committees of which he is a member.

Another preliminary and general observation I desire to submit is, that the proposed code is based upon the conception that it is the duty of the House to "facilitate business," and to "facilitate business" is considered to be solely the passage of measures, when in truth an important function of a great representative body is to refuse to affirmatively act upon proposed measures. It has been found, after a hundred years of experience, that to reject rather than to pass proposed legislation is the part of wisdom. In the Fiftieth Congress somewhere near fifteen thousand bills were introduced; of these somewhat over eighteen hundred became laws. The rejection of 88 per cent. of these proposed bills, taken as one act, was much wiser than the passage of one-fifth of them would have been.

Deliberation, caution in consideration, slowness in reaching a consummation, are among the very highest qualities of a representative legislature; and the rules which permit this to be done are necessary to the wise transaction of business; and all rules which prevent it must work harm. Of course, with the power of appropriation, and with the higher power of levying taxes, there must be such rules as will enable Congress to pass the necessary appropriations for the proper maintenance of the machinery of government; and all the codes which have been adopted by this House since its inauguration a century ago have facilitated the introduction, preparation, and passage of revenue and appropriation bills. There never has been a code under which a majority of the House did not have full power to do this.

As to all other business, except in rare emergencies, there is no necessity for haste, but there is often great occasion for caution and delay. These rules, as far as it is possible, prevent that caution and delay whenever the Speaker and a bare majority desire hasty action.

Now, rules are never imposed for the purpose of giving the majority power. It has that power inherently and necessarily, and a code of rules must be a limitation upon its exercise. Rules are for the protection of minorities, not solely because the individual Representative may have rights which ought to be protected, but because he represents directly constituencies, and, indirectly, all the States, which have rights, and which constituencies are entitled to be heard through him, and by his action influence the legislation which is to affect their prosperity and happiness. We do not speak nor act for ourselves on this floor. The rights which we claim are not personal to us. They are official, belonging to us in our representative capacity, and are for the benefit of our respective constituencies, and therefore necessarily in part for the entire body of the people. This code is based upon the idea that the minority has no parliamentary rights, and that the rules have for their object no other purpose than to enable the majority to do as it pleases, when it pleases, and as rapidly as it pleases.

If the majority were always the same, composed always of the same Representatives, and therefore each always responsible for his part of every vote, this might be tolerable, because the country could then ascertain with certainty the identical Representatives who have passed the measures under which it must live; but the majority and minority are constantly fluctuating, very rarely, except on partisan questions, composed of the same Representatives. The line of division is more often horizontal in this Chamber than down the main aisle; and this code therefore constantly renders obscure the identity of that particular majority who may be responsible for any particular measure.

But there are three alterations in the proposed code which are radical, and upon each of which I desire to comment.

CONSTITUTIONAL QUORUM.

The controversy which for the past few weeks has attracted the attention of the country, between the Speaker of the House and the Democratic Representatives, grew out of his claim that he, by virtue of his office as Speaker, and without any rule of the House, had the constitutional power to have noted upon the Journal of the House the names of enough silent members on a yea-and-nay vote to make with those who voted on that roll-call 166 Representatives, and thereby create "a quorum to do business."

This is not a question of parliamentary law, but it is a contest over the proper construction of the provisions of the Constitution, and it necessarily is twofold—first, as to the power of the Speaker as Speaker to count a quorum, even if the Constitution would permit a quorum to be counted, on the call of the yeas and nays except by the roll; and, secondly, whether the number as shown by that roll-call was not under the Constitution exclusive and conclusive of the presence of "a quorum to do business." The report of the committee proposing by clause 3 of Rule XV to confer this power upon the Speaker, in common with any member, may be construed into an admission by the majority that the exercise of that power by the Speaker was without warrant, for otherwise it need not to have been granted by the House.

When the Constitution was adopted its framers were entirely familiar with the constitution and proceedings of Parliament, and with the constitution and proceedings of various legislative bodies in this country; and they put into the Constitution certain provisions, irrepealable save by a change in the Constitution, to govern the House. These provisions must be construed in the light of the evils which were to be remedied, as well as in the light of the objects for which they were inserted. A number smaller than a majority of the members of Parliament was a quorum sufficient to do business. There was a mode by which the Speaker of the House of Commons could ascertain whether a quorum was present, and there were parliamentary modes of taking a vote.

Now, the Constitution, in the light of these facts, requires:

1. * * * A majority of each [House of Congress] shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner, and under such penalties as each House may provide.

2. Each House may determine the rules of its proceedings, punish its members for disorderly behavior, and, with the concurrence of two-thirds, expel a member.

3. Each House shall keep a Journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either House on any question shall, at the desire of one-fifth of those present, be entered on the Journal.

* * * * * * *

2. Every bill which shall have passed the House of Representatives and the Senate shall, before it become a law, be presented to the President of the United States; if he approve he shall sign it, but if not he shall return it, with his objections, to that House in which it shall have originated, who shall enter the objections at large on their Journal and proceed to reconsider it. If after such reconsideration two-thirds of that House shall agree to pass the bill it shall be sent, together with the objections, to the other House, by which it shall likewise be reconsidered; and if approved by two-thirds of that House it shall become a law. But in all such cases the votes of both Houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the Journal of each House respectively.

As the duty to keep a Journal is devolved upon each House, and as the Clerk is the officer of the House in the performance of that duty, it seemed perfectly clear that the Speaker, who is the servant of the House, had no right to have entered upon that Journal any fact of any nature, nor to give to the Clerk any order for him to make such entry, except by the order of the House, and that any attempt of any Speaker to do this was an usurpation of authority. I believe it is wholly unprecedented.

The Speaker, in the presence of the House, acting by the implied consent of the House, with the recognized power of the House to prevent his action, has no doubt from the very beginning of Congressional practice given directions to the Clerk to make entries upon the Journal, but this was always done under the rules of the House, with the implied consent of the House, and with the recognized power of the House to stop it at its will. It was never assumed that the Speaker, by mere virtue of his office, could put any entry onto the Journal; and in this entire discussion no precedent in either House of Congress has been found to give even a color of justification to such an assumption.

The verity of the Journal is assumed by all the courts. It, and it alone, is evidence of what occurs on this floor. It, and it alone, is evidence of what this House does. Its narration is conclusive after it has been approved, and therefore to preserve its verity and to maintain its purity is of the very highest importance to the certainty of our legislation and to the stability of our proceedings. It has not been an idle controversy over mere words. It goes to the very nature of the evidence upon which the rights established by our legislation are based.

"To do business" requires that "a majority of the House" shall "constitute" the body acting, which the Constitution calls "a quorum." The mode in which that business is done when that quorum comes to act is by voting. When it votes by voice or by tellers the presumption is that the silent acquiesce with the voting majority, and that in their seats are the elected Representatives of the people, for it is their duty to be present, and the presumption is that each is performing his duty; and therefore all business done by a vote by mere sound or by tellers is conclusively presumed to be with the consent and acquiescence of all who have not voted in the negative.

Under this rule any member can enter a motion to reconsider, because he is presumed to have voted with the majority. But it was given to

one-fifth of those present to require that that business should be done; that is, that the solemn act of enacting a bill or adopting a motion by voting, which is the only mode in which this can be done, should be done by having those votes recorded in the Journal, and having the fact that a quorum was actually "doing business" made manifest by a roll-call, and whenever this one-fifth present made this demand, instantly it became the duty of the House to "do business" by that roll-call, and by the most familiar rule that evidence became exclusive and conclusive. Whatever that roll-call showed, and only what that roll-call showed, could become part of either the act of doing business or of the Journal which narrated the transaction.

There can be no rule more firmly established than that when the Constitution or statute requires a certain fact to be proven in a certain mode, it can be shown only in that mode and by that evidence. It would be an insult to the intelligence of this House to quote authorities. The Journal alone testifies as to our transactions here; the mandatory roll-call alone reveals who is present to "do" that precise "business."

To it no one can add, nor from it subtract; it speaks by order of the Constitution, and when it demonstrates that a quorum is present doing "business," that "business" is done; if it demonstrates that a quorum did not "do business"—that precise, identical "business"—then the vote is a nullity, and the House has full power to continue its sessions and compel "the majority" to attend. This is the constitutional limit to the power granted, and wisely, for a measure which can not receive the voluntary and concurrent vote of a majority of the Representatives ought not to pass.

This construction is conclusive on the face of the Constitution itself; and if it were an entirely new proposition I would feel no hesitancy as to the proper construction of these provisions. No power is given by these provisions to ascertain who is present save by that roll-call. And the duty of ascertaining by the roll-call the presence of a "quorum to do business," at the desire of one-fifth of those present, under section 5 of Article I, is as absolutely mandatory as the ascertainment under clause 2 of section 7, that two-thirds of each House have voted by the ayes and noes before the veto of the President can be overruled.

But this construction was put upon these provisions of the Constitution by those who made it. The rules which have governed this House upon this matter during fifty Congresses were in substance those adopted by the first Congress, composed largely of members of the constitutional convention. Mr. Alexander H. Stephens, on January 28, 1880, when this same general matter was under discussion, said: "The rule as reported by the committee is as it was made by the founders of our Government." That rule upon which Mr. Stephens was commenting is substantially the rule that was in the code of the last Congress, and is diametrically hostile to that reported by the committee of the present Congress. He adds:

> The Constitution has been in existence for over three-quarters of a century, and the Government carried on all the time under this rule as reported, and without the proposed amendment. * * * That rule has been the rule of this House, I think, since the first Congress. There have been divers attempts to amend it to make members vote whether they will or not. * * * I think we had better leave it just as we find it.

This is undoubtedly stated with historical accuracy. The proposition of law that the contemporaneous construction of a constitutional provision and afterwards long acquiesced in will be held to be the proper construction, is familiar and undoubted. There is no better established principle than that the courts will follow that construction which was placed upon a constitutional provision by those who made it and who had to perform official duties under it. And under these provisions both Houses of Congress acted. The First Congress, in the Senate and the House, united in what was meant, and fifty subsequent Congresses in both Houses have concurred in that construction.

It can not, therefore, be complained of with any sense of justice when we who adhere to that construction contend that its sudden and absolutely unprecedented repudiation is revolutionary. If our contention is well founded, this House by rule has no greater power to have a quorum counted by the Speaker or Clerk or the House itself than the Speaker had without rules. The rule can not confer the power upon anybody if the Constitution prohibits the exercise of it.

It is no answer to respond that there have been in some houses of the State Legislatures an occasional revolt against these constitutional restraints. These few and generally violent exceptions to an almost universal observance for a century demonstrate the power, universality, and general acceptance of the rule we contend for. Nor does a dictum in an occasional decision on the construction of some statute of a State conferring powers and imposing duties on municipal councils or village trustees palliate the sudden repudiation in Congress of the unbroken action of both Houses of Congress.

These particular provisions affect these Houses alone; primarily they and they alone can practically construe them; they and they alone can act under them. Their construction for a century is final, conclusive, and obligatory on us and these bodies. And if eminent names, illustrious services and great learning can add strength to the conclusiveness of this argument, surely the Vice-Presidents and Speakers who have presided over these Houses, and the Senators and Representatives who have deliberated in these Houses, give sanctity to the rule, and they who lightly discard their united consensus of opinion on so grave a matter must expect comparisons to be made between these predecessors and themselves.

These constitutional provisions cast upon the elected majority of each House the responsibility of "doing business." It changed the mere presumption of law, that those present and silent acquiesced with the majority, and compelled each member of the House present at the time the roll was called to elect to vote on the measure or to testify by his silence that he was not willing to aid its passage even by voting against it. It was under this provision, the province of the individual member as it might indeed be his highest duty to resist the passage of an iniquitous bill by putting upon the majority the duty of being present in the Chamber and accepting the responsibility of the act.

DISTINCTION BETWEEN DILATORY MOTIONS AND REFUSAL TO VOTE.

There is a generic and radical difference between the exercise of the constitutional right to be silent and compel the majority to act and take the responsibility therefor, and the parliamentary right under a code of rules to affirmatively act and thereby prevent the majority from acting. "Filibustering" by virtue of dilatory motions is an affirmative and aggressive act by which obstacles are put in the way of the majority and that majority prevented from acting. This may be or may not be a proper proceeding. It may or may not have been carried to excess; but this is not like unto the constitutional right of the minority to be silent, by which no obstacle is thrown in the path of the majority; but, on the contrary, that majority instead of being prevented from acting, is compelled to act.

This distinction has been carefully covered up and ingeniously obscured here, that the public sentiment might not distinguish between the parliamentary filibustering under a code of rules, and the constitutional silence permitted by the provisions which I have quoted. Under the Constitution a bill can be passed by a majority, and it may be within the power of a certain minority to require all the majority to assume responsibility for the measure. This is a most valuable right, valuable to the Government, safe to its Treasury, and profitable to the people.

When the majority consists of 169 Representatives belonging to one party, and the caucus of that majority, being therefore only 85, determines that a measrue shall be adopted, there may be Representatives belonging to the majority whose character is such that they are not willing to jeopard it by voting for such measure, and yet from ambitious or other motives they are not willing to openly revolt against the caucus decree.

Now, under the Constitution it is in the power of the minority, if it consists of 160 or 161, to compel 166 of those Representatives to take the responsibility, each man for himself, of affirmatively indorsing by his solemn and recorded vote that measure, or of preventing its passage by refusing to obey the party decree in caucus. The construction contended for by the Republican majority of this House enables a number of such Republican Representatives to preserve their party standing, and yet also keep within them a fairly good conscience, by merely absenting themselves when the vote comes on; and then gives the power to the Speaker to compel a certain number of Democratic Representatives to consummate the devious and possibly iniquitous work which these absented Republicans can not find it in their consciences to do for themselves, by merely counting them as present, declaring that a constitutional quorum to "do business" is in the Hall, and declaring that the measure for which these absent Republicans will not vote has been enacted.

It will not do to say that the majority can not be presumed to pass that which is improper or iniquitous, for in times of party excitement measures of more than doubtful character have been passed in the Congresses of the past, and measures of doubtful character have been prevented from being passed by dilatory proceedings or by the refusal of a minority to vote. And during this very controversy we have witnessed the remarkable spectacle of the leading Republicans, men of conspicuous position and of national reputation, suddenly proclaiming that the constitutional views which they have held until past middle life and the Congressional acts which have marked their career during protracted and brilliant Congressional life have been erroneous, improper, unworthy, and when this is done in the face of the nation surely it is not overstepping the limits of the strictest parliamentary courtesy to deplore the removal of that barrier which the Constitution interposed to prevent the enactment of measures which could not receive the recorded votes of a majority of the Representatives elected to this House.

There can arise no harm of a permanent nature from this construction of the Constitution. All that can result is a comparatively short delay or the failure to pass a bill because it can not receive the votes of a majority of the House. This was so well stated by General HAWLEY that I quote from the debate in the Forty-sixth Congress:

> Now, the evil, if there be one, in the existing system, that of which gentlemen complain, is simply this, that we of the minority claim a right by sitting silent to prevent less than a majority of the members elected from passing a bill. The worst that can be done by a factious minority, if that be the term applied to it, is to fight until the actual majority of the members elected shall pass the bill.
>
> When they are present, that friendly majority constitute a quorum of themselves. They do not require the assistance of the minority. They run the House themselves, and pass their bills. In case of what you call factious resistance, we drive them only to that. * * * Now, we are causing no hardship

whatever in taking the ground we do against this new rule, and I think we do no serious wrong to the country at any time when we sit in our seats and decline to vote. If the majority desires to have a bill passed in opposition to our wishes, then let the majority come here and pass it over our heads. At any rate, I decline to be answerable to anybody but my constituents if I sit in my seat and decline to vote. I hold myself responsible to them and to the Constitution alone.

And this has been made the rule by the constitutions of a majority of the States of this Union, if I am correctly informed, among them the great States of Pennsylvania and Illinois, together with other States in every part of the country. It is the prevailing tendency of the popular thought that no legislation ought to be accomplished which can not receive and which does not receive the recorded approval of a majority of the law-makers. It is a wise provision, and its destruction can not be in the interest of good government.

COMMITTEE OF THE WHOLE HOUSE.

The proposed rule which makes a quorum of the Committee of the Whole House consist of a hundred members is, if possible, even more dangerous, and is equally unconstitutional. This view has been so well presented by the gentleman from Georgia [Mr. BLOUNT] that it is unnecessary to make a further argument upon it, but it will not be improper to say that the contention that the whole House, which by the Constitution can not "do business" unless a majority of its members participate therein, can by a simple rule adopted by itself change itself from the House to a committee, and by that mere change of name and some change in the mere rules of procedure become enabled to transact business with a hundred members.

It is mere splitting at straws and haggling over words to say that what is done in the Committee of the Whole is not "to do business," in the constitutional sense of those words. The business done is of the very highest importance. The amendments passed upon, accepted, or rejected, practically commit the House to the gravest and most important legislation. Vast sums of money are taken from the public Treasury by the action of that committee. The rights of the citizen, the duties of public officers, the course of public business are settled in that committee. That committee is the House; the House is that committee. When the House is in session, that committee can not sit; the House may give permission to all other committees to sit during its sittings, but in the very nature of the case it is impossible for the House to give to the Committee of the Whole House permission to sit while it is in session. If the House adjourns, the committee can not sit. If the House is in recess, the committee can not sit.

By the action of a quorum of the House, that House then present resolves itself into the Committee of the Whole. It does not cease to be the House; it does not adjourn; it does not take recess; it does not dissolve. It simply, for parliamentary purposes, under parliamentary rules which by the Constitution the House has the power to adopt—it passes from the forms of procedure adopted for the government of the House, sitting as the House, to those adopted for the House sitting as a Committee of the Whole. This committee when it rises necessarily resolves itself into the House without any other action; without any action of any sort, *co instanti*, by the very act of the committee rising, the House as a House is in session.

Now, it does seem to a plain man that it is absurd to say that it is mandatory upon the House to have 166 Representatives to resolve itself into the Committtee of the Whole, that it takes 166 Representatives to constitute the House into which the Committee of the Whole resolves itself by virtue of its rising, but that in the interim the same House by merely calling itself the "Committee of the Whole" can "do business" with less than one-third of the elected Representatives of the people. This Committee of the Whole House, in the English House of Commons, and in our country, has been the great protection of the tax-payers of the country.

In these committees, constituted of the members elected to the different bodies, have been discussed and settled what shall be the revenues which the Empire of Great Britain and the imperial Republic of the United States may have, what taxes shall be levied upon the labor of the respective countries, and what functions shall be granted to those to whom these revenues are given. Here the representatives of the people were given the very widest latitude of debate and the wider latitude of amendment. The forms of procedure by which this latitude was guarantied did not make this committee a different body from the House whose members composed it, but simply took from them some of those trammels of parliamentary law which it has been supposed were necessary for the transaction of the more formal and agreed-upon motions passed upon by the House.

In this committee are perfected the bills; here the real work of economy, of frugality, of impartial distribution of burdens, is done; here jobs are throttled or exposed; schemes skillfully concealed in the midst of sections are brought to light, and in that light die. All this is changed by this rule, and changed not towards greater caution, more careful deliberation, wider debate, more anxious scrutiny, but to ill-considered haste, to the easy accomplishment of precedent arrangements, to the more pliant adoption of doubtful measures, to the curtailment of troublesome debate and annoying interrogatory by which well-devised schemes might be defeated.

With the power to substantially stifle debate, to render possible log-rolling by combination between various schemes, the ease of preserving so small a quorum under such a combination, this new creature misnamed the Committee of the Whole House will become the most potent and, I respectfully predict, the most dangerous factor in legislation. With such a Committee of the Whole and the power to count a quorum this House enters upon a new era of legislation. The experiment begins with the new century of Congressional government. The practice of a hundred years, adhered to by fifty Congresses, gives place to these two new rules; and I content myself with leaving to the future to write the history of the experiment upon which we are entering.

DILATORY MOTIONS.

As to that part of the proposed code which is parliamentary rather than constitutional, I have but a single additional suggestion to make. The power granted to the Speaker to decide what motions are dilatory and to refuse to entertain them, is a most dangerous and ungracious power. He must be a singularly pure, passionless, and impartial character who can occupy the Speaker's chair in this House and so conduct himself in that great office, with this added and unprecedented power, as to preserve the confidence and esteem of the House. No man who is at all conscious of the difficulties which confront a Speaker armed with this power would willingly accept an office burdened with such a duty.

It will be almost impossible that his motives will not be misconstrued; that his actions will not be criticised; that his conduct will not be condemned. Impartiality in a Speaker has been well compared to chastity in a woman, and it is almost as essential that the Speaker should have the reputation for impartiality as that the woman should have the reputation for chastity. To have his proper influence upon the House, to maintain his proper standing in the country, he must be believed to be impartial as well as be impartial; and if a large minority of the Representatives on the floor believe that he does not deal with them fairly, that he does not exercise this great power impartially, it obstructs the pleasant and proper transaction of business.

I doubt whether there is a living man who can exercise the power granted by that rule during one term of this Congress without disastrous consequences to his reputation, and without the danger of frequent anger and perhaps permanent estrangements between Representatives on the floor. It necessarily tends to bad temper, to crimination and recrimination, to the creation of a feeling of injustice, to the belief that the rights of the Representative have been trampled upon, that the courtesies due have not been granted, and out of all this will necessarily grow that state of mind which prevents the orderly, prompt, and pleasant transaction of the public business.

In a House like this, constituted as this is, most of its business must be done by consent based upon mutual respect and confidence. We grow to be specialists. On a great number of important matters we vote on faith. We are not able to examine the questions for ourselves; they are too numerous. We are not able to investigate the facts bearing upon these matters; they are too voluminous; time and opportunity are not given. When that mutual confidence and esteem give way to distrust; when on one side there is a feeling that arrogance is displayed, and on the other that unnecessary and angry obstruction is interposed, it will be found that not merely will our sessions be unpleasant, but they will grow to be unprofitable.

I will append to this the paper drawn by my colleague [Mr. CARLISLE], which presents the views of the minority on the contested questions between the Speaker and the Democratic Representatives. I have felt, however, that my duty to my own constituents and to myself required that I should put upon record some of the reasons which have controlled me during these controversies. I will not trespass upon the courtesy which the House has shown by permitting the printing in the RECORD of such speeches as were not delivered on the floor, by making any comments upon the motives, objects, or purposes of those by whom these changes have been made, nor even by making predictions as to what will be the results of the changes. I leave all that to the development of the future.

It is not, however, improper to add that the rules in this code and the rulings which have preceded their introduction, and the principles upon which those rulings and this code are based have given widespread alarm to a very large section of the country, and anxiety and apprehension to other sections of the country. When the possibilities of legislation under this new code and under this new construction of the Constitution are considered, it is not strange that the alarm in one section and the anxiety in other sections should be created.

For myself I have such a profound confidence in the general wisdom of the great body of the American people, in the general sense of right and justice by which these people are controlled, in the power of that spirit of freedom which pervades our institutions and by which they were created, and in the marvelous resources of our young country, that I do not fear permanent disaster from the acts of any party in possession of any branch of the Government. We are young enough and rich enough and at heart free enough to temporarily bear misrule and to emancipate ourselves from it.

THE VIEWS OF THE DEMOCRATIC REPRESENTATIVES ON THE RULING OF THE SPEAKER.

The present situation in the House of Representatives is so anomalous and

the unprecedented decisions of the Speaker are so full of danger to the integrity of future legislation that we consider it our duty to submit a brief statement of the facts in order that the propriety of the course we have taken may be fairly determined.

The House met on the 2d day of December, 1889, and immediately organized by the election of a Speaker and other officers. On the same day, by a resolution of the House, the Speaker was authorized to appoint a Committee on Rules, and the rules of the last preceding House were referred to that committee. The committee, consisting of the Speaker himself and four other members, was appointed on the 5th day of December, and on the 9th it made a report authorizing the Speaker to appoint all the other committees and defining their jurisdiction. The Committee on Elections, to which were referred all cases involving the rights of members to their seats, was appointed on the 9th day of December.

Although nearly two months have elapsed since the Committee on Rules was appointed it has made no report upon the matters referred to it except the partial one made on the 9th of December, and consequently the House has been compelled to conduct its business without any rules except the general parliamentary law as construed by the Speaker. There have been no Calendars, no order of business, no fixed time to receive reports from committees, or for the consideration of bills or resolutions, and in fact no regular methods whatever in the proceedings of the House.

The American House of Representatives has been during all this time, and still is, so far as rules for its government are concerned, in precisely the same condition as a popular meeting or a political convention in which the chairman and his partisans absolutely control all the proceedings. No measure can get before the House for consideration unless the Speaker chooses to allow it to be presented, and members have no means of knowing in advance what they are to be called upon to discuss or decide.

This is the first time in our history that a legislative assembly, or even a public meeting, has attempted to transact business for any considerable period without a regular code of rules prescribing the order of its proceedings, and the inconvenience and injustice resulting from such an attempt have been forcibly illustrated in the present instance. The Speaker has repeatedly during these extraordinary proceedings refused to entertain parliamentary motions that have been recognized as legitimate ever since the Government was established, and when attempts have been made to appeal from his decisions he has refused to submit the question to the House. By his arbitrary rulings, sustained in some instances by less than a quorum, he has subverted nearly every principle of constitutional and parliamentary law heretofore recognized in the House.

This personal and partisan domination of the House was submitted to—though not without repeated protests—until we became convinced that it was the deliberate purpose of the Speaker and his supporters to proceed without rules to oust the Democratic members whose seats are contested and admit their Republican opponents, whether elected or not.

On Wednesday, January 29, the Committee on Elections called up a contested-election case, and the Democratic members determined that, in the absence of rules, it should not be considered if they could prevent it by any proper parliamentary proceedings. Accordingly they raised the question of consideration, demanded the yeas and nays, and on the call of the roll refrained from voting.

The result was that less than a constitutional quorum voted; but the Speaker, in violation of the uniform practice of the House for more than a century, proceeded to count members who were present but not voting, and declared that the House had decided to take the case up. From this decision an appeal was taken, and on a motion to lay this appeal on the table the yeas and nays were taken, and less than a quorum voted, but the Speaker again counted members not voting, and decided that the motion was agreed to, and his ruling thereby sustained.

The Constitution of the United States provides that a majority of each House "shall constitute a quorum to do business, but a smaller number may adjourn from day to day and may be authorized to compel the attendance of absent members in such manner and under such penalties as each House may provide." Another clause of the Constitution requires each House to keep a Journal of its proceedings, and provides that when one-fifth of the members present desire it the yeas and nays shall be taken upon any question, and entered in the Journal.

Since the beginning of the Government under the Constitution, more than a hundred years ago, the House of Representatives and the Senate have uniformly construed the first clause of the Constitution quoted above to mean that a majority of all the members elect must be present and actually participate in the transaction of business, and that whenever, upon a call of the yeas and nays, it appeared from the Journal, which is the only official record, that less than the constitutional quorum has voted on any proposition the vote was a nullity, and no further business could be done until the requisite number appeared and voted.

Every presiding officer in the Senate, and every Speaker of the House, except the present one, has held that when less than a quorum voted on a call of the yeas and nays, no matter how many might be actually present, it was his duty to take notice of the fact and declare that the pending bill or motion had not passed. When the vote is not taken by yeas and nays it is not entered upon Journal, but if any member makes the point that no quorum has voted, the proceeding is a nullity, and the vote must be taken over. The presumption of the law is that when nothing appears to the contrary, the proceedings of a legislative body are regular and valid, and therefore when the official record does not show that less than a quorum voted, or attention is not called to the fact in such a way as to furnish legal evidence of it, the question can not be made afterward.

Many bills have been passed when there was no quorum voting, and it is equally true that many have passed when there was no quorum actually present, but this does not prove that the proceeding would have been valid in either case if the official record had shown the fact.

In order to secure certainty and stability in the administration of the law it is a rule in our jurisprudence that when a particular construction of a constitution or a statute has been for a long time acquiesced in, not only by those whose duty it is to execute it, but also by those whose personal and property rights are affected by it, the courts will recognize it as the true construction and enforce it accordingly.

Even if this were an original question it would not be difficult to show that the practical construction of the Constitution which has prevailed in the House and Senate for over one hundred years is the correct one. Speaker REED himself, when in the minority on the floor of the House, stated the true meaning and the true philosophy of the Constitution when he said: "The constitutional idea of a quorum is not the presence of a majority of all the members of the House, but a majority of the members present and participating in the business of the House. It is not the visible presence, but their judgement and votes, which the Constitution calls for."

PRECEDENTS VIOLATED.

General Garfield, Mr. Blaine, Mr. HAWLEY, Mr. Conger, Mr. Robeson, and other eminent Republicans have taken the same position, and their arguments have never been answered. If any legal or political question can be settled in this country by the long acquiescence of jurists and statesmen of all parties, certainly this question has passed beyond the domain of discussion.

When, therefore, the present Speaker repudiated this settled construction of the Constitution, and decided that when the official record which the Constitution requires the House to keep shows on a call of the yeas and nays that a quorum has not voted, he can count members present and not voting, and thus by his own act, outside of the recorded vote, determine that a measure has passed, we considered it our duty, as a part of the representatives of the people, to enter our protests in every form available to us under the circumstances. We are not contending for the right of the minority to govern, as the supporters of the Speaker have endeavored to make the country believe.

On the contrary, we are denying the right of a minority to eject members from their seats or to pass laws for the government of the people. Under the Constitution a majority of the members of the House constitute a quorum to do business, and we are simply insisting that less than a majority shall not do business. We are contending that the majority shall take the responsibility which properly belongs to them, and shall come to the House of Representatives and vote if they desire to control its proceedings; and we are protesting against their right to carry their measures by counting us when we do not vote.

The claim of the majority that they have a right to govern the House without attending its sessions and taking part in the conduct of its business is too preposterous to require refutation. It must be evident to any one who understands the position taken by the Democratic minority in the House that it can not possibly result in any injury to the country or any injustice to the majority. Its only effect will be to compel the Republican majority, elected by the people, to assume the responsibility imposed upon them. On the other hand, no one can foresee the evils that may result from the inauguration of the practice of counting votes not cast in order to make a quorum.

Under it a minority of the members elect to the House and Senate may pass the most tyrannical laws for the oppression of the people, and the most corrupt laws for the spoliation of the public Treasury. Whether so intended or not, its direct tendency is to break down the barriers hereto ore existing for the protection of the citizen against the encroachments of power and the spoliation of the Treasury by destroying the limitations which the Constitution has wisely imposed upon the legislative department. Constitutions are made to restrain majorities and protect minorities. A majority ruling without limitations or restraints upon its power is a pure despotism, and is inconsistent with our system of government.

The Farmers and the Tariff---Mortgage Indebtedness.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 15, 1890,

On the bill (S. 1181) to require the Superintendent of Census to ascertain the number of people who own farms and homes and the amount of mortgage indebtedness thereon.

Mr. LANE said:

Mr. SPEAKER: I am heartily in favor of this bill. Nearly all the farmer organizations of my district have written me in regard to this measure, and urged me to use my influence to secure its passage; and I am glad that immediately after the adoption of the rules of this House this measure is brought forward. The farmers are organizing in the great Northwest, and it is time that some recognition should be given them by this House.

If they are true to themselves and to their organization laws will be passed recognizing their rights and to some extent lightening the burdens that now oppress them. They have been inactive too long, and this to a great extent accounts for the disregard that has been paid to their interests in this House.

The object of this bill is to ascertain to what extent the homes and farms of the people are mortgaged, and to ascertain the number of persons who live on and cultivate their own farms and who live in their own homes, and the number who hire their farms and homes.

It is evident that farmers, as a class, are not prosperous. Their crops in many States do not sell for enough to pay the cost of production. The information furnished by this bill will open the eyes of the people to their true condition and enable them to intelligently comprehend the source of the evil that threatens their very existence. It may not be absolutely reliable, but it will show them to what extent their homes are mortgaged, where these mortgages are held, and why one section of the country has prospered in preference to another. The bill should pass, as well as the amendment offered by the gentleman from Missouri [Mr. DOCKERY].

Mr. Speaker, under the courtesy extended by the House to members, I wish to investigate the condition of agriculture and its decline in this country, although such discussion may be a little foreign to the measure under consideration. But representing as I do a great agricultural constituency, I hope the House will indulge me in submitting my views on this important question.

Mr. Speaker, industrial depression has laid its withering hand on the agricultural interests of America, and farming will soon be among the lost arts in this country if something is not speedily done to resuscitate and give it new life.

A large majority of our people are engaged in the time-honored pursuits of agriculture, and of right they are entitled to consideration from the law-making department of the Government, and while for the last twenty years every other interest has been watched and guarded this interest has been rendered contributory and subordinate to all others. I view with feelings of profound sorrow and gloom the farming interest of the great Northwest to-day.

Sir, I propose to examine some of the causes that have led to this

condition of things, and to show that even amidst abundant harvests the farming interest of the West is nearly paralyzed. The price of everything that the farmer has to sell has so declined and the price of everything he has to purchase has so advanced that the farm that he once held in fee-simple is now mortgaged to make the ends meet, and in many cases the mortgages are being foreclosed and the farmer with his wife and children are driven from their homes.

It has been the standard maxim in all ages that the cultivation of the soil lies at the very base of all industry. If the farmers of the country are suffering from the effect of unwise legislation, all the other interests of labor in this country suffer in consequence. No nation can long prosper unless the arts of agriculture are in the ascendency. The decadence of agriculture was the decadence of Rome. The farmer is the strength and shield of every government. During the Revolutionary war our greatest generals came from the fields and returned to the plow when the war was over, and certainly during the late civil war the farm contributed its full quota both to the rank and file of the Army.

In no calling in life in this country to-day can nobler or grander men be found than on our farms, and yet by an unjust law their condition is reduced to that of serfs. They bear all the burdens of government and receive none of its benefits, but simply the right to exist. I wish to speak to-day in their interest, being personally acquainted with their condition and wants. I do not claim that the farmers of the country are paupers and are now starving, but what I insist upon and what I expect to show is that the farmers are not sharing in the increased wealth of the country and are not receiving their just proportion of it. I deem it necessary first, however, to state some general propositions which are now received as axiomatic truths.

First, taxes in any and every form are oppressive and burdensome to the people. It is said they are as merciless as death and as certain to overtake us as eternity. But, notwithstanding this, every good citizen should be and I think is willing to pay his just proportion of the taxes necessary to support and defray the expenses of the Government that protects him, and, while such taxes are a burden, it is the duty of the Government to make them as light on the citizen as possible.

Taxes are absolutely necessary for the life of the nation, and the needed revenue must be supplied by the people—it can not come from anywhere else. There are two modes of taxation, direct and indirect. A direct tax is a pro-rata levy by the state on all the property of its citizens, as is the practice in most of the several States for raising a State revenue. An indirect tax is an assessment on the business or consumption of a people. This system is exercised in various ways by the Government, as a tax on manufactures of tobacco, spirits, etc., and a tax on goods imported into this country, which latter tax is an assessment on the consumption of the people.

I do not deem it necessary to define these various systems of indirect taxes further, as I propose to deal with none of them but the tax on imported goods, which is now universally called a tariff.

A tariff is therefore a tax, and any person who denies it is simply a fit subject for an insane asylum, be he President, Senator, Representative, or other person. The Government levies a tariff or duty on imported goods, which the importer pays and adds it to the cost of the article, with freight, interest, commissions, and other costs, and the consumer in the end pays the tariff with all the other costs.

This proposition will not be denied by any one. The result of a tariff on our imported articles in nearly all cases is to increase the price of the article to the consumer. Take sugar for example; the tariff on imported sugar causes a rise on that article to the consumer to the exact amount of the tariff. Sugar that is sold here for, say, 10 cents per pound, upon which there might be a tariff tax of 5 cents per pound, if not for the tariff could be purchased by the consumer for 5 cents per per pound. This is nearly true of all other importations.

A tariff may be levied for two purposes, namely, for revenue or protection; or, as it is stated sometimes, a tariff for revenue with incidental protection, or a tariff for protection with incidental revenue. But a tariff for either purpose has the effect to raise the price of imported articles to the consumer just the extent of the tariff. When a tariff is paid on an imported article at the port of entry the Government gets the tariff or tax and the consumer pays it. From this source the Government collected over $217,286,890 last year.

But the tariff has another effect; it raises the price of imported goods to the extent of the tariff, and that of necessity increases the value of all like domestic manufactured goods in this country. That is, because of the tariff tax the domestic manufacturer is protected to the extent of the tariff tax and he is able to sell his goods for that much more than he would be if there was no tariff. There was manufactured in this country last year over $6,000,000,000 worth of goods, and there being an average tax of 47 per cent., but say 40 per cent. for convenience, because of this tariff the manufacturer of domestic goods in this country was a recipient, as a gift from the consumers, of the snug sum of over $2,400,000,000. In other words, because of this vicious tariff system the farmers and laborers, who are the greatest consumers, were compelled to pay this enormous sum to the merchant princes and manufacturers as a gratuity. And still the protectionists are demanding an increase of the tax on many imported articles.

But in what I have to say at this time I do not care to discuss schedule rates of 40 or 47 per cent., but the principle that underlies the system itself. It being admitted that a tariff is a tax, it is a tax for some person to pay. I have shown that the consumers last year paid the Government over $217,286,890, and to the domestic manufacturers $2,400,000,000. Now, who is benefited by this system? Clearly, the manufacturers. The tariff raises the price of goods. If not, why do the manufacturers desire to keep the tariff up? Aside from the fact that it is not warranted by our Constitution, as I think is fully explained by the Supreme Court of the United States in the case of The Loan Association *vs.* Topeka, 20 Wallace, where it is held by the court that taxes can only be levied under our Constitution for public purposes—I could add to this as further authority the names of eminent statesmen, both living and dead, who sustained this view of the question, but I deem it unnecessary—I think it is manifest to every fair-minded person that taxes should only be levied for public purposes and not to create private fortunes; any other system is manifestly unjust.

A government that taxes the mass of its citizens to enrich a class does not deserve to exist, and can not long exist, unless the laboring classes and farmers consent to become slaves, and in this country we are fast tending to that result. What right has the Government to take by law one-third of the poor man's wages and give it to the rich? And yet this is done every day. There is not a laboring man in the country who has a family to support who is not compelled to pay one-third of his annual earnings to support the tariff system.

If it were not for this tariff system the necessaries of life that he is compelled to purchase for the support of himself and family he could purchase for one-third less. He is now compelled to pay fifteen or twenty dollars for a suit of clothes; if it were not for the tariff tax he could buy a similar suit for $10. He is compelled to work twenty day when ten days' work would be sufficient, and thus he is robbed of his labor and to that extent is a slave. But to make him content with his lot he is told that his condition is better than that of the pauper laborer of Europe.

This argument, if it may be called such, is a very poor one; this argument was used to the slave in the South fifty years ago. He was told that his condition was infinitely better than in savagery in his native land, and, in fact, that his condition was infinitely better than his brethren in the wilds of Africa. In fact, many able lectures were delivered and learned essays written to prove the point, and the pulpit argued his better condition and the divine right to hold him in his chains. But where are these arguments now? Repudiated by their authors as unworthy of the enlightenment of the nineteenth century. The master, in those days, claimed the wages of the slave and by law they were given to him.

The present high protective system is simply a huge, complicated, far-reaching instrumentality put in motion by unjust laws to take the hard-earned money out of the pockets of the farmers and laborers and place it in the pockets of the wealthy. It dishonestly takes the wages of labor, and thereby enslaves the laborer. This system should not and will not long endure, for if it does it would be a mockery to call this country free.

I wish briefly in the time allowed me to-day to examine how the farmer is benefited by a protective tariff. Mr. CULLOM, the senior Senator from Illinois, during last fall published an article in the Forum in which he states "That the interest of the farmer is in favor of a protective tariff." Is this true? The farmers of Illinois are intensly interested in this question and they know better than any one else their true condition. What is that condition? Do the farmers of Illinois feel that their wives, children, and others, depending on them for shelter, bread, and fuel may not come to want if the present system is continued? Do they feel that there is no incentive to toil for that nothing will come of it but one monotonous repetition of work and that others will reap the reward of such labor until existence itself becomes a mockery? Is the condition of the farmer all that he desires it should be? I submit the following figures comparing the past with the present, which I think will show that the farmers' condition is not what it should be:

The increase in the value of our farms between 1850 and 1860 was as follows:

	Value of farms.
1860	$6,645,045,007
1850	3,271,575,421
Total increase, ten years	3,373,469,586
Average yearly increase	337,346,958

This was the free-trade era, the ten years of a Democratic low tariff. Contrast these with the past twenty years of high tariff:

1880	$10,197,096,776
1860	6,645,045,007
Total increase, twenty years	3,552,051,769
Average yearly increase	177,602,588

In other words, farming was 90 per cent. more prosperous under a Democratic low tariff than it has been under a Republican high tariff. In exact figures the increase was:

1850 to 1860 (ten years)	$3,373,469,586
1861 to 1880 (nineteen years)	3,374,449,181

When we consider that the population more than doubled and the wealth of the country increased more than fivefold between 1850 and 1880, the significance of these figures can not be overestimated.

FARMING VERSUS MANUFACTURING.

That farming paid under a low tariff is shown by the capital invested in it:

1850	$3,271,575,421
1860	6,645,045,007

Yearly increase, 10½ per cent.

That it has not paid under protection needs but a glance at the census figures:

1860	$6,645,045,007
1880	10,197,096,776

Yearly increase, 2½ per cent.

In ten years of low tariff our farms doubled in value. In twenty years of protection they have only increased 54 per cent. No other explanation is needed why farming no longer pays, why the farm lands of Vermont are for sale at $2 per acre, and why industry is seeking other fields.

During the "free-trade era" 123,029 firms were engaged in manufacture, and the census shows the following capital invested:

1850	$533,245,351
1860	1,009,855,715

Yearly increase, 9 per cent.

The farmer and the mill-owner were then on equal terms, and both prospered. Manufacturing was confined to what would pay. In 1861 the cotton-mill owners of New England, the woolen-mill owners of New York, and the ironmongers of Pennsylvania, about 3,000 in number, obtained control of the legislation of the United States, and this is how they protected themselves:

1860	$1,009,855,715
1880	2,790,272,606

Yearly increase, 8¼ per cent.

These figures are the totals of all manufactures, protected and non-protected. Some industries, like our ship-yards, have been "protected" out of existence, others have been crippled, and these bring down the average, for only a small proportion of our manufactures are protected, and they have prospered not only at the expense of the former but at the expense of the unprotected manufacturer.

In 1850-1860 the American farmer had the whole world for a market. He could sell anywhere and bring his payment in foreign goods into the country. If his payment was taxed, it was only properly taxed to bear its fair share of the expenses of Government. He was then and is to-day the importer of 80 per cent. of the foreign goods coming into the country. He was then the only competitor of the unprotected, as he is to-day the only competitor of the protected mill-owners.

These figures absolutely show that the high protective tariff has not benefited the farmer in the way of advancing the price of his lands. Let us now see if a high protective tariff increases the price of farm products. The report of the Bureau of Statistics of March, 1884, contains a table showing the average price of farm products in New York from 1846 to 1883. According to this the average price of wheat was $1.50 under the Walker tariff and $1.48 under the Morrill tariff; corn was 77 cents under the former and 66 cents under the latter; flour was $5.83 as against $4.69; wool under the Walker tariff was 32 cents and under the Morrill tariff it was only 28 cents; timothy seed was $3.12 as against $2.62 in the latter period; and this same depression of prices will be found true of all other farm products.

Now, remember that the Morrill tariff was much higher than the Walker tariff, and according to the theory of the Senator a tariff is benefiting the farmer, and therefore the farmer should be better off under the high tariff than the low one, but just the reverse is shown to be the fact; or, in other words, the Senator would make the farmer believe that the more taxes he pays and the less he gets for his farm products the better is his condition.

We will look at it in another light. According to the census of 1880 the number of persons engaged in farming was 7,670,493. Of course this did not include their wives and children, although they do a great deal of the farm work; so it is safe to say that there is over one-half of our entire population engaged in agriculture. The whole number of farms in 1879 was 4,008,907, and the value of the farms was $10,197,096,776. The value of farming implements and machinery was $406,520,055. The value of live-stock on the farms was $28,586,397, and this makes the total capital interested in farming in the year 1879 $12,132,667,837.

The estimated gross value of all farm productions for that year was $2,213,402,564. This includes all that was sold and all that was consumed as well as all that was on hand. The gross product for the labor of each person engaged on the farm was $288.56 for the year. This was the gross earning and did not include board, clothing, cost of seed, or interest on the capital. But the interest on the invested capital in farming at 6 per cent. apportioned to each person would amount to $94.90, and this taken from $288.56 leaves $193.66 as the gross product of the labor of each person engaged in farming, and this would amount to not quite 62 cents a day, and now out of this is to come the board and clothing of the farmer; and is it any wonder that farming does not pay? And yet the Senator from Illinois says that the farmer is greatly benefited by protection. The Lord save the farmer from such protection.

Now let us look at the other side of the picture. The number of persons engaged in manufactures in this country in 1880, as you will see by the census, was—males over sixteen years, 2,025,335; females over fifteen years, 531,639; children and youths, 181,921; this makes a total of 2,738,895. The capital invested was $2,790,272,606; the gross product of the manufactures was $5,369,579,191; from this deduct the value of the material used, $3,396,823,549; this gives a net product of the manufactures of $1,972,755,642 for one year. This gives each man, woman, and child engaged in manufacturing the sum of $721.93 as the product of his or her labor per annum. Deduct the interest on the capital invested, which amounts for each person to $61.20, and the labor for each person engaged in manufacturing for that year amounts to the sum of $660.67, or $2.11 per day. This is nearly three and one-half times more than a person gets who is engaged in farming. There can be no mistake about these figures, taken from official sources and presumably compiled by protectionists at that, and any child of school age can figure out the result, and yet the Senator insists that protection benefits the farmer.

From 1850 to 1860 there was very little protection, and at that time farming paid. The value of farms increased 10½ per cent. yearly, or more than double the rate of increase of population. From 1860 to 1880 we had a high protective tariff against the farmer, and farming did not pay. The value of farms increased only 2½ per cent., or less than the rate of increase of population. In 1850 our farms represented 46 per cent. of our national wealth, and in 1880 they represented only 23 per cent., a decline of one-half.

Year.	Value of farms.	Total wealth.	Per cent.
1850	$3,271,575,421	$7,135,780,228	46
1860	6,645,045,007	16,159,616,068	41
1880	10,197,096,776	43,642,000,000	23

In the face of these facts the Senator expects the farmer to vote for protection, and this some of them continue to do, solidly and blindly, against their own interests.

The capital invested in manufactures pays nearly four times as much as the capital invested in farming. Why should this be? A high tariff protects the manufacturer and enables him to sell his products at from 20 to 75 per cent. above what otherwise would be the cost, and the farmer, through the blessings of this protection that the Senator spoke about, has to pay this advance.

The estimate of the United States Commissioner of Agriculture for 1880 shows the agricultural products of the United States marketed that year was $3,726,331,422, and that there was exported of agricultural products for that year, $685,961,091.

The most careful estimate, then, that can be made would show that 1,412,137 persons engaged in agriculture were depending for their living on the sale of their products in foreign markets and who are not and can not be protected by any tariff, and are only injured by it.

Tho highest estimate made by any person is that there are not over 800,000 persons engaged in all the protected industries who are in any manner protected by a tariff. If a foreign market could not be found for our supplies it would not be raised or would rot on the ground, and the 1,412,137 persons engaged in raising this surplus would have to seek some other employment, thus increasing competition and reducing the rate of wages. Why should 800,000 persons be protected when it is impossible to protect the 1,412,137 persons? Is this the greatest good to the greatest number? There is no protection to the farmer.

Let us see again how the Senator's theory holds good in Illinois, our own State. What are the figures? In 1880 it will be found that Illinois had $1,175,772,293 invested in farming and that 436,371 persons were engaged in the business. Her entire farm products were $203,980,137, or each person was supposed to invest $2,694 in capital, and with the capital his labor produced $468 per annum; deducting the interest would leave $307. In the same State for the same year there was invested in manufacturing $140,652,066 and 144,727 persons employed. The product, after deducting costs of material, was $125,020,766 and the wages paid was $57,429,085; each person employed used $972 worth of capital, produced $864 in value of manufactured articles after deducting price of material, they pay as wages $397.

Now, take $397 from $864, which leaves $467, the amount the manufacturer puts in his pocket for each man employed by him. To state it in other words, the farmer in Illinois gets for his year's work $307, the laborer engaged in manufacturing produces $864, of which sum he receives as his wages $397 per annum; and the mill-owner robs both the farmer and laborer of $467 per annum as clear profits on his $972 invested in manufacturing. Any farmer on some rainy day can take his pencil and figure out this problem and satisfy himself of the correctness of these figures, and then he can answer for himself why is this discrimination against the farmer?

These are the facts, as the figures show, and yet the Senator says that protection benefits the farmer.

Again, the Senator says in his article in regard to the benefit of protection to the farmer:

His food, his clothing, his household goods and furniture, his horse, his barn, his tools and fences, are all cheaper, while everything he produces sells for more, and his land has trebled or quadrupled in value.

Is this statement true? I will answer the last part of the statement first. I think I have shown that farm property, instead of increasing in value in this country, is actually decreasing. The following advertisement appears in the Springfield (Mass.) Republican of October 25:

DO NOT GO WEST

when you can get a fine 150-acre farm right at home on a good road near neighbors, for $950. Excellent land; hay cut by machine; plenty of fruit: no end to the wood. Cottage-house in good shape, good barn, sheds, etc. The farm is

well located, only one-half mile to school, only 5½ miles to Orange, as good a market as there is in the State.

This farm, be it observed, is situated in a thickly settled portion of Massachusetts, where numerous manufactories have made a "home market," which, according to the protectionists, should have enchanced the value of farming lands far above that in the agricultural States of the West, where the manufactories are comparatively few and the home market consequently restricted.

In the Herald, of Windsor County, Vermont, of a late date, it is said that in a single township in that county 4,000 acres of land in farms of from 70 to 100 acres are for sale, with all improvements, at from $3 to $4 an acre. In Vershire Township, in the same county, thirty-five farms lying in a body are abandoned and unoccupied, in easy reach of home markets the Republican party has been promising the farmers.

The New York Tribune has the following:

The farmers of South Jersey are completely discouraged. Many of the best and oldest say they can not make both ends meet, and that the outlook is not encouraging; many farmers have made assignments and others are in the hands of the sheriff.

Ten fine farms in Berks County, Pennsylvania, averaging 100 acres each, were sold by the sheriff last week for what they would bring, and twenty other farms in the same county have been sold in the same way previously, all the owners having failed.

The Labor Report of Michigan for 1888 shows that out of the 90,803 farms in that State reported, 43,079 were mortgaged. That the annual tribute paid as interest amounted to $2,701,669. By estimating the balance of the State not reported by the ratio of what was reported, Michigan is in debt $64,392,580 on farms alone, with an annual interest of $4,636,265. In one county there were 366 mortgage foreclosures in one year.

A correspondent of the Post recently called attention to the fact that in a drive on the main road from Lowell, Mass., to Windham, N. H., a distance of 12 miles, he counted six deserted sets of farm buildings, besides several that had already gone to ruin, while fields and pastures were growing up in woods. And much more of this same kind of matter might be produced, but every well-informed person knows that lands are not as high as they were fifteen years ago.

In Illinois I know of my own personal knowledge that farms that sold from $35 to $40 per acre fifteen years ago can not be sold now for $25 an acre. There may be exceptions, but this is the general rule. Protection certainly does not protect the Illinois farmer nor other farmers in the West. If so, why should the Western farms be mortgaged as they are?

The Bankers' Monthly of last year, after making a thorough investigation of this question, gives as the mortgage indebtedness of Kansas, Illinois, Indiana, Iowa, Michigan, Wisconsin, and Ohio, the sum of $3,837,000,000.

The report of the Illinois Bureau of Labor Statistics for 1888, a Republican authority which Republicans must believe, gives the mortgage indebtedness of Illinois at $416,000,000, and on page 36 it appears that there were filed in the single year of 1887 a total of 125,923 new mortgages, for the immense sum of $117,152,857, covering 2,178,532 acres of land and 65,066 lots, as well as miscellaneous property or chattels to the value of $17,000,000.

The population of Illinois by the census of 1880 was 3,077,871. Say that it is now 4,000,000, and divide that amount by five to arrive at the number of heads of families. We have thus 800,000, which is close to the real number, as the total Illinois vote of 1888, was 748,000. Averaging among these the total mortgage indebtedness it makes a debt of $520 for every head of family in the State, while the new debt contracted in 1887 alone makes $146.25 for each head of family. How do the figures contrast with the statement of Mr. Blaine that "the savings banks of Massachusetts alone have deposits of over $375,000,000?"

But the condition of Kansas is still worse than that of Illinois. I have a statement by counties from the State of Kansas showing the total public and private indebtedness of that State, except the school, is $259,712,323, and that the total assessed value of all her lands in 1888 was $295,150,077. Now, when you take from this the total assessed value of all railway property in the State which was that year $52,829,394, the State is verging on bankruptcy. These figures are of vital importance to the farmer, and they can not be denied or ignored.

The farmer does not make a dollar a day by hard work, while the pet of protection makes a dollar a minute without working at all. Away with a protective system that robs labor and enriches idleness; that creates millionaries and tramps, both a curse to society; that mortgages the farm and increases the capital of the banks; that fills poor-houses and creates palaces; that dresses one man's children in silk and satin and another man's children in rags; that makes the rich richer and the poor poorer. This is the inevitable tendency of the protective system. It protects the moneyed kings, but is a positive injury to the farmer as it lowers the price of his land and the products thereof.

I submit some further facts on this proposition. In 1850 the total value of farms in this country was $3,271,575,400. During the next ten years of a very low tariff the value increased to $6,645,043,000, a gain of 103 per cent. In the next ten years the tariff was raised more than 100 per cent., and yet they had only increased to $9,262,803,800, or a gain of only 39 per cent., an absolute arrest of progress. During the next ten years, with a still upward tendency in the tariff, the value of farm property only increased to $10,179,096,700, in a sum less than 10 per cent., not so much as 1 per cent. per annum. This is not true of other callings; during all this period the wealth of the country increased wonderfully, but not in farm property.

The following table, compiled from the census reports by the Statistician, shows the exact percentage of increase between 1850 and 1860 in the first column, and the percentage of increase for each of the ten years between 1860 and 1880.

Lines or progress.	1850–1860.	Average each ten years, 1860–1880.
Population	35.5	26.2
Wealth	126.6	61.0
Foreign commerce, aggregate	131.0	45.6
Railroads, aggregate	240.0	69.0
Railroads, per capita	150.0	34.0
Capital in manufacturing	90.0	66.0
Wages in manufacturing, per hand	17.3	9.4
Value of farms	103.0	23.6
Farm tools and machinery	62.0	27.7
Live-stock on the farm	100.0	17.3

It will be readily seen by this table that under the low tariff farm values increased about 100 per cent., while under a high tariff it only increased about 20 per cent., while the wealth of the country increased 61 per cent. It will be seen also by this table that wages increased 17 per cent. during the low tariff, while they only increased 9 per cent. under the high tariff. This should speak volumes to the laboring man. But, again, in 1850 the total wealth of the country was $7,000,000,000, and of this the farms owned $4,000,000,000, or more than one-half. In 1860 the total wealth of the country was $16,000,000,000, and the farmers' share was $8,000,000,000, or one-half.

During the next twenty years, under a high protective tariff, in 1880 the census shows the wealth of the country was $43,600,000,000, of which the farmers' share was but $12,000,000,000, or a little more than one-fourth, and yet the Illinois Senator says that protection benefits the farmer and that "his land has trebled or quadrupled in value." The Senator's statements can not be verified by the facts of the case. Mr. Thomas Shearman, the statistician, gives the names of seventy persons in the United States who represent an aggregate wealth of $2,700,000,000, or an average of more than $37,500,000 each.

Mr. Shearman finds that he can do in the United States what he can do in no other country in the world—make a list of ten persons whose wealth averages $100,000,000 each, and a list of one hundred persons whose wealth averages $25,000,000 each. He supports with an array of such facts his conclusion that 25,000 persons own one-half the wealth of the entire country. This is supposed to be true, and yet forty years ago there was but one man in the United States who was supposed to be worth $5,000,000, and that was John Jacob Astor.

Now, see what is the condition of things—25,000 persons owning one-half of the wealth of the United States, or over $2,000,000 each. If, then, 25,000 persons own one-half the wealth of the country, it means that in one form or another they receive tribute from the public at large as the use-price of it.

If the conditions responsible for such vast accumulations continued this use-price of itself would be sufficient to make the permanent ownership of property impossible for 75 per cent. of the people. At least that proportion would be obliged to rent their wealth from the owners and pay usury as rent. This is the present condition to a very large extent, and it must continue until the causes producing it can be removed.

The statistics of the country show that in 1880 five-eighths of the people owned their homes, and only three-eighths were the prey of landlordism. In 1886 only three-eighths owned their own homes, and five-eighths were reduced to the rank of tenants.

By the census of 1880, 24 per cent. of the farmers in Illinois were tenants, and it is claimed now by those best informed that 15 per cent. of the Illinois farmers do not own their farms in fee and free from debt.

In the last twenty years this condition of things has been brought about. During these twenty years the grip of plutocracy has been tightening around the throat of the laborer and farmer. During this time more than any other the vampire bats of high-tariff taxes have been increasing their power of suction and their capacity for gorging themselves. During all these years more than any other the rich men have been growing richer and the poor man poorer. During all these years the Government has been favoring the lords of protection, until we are led to question whether the interest of the people or the interest of Wall street is the most potent here at the national capital. It is no wonder that the farmers of the West and Northwest are organizing and entering the domain of practical politics.

It is time that the magnates of all political parties should know of the wrongs of the wheat-growers and learn of their unrequited toil. They have organized into lodges, granges, and alliances, and armed with a free ballot, the most formidable weapon of free men, they will demand equal consideration with the kings of protection. It is high time that the people who pay the taxes, the people who plow the fields, the people who sustain the armies, and the people who bear the burdens of civil government, should receive some attention from those

in power. Every well-informed person knows that amid apparent general abundance, amid the vast actual increase of general wealth, the farmer is not so prosperous or so contented or hopeful as he was prior to the war.

Since the war in this Republic the farmer has been vainly striving to increase the amount of dollars for his labor, and the manufacturer has been plotting, through a cunningly devised tariff, to rob the farmer of the rewards of his labor.

For the last twenty years the market value of farm products and the price of labor have constantly decreased, while the wealth of the manufacturers has piled mountain high, until the wage-worker and farmer in their bitterness and their wrath sometimes ask which is the greater evil, the black slavery that is gone or the white slavery that has come? Before the war we had chattel slavery, and the master had to provide for the slave when sick or disabled and also in his old age. And now the new phase of it is the mortgage slavery which is going on in the West and is greatly increasing the power and arrogance of capital.

Is it any wonder, then, when we note what strides capital has made in so short a time toward the complete destruction of liberty, that thoughtful men are concerned as to the future and anxiously question what the next step will be?

Actual empire would be no greater innovation than the last, and if introduced so insidiously it might be achieved—an empire of Plutocracy.

Andrew Johnson said:

Slavocracy was destroyed and a bondocracy was established in its stead.

The tendency of every protective tariff is to enslave.

Trade is the exchange of the products of labor. Every laborer who is not free to trade in the products of his labor is a slave. The essential condition of slavery is that the laborer has no control over what he produces. The negro slave produced cotton. Had he been free to trade in it it would have been his own and he would not have been a slave. The essential condition of servitude would have been lacking. The slave is only valuable for his product.

The laborer is bond or free as this product is another's or his own. Wherever labor is denied the right of controlling its own products there slavery exists. Freedom of trade between individuals is the liberty to exchange the products of labor. It is based on the liberty of the laborer to dispose of the products of his labor or to exchange them for the products of the labor of another. Freedom of trade between nations is the liberty of all their citizens to exchange with each other the products of their labor.

Wherever labor is denied freedom of trade it is slave labor. The right of one man to trade with another man is a natural right. In as far as this is denied, liberty is taken away and slavery is established. If the laborer is not allowed to trade at all in what he produces, and is controlled in person as well as in product, he is a chattel slave; but he is none the less a slave if his person is controlled through his product, as under the Republican system which taxes away from labor the freedom to trade in its own products.

There are two operations in trade, giving something and getting something. To control either of these is to control trade. Since the abolition of chattel slavery the negro who has produced a bale of cotton is in a small measure free. He can trade in it in the United States or he can give it away. But he has no more master of the product of his labor now in principle than in 1856. If he lives on the Texas line he is not allowed to take it over to Mexico and exchange it. He is free to give something as the first operation in the trade, but the Government stops the trade in the second operation by taxing what he gets 47 per cent. of its value when he brings it to the custom-house line on his way home. Thus in our relation to the outside world every American farmer is 47 per cent. a slave. The tariff law denies him 47 per cent. of his liberty to control the products of his farm, or exchange it for foreign goods.

The slavery of a high protective tariff has done and is doing more to devastate the farmers of the West than all other causes combined. A high protective tariff exists only for and through the denial of liberty, the oppression of labor, and the suppression of right. All its theories are absurd, as absurd as pocket-picking, highway robbery, or any other plan of getting something for nothing. A high protective tariff is the power of money, and concentrated wealth makes some millionaires while the many struggle for bread. The present leaders of the Republican party have demonstrated by their every action that they are the most servile tools in the hands of a greedy, soulless money power that is as devoid of mercy and justice as is the infernal region of angels of light. The money power has crept into the ballot-box, and its leprous taint is rapidly spreading through every branch of the public service.

When the largest contributors to corruption funds get the highest official positions, and when men who advocate and urge the purchase of votes in "blocks of five" lose no caste in the councils of their party, we may be sure that the money canker-worm is at the very core of our Government, and unless the antidote is speedily applied the fruit brought forth by the wisdom and bravery of our fathers will soon perish. With money without limit in the hands of monopolists, corporations, trusts, and under the control of that class who do not believe that the common people are capable of self-government, a crisis is reached in American history that will destroy the Republic from turret to foundation-stone.

For the past twenty years we have had abundant prosperity in this country, but at the end of it we find that the wealth is centered in a few hands. What has the farmer to show for his twenty years' toil? Where can you find a farmer who is a millionaire? The farmer can boast that the aggregated wealth of the country has increased; he can boast of the factories established, cities erected, mountains tunneled, rivers bridged. He can call the roll of millionaires to-day and thousands will respond, when before the war there were very few.

Yes, the farmer can wipe the sweat from his weary brow and reflect that among the six thousand millionaires may be mentioned the names of twenty American citizens who have gathered $1,500,000,000 from the toil and tears of 60,000,000. And still more, he can reflect that these twenty men have it in their power to combine their efforts and fix the price of every bushel of wheat, every ton of coal, and every day's wages of labor between New York and California. These twenty men have it in their power to name and do name the majority of Senators, Congressmen, governors, and Legislatures in at least one-half of the States of the Union.

The farmer can behold the silken garments which his toil has made on the backs of others, but his family must wear the coarsest shoddy. He can behold the palaces that have been erected from margins on his wheat, but he can not enter. He can behold the palace and buffet car which was constructed by an unlawful tariff extorted from him in carrying his farm products to market, but he and his family can not ride therein; they must occupy the emigrant car or the smoker and see others enjoy the fruits of their labor. To-day all over the Northwest the farmer views with dismay the narrow margin between the cost and the income of his wheat-field and wonders why it is that the prices of those things that he has to sell continues to fall in value so much faster than the price of those things which he is compelled to buy.

In Illinois to-day the farmer reads the market reports with a sigh, and wonders why it is that with an increased production of wheat there can not be an increase of price sufficient to free him from the fears of bankruptcy. The Illinois farmer during the last summer was compelled to sell his wheat at from 65 to 70 cents per bushel, and he paid 10 cents per pound for his sugar. On the same day the Liverpool farmer sold his wheat for $1.05 per bushel and paid 4 cents a pound for the same grade of sugar. In other words, the American farmer exchanged his bushel of wheat for 6½ pounds of sugar, while the English farmer received for his bushel of wheat 20½ pounds, a difference of nearly 20 pounds, or, at the price in this country, $2. That is to say, that by our cunningly devised tariff system the American farmer was robbed out of two days of hard labor in the exchan e of a single bushel of wheat.

How much longer will our farmers consent that Senators and Representatives at Washington shall continue to legislate in the interest of the tariff barons? If the farmers wish to protect their cottages and firesides they must now stand together as one man, and must appeal to the honest men of all parties to liberate the country from the gold bugs of Wall street and the merciless grasp of the monopolists who plunder the homes, the farms, and the workshops of the people, and are thus enabled to contribute liberally of their ill-gotten wealth to the corruption of the ballot-box and the success of the Republican party.

All these burdens fall on the farmer, for in the end the farmer pays for all. It is like the celebrated toasts given by a king, a bishop, and a farmer in Spain; the king gave "I rule all," the bishop responds "I pray for all," and the farmer added "I pay for all."

And the trouble with the monopolists is that they are not satisfied with one payment, but the farmer must pay several times. Thus, in 1865, the national debt was nearly $2,800,000,000, on the principle of which the farmer has been paying about $50,000,000 a year, besides the annual interest, which in the aggregate has amounted to more than 75 per cent. of the original sum. Still, with all that has been paid, which amounts to nearly two-thirds of the original sum, the farmer has nearly as much to pay now as he had at the commencement. Thus, in 1865, 1,600,000,000 bushels of wheat would pay the debt at the price of wheat at that time, but at the present price, say 70 cents per bushel, it would require over 1,300,000,000 bushels to still pay the debt, and this is true of days of labor as well as bushels of wheat.

At this rate of paying the public debt it is sa e to say that it will not be paid for many generations, but in the end the farmer will have to pay it, as every farm in the United States is mortgaged so to speak to secure the payment of this debt. How can the farmer pay it under the present law? is the question that is now being discussed in the various farmers' meetings in the Northwest. Estimates based on census reports show that in the last thirty-eight years the railroad interest has increased 1,580 per cent. and the banking interest 918 per cent., while the farming interest only reached 252 per cent.

The farmer is hedged in on the one hand by an infamous high tariff and on the other hand by a railroad monopoly that is sucking his very life-blood. Whenever there is a good crop of wheat it is at once determined by the railroad association to advance the freight on wheat, say 10 per cent. from Chicago to New York; and say the wheat and oat crops in Illinois were worth about $50,000,000 per annum, there would be a gigantic robbery of $5,000,000 from men who labored hard and suffered untold hardships to grow this wheat. Can language de-

scribe the enormity of this outrage? Is it any wonder that the farmers are organizing into powerful bodies to resist this infamy?

Nor is this all. The grain gambler is at work in the various boards of trade; they give notice that there will be a rise in freights and immediately great quantities of wheat will be hurried to market to save the rise and the market will be glutted, prices will drop to a nominal figure, and the farmer will be robbed. The railroad president will get his princely salary of $50,000 a year and the other officers in proportion, and the stockholder his 12 per cent., and other swindlers will grow fat and the farmer will be expected to toil on to feed and support the world.

At Streator and other points in Illinois, as well as at Treverton, Pa., last summer men, women, and children were suffering for food, and would have starved to death had not the farmers of the country, in the name of charity, furnished them with food. The men were willing to work, but could not get the work to do. The rich men who own and have control of the monopoly in coal mines decided that it would pay them better to suspend operations for a few months than to continue the work.

It has actually come to pass in this country that the wealthy suppose they own the farmers and laborers of the country body and soul, and they are now forging iron chains to bind them forever, and a high protective tariff is the forge where such chains are manufactured.

But, sir, as I said before, I am not speaking to-day so much of schedule rates of 47 or 75 per cent. as I am of the principle. What I complain of is a law that gives to one set of men the labor of another set without anything in return. A law that renders such a thing possible should not remain on our statute-books. It is a disgrace to our civilization. Our fathers taught us that the only way to produce wealth was by labor, but a new order of things exists now. When a railroad syndicate desires to enrich themselves they issue a million dollars of watered stock on their road and in an instant of time and without labor they have added to their wealth $1,000,000.

You may say that this is not wealth, but it is. Every farm in the country is mortgaged to pay the interest on this watered stock. The railroad syndicate insists on and receives from the farmers for carrying their products to market the additional freight to pay interest on this watered stock, and under the law they get it. If any person forges a twenty-dollar bill or other Government security he is at once arrested and sentenced to the State prison for a term of years. And why is this? Simply because the property of the people is pledged to pay the national debt. But when the railroad magnate forges—that is, issues millions of watered stock, which the farmers are compelled to pay in advanced freights—nothing is said, and the parties go unwhipped of justice. The effect on the public is just the same; and the government that permits or suffers these robberies of the people, either by a protective tariff, speculation in Government stocks in Wall street, or watering railroad stock, is not discharging its public duty.

No fault should be found with a man because he makes money. It is the duty of every man to make all he can honestly, by brain or muscle, but every candid man will admit that in a lifetime no man could become a millionaire without entering these unlawful monopolies, combinations, or trusts, and a high protective tariff is the parent of them all. It is the life of Mammon and plutocracy, and the death of agriculture. In the name of 200,000 noble men and women engaged in agriculture in the great State of Illinois, whom I have the honor to represent on this floor, I protest against this policy of protection and the rule of Mammon.

In conclusion, I wish to say to the farmers of the country, arise, organize, and fight for right and justice, your homes, and your firesides! The welfare of yourselves and your families, the cause of civilization and freedom are at stake. Press the battle in the name of tariff reform and liberty of trade, and victory at the ballot-box—the greatest of all victories to freemen—will be yours.

Code of Rules.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1890.

The House having under consideration the report (No. 23) of the Committee on Rules—

Mr. McMILLIN said:

Mr. SPEAKER: I shall ask the indulgence of the House for a brief period in the discussion of what I conceive to be one of the most important questions that ever arose in Congress. It is not simply a question of rules, but of the Constitution itself. From that sacred instrument we can not depart without ruin. Sir, gentlemen on the other side of this Chamber have said this is an effort to enable the minority to rule, and to prevent the majority from ruling. I deny it.

It is an effort to prevent the majority elected and sent here to do business from sending part of their members fishing, part hunting, and part off to attend to their own business, and then doing it with a minority. It is an effort to prevent the Speaker, with the aid of a pencil and paper, from counting a quorum which they have not in the city, and from doing business with a less number than the Constitution requires. That is the effort that was made without rule last week, and is attempted to be embodied permanently into the rules this week.

The party on the opposite side of this Chamber at first determined to have no rules, in violation of the custom of the House. They went week after week, and month after month without attempting to have any. The programme seems to have been to go under general parliamentary law—that elastic something of which so much is said and so little known—until the contested-election cases were tried, the Democrats turned out and Republicans put in their place, so there would be a full working majority who could do as they pleased, and who should be restrained by no law.

But against that we raised our protest. We denounced in terms not to be misunderstood such a proceeding. The press of the country rushed to the rescue of the rights of the House, which were being trampled under foot, and even you, Mr. Speaker, and the bold men who stand back of you had to reverse your action, revise your decision, and bring forward a code of rules for the government of the House. You have brought such a code as was never seen before in the history of this country, and it is to be hoped in the interest of decorous proceeding and constitutional government nothing like them will ever be seen again.

Mr. Speaker, one hundred and fourteen years ago a declaration was made in Philadelphia which has revolutionized and is revolutionizing the Governments of the world. Before that declaration of the rights of man crowns have crumbled and despotisms have departed. The king was dethroned and the free citizen, crowned with constitutional rights and guarded by constitutional guaranties, was proclaimed chief monarch of the earth. One-man power and one-man government were trodden under foot. In order that there might be no disregard of these rights and no destruction of them, the authority of those who were chosen temporarily to rule had constitutional limitations placed upon it. Even this House, chosen by the people themselves, was not permitted to transact business without the presence of a majority of those elected.

Sir, Article I, section 5, of the Constitution provides:

> Each House shall be the judge of the elections, returns and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner, and under such penalties as each House may provide.
>
> * * * * * * *
>
> Each House shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either House on any question shall, at the desire of one-fifth of those present, be entered on the Journal.

Those who framed the Constitution and were its first expounders never claimed that they could take one step in legislation without the presence and active participation by voting of a majority of those who constituted the legislative body. Mr. Jefferson, the great author of the Declaration of Independence and defender of individual rights, was chosen Vice-President of the young Republic, and was *ex officio* President of the Senate. He wrote the first and greatest manual of parliamentary law ever written for the guidance of Congress. Is it not strange, if the right of less than a quorum to pass a law existed, that he neither discovered it while Vice-President or President, nor hinted at it in his manual?

Sir, many of the signers of the Declaration of Independence and framers of the Constitution were members of one or the other branch of Congress. Is it not passing strange that no word escaped from any of them claiming such a right to exist?

Mr. Speaker, when the young Republic was but twenty-five years old war was declared against it by its ancient enemy, the Kingdom of Great Britain. Armies had to be mustered and marshaled on the field. Navies had to be equipped and turned loose on the ocean. Every energy and constitutional right of the young Government had to be exercised. The Capitol itself was beleaguered and the President's mansion burned.

Vast sums of money had to be expended and extraordinary legislative force exerted, yet in all these troublesome times no advocate of temporary expedients, no parliamentary usurper was found bold enough to claim that less than a quorum of those elected and sent here by the people could impose taxes to collect one dollar or muster one man to be sent into the field. Sir, General Jackson, who took so glorious a part in that great struggle, was himself at one time in Congress, but he seems never to have supposed that this authority existed. Later on we had war with Mexico, when other armies and other treasures had to be gathered together, yet no wise man from East or West, North or South, ever laid such a claim, no Speaker ever exercised such authority.

Sir, if there ever was a period when constitutional authority was strained and legislative expediencies brought into full play, it was the period of our recent unfortunate civil war. Millions of men had to be raised and equipped; billions of money had to be collected and expended,

and yet during that period the authority exercised by the Speaker of this House and now attempted to be embodied into rules was never once exercised or claimed.

It is a well-settled rule in construing both statutes and constitutions that "the enumeration of one thing is the exclusion of another." Therefore, when the Constitution, in the article I have quoted, enumerates certain things that may be done by less than a majority, it is an irresistible conclusion that nothing else may be done without a quorum. The language is:

> A majority * * * shall constitute a quorum to do business. But a smaller number may adjourn from day to day and may be authorized to compel the attendance of absent members. * * *

Is not a distinction clearly drawn between "adjournment" or "securing the attendance of absent members," and "doing business?" What lawyer would conclude from this that less than a quorum could "do business?" Could do anything but adjourn or compel attendance?

Mr. Speaker, fifty-one Congresses have assembled. More than fifty Speakers have been elected to preside over them. Twenty-five Vice-Presidents have been chosen by the people and sent to preside over the deliberations of that august body the Senate. First and last, more than a thousand men have probably occupied the chair in which you now sit or the chair occupied by the Vice-President of the United States. At the feet of many of them any man of this generation might count it an exalted privilege to set and learn constitutional law, legislative wisdom, and principles of human government. Yet, sir, has it occurred to you that you are the first presiding officer ever found in Congress, small or great, who had so much avarice of power as to desire the authority conferred by these rules or such ideas of the Constitution of our country as to lead to the rulings you made last week?

Sir, to-day we are assembled as the representatives of more than sixty millions of people, a people who have boasted of freedom for more than a hundred years. No foreign war exhausts our resources. No threatened invasion disturbs our peace. It is a period of unusual quiet; a period when there is as little excuse for the adoption of questionable methods as ever existed. Our Army is small and need not be larger. Our work is done by civil rather than military power. The courts are open and free to the access of all. More money is being collected even under existing laws than is necessary for the purposes of government.

Yet, in this time of profound peace, on the assembling of Congress the majority in this House, overriding all of the precedents of a hundred years, and breaking down all the barriers erected between the people and ill-advised, hasty legislation, propose to clothe the Speaker with extraordinary and unheard-of authority and tie the Representatives of the people and deliver them over bodily to a presiding officer who has already refused to entertain motions to adjourn, to entertain motions raising the question of consideration against measures, to entertain demand for tellers to verify his count, and who has gone to the unheard-of lengths of time and again refusing to allow appeals from his decisions.

Sir, what does all this mean? Why this disregard of precedents, practices, and principles as old as the Constitution itself? What is the necessity for it? What emergency has arisen? What exigency is now upon us?

> Upon what meat doth this our Cæsar feed,
> That he is grown so great?

Why, sir, are we who are sent here to perpetuate a republic required to thus bow down ignobly to a despotism? For, sir, I assert, and fair-minded men will agree with me, that when this code of rules is adopted the House of Representatives will have been converted into the worst despotism on this continent and one of the worst on the earth.

I come not here simply advocating the rights of the minority as a minority party. I come not to rail against the rule of the majority. To the action of the majority ruling by constitutional methods we bow down unprotestingly. My objection to this system of rules, sir, is that it utterly destroys the power and the authority of the individual, whether he be of the majority or minority party, and places the government of the House almost exclusively in the hands of the Speaker, aided in a small measure only by the chairmen of committees.

Mr. Speaker, a part of the questions involved here are not new. Your predecessors in office have time and again decided that when a roll-call was ordered and the yeas and nays taken on any proposition, if the roll-call showed that less than a quorum had voted the action was a nullity and the vote must be taken over again before the measure could be considered as constitutionally passed. In no instance, in either branch of the Congress of the United States, has a contrary doctrine been held. The question has been decided thousands of times, and was never seriously doubted by any Speaker.

When the force bill was up, fifteen years ago, General Butler, then a Representative from Massachusetts, made the point, when the RECORD showed that less than a quorum had voted, that the Speaker had the right, and should exercise it, to supplement the vote by counting those as present who had not voted and making a quorum in that way. Mr. Speaker, the distinguished Secretary of State, Mr. Blaine, then Speaker, ruled that it could not be done. The following is his language:

> The SPEAKER. The Chair never heard of that being done. He begs to remind the House, whereas that might and doubtless would be true, that there is a quorum in the Hall, the very principle enunciated by the gentleman from Indiana has been the foundation probably for the greatest legislative frauds ever committed. Where a quorum, in the judgment of the chair, has been declared to be present in the house against the result of a roll-call, these proceedings in the different Legislatures have brought scandal on their names.
>
> Mr. CONGER. It would be a record made by the House.
>
> The SPEAKER. There can be no record like the call of the yeas and nays; and from that there is no appeal. The moment you clothe your Speaker with power to go behind your roll-call and assume that there is a quorum in the Hall, why, gentlemen, you stand on the very brink of a volcano.

Sir, in the first Congress of which I was a member, the Forty-sixth, the proposition was made by one of the members to establish a rule somewhat similar to the one now under consideration. Against it General Garfield, then a Representative from Ohio, raised his voice in his usual forcible style in the following language:

> I ask my friend from Virginia, without any regard to its partisan bearing, to see in what a strange and vague condition this House would be left if this were adopted. Whenever the question arises whether there is a quorum or not present, it is to be determined according to what he calls "ocular demonstration." The chairman of the Committee of the Whole or the Speaker of the House is to see with his own eyes that there is a quorum present. Who is to control his seeing? How do we know but that he may see forty members more for his own purposes than there are here in the House? And what protection have gentlemen, if the Speaker says he sees a quorum, if he can convert that seeing into a list of names on the call of the roll by the Clerk? I think my friend from Virginia will see that he lets in the one-man power in a far more dangerous way than ever has occurred before in any legislative assembly of which he and I have any knowledge.

Again he said:

> Aside from the insuperable objection that I have raised to this proposition, as a thing that ought not to be tried because of its vagueness, its uncertainty, and the danger that members of the House may be imposed upon by an unscrupulous Speaker that may come hereafter, I say that aside from all that, and beyond all that, I ask members to consider one fact: This has been a House of Representatives since 1789. This House has been the theater of all sorts of political storms and tempests. We have lived through the times of great wars, of a great civil war, when there were excitements hardly paralleled in the history of parliamentary annals. Yet, during all these years, no man before, so far as I know, no party before, has ever thought it necessary to introduce a rule that gives the power of declaring the presence of members by the single voice of one person; a power that will enable him to bring from his sick-bed a dying man and put him down in this Hall, so that the Speaker shall count him, and make his presence against his will, and perhaps in his delirium, count in order to make a quorum, so that some partisan measure may be carried out over the body of that dying man.
>
> Sir, the moment you get over the line, the moment you cross the boundary of names, the moment you leap over the iron fence of the roll, that moment you are out in the vague, and all sorts of disorders may come in.

Sir, in this memorable discussion Mr. Conger, of Michigan, took part. He has since served a term in the Senate, after a long service in the House. He said:

> Sir, I, in common with every member of this House, demand that there shall be a public exhibition of presence—a public record of votes; that there shall be tellers; that there shall be yeas and nays; that the yeas and nays shall determine how you and I and every other member of this House may have voted and would vote.
>
> The point made by my friend from Ohio [Mr. Garfield] is a good one—that we are committing to the Speaker of this House or the Chairman of the Committee of the Whole the right first to determine who are present and to determine when there is a quorum. It is useless to say that there may not be times when in such an emergency as would require the exercise of this power the presiding officer would not be partisan. Shakspeare foretold this when in one of his plays he said:
>
> "Get thee glass eyes,
> And, like a scurvey politician, seem
> To see the things thou dost not."
>
> Such politicians will come here on either or any side. The force of circumstances, the impetuous passions of members which would produce such an occasion, will influence men to see that which they see not, with or without "glass eyes."
>
> I have no fear that this amendment will be adopted in this House, because it would be wrong in itself; it would be unconstitutional; it would be violently partisan. I have no fear that the fair-minded men of this House on either side will adopt so violent and partisan a measure.

Mr. Speaker, one of the most distinguished and experienced Representatives then on this floor from the South was Alexander H. Stephens, of Georgia. If I remember correctly, he was, with General Garfield, a member of the committee reporting the rules. Concerning this extraordinary proposition to let the Speaker count a quorum whether one voted or not, he said:

> I think we had better leave it just as we find it. I know of no way unless we attempt to punish a member for absenting himself or not voting when present. Suppose we bring an absent member into the House, as we have a right to do. But when he is brought in and he refuses to vote, what then? The gentleman from Illinois has just now stated that they could be counted to make a quorum. But what of that? A quorum—a majority of the House—must not only be present, but must join in the business of the House either for or against a measure, to make the action valid. If they are in, and do not vote upon the passage of the bill or measure in the House, they do not make a quorum in the transaction of business. You can not pass the bill or measure unless a quorum votes! You can not count those voting for the bill, and say of all others, constructively, that they voted against it, and thus pronounce the measure carried! Your Journals must show the votes—the yeas and nays of a quorum for and against the measure. But under this amendment there could be no such record. You could count the votes of those present and not answering to their names only by construction. This could not rightfully be done. You must have the votes before you can rightfully count them.
>
> I state to the House, after mature reflection and after studying this question carefully for many years, that in my opinion you can not improve upon the language adopted by the founders of the Republic as set forth in the rule reported by the committee. They made the rule as it now stands. You can not secure votes by compulsion, and you can not create them by construction.
>
> The rule says any member shall vote except he be interested or excused. If any member or number of members refuse to vote you can not provide a rule that will meet the difficulty.
>
> A member not voting in his seat or going out, so long as he is not disorderly,

so long as he commits no improper act, is responsible only to his constituents. If they send a member here who will not vote when in his seat, or will leave the House on roll-call, it is a matter that concerns him and them, and not this House. I say in conclusion I think we had better let the rule stand as it is.

The present Senator from Connecticut, General HAWLEY, opposed the proposition. I send to the Clerk's desk to be read a part of the speech from him:

Now, the evil, if there be one, in the existing system, that of which gentlemen complain, is simply this: That we of the minority claim a right, by sitting silent, to prevent less than a majority of the members elected from passing a bill. The worst that can be done by a factious minority, if that be the term applied to it, is to fight until the actual majority of the members elected shall pass the bill. When they are present, that friendly majority constitute a quorum in themselves; they do not require the assistance of the minority; they run the House themselves, and pass their bills. In case of what you call factious resistance, we drive them only to that.

The modern State constitutions are all tending in that direction. I have not looked at them with this in view, but I know from a casual inquiry of gentlemen near me that the new constitutions of California, Minnesota, Pennsylvania, and New Jersey require that a bill shall not be regarded as passed unless an actual majority of the members elected shall vote for it.

Now, we are causing no hardship whatever in taking the ground we do against this new rule, and I think we do no serious wrong to the country at any time when we sit in our seats and decline to vote. If the majority desires to have a bill passed in opposition to our wishes, then let the majority come here and pass it over our heads. At any rate, I decline to be answerable to anybody but my constituents if I sit in my seat and decline to vote. I hold myself responsible to them and to the Constitution alone. I take my position with that horse which is brought to the water but can not be made to drink, and I am afraid if the proposed rule should be adopted I should say that no Speaker and no House could compel me to answer yes or no on a roll-call.

I think it very decidedly wrong, in the first place, that a Speaker should be at liberty to recognize or declare a quorum without a formal count, and, in the next place, that by any sort of combination of rules there should be a law put on the statute-book and declared in force which can show perhaps only a quarter or 10 per cent. of the members in favor of it.

Nor, Mr. Speaker, are we confined in our researches to these eminent authorities in sustaining our position. There was another gentleman who denounced the proposed innovation with a vigor and clearness which justice to this question will not allow me to overlook. That statesman was the distinguished gentleman who now presides over this House, and who is grasping at the authority which we hesitate to give. Among other things, Mr. Speaker, you then said:

Mr. REED. Mr. Chairman, if it was my purpose to reply to the gentleman who has just taken his seat [Mr. Phister], it seems me that it would be a suitable and proper reply to say to him that the constitutional idea of a quorum is not the presence of a majority of the members of the House, but a majority of the members present and participating in the business of the House. It is not the visible presence of members, but their judgments and their votes, that the Constitution calls for.

I prefer, however, in the short time which I have, to discuss this question upon a different basis. This privilege, which the minority of this House at the last session availed itself of, is a privilege which every minority has availed itself of since the foundation of this Government. By pure accident, in looking over an index of the RECORD this morning, I found the account of a resolution which was drawn up by a distinguished member of this House from Massachusetts [Mr. Butler], to cause the arrest of a distinguished member from Pennsylvania [Mr. RANDALL] for not voting. I believe, however, nothing ever came of that resolution.

Now, what is the practical upshot of the present practice? It is that the members of the minority of this House upon great occasions demand that every bill which is passed shall receive the absolute vote of the majority of the members elected. They do this in the face and eyes of the country. If they demand upon any frivolous occasion that there shall be such an extraordinary vote as that, they do it subject to the censure of the people of this land. This practice has hitherto kept this House in proper condition upon this subject, so that there has been no improper impeding of the public business.

It is a valuable privilege for the country that the minority shall have the right by this extraordinary mode of proceeding to call the attention of the country to measures which a party in a moment of madness and of party feeling is endeavoring to enforce upon the citizens of this land. And it works equally well with regard to all parties, for all parties have their times when they need to be checked, so that they may receive the opinions of the people who are their constituents and who are interested in the results of their legislation.

I say that as a practical matter the results hitherto throughout all our history have justified the construction which those upon this side of the House have put upon this matter, and which has been put equally by members of the other side in times past. I must say that I am glad to see that this question is being discussed not by divisions of party, but that gentlemen are taking views upon it with reference to its whole bearing, past and future, as well as present.

These, Mr. Speaker, were your utterances when it was sought to clothe another man than yourself with this extraordinary power. This was your just criticism on what was an innovation then, is an innovation now; what was inexpedient then is inexpedient now; what was reprehensible then and is reprehensible now. What scales have fallen from your eyes since then? What light has dawned upon you to show you that you were then in darkness? What emergency is on the country now that was not on it then? There had been filibustering then. The question of no quorum voting had been made then; important measures had been delayed then. What change has come over the spirit of your dream?

Sir, why do you stand ready to destroy what you then denominated "a valuable privilege for the country?" Have you in the full tide of power no regard for "valuable privileges?"

Again, sir, I wish to ask you if you are reckless enough to destroy "the constitutional idea of a quorum" and set up one of your own making outside of the Constitution? You are running counter to the practices of your predecessors. You are putting your judgment against that of the commentators on the Constitution, and doing that which you have said was wrong.

Judge Cooley, in his Commentary on Constitutional Limitations, says:

It is also provided in some of the States that on the final passage of every bill the yeas and nays shall be entered on the journal. Such a provision is designed to serve an important purpose in compelling each member present to assume, as well as to feel, his share of responsibility in legislation, and also in furnishing conclusive evidence as to whether the bill has been passed by the requisite majority or not. The Constitution prescribes that as the test to determine whether the requisite number of members vote in the affirmative. The office of the Journal is to record the proceedings of the House and authenticate and preserve the same. It must appear on the face of the journal that the bill passed on a constitutional majority. These directions are all clearly imperative. They are expressly enjoined by the fundamental law and can not be dispensed with by legislation.

Mr. Speaker, James Madison has been called the Father of the Constitution. Surely one so gifted and patriotic should have some weight in these days of legislative expedients. He used this language:

Can it be of less consequence that the meaning of a constitution should be fixed and known than that the meaning of a law should be so? Can, indeed, a law be fixed in its meaning and operation unless the constitution be so? On the contrary, if a particular legislature, differing in the construction of the constitution from a series of preceding constructions, proceed to act on that difference, they not only introduce uncertainty and instability in the constitution but in the laws themselves, inasmuch as all laws preceding the new construction and inconsistent with it are not only annulled for the future but virtually pronounced nullities from the beginning. * * * Has the wisest and most conscientious judge ever scrupled to acquiesce in decisions in which he has been overruled by the matured opinions of the majority of his colleagues, and subsequently to conform himself thereto as to authoritative expositions of the law? And is it not reasonable that the same view of the official oath should be taken by a legislator acting under the Constitution, which is his guide, as is taken by a judge acting under the law, which is his?

There is in fact and common understanding a necessity of regarding a course of practice as above characterized in the light of a legal rule of interpreting a law; and there is a like necessity of considering it a constitutional rule of interpreting a constitution. * * * Let it then be left to the decision of every intelligent and candid judge, which, on the whole, is most to be relied on for the true and safe construction of the Constitution, that which has the uniform sanction of successive legislative bodies through a period of years, and under the varied ascendancy of parties; not that which depends upon the opinions of every new legislature, heated as it may be by the spirit of party, eager in the pursuit of some favorite object, or led away by the eloquence and address of popular statesmen, themselves perhaps under the influence of the same misleading causes. It was in conformity with the view here taken of the respect due to deliberate and reiterated precedent that the Bank of the United States, though on the original question held to be unconstitutional, received the Executive signature in the year 1817.

Mr. Speaker, the following collation of authorities, collated by my friend from Arkansas [Mr. ROGERS], is so complete that I shall not attempt to improve it, but have the Clerk read.

The Clerk read:

In Dwarris on the Construction of Statutes a similar principle is laid down. He says:

"And it is also held that contemporary history and contemporary interpretation may be called in to aid in arriving at a just conclusion."

The Supreme Court of the United States in the early history of our country, in which there sat William Cushing, William Patterson, Samuel Chase, and Bushrod Washington, used these words, which I commend to gentlemen upon the other side. The court said:

"A contemporary exposition of the Constitution, practiced and acquiesced under for a period of years, fixes the construction, and the court will not shape or control it."

Fixes the construction, Mr. Speaker. That is a synopsis of the opinion.

Time will not admit of reading the opinion in full, but the court says further:

"Another reason for reversal is that the judges of the Supreme Court have no right to sit as circuit judges, not being appointed as such; or, in other words, that they ought to have distinct commissions for that purpose.

"To this objection, which is of recent date, it is sufficient to observe that practice, and acquiescence under it for a period of several years, commencing with the organization of the judicial system, afford an irrefutable answer, and is, indeed, a fixed construction. It is contemporary interpretation of the most forcible nature. This practical exposition is too strong and obstinate to be shaken or controlled.

"The safest rule of interpretation after all will be found to be to look to the nature and object of the particular powers, duties, and rights, with all the lights and aids of contemporary history, and to give to the words of each just such operation and force, consistent with their legitimate meaning, as may fairly secure and attain the ends proposed."

In Martin vs. Hunter's Lessees, Chief-Justice Marshall said:

"This weight of contemporaneous exposition by all parties, that acquiescence by enlightened State courts, and these judicial decisions by the Supreme Court through so long a period, do, as we think, place the doctrine upon a foundation and authority which can not be shaken without delivering over the subject to perpetual and irremediable doubts."

I can multiply these decisions indefinitely, from the same court and from the State courts throughout the Union.

So again, in Cohen vs. The State of Virginia, in the opinion delivered by Chief-Justice Marshall himself many years ago, he makes use of this language:

"Great weight has always been attached, and very rightly attached, to contemporaneous exposition."

Mr. MCMILLIN. The absurdity of the proposition contained in this rule is made manifest by the declaration of the gentleman from Ohio [Mr. MCKINLEY], who in his speech last week said:

The gentleman from Kentucky declared in his remarks on yesterday that under the ruling of the Speaker one Representative could carry a bill if 167 gentlemen sat in their seats in silence. Well, so he could, and so he ought to, if 167 men sit in silence in their seats and refuse to vote when their votes would defeat the proposition; then the vote of a single member ought to carry a bill.

Mr. Speaker, the Constitution requires that when a bill is sent back to Congress with the President's objections to its passage, or, in other words, vetoed, the yeas and nays shall be taken on its passage. If the position assumed by the gentleman from Ohio [Mr. MCKINLEY] be correct, then 2 men voting to override the veto and 165 not voting would carry the bill over the veto. Both the gentlemen from Ohio [Mr. MCKINLEY and Mr. BUTTERWORTH] boldly announced these doctrines. Such were never avowed here before. What would Madison and Jefferson have thought if told that in this year three statesmen would be here proclaiming that on a yea-and-nay vote 1 man could pass a bill by his single vote if 165 others were present who did not vote, and that the Speaker and two stalwart statesmen could override the veto of a President?

To show still further the absurdity of this position I need only recount that during the consideration of the contested-election case last week, when the majority of this House were trying to keep a quorum, the gentleman from Missouri [Mr. NIEDRINGHAUS] left the city, and it was said on private business. The Speaker thereupon took his pencil and paper and straightway counted somebody else who had not voted to take his place.

Sir, autocratic powers are, by the proposed rules, given to the Speaker in various ways. He can refuse to entertain a motion to adjourn. It has been supposed until now that when a body of intelligent representatives of either church or state, town council or public meeting, assembled for the transaction of business they might separate whenever a majority of them desired to do so; but under these rules the Speaker might refuse to entertain a motion to adjourn for twenty-four consecutive hours if he saw fit to do so. Any motion, however parliamentary or however appropriate, he may declare out of order and give only as a reason that he considers it a dilatory motion. As a matter of fact he has entertained motions to adjourn at 2 o'clock in the day, and has refused to entertain them at 6. Sir, the changes in the rules are not only radical but revolutionary. I will not take time to enumerate all the changes, nor to follow them to all their evil results.

I will illustrate with a few. The members make a humiliating surrender of their rights in the matter of the introduction and reference of bills. Under the former rules all public bills had to be introduced in the House publicly. The members were thereby notified of their presentation, the reporters wired them across the continent, and a free press began to discuss them the day of their presentation. Everybody interested was warned of their existence, if vicious, and opposition could begin at once. Any member could have the bill read when introduced, and the question of its reference was with the House and it could refer it to any committee desired.

When it came back to the House, if it made an appropriation, or was a draft on the Treasury, it had to receive its first consideration in Committee of the Whole House, where only a majority of all the members of the House could act on it. The greatest publicity possible was given to it, that the people might know what was being done by their Representatives in matters affecting their interests.

Mr. Speaker, how is it in this code of rules presented for our adoption? The bills are secretly introduced by handing them to the Clerk. They are secretly referred by the Speaker to any committee he desires. The House has no voice in their reference. That is surrendered to the Speaker. If an improper reference is made by the Speaker it can only be changed by unanimous consent, and the Speaker may refuse to recognize the member to ask unanimous consent for a change. The House, as such, has no power over it. None.

When reported back, if considered in Committee of the Whole, one hundred members, under these rules, constitute a quorum to do business. Fifty-one is a majority of that number. The result is that fifty-one members may pass a bill through the Committee of the Whole, although that is less than one-sixth of the House.

Sir, the bills not being read when introduced are passed through the House with only one reading. The inevitable result of this is to vastly increase the power of the Speaker, to decrease the power of individual members, to rush measures through without due deliberation, and to curse the country with hasty and ill-advised legislation.

The Speaker, under these rules, without consulting the House, says who shall compose the committees and what measures shall go to them? He is made such an autocrat as is not found in the legislature of any other free country in the world. Sir, I have been astonished at the silent composure with which members on the other side of the Chamber stand here and surrender one by one the prerogatives so dear to their predecessors. What excuse can we give those who are to come after us for this unmanly surrender?

The right to have reports made openly is surrendered. That, too, is taken away.

Sir, the individuality of members is surrendered in motions to suspend the rules and fix days for the consideration of measures. If a committee makes the motion a majority can do it; but if an individual makes it, it requires two-thirds to do it. Why should it require more votes to carry a proposition made by a single member than by a committee? Is the House less to be trusted when called upon by an individual than when called on by a committee? Is it not the same House all the time? Is a proposition less meritorious when advocated by a member than the same proposition would be when advocated by a committee? Yet this is but another sample of the cringing sycophancy with which individual right is to be transferred to the Speaker, and individual strength taken away from the members.

The Constitution, Article I, and the last clause of section 5, provides:

> Neither House during the session of Congress shall without the consent of the other adjourn for more than three days nor to any other place than that in which the two Houses shall be sitting.

This clearly implies that either House may adjourn for a less period than three days, and carries with it the right for the House itself to fix the time to which it shall adjourn. Yet this code of rules takes that authority away; makes it out of order to make the motion.

Why this disregard of all constitutional authority? Why this destruction of individual right? Why this ruthless breaking down of precedent and senseless establishment of new practices? I suspect that there is method in all this madness. Four years of frugal Democratic legislation and administration after making unprecedented inroads in the public debt still left an overflowing Treasury. In yonder vaults, but little more than a mile away from where we sit, there are millions on millions of money.

But one result can flow from the breaking in of these ancient bulwarks of the Treasury. Measures calling for money and hundreds of schemes and jobs are crowding on Congress for consideration. Adopt these rules and you may expect ever plunderer who has a stale claim, every schemer who has a malodorous job to wend his way to Washington. And the Goth and the Vandal never poured in on Rome in her decline with more avaricious greed than will come the different advocates of various schemes for emptying the Treasury.

The Pacific Mail Line, which was once subsidized by Congress and which in turn subsidized Congress, is thundering at your doors again for a new largess out of the Treasury. A Congressional investigation showed that it paid $700,000 to corrupt Congress once. Not only will it, but other lines will be subsidized, amounting in ten years to a quarter of a billion.

Subsidies are demanded for carrying the ocean mail.

The bill to return the direct tax, involving about seventeen millions, is here ready to get under the influence of the new rules by which questionable jobs are to be accelerated through.

The bill to pay thirty millions of French spoliation claims is here or will be here. These claims, now nearly a century old, which have already been vetoed by one President, will have to be paid.

The Blair educational bill is here, carrying in ten years seventy-seven millions.

Coast defenses and a splendid navy ask three hundred millions.

Indian depredation claims for fifteen millions are here ready to mount this "toboggan slide" which is being constructed to the Treasury.

Bills confirming unearned land grants and taking from the masses what is worth more than one hundred million dollars are taken out of the hands of the members and placed in committees by the Speaker without consulting the House.

The gentleman from Ohio has given us to understand that one object sought is to make the passage of the coming tariff bill more easy. Well may you fear, gentlemen, the wrath of an outraged people on such an increase of taxes as that bill bids fair to be. Well may you begin to tire their representatives in advance. For they are not ready to submit uncomplainingly to an increase of their burdens. They are not ready to take your admonition to "lie quiet and die easy."

Schemes for spending millions of dollars on irrigation projects will feel the quickening impulse of this system of rules. Schemes for building canals by the Government, demanding many millions, are here and ready to be "promoted."

And these are only the beginning of what might be mentioned.

Sir, under this system of rules an era of extravagance will be inaugurated the like of which has not been seen in twenty years. The result will be that when the record of this Congress shall have been finished it will have put the prodigal son in his most prodigal day down as parsimonious, for I believe he squandered only his own inheritance. He did not put felonious fingers into somebody else's pocket, take out somebody else's money, and spend it as you are proposing to do. The result of it all will be an outraged and enraged people, who will rise in their might and hurl from power the unfaithful servants who break down their precedents, squander their Treasury, and override their Constitution.

The Rules.

There is no revolution so injurious to a republican government as revolution of the minority. The majority is responsible and can be punished. The minority has no responsibility, no legislative responsibility, no responsibility that can be traced to them, and therefore they become more dangerous in that they are not responsible to the source of power that constantly holds the majority to the discharge of its duties on the floor of Congress and everywhere else.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 11, 1890.

The question being the adoption of the code of rules reported from the Committee on Rules—

Mr. GROSVENOR said:

Mr. SPEAKER: I fully recognize that the question now presented by the report of the Committee on Rules of the House is one of vast importance. The settlement of this question will affect the interests of the country at this time, and will be of far-reaching import to the whole country in the coming years of our legislative history. We have

reached a crisis in parliamentary history in this country when a radical change in our system of rules is imperatively demanded, and it is wise and proper and eminently fitting that the Republican party, which has been found equal to all the great emergencies that the country has encountered, should be in a position to meet the popular demand for reform in this connection.

Mr. Speaker, I may turn aside at this point for an instant to say that it is possible I may insist on a vested right in more than thirty minutes of the time allotted to this debate, inasmuch as the division into thirty minutes for each speech was agreed upon after I had been accorded the floor under the hour rule. But this question will arise later.

It is said by gentlemen on the other side of the House that the change of rules provided for by the report of the committee amounts to revolution. No one of the able gentlemen who have spoken on that side has pointed out wherein this revolution, if it be one, will imperil or unfavorably affect the business of the country, or any other of the great interests of the country, and so, I suppose, if narrowed down to a complete analysis of the statement, they would be compelled to say that because a certain end is reached by a different mode of parliamentary procedure than we have heretofore pursued in this country, therefore, while the result is the same, while all the material rights of everybody are preserved, the mere fact that a different process has been invoked, a different system of rules has been constructed under which action is taken, they are justified in the statement that the majority on this floor are attempting revolution.

There are conspicuous leaders here, Mr. Speaker, shouting in the ears of the House and of the country a theory of revolution. Somebody has revolted against something, and I trust that during the long debate which is to follow they will point out wherein consists this revolution. Do they mean to be understood before the country as saying and claiming that a change in a rule that deprives nobody of a particular right is revolution? Are all the changes in our modes of procedure revolutionary? If so, Mr. Speaker, we have been guilty of a good many revolutions in this country. Our code of rules as it existed in the Fiftieth Congress was a body of revolution, was the outgrowth of a series of revolutions, if this logic be good.

When I first had the honor to enter Congress—in the Forty-ninth Congress—private bills were introduced in the House exactly as public bills are now introduced, but afterwards by a change in the rules private bills were deposited in what is called the petition-box and entered upon the record of Congress by the Clerk in pursuance of the rules of the House. That was a complete change in the mode of procedure. Bills made their appearance upon the records before any one knew that they had an existence anywhere. But I never heard that change called a revolution. It was a new and different mode to reach a similar result. It was a mode adopted by the mode-adopting power of the House, and was recognized as legitimate and proper.

What is there proposed in this code of rules that under this criticism and this definition amounts to revolution? May it not be just possible that our friends on the other side have invoked a word or term offensive in its popular use in this connection, offensive in its general meaning, and without any particular signification or meaning when thus applied to the subject-matter about which they are talking? The word revolution in a government like ours is an odious word. We had a revolution once; we are not proud of it any one of us, and we ought not to use the term revolution in a trivial or non-serious manner.

It is said that this code of rules under which we have so long proceeded is the product of a hundred years of legislative experience and legislative wisdom. It is true that it is the growth of opinion, and as I will show hereafter, the growth of the tendency to self-preservation that has taken one hundred years to reach this unfortunate development. During that hundred years there have been a great many changes in this country in the modes and methods of business. He would be a very poor merchant or wonderfully ineffective manufacturer, an utter failure as a business man in any walk of life, who should at this time attempt to do business while adhering to the systems of business practiced in this country a hundred years ago. Antiquity in this country does not always signify perfection. Antiquity in the modes of procedure in this regard signifies a complete abrogation of the rights of the majority, and a complete, undeniable, and indefensible enthronement of the powers of the minority.

A merchant doing business west of the Alleghany Mountains in this year of grace would make poor competition against the merchant carrying goods from the Eastern market of purchase to the Western market of sale, if antiquity is to be the rule. The merchant of to-day must not ignore the telegraph and telephone and lightning express, and deal in the old time ways of business and communication. We have progressed, and in this rapid age we assimilate the best and discard the poorest. It is a great demonstration on a scale of magnitude almost incomprehensible of the survival of the fittest.

It was well said in the early part of the debate this winter that the men who made the Constitution never dreamed that the processes to evade the control of the majority and subjugate the majority to the will of the minority, which you have seen in this Hall, would ever be resorted to. They looked forward with prophetic vision to the future. By that vision they saw the growth of the country, the growth of intelligence, the growth of wisdom, patriotism, wealth, and power, but they never saw in any vision of theirs the presence of a Democratic party in this country. Evils were anticipated; misfortunes they understood to be the lot of man, but with all of their disabilities which they understood that Providence would place upon the human race in America, they never looked for the cumulative process of personal punishment in the presence of the Democratic party.

Filibustering was an idea that never penetrated the minds of the makers of the Constitution of the United States. They understood that the minority might make struggles to defend itself against the aggressions of the majority. They discussed the question of the withdrawal of the minority from the House of Congress, and they discussed all the other methods known or dreamed of by them; but they little suspected that the time would come within the first hundred years of legislative experience in this country that a minority consisting of sixty-odd members out of 325 members would seize the legislative department of this great Government by the throat and compel the people of the country to yield a right which they demanded and which the legislative power of the country was quite willing to give them. A procedure like this is a growth in legislative experience. It is an accretion of legislative methods that the makers of the Constitution never understood it was possible could be the outgrowth of free government in this country.

I have in my hand, Mr. Speaker, a volume of the debates on this subject in the convention that framed the United States Constitution. It was kindly furnished to me by the gentleman from Connecticut [Mr. SIMONDS], who has made valuable research in the domain of the early history of these questions, and I desire to incorporate at some length portions of this record in my remarks. I refer to Elliot's Debates, or Madison's Papers, beginning on page 405, and without objection I will incorporate at this point some remarks made by the distinguished gentlemen who were engaged in the discussions upon this question of quorum and the methods by which the House or a minority of the House might possibly hinder and delay legislation. I do it now for the double purpose of showing what their understanding was of the effect of the presence in the House of a quorum; I mean the physical presence of the number requisite, and to show that in their judgment a quorum did not imply the participation of anybody in the particular matter under consideration.

[Extracts from the Debates on the Constitution, by Elliot.]

Mr. Gorham contended that less than a majority in each House should be made a quorum; otherwise great delay might happen in business, and great inconvenience from the future increase in numbers.

Mr. Mercer was also for less than a majority. So great a number will put it in the power of a few, by seceding at a critical moment, to introduce convulsions and endanger the Government. Examples of secession have already happened in some of the States. He was for leaving it to the Legislature to fix the quorum, as in Great Britain, where the requisite number is small, and no inconvenience has been experienced.

Colonel MASON. This is a valuable and necessary part of the plan. In this expanded country, embracing so great a diversity of interests, it would be dangerous to the distant parts to allow a small number of members of the two Houses to make laws. The central States could always take care to be on the spot, and by arriving earlier than the distant ones, or wearying their patience and outstaying them, could carry such measures as they pleased. He had admitted that inconveniences might spring from the secession of a small number; but he had also known good produced by an apprehension of it. He had known a paper emission prevented by that cause in Virginia. He thought the Constitution as now molded was founded on sound principles, and was disposed to put into it extensive powers. At the same time he wished to guard against abuses as much as possible.

If the legislature should be able to reduce the number at all, it might reduce it as low as it pleased, and the United States might be governed by a junto. A majority of the number which had been agreed on was so few that he feared it would be made an objection against the plan.

Mr. King admitted there might be some danger of giving an advantage to the central States, but was of opinion that the public inconvenience, on the other side, was more to be dreaded.

Mr. Gouverneur Morris moved to fix the quorum at thirty-three members in the House of Represenatives and fourteen in the Senate. This is a majority of the present number, and will be a bar to the legislature. Fix the number low, and they will generally attend, knowing that advantage may be taken of their absence. The secession of a small number ought not to be suffered to break a quorum. Such events in the States may have been of little consequence. In the national councils they may be fatal. Besides other mischiefs, if a few can break up a quorum they may seize a moment when a particular part of the continent may be in need of immediate aid to extort, by threatening a secession, some unjust and selfish measure.

Mr. Mercer seconded the motion.

Mr. King said he had just prepared a motion which, instead of fixing the numbers proposed by Mr. Gouverneur Morris as quorums, made those the lowest numbers, leaving the Legislature at liberty to increase them or not. He thought the future increase of members would render a majority of the whole extremely cumbersome.

Mr. Mercer agreed to substitute Mr. King's motion in place of Mr. Morris's.

Mr. Ellsworth was opposed to it. It would be a pleasing ground of confidence to the people, that no law or burden could be imposed on them by a few men. He reminded the movers that the Constitution proposed to give such a discretion, with regard to the number of Representatives, that a very inconvenient number was not to be apprehended. The inconvenience of secessions may be guarded against by giving to each House an authority to require the attendance of absent members.

Mr. Wilson concurred in the sentiments of Mr. Ellsworth.

Mr. Gerry seemed to think that some further precautions than merely fixing the quorum might be necessary. He observed that as 17 would be a majority of a quorum of 33, and 8 of 14, questions might by possibility be carried in the House of Representatives by two large States, and in the Senate by the same States, with the aid of two small ones. He proposed that the number for a quorum in the House of Representatives should not exceed 50 nor be less than 33, leaving the intermediate discretion to the Legislature.

Mr. KING. As the quorum could not be altered without the concurrence of

the President, by less than two-thirds of each House, he thought there could be no danger in trusting the Legislature.

Mr. CARROLL. This would be no security against the continuance of the quorums at 33 and 14, when they ought to be increased.

On the question of Mr. King's motion, that not less than 33 in the House of Representatives, nor less than 14 in the Senate, should constitute a quorum, which may be increased by a law, on additions to the members in either House—

Massachusetts, Delaware, ay, 2; New Hampshire, Connecticut, New Jersey, Pennsylvania, Maryland, Virginia, North Carolina, South Carolina, Georgia, no, 9.

Mr. Randolph and Mr. Madison moved to add to the end of Article VI, section 3, "and may be authorized to compel the attendance of absent members, in such manner and under such penalties as each House may provide." Agreed to by all except Pennsylvania, which was divided.

And following this debate and the adoption of this section of the present Constitution, and that there might be no mistake about it, Mr. Randolph and Mr. Madison proposed the amendment which was adopted and which has been so powerful in producing a quorum of the House during all of the past hundred years. They proposed the following words:

And may be authorized to compel the attendance of absent members in such manner and under such penalties as each House may provide.

This provision was placed at the end of a section, which clearly indicates that it is the presence and not the co-operation of a majority which is required by the Constitution, and this is the familiar power which Congress possesses under the Constitution, and which has been so often enforced. It was put into the Constitution by the framers of that instrument to give efficiency and power to the provision that required a quorum to be present, and defined that quorum to be a majority of the House. How idle it was—if so it was—that men possessed of the wisdom of Madison and his coadjutors should have placed a vain provision in the solemn instrument then under consideration.

How vain would it have been for the framers of the Constitution at the very point of time where they were discussing the whole subject of a quorum to have placed in the Constitution a nugatory provision. The proposition of Mr. Morris, of New York, was that the quorum should be thirty or forty of the members of the House of Representatives, a proposition which proposed a number far below the quorum which was afterwards adopted. How vain it was that they should have gone on and provided a mode and manner of process by which the members of this body could be brought into the House when by the silence of the members so brought in they could render nugatory the effect of their presence here. Thus it was understood by the framers of the Constitution, nor will it be seriously challenged on this floor, that when a majority of the House of Representatives is present within the body of the House, there is a quorum present, and a majority of that quorum may proceed to enact legislation.

Subsequently we find that the Constitutional Convention adopted a provision that under certain contingencies the House might elect a President of the United States, and there it is provided that not only there shall be a certain number of States represented, but it is provided that a certain number of the States shall vote in the affirmative for the election of the President, showing by the very utterance of the one thing in one section of the Constitution that the omission from the other section was done significantly and on purpose; done because the convention understood that in the one case a number less than a majority may proceed to act if the others were present; and in the other case requiring that a given number of States should participate in the election of President. There can be no stronger argument in the nature of inference than this one, and this provision having been adopted, a long period of time elapsed before it was ever deemed possible in this country that the presence of a silent member could affect the quorum.

I have been present, Mr. Speaker, in this House when, upon a warrant issued by the Speaker when it had been ascertained that no quorum was present, members have been brought into the House and arraigned before the bar of the House. They were brought here because there was no quorum; because under the Constitution the House could not act, could not legislate, could not do business; was paralyzed, was helpless; had but one power, and that was the power given them by the Constitution to send for absent members. And I have seen these members arraigned before the bar of the House, and I have heard them answer to their names upon a call of the roll, and then instantly upon the House attempting to proceed with business refuse to answer to their names upon a call of the roll, and the House became again paralyzed. It was vain work, vain endeavor, absurdity sublimated, the play of children, the amusement of idiots, an insult to the intelligence of the American people.

Mr. Speaker, I represent an intelligent district. My constituents are men of character and intelligence. They will compare very favorably with the other Congressional districts of the country. But they can not understand and they will not understand that it is right and proper for members of Congress to be present in this House for one purpose and absent for the purpose of the discharge of their duty. They can not be made to understand that a representative of the people, sworn to obey the rules of the House, may be permitted to sit here for the purpose of objecting and raising the point of no quorum, while that member himself refuses to vote upon a call of the roll.

The American people have advanced beyond this puerile stage. They are not idiots nor children, and they will submit no longer to this trifling with their rights and the dignity of this body. But, Mr. Speaker, from the adoption of the Constitution down to a late day we went along without any of this disorganization, and this political revolution grew up at a time when other revolutions were ripe in the country. It was unheard of back of the war, and I think unheard of until about the period of the Forty-fifth Congress. I am told by a number of gentlemen who still survive the Congresses before the war—and I wish, sir, that more of them were surviving, and that there was more of the patriotism that was in the House of the Congress of the United States when the war was coming on—I am told by those who are yet living that during those hottest debates in the height of the terrible fever-heat of that period of Congressional contests and bitter personal crimination and recrimination no member of this House refused or hesitated to vote when his name was called.

The great senior Senator from Ohio, JOHN SHERMAN, who was a member of the Thirty-fourth Congress, told me recently that he and Mr. Fessenden, of Maine, sat in that Congress when the most revolutionary proceedings were offered, and in the Congresses of that period, and never once under any set of circumstances attempted to break the power of the majority by silence or by failing to vote their opinions when their names were called.

It is not worth while for us here to charge each other with wrongdoing in this behalf. We can not charge that the Democratic side in this House has been exclusively guilty of this crime against good government.

Or those eighteen, upon whom the tower in Siloam fell, and slew them, think ye that they were sinners above all men that dwelt in Jerusalem?
I tell you, Nay: but, except ye repent, ye shall all likewise perish.

We have all been guilty of it. It was brought to the highest degree of development in the Fiftieth Congress. I confess that I joined with others upon this side of the House in that procedure. I did it on many occasions, and I stand here to-day to confess in this public manner exactly what my distinguished colleague from Ohio, Mr. MCKINLEY, did the other day, that I never did that and broke a quorum and prevented action by the majority of this House that I did not feel that I had resorted to an unjustifiable and almost unpardonable breach of my duty as the representative of my constituents.

I need not speak here any great length, Mr. Speaker, about the enormous evil to which this whole system has grown. Nine days of the time of the House of Representatives in the long session of the Fiftieth Congress was occupied here by the ceaseless and brutal disregard of the demands of this country.

Mr. PAYSON. On what occasion was that?

Mr. GROSVENOR. I make no criticism upon any gentleman who participated in that filibustering scheme. They availed themselves of the operation of a set of rules that have grown up here and become an abuse and took advantage of a bad habit to which the House had become addicted. But I say, and I say what I think I am justified by the echoes that are coming from every portion of this Union, that the people have condemned that consumption of nine days of the valuable time of the House and punished the men to a very large extent who acquiesced in and led in that policy.

I do not stop here to discuss the merits of the bill to refund the direct tax. It is enough for my present purpose and for my present illustration to say that more than a two-third majority of this House was in favor of the passage of the bill. It had been passed in the Senate by an almost unanimous vote, and yet the minority, with no rights in that behalf, stood here and for nine days throttled the House, held the majority by the throat and demanded and ultimately wrested from the House the abandonment of its purpose to pass the bill. It was an act of overt revolution against law and the Constitution, no better in its spirit and no less a violation of the Constitution than any other revolutionary act with which this country has been acquainted.

Gentlemen say that it is revolution when we prevent a member of the House from making dilatory motions for the simple purpose of obstructing public business. I answer that if it is so, it is minor, defensible, harmless revolution as compared with the system that permits the minority of a legislative body to prevent absolutely the action of the majority.

What are the rights of a minority of a legislative body? We hear a great deal about them, and there is a great deal more that we are to hear. There is a great deal more in this claim of minority rights in stump speeches and in lyceum lectures than in a practical argument in Congress.

This is a Government of the majority, and the rights of the minority end, in my humble judgment, when the minority are afforded ample opportunity to present their opposition to a pending measure by debate and make themselves heard and understood by the country, record their votes in opposition, see to it that the men who pass the measure record their votes in the affirmative, and then protest in their own language to the country; then, in my judgment, Mr. Speaker, the right of the minority is ended, and all else that the minority does, whether by the delay of legislation, the prevention of legislative enactment, or the annoyance and obstruction of public business, is disorderly, revolutionary, and against public morals.

It is a usurpation of power nowhere guarantied in the Constitution,

nowhere contemplated in our form of government, subversive of the very principles upon which our Government rests, and it is unfortunate that the Democratic party of to-day places itself in the attitude towards this great public question that it does. It has not a record, Mr. Speaker, that justifies it in raising doubtful questions of loyalty to established principles of government.

I have enumerated what I understand to be the rights of the minority.

I know of no other God-given or constitutionally-guarantied right of the minority anywhere; there is no revolution so injurious to a republican government as a revolution of the minority. The majority is responsible and can be punished. The minority has no responsibility; no legislative responsibility; no responsibility that can be traced to them; and therefore they become more dangerous in that they are not responsible to the source of power that constantly holds to the discharge of its duty the majority on the floor of Congress and everywhere else.

While on this subject, Mr. Speaker, I desire to interpolate into my remarks the same chapter that was furnished with so much effect by the distinguished gentleman from Pennsylvania [Mr. BAYNE] yesterday. I want it to go everywhere in this country and be understood by the humblest citizen that the fight of the minority here to-day, their contention, the thing which they want to work out and achieve, is to continue in the House of Representatives a system that will enable the minority upon the floor of this House to perpetuate the sort of proceeding there described as having taken place in the Fiftieth Congress. Without objection I desire to incorporate that familiar scene from the report of the Fiftieth Congress.

The Clerk read as follows:

HOUSE OF REPRESENTATIVES,
Wednesday, January 9, 1889.

The House met at 12 o'clock m. Prayer by the Chaplain, Rev. W. H. MILBURN, D.D.

ORDER OF BUSINESS.

The SPEAKER. The Clerk will read the Journal.
Mr. WEAVER. I rise to a question of order.
The SPEAKER. The gentleman will state it.
Mr. WEAVER. Clause I of Rule I provides that—

"The Speaker shall take the chair on every legislative day precisely at the hour to which the House shall have adjourned at the last sitting, immediately call the members to order, and on the appearance of a quorum, cause the Journal of the proceeding of the last day's sitting to be read, having previously examined and approved the same."

I make the point of order that the Journal can not be read until it is ascertained that a quorum is present.

The SPEAKER. That point of order was made during the last session of Congress, and the Chair sustained it. It is not only a rule of the House, but the Constitution itself provides that it shall require a majority of the members-elect to transact business; and the reading and approval of the Journal is the transaction of business, because the Journal is nothing more than memoranda made by an officer of the House, until it is approved by the House.

The Clerk will call the roll.

The roll was called, and the following members answered to their names:

Abbott,	Dingley,	Kean,	Rice,
Allen, Mass.	Dockery,	Kelley,	Richardson,
Anderson, Iowa	Dunn,	Kerr,	Rockwell,
Anderson, Miss.	Elliott,	Ketcham,	Rogers,
Anderson, Ill.	Enloe,	Kilgore,	Romeis,
Atkinson,	Ermentrout,	Laffoon,	Rowell,
Baker, N. Y.	Farquhar,	Laidlaw,	Rowland,
Baker, Ill.	Felton,	Lane,	Sawyer,
Bankhead,	Finley,	Lanham,	Sayers,
Barnes,	Fisher,	Latham,	Scull,
Biggs,	Flood,	Lawler,	Seymour,
Bingham,	Foran,	Lind,	Shaw,
Blanchard,	Forney,	Lodge,	Shively,
Bland,	French,	Long,	Smith,
Blount,	Fuller,	Lynch,	Sowden,
Bound,	Funston,	Macdonald,	Spooner,

The SPEAKER. Two hundred and three gentlemen are present, and there is a quorum.

Mr. WEAVER. I move the House adjourn; and pending that motion, I move that when the House adjourn to-day it be until Friday next.

Mr. RANDALL. I suggest that the roll-call, as directed by the Speaker, was for the purpose of knowing whether there was a quorum present, and when the Speaker found a quorum present the next requirement is that the Journal be read.

The SPEAKER. The requirement is the Speaker shall direct that the Journal be read. The Chair thinks the House may adjourn to prevent the reading of the Journal at any time it thinks proper. Such motions have been made before, and the House has adjourned without the reading of the Journal.

The question was taken on adjournment until Friday; and the Speaker announced that the "noes" seemed to have it.

Mr. WEAVER. Division.
The House divided; and there were—ayes 3, noes 139.
Mr. WEAVER. No quorum
The Chair appointed Mr. Weaver and Mr. CRISP as tellers.
Mr. JACKSON. I demand the yeas and nays.
Mr. CRISP (to Mr. Jackson). Do not do that; we will get a quorum presently.
Mr. JACKSON. I will withdraw the demand for the yeas and nays.
After some time spent in counting, the tellers reported—ayes none, noes 139.
The SPEAKER. No quorum has yet voted.
The tellers continued the count, and finally reported—ayes none, noes 163.
So the motion that when the House adjourn to-day it adjourn to meet on Friday next was disagreed to.

Mr. WEAVER. I move that when the House adjourn to-day it be to meet on Saturday next.

The question was taken; and the Speaker announced that the noes seemed to have it.

Mr. WEAVER. Division.
The House divided; and there were—ayes none, noes 115.
Mr. WEAVER. No quorum.
Mr. Weaver and Mr. CRISP were appointed tellers.
The House again divided; and the tellers reported—ayes none, noes 166.
The SPEAKER. No quorum has yet voted.
Mr. GROSVENOR. Mr. Speaker, I rise to a parliamentary inquiry.
The SPEAKER. The gentleman will state it.
Mr. GROSVENOR. I want to know whether during the attempt to obtain a quorum it would be in order for Mr. CRISP to address the House on the rights of a minority being protected under our form of Government. [Laughter.]
The SPEAKER. It would not.
The tellers again reported—ay 1, noes 163. So the motion to adjourn till Saturday was not agreed to.

Mr. WEAVER. I move that when the House adjourn to-day it be to meet on Monday next.

Mr. CRISP. I make the point of order that that is more than three days.
The SPEAKER. It is four days.

Mr. WEAVER. Then I move that the House take a recess until half past 2 o'clock.

The question was taken; and the Speaker announced that the noes seemed to have it.

Mr. WEAVER. Division.
The House divided; and there were—ayes 3, noes 153.
Mr. WEAVER. No quorum.
Mr. Weaver and Mr. CRISP were appointed tellers.
The House divided; and the tellers reported—ayes none, noes 90.
The SPEAKER. No quorum has yet voted.

Mr. REED. Mr. Speaker, I would like to inquire of the gentleman from Georgia [Mr. CRISP] whether there is anything else that can be done to protect the rights of the minority. [Laughter.]

Mr. CRISP. Mr. Speaker, the gentleman from Georgia has said nothing to indicate that he was at all objecting to this.

Mr. PAYSON. How does the minority feel about it?
Mr. ROGERS. There is no minority.
Mr. WEAVER. This is a fight for the rights of the majority.

Mr. PAYSON. I think we ought to be advised as to how "the minority" himself [Mr. Weaver] feels as to his own situation. [Laughter.]

The SPEAKER. Upon the pending question the tellers report—ayes 2, noes 161. The noes have it, and the motion is not agreed to.

Mr. WEAVER. I move that the House take a recess until half past 1 o'clock.

The question was taken; and the Speaker declared that the noes seemed to have it.

Mr. WEAVER. I ask for a division.
The House divided; and there were—ayes none, noes 81.
Mr. WEAVER. No quorum.
The SPEAKER. The point being made that no quorum has voted, the Chair will appoint to act as tellers the gentleman from Georgia [Mr. CRISP] and the gentleman from Iowa [Mr. Weaver].
The House divided; and the tellers reported—ayes none, nays 117.
The SPEAKER *pro tempore* (Mr. HATCH). No quorum has voted. There is evidently a quorum present in the House, and the Chair hopes members will come forward and vote.

Mr. STEELE (at half past 1 o'clock p. m). Mr. Speaker, I make the point of order that the time named in the pending motion to take a recess has arrived, and that the motion therefore falls, and I now call up the bill (S. 944) to increase the pension to Mrs. Elizabeth Scott.

Mr. WEAVER. Regular order.

The SPEAKER *pro tempore*. The Chair will state to the gentleman from Indiana [Mr. Steele] that the House is dividing, and no quorum has voted.

Mr. STEELE. But the time during which it was proposed that the House should take a recess has expired.

The SPEAKER *pro tempore*. The question is under consideration, and it is for the House to determine. The Chair will again remind members that no quorum has voted. There is obviously a quorum present, and the Chair hopes that gentlemen will come forward and vote and make a quorum.

Mr. STEELE. But the hour to which the gentleman from Iowa [Mr. Weaver] moved to take a recess having expired, is it not in order to make that point?

The SPEAKER *pro tempore*. That is a matter for the House to determine. The Chair will state to the gentleman [Mr. Steele] further that even if that question were determined his motion would not be in order, because the Journal of yesterday's proceedings has not yet been read. No motion is in order until after the Journal has been read.

Mr. STEELE. I wish to discuss the point of order, but I yield now to my friend from Michigan [Mr. BREWER].

The SPEAKER *pro tempore*. The gentleman is not in order.

Mr. WHITE, of New York. Mr. Speaker, would it be in order to inquire if protection to the rights of the minority is the palladium of our liberties to-day? [Laughter.]

The SPEAKER *pro tempore*. The Chair does not think that is a parliamentary inquiry. If members who are present desire that the business of the House shall proceed they will come forward and vote and make a quorum. It is for them to determine whether the business of the House shall be blocked in this way or not.

The tellers reported—ayes none, noes 152.
Mr. WEAVER. No quorum.
Mr. MCCREARY. I move a call of the House.

Mr. McCULLOCH. I rise to a point of order.
The SPEAKER *pro tempore*. The gentleman will state it.
Mr. McCULLOCH. When a motion is made and, upon a vote, the ayes are none, does not the motion fail?
The SPEAKER *pro tempore*. Not unless there is a quorum. The gentleman from Iowa [Mr. Weaver] insists upon the point that no quorum has voted. The question is on the motion of the gentleman from Kentucky [Mr. McCREARY] that a call of the House be ordered.
A call of the House was ordered—ayes 73, noes 5.
The SPEAKER *pro tempore* (Mr. HATCH). The roll-call discloses the presence of 232 members, being more than a quorum.
Mr. McCREARY. As a quorum is present, I move to dispense with further proceedings under the call.
The motion of Mr. McCREARY was agreed to.
Mr. WEAVER. I move that the House take a recess until forty minutes past 2 o'clock.
The SPEAKER *pro tempore*. There is already a motion pending, which must be determined. The tellers will resume their places. The question is on the motion submitted by the gentleman from Iowa [Mr. Weaver] that the House take a recess until half past 1 o'clock to-day.
Mr. WASHINGTON. I make a point of order——
The SPEAKER *pro tempore*. The point of order which the Chair understands the gentleman desires to make has already been overruled. This is a question which must be determined by the House.
Mr. WASHINGTON. I call the attention of the Chair to the fact that it is now 2 o'clock.
The SPEAKER *pro tempore*. That is a matter for the House. The motion having been made must be voted on. The House is dividing on the question.
Mr. WEAVER. I make the point that the vote must now be taken *de novo*.
The SPEAKER *pro tempore*. The Chair so holds.
Mr. BUCHANAN. I rise to a parliamentary inquiry. I understand the pending motion is that the House take a recess until half past 1 o'clock.
The SPEAKER *pro tempore*. It is.
Mr. BUCHANAN. It now being half an hour past that time, what would be the effect of this motion if adopted?
The SPEAKER *pro tempore*. The Chair will determine that when the House votes upon the proposition.
Mr. BUCHANAN. But my point is this: If the motion were adopted, would it not throw us over until half past 1 o'clock to-morrow? I ask the question in good faith.
The SPEAKER *pro tempore*. The Chair will state to the gentleman from New Jersey that such would not be the effect.
The House again divided; and after some time the tellers reported—ayes 1, noes 162.
So the motion of Mr. Weaver was not agreed to.
Mr. WEAVER. I move that the House take a recess until fifteen minutes past 3 o'clock.
The SPEAKER (having put the question). The noes seem to have it.
Mr. WEAVER. I call for a division.
The question being again taken; there were—ayes 3, noes 34.
Mr. WEAVER. No quorum.
Mr. CRISP. I call for the yeas and nays.
The yeas and nays were ordered, 48 voting therefor.
So the question was taken; and it was decided in the negative—yeas 3, nays 184, not voting 136; as follows:

YEAS—3.

* * * * * * *

NAYS—184.

* * * * * * *

So the House refused to take a recess.

* * * * * * *

The vote was then announced as above recorded.
Mr. WEAVER. I have no objection to the Journal being read.
The SPEAKER. The Clerk will read the Journal.
The Journal of yesterday's proceedings was read and approved.

This is the spectacle to which the country has been invited under Democratic administrations, and this the God-given right of the minority, which our friends on the other side insist upon having.

The outbreak of this character of revolution in the national House of Representatives, like every other wrong and evil, spread among the parliamentary bodies of the country, and so it has come about that legislative and judicial decisions bearing upon this question have made their appearance all over the Union.

The Speaker of the House, in the early days of this controversy, quoted Governor Hill, of New York, when presiding officer of the senate of New York, and quoted other legislative authorities. Since then we are furnished with reports from all over the country, showing that in cases of emergency and necessity the presiding officers of parliamentary bodies in more than half the States have not hesitated to count the members present and not voting, and thereby declare a quorum present for business, but the identical question has reached the supreme court of a number of the States, and gentlemen who have preceded me in this debate have furnished a number of cases, which I will reproduce, and there are some which I myself have found in the various law-books of the country, and the aggregate result of the whole of it is that the courts have uniformly and always and everywhere cut through the fiction asserted by our Democratic friends here, and held under all circumstances that a member present and refusing to vote might be counted to make a quorum.

A notable case is reported in the 37th Ohio State Reports, and which decides the identical question, and that, too, under a statute that must be interpreted quite as strongly for the views held on the other side as the Constitution of the United States. I copy an extract from the debate upon this question during the great speech of my eloquent colleague, Mr. BUTTERWORTH. He said:

Upon this question of the effect of sitting in silence when the roll is called, I desire to read from a decision of the supreme court of the State of Ohio. I read from the case of The State *ex rel. vs.* Green, 37 Ohio State Reports, 234:

"In holding, as we do, that the relator was duly elected, we do not contravene the well-settled rule that in all deliberative bodies the majority must govern. We simply hold that the law cast upon each member of council the duty of voting for some one—that by being present and keeping silent when called on to vote they are presumed to acquiesce in the vote given. This acquiescence creates the presumption that the choice of their voting is the choice of a majority of all present and not voting."

A DECISION DIRECTLY IN POINT.

And this decision of the supreme court of Ohio is in the line of well-established precedent; and I beg to quote briefly from one more authority as to the fact of members being present as a part of a quorum and remaining silent during the roll-call—that is, abstaining from voting. I read from 1 McCord, page 63. The title of the case is The State *vs.* Francis de Lieselline. The opinion of the supreme court of South Carolina in this case was delivered by Justice Nott. I read only the portion of the decision which bears immediately on the question under consideration. The court says:

"The constitutions of this State and of the United States declare that a majority shall be a quorum to do business; but a majority of that quorum are sufficient to decide the most important question. It has already been stated that eleven constitute a quorum of the board of trustees of the college, which is composed of twenty-nine members. Six constitute a majority of that quorum, and the concurrence of that number, when only eleven are present, has always been held conclusive on the whole body. In the case of Rex *vs.* Foxcroft (2 Burr., 1017), the whole number of electors was twenty-five; out of that number twenty-one assembled pursuant to summons. A particular person was nominated, for whom nine voted, eleven refused to vote at all. The person who received the nine votes was held duly elected. Lord Mansfield said: 'Whenever electors are present and do not vote at all, they virtually acquiesce in the election made by those who do;' and Justice Wilmot, in the same case, mentioned the case of Rex *vs.* Withers, where, out of eleven voters, five voted and six refused, the court held that the six virtually consented. See also the case of Sir Robert Salisbury Cotton *vs.* Davis, (1 Strange 53), where it was held that a majority of the number present was sufficient. It appears, therefore, that whether we consider the case upon principle or authority, we are led to the same result."

Mr. BUTTERWORTH was interrupted at one point by a gentleman who bore testimony as follows:

Mr. WILSON, of Kentucky. In 1886 I had the honor to be a member of the Kentucky senate, and it is always an honor to be a member of the Kentucky senate. On the last day of the session there came up for consideration in that body a bill, which had passed the lower house, providing for the disposition and employment of convicts. It came before the senate for its consideration. A quorum refused to vote, and the lieutenant-governor designated members who occupied their seats without voting and had their names entered upon the journal in order to make a quorum. [Applause on the Republican side.]
Mr. McCREARY. What year was that?
Mr. WILSON, of Kentucky. The lieutenant-governor was Hon. J. R. Hindman, who is well known to every Kentuckian on this floor.
A MEMBER. A Democrat?

A KENTUCKY LIEUTENANT-GOVERNOR COINCIDES.

Mr. WILSON, of Kentucky. A Democrat, and one who intends, I hear, to try to break into Congress from the Eleventh district. [Laughter.] Furthermore, Mr. Speaker, there was a member then upon the floor of that senate from Covington, the Hon. J. W. Bryan, who was officious and active in pointing out members and having them designated, and he has been since elected lieutenant-governor of Kentucky and will try to break into the governor's chair at the next election. [Laughter and applause on the Republican side.]

In his speech here yesterday the gentleman from Pennsylvania [Mr. BAYNE] offered the following strong authorities:

But, Mr. Speaker, I do not know of a single one of the legislative bodies in this country nor of a single corporation in the country where the members have been sustained in sitting silent and refusing to vote; while, on the other hand, from the courts of justice in nearly every State in the Union have come decisions which recognize the duty to vote and the right to count the membership present to make a quorum.

I wish to call attention to a few of these cases. One case is that of the Commonwealth *vs.* Green, reported in 4 Wharton, a decision of the supreme court of Pennsylvania. The decision was rendered by Chief-Justice Gibson, one of the ablest lawyers that ever presided over any court in this country. The question was raised from the proceedings of the general assembly of the Presbyterian Church. The assembly was presided over by a moderator, and a number of those who were present refused to vote. The moderator counted them.

In the opinion Judge Gibson says:

"When a question is put by the established organ, silence is acquiescence with the majority, because each member is supposed to have assented beforehand to the process pre-established to ascertain the general will.

"But this rule of implied assent is inapplicable to a measure which is essentially revolutionary and based upon no pre-established process of ascertainment whatever."

There he held that in that body a corporation, having no fixed rules, ruled by general parliamentary law, the presiding officer had the right to count as present, in order to make a quorum, those who sat silently in their seats. My friend from Ohio [Mr. BUTTERWORTH] cited a case from South Carolina where the same ruling was made by Justice Nott, of the supreme court of that State. I shall not read it, but shall print it with my remarks. It is the case of the State *vs.* Francis de Lisselline, 1 McCord, page 63, and in giving his opinion Justice Nott says:

The constitutions of this State and of the United States declare that a majority shall be a quorum to do business; but a majority of that quorum are sufficient to decide the most important question. It has already been stated that eleven constitute a quorum of the board of trustees of the college, which is composed of twenty-nine members. Six constitute a majority of that quorum, and the concurrence of that number, when only eleven are present, has always been held conclusive on the whole body. In the case of Rex *vs.* Foxcroft (2 Burr, 1017) the whole number of electors was twenty-five; out of that number twenty-one assembled pursuant to summons. A particular person was nominated, for whom nine voted, eleven refused to vote at all. The person who received the nine votes was held duly elected. Lord Mansfield said, "Whenever electors are present and do not vote at all, they virtually acquiesce in the election made by those who do;" and Justice Wilmot, in the same case, mentioned the case of Rex *vs.* Withers, where, out of eleven voters, five voted and six refused, the court held that the six virtually consented. See also the case of Sir Robert Salisbury Cotton *vs.* Davis, 1 Strange, 53, where it was held that a majority of the number present was sufficient. It appears, therefore, that whether we consider the case upon principle, or authority, we are led to the same result.

And in a case recently decided in the State of Indiana, which to my mind is one of the strongest that could be adduced in support of the proposition that those present may be counted to constitute a quorum, the supreme court gave an opinion from which I shall ask the Clerk to read the portion marked.

The Clerk read as follows:

"The mayor of the city of Rushville appointed a committee, composed of the members of the common council, to investigate and report upon the question of the expediency of buying an electric-light plant and machinery. The committee in due time reported to the common council in favor of making the purchase. On the 3d day of April, 1889, action was taken on the report, at a regular meeting, at which all of the members of the common council were present, and the following resolution was introduced:

"'*Resolved*, That the report of the special committee relating to the lighting of the city be adopted, and that the officers therein named be instructed to sign the contract named therein.'

"Three of the six members composing the common council voted in favor of the resolution, but the other three members, although present, declined to vote, and the mayor declared that it was adopted. By virtue of this resolution the city is about to enter into a contract with the companies named in the report for the purchase of an electric-light plant and the power to run it, for which the city is to pay the sum of $10,150. Acting under the resolution, the Edison Manufacturing Company has put up poles, strung wires on them, and placed in operation a system of electric lights, and the city will buy the plant and machinery, unless enjoined. The city has contracted with the Buckeye Engine Company for a steam-engine and appliances to be used in operating the machinery of the Edison company plant at a cost of $2,200. Unless enjoined, the city will issue bonds to pay for the plant, machinery, engine, and appliances.

"The meeting at which the resolution was adopted was a regular one, attended by all the members of the common council, and all who voted at all voted in favor of the resolution. The question, therefore, is, Does the fact that three of the members present declined to vote authorize the conclusion that the resolution was not legally adopted? In our judgment it does not. The rule is that if there is a quorum present and a majority of the quorum vote in favor of a measure it will prevail, although an equal number should refrain from voting. It is not the majority of the whole number of members present that is reqired. All that is requisite is a majority of the number of members required to constitute a quorum.

"If there had been four members of the common council present, and three had voted for the resolution and one had voted against it, or had not voted at all, no one would hesitate to affirm that the resolution was duly passed, and it can make no difference whether four or six members were present, since it is always the vote of the majority of the quorum that is effective. The mere presence of inactive members does not impair the right of the majority of the quorum to proceed with the business of the body. If members present desire to defeat a measure they must vote against it, for inaction will not accomplish their purpose. Their silence is acquiescence rather than opposition. Their refusal to vote is, in effect, a declaration that they consent that the majority of the quorum may act for the body of which they are members.

"The rule we have asserted is a very old one. The doctrine is thus stated by one of the earliest writers on municipal corporations: 'After an election has been properly proposed whoever has a majority of those who vote, the assembly being sufficient, is elected, although a majority of the entire assembly altogether abstain from voting, because their presence suffices to constitute the elective body, and if they neglect to vote it is their own fault and shall not be deemed to invalidate the act of the others, but be construed an assent to the determination of the majority of those who do vote.'—*Willcock Municipal Corp.*, section 546.

"In a recent American work it is said: 'Those who are present and who help to make up the quorum are expected to vote on every question, and their presence alone is enough to make the vote decisive and binding, whether they actually vote or not. The objects of legislation can not be defeated by the refusal of any one to vote when present. If eighteen are present, and nine vote, all in the affirmative, the measure is carried, the refusal of the other nine to vote being construed as a vote in the affirmative so far as any construction is necessary.' (*How & Bemis Municipal Police Ordinances*, 42.) The principle involved is asserted in many cases. (State *vs.* Green, 37 Ohio Stat., 227; Lountz *vs.* People, 113 Ill., 137; County *vs.* Johnson, —— 569; St. Joseph Tp. *vs.* Rogers, 16 Wall., 644; State *vs.* Mayor, 37 Mo., 270; Everett *vs.* Smith, 22 Minn., 53; Olaknon *vs.* Wainright, 2 Burr., 1017; King *vs.* Belbringer, 4 Tem. Rep., 810; Inhabitants *vs.* Stearns, 21 Hick., 148.)"

The authorities produced by the able gentlemen are conclusive of the proposition I have stated. But New Hampshire, with its strong supreme court, has met the question: Said the gentleman from New Hampshire [Mr. MOORE]:

The development of the principle here in dispute is easily traceable. The first case, Beck *vs.* Hanscom, 29 N. H., 213, decided forty years ago, settled the doctrine that the absence of a quorum in one branch of a city government, in a convention duly called, did not invalidate an election of a marshal.

In the second case, Kimball *vs.* Marshal, 44 N. H., it was held that a clerk was legally elected though only a minority of one branch were present, no convention having been agreed to, because the law required an election on that day. Here we have the doctrine of official and individual responsibility broadened out. But it was left to the court in Attorney-General *vs.* Shepard *et al.*, 44 N. H., 393, to meet the question here at issue face to face and settle the doctrine that a proposition is carried by a majority of the votes cast, though a quorum, being present, should not vote. The opinion in this case was delivered by Chief-Justice Doe, whose name will be recognized by the able lawyers on both sides of this Chamber as that of one of the ablest jurists in this country. All the justices, three Republicans and three Democrats, concurred.

I quote:

"There were seven aldermen; four were a quorum; six were present; three voted for the adoption of the amendment, and the refusal of the other three to vote was inoperative. In the absence of express regulation a proposition is carried in a town meeting or other legislative assembly by a majority of the votes cast. (St. Joseph Township *vs.* Rogers, 16 Wall., 644, 664; Dill. Mun. Cor., s. 44, p. 63, n. 2; Richardson *vs.* Society, 59 N. H., 167, 168.) The exercise of law-making power is not stopped, by the mere silence and inaction of some of the law-makers who were present. An arbitrary, technical, and exclusive method of ascertaining whether a quorum is present, operating to prevent the performance of official duty and obstruct business of government, is no part of our common law. The statute requiring the presence of four aldermen does not mean that in the presence of four a majority of the votes cast may not be enough. The journal properly shows how many members were there when the vote was taken by yeas and nays; there was no difficulty in ascertaining and recording the fact, and the requirement of a quorum at that time was not intended to furnish a means of suspending the legislative power and duty of a quorum."

But I will not multiply authorities. No great court of the country has ever held the opposite doctrine, and it is in the highest degree satisfactory that the courts have not been carried away by partisan zeal to tolerate a doctrine so opposed to common sense and common honesty.

Mr. Speaker, one claim of our opponents, and which has been asserted here so often that I assume our friends making it begin to really believe their statement, is that from the beginning of the Government down we have an "unbroken line" of recognition of the idea and practice that members of Congress not voting do not count to make a quorum. Those making this assertion are mistaken.

In the first session of the Thirty-fourth Congress, in a heated contest upon the Dakota contested-election case, the Speaker, Mr. Colfax, counted members present and not voting, ascertained and declared a quorum, and proceeded with the public business.

The record will be found in the Congressional Globe for first session of that Congress, volume 52, pages 2892, 2898.

In that case a series of filibustering motions had been made, and finally a call of the roll showed present and voting less than a quorum. And then follows:

The SPEAKER. The previous question having been ordered, and no quorum having voted, under the one hundred and thirty-second rule the Chair will count the House to ascertain whether a quorum is present.

The Speaker proceeded to count the House, and announced that 118 members (a quorum) were present; and the motion that there be a call of the House was therefore not in order.

Mr. MALLORY. Is it in order when the Speaker is counting the House for members to withdraw into the coat-room to prevent being counted?

The CHAIR. It is not in order, but the Chair has no power to prevent it.

Further discussion shows that under the one hundred and thirty-second rule as it then stood a roll of members not voting was kept and entered upon the Journal and Globe.

Here was a rule authorizing this "despotic" act. Nobody cried out "revolution" then. No one felt his rights slipping from him. Nobody said that rule was creating a despotism.

The minority, not then grown so wicked as has the present, did not understand that one of their "God-given" rights had been wrested from them.

I trust it will not be considered that I am reflecting in any way upon anybody when I say that there grew up another abuse in this House that is wiped out by these rules, for I am not going to discuss these rules in detail. One of the instances of this filibustering, one of the instances of the power asserted by the minority over members of Congress, was the right to introduce bills on every Monday and have them read in the hearing of the clerks and pages of this House.

You have seen the House of Representatives, with a clear working majority, standing ready to enter upon the serious business of the country, about which I shall speak directly; you have seen the House in that position, and a single member, from Iowa, it may be, from Ohio possibly, from some other State perhaps, introduce the Revised Statutes of the United States, and coolly defy the 324 members present to proceed to any other subject in the discharge of their duties, and one-sixth of that time, fully one-sixth part of more than four months of that Congress, was used up absolutely by that sort of process. And, Mr. Speaker, I understand that our opponents on the other side are willing to put themselves on record as maintaining that sort of procedure for the purpose of "protecting the rights of the minority" and that minority may be one man. It takes only one man to do that, and if there were not present here some very good men and very distinguished men who have indulged in proceedings of that character in the past, I might say, in the language of a distinguished Democrat of the last Congress, "any fool could do that."

What was the effect upon the country? The legislation which ought to have been distributed over a period of six years is here pending in Congress to-day, at the door of the Democratic majority, and, because of their rules, the offensive rules against which this report inveighs, because of their rules and their action, the legislation which the country has demanded is piled up, accumulated, and placed upon us as a part of our duty in this Fifty-first Congress. And in this connection I will discuss this question of one-man power, this question which has brought out some utterances upon this floor in the smooth and parliamentary language of the distinguished gentleman from Kentucky [Mr. CARLISLE], the leader of the Democratic side of the House, and in the beautiful and ornate and eloquent language of his distinguished colleague [Mr. BRECKINRIDGE, of Kentucky], in the sarcastic and eloquent language of the gentleman from West Virginia [Mr. WILSON], and in some other utterances which I would not denominate either eloquent, parliamentary, or even gentlemanly, that have been made upon this floor.

The Speaker of this House has been denounced because it is said that he has done something that is the act of a tyrant. Now, I want some gentleman who is to take part in this long debate, some gentleman who has insisted, perhaps, upon two days of general debate, to use a part of his time to tell the people of this country what act of the Speaker of this House has been tyrannical. He may answer that when the House was proceeding to the discharge of its duty under the Constitution some member who wanted to stop the transaction of business stood up in the House and wanted to make a motion to adjourn and the Speaker would not allow him to do it, and that that refusal on the part of the Speaker was an act of tyranny. That is "tyranny" that rescued 329 men from the incendiarism, the stupidity, and the obstinacy of one man.

I think, Mr. Speaker, the time will never come again in this country when it will be tolerated that the American Congress, convened for the dispatch of the public business, with vast interests involved in its action, will be compelled to turn aside and call the roll of the yeas and nays because some one man is anxious to obstruct the public business. What did we have in the Forty-ninth and Fiftieth Congresses? We had a demand coming up from the people of the South and the Southwest, almost as the voice of one man, asking that certain burdens of taxation resting upon them should be taken off by act of Congress. I refer to the tobacco tax and the fruit brandy tax.

I am not here now to discuss the merits or the demerits of either one of those propositions. I simply say that the people were here demanding that those taxes should be removed, and who prevented it?

How does it happen that to-day the records of Congress show that at the end of almost six years of unceasing demand there has been no vote of Congress upon that subject? I will tell you, and in telling you I will borrow a phrase from my Democratic friends; I will claim no authorship in it and give no indorsement of it, but I will borrow that phrase and say that the failure of Congress to respond to the demand of the people was due to "the tyrannical act of a single man," the then Speaker of the House of Representatives.

Tell me when it was that the distinguished gentleman now occupying the Speaker's chair refused to permit the Representatives of the people of this country to pass a bill that three-fourths of Congress were in favor of having passed? Yet, under your system of rules, the distinguished gentleman from North Carolina [Mr. COWLES] and a large number of other gentlemen from your side of the House, in season and out of season, on their knees and erect, before the personification of the one-man power, asked on behalf of their constituents the poor privilege of having a vote of Congress upon a proposition which three-fourths of the Representatives in Congress approved.

The SPEAKER. The time of the gentleman has expired.

Mr. GROSVENOR. Mr. Speaker, I gave notice that, having obtained the floor under the hour rule, I should insist upon the extension of my time. I do not understand that I should be cut off by a change of the rule.

The SPEAKER. The Chair understands that the gentleman must be cut off under the resolution adopted by the House this morning.

Mr. KERR, of Iowa. Mr. Speaker, I ask unanimous consent that the gentleman be allowed to finish his remarks.

The SPEAKER. The gentleman from Iowa asks unanimous consent that the gentleman from Ohio be allowed to proceed. Is there objection?

Mr. ROGERS. Before that question is put I wish to make a parliamentary inquiry. Do I understand that under the resolution the time for this debate is to be equally divided between the two sides of the House?

The SPEAKER. The Chair does not know that there was anything in the resolution to that effect, but the custom of the House has been somewhat that way.

Mr. ROGERS. Well, if the gentleman is to have additional time, it should not be taken from us. It should be taken out of the time of his own side.

Mr. GROSVENOR. That is right.

The SPEAKER. The gentleman from Ohio [Mr. GROSVENOR] thinks that he had an understanding with the House that he should be allowed an hour, but the Chair is unable to make any ruling on that point.

Mr. ROGERS. If there was any such understanding as that, of course I shall not object.

Mr. McMILLIN. Mr. Speaker, I suppose that there will be no objection to allowing the gentleman from Ohio to proceed now, letting the additional time which he consumes come out of the time allotted to his side of the House.

Several MEMBERS. That is right.

The SPEAKER. If there be no objection, the gentleman from Ohio will continue with that understanding.

There was no objection, and it was so ordered.

Mr. GROSVENOR. Now, Mr. Speaker, there are many other matters to which I might refer, but I will do so only to a limited extent.

There was pressing here upon the Forty-ninth and Fiftieth Congresses a demand from a million of soldiers—a million of men who had borne arms to rescue this Government from the hands of traitors. They came here in the Forty-ninth Congress; they came again in the Fiftieth Congress. The appropriate committees of both those Congresses reported innumerable bills for their relief. Yet no man in the Fiftieth Congress, so far as I recollect (and if I am wrong I desire to be corrected), was ever recognized by the Speaker to move a suspension of the rules in order to pass a general pension bill.

So it was with the Blair educational bill. I have no desire to discuss the merits of that provision; I do not here commit myself for it or against it; but I do know that in the Forty-ninth Congress, with a report in favor of it from a majority of the Committee on Education, with the distinguished chairman of that committee earnestly pressing for a hearing, over and over again appealing to the Speaker to be recognized to ask the question of the House whether by a two-thirds vote they would pass the bill, one man refused to allow the Representatives of the people of this country to express their voice upon the passage of that bill.

So it is, Mr. Speaker, that the records of those two Congresses are records of failure all along the line. I have yet to witness in all the history of American legislation a spectacle that so established and made all potential and invincible the power of a single man as did the rules of the Fiftieth Congress. And it was because of that and because the people of this country were groaning under it that this demand went up away back of the elections of 1888.

This Congress was elected on an issue that had been presented to the country not only in the public press but upon the stump and everywhere, in opposition to a system of control in the House of Representatives that destroyed the representative character of the House. And so it was that the Republican majority came here naturally and inevitably to do exactly what we are proposing to do.

And the Speaker of this House has by no means transcended his proper representative capacity in anything which he has done. It may as well be said now as at any other time that there has never been a moment when every man on this side of the House has not heartily stood by and sustained the Speaker in every ruling and decision that he has made. And we were able, gentlemen on the other side, to bring here, out of a possible 168 votes, 166 to vote upon these questions in this House, a condition of things which I undertake to say has never existed before in the history of the House of Representatives.

But, Mr. Speaker, the Democratic attitude on this question is an attitude which has grown up with the growth of the Democratic party in this country and is as naturally assumed by them as any other wrongdoing of which they have ever been guilty as a political organization. They are here to-day as obstructionists; they are here to-day to obstruct legislation. The whole object and purpose of the attitude of the Democratic party on this floor is to obstruct and impede the representatives of the people so as to prevent their going forward in the discharge of the duty to which they had been ordered by the vote of the people.

How came this Democratic party to become efficient as obstructionists and never efficient as leaders of public opinion? How does it happen that when this great sentiment has grown up in this country until it threatens revolution in the procedure in Congress—how does it happen that the Republican party stands upon the one side, the side of progress, the side of something new, in favor of destroying these obstructionary processes of the Democratic party? How does it happen that the Democratic party stands here, obstructionists and nothing else? What do you propose? Let me show you how you came to be efficient in obstructing the onward progress of political reformation and civilization in this country, and how you have demonstrated your incompetency to lead public opinion when the position of leadership has been assigned to you.

Here are these great questions which were submitted to you in those two Congresses about which I have spoken. You have shown yourselves inefficient—incompetent even to express an opinion to the people of the country. How stands the Democratic party of this country, given power by the people—how stands it upon these great questions to which I have referred and the numberless others that throng this record of your failure? How does it happen?

When the great revolution upon the subject of slavery came and the people of this country decreed with no uncertain sound, away back in 1856 and again in 1860, that slavery should be circumscribed to the limits of the States where it existed, should never again be nationalized upon the free soil of this country, where stood the Democratic party then? It offered no solution of the problem; it came forward agreeing to nothing. It could not do it; for in the North there were Democratic Free-soilers.

In my own State the Democratic party in 1858 and again 1860 declared that they would use all the power given to them by the terms of the national compact "to mitigate and finally eradicate the evil" of slavery. So you did not dare to utter to the people of this country a proposition of settlement of the great vexed question of the introduction of slavery into the Territories. You were obstructionists.

And when war came, when secession came, you stood here, those of you who remained in Congress, obstructionists to the acts of Congress in that behalf. "Not a man nor a dollar," said the Northern Democracy "to put down the rebellion." "Every man and every dollar," said the Democracy of the South "to carry it on." And when the war was over and the question of the habilitation of your slaves and the colored men of the country as citizens came up, you offered no proposition of settlement. You were again obstructionists. You came back into Congress to obstruct the processes of legislation. And it was then and afterward that this whole scheme of filibustering engrafted itself upon the legislative department of this country.

Again, when the great questions of reconstruction came, you stood in Congress here to defeat the measures of the Republican party, but never to lead. Obstruction was your attitude. When the great country was moving forward to take its position upon the higher plane of political liberty and political independence, you stood holding on to the coat tails of the world and crying out "Whoa!" as the only sentiment of the Democratic party. You were obstructionists then as you are obstructionists now.

We moved forward and the great questions of commercial interest came thronging upon the people of this country—the question of whether or not we should continue to maintain an irredeemable paper currency or whether we would attempt the great feat which was achieved in 1879, the restoration of the currency of the country to a specie basis—you never offered a proposition in advance; you never tried to settle the question. You can not find upon the whole records of your party in the famous Congresses back of the resumption period a proposition looking to the restoration of specie resumption or in any other way looking to getting the commercial interests of the country out of the terrible dilemma into which they had been cast.

You were obstructionists of the Republican policy. You stood here in Congress, and on the stump, and in the press, obstructing the great measures of the Republican party looking to the restoration of specie resumption. And finally, when the great question of tariff came, you were driven, for the want of any other issue, to take an affirmative po-

sition on that point, and the moment you did so, you broke your party to pieces; you were driven out of power.

It was the first attempt at propagation of leadership. It was the first effort—weak, feeble, and puerile as it was—it was your first effort at leadership in American politics. You stood idly by and saw proposition after proposition to save the country acted upon by the Republican party and obstructed by you. Then you came forward by stress of necessity and succeeded in holding in this House together a sufficient number to pass the Mills bill, but you did not succeed in holding enough people together to give you back power, and you found your first attempt at national leadership and your first attempt to promulgate a great political idea in this country was a flat failure, and recoiled on you. [Laughter and applause.]

That is how it happens, Mr. Speaker, the Democratic party in this country is always the party of obstruction.

Mr. BARNES. Will the gentleman yeld to me for a question?

Mr. GROSVENOR. Certainly.

Mr. BARNES. How did you become an obstructionist in the last Congress in the Sullivan-Felton contested-election case?

Mr. GROSVENOR. Evil communications corrupt good manners. [Laughter.] I had seen my distinguished and good-natured friend from Georgia [Mr. BARNES] during nine long days of that Congress coming down the aisle bearing the burden of his representative capacity and passing between the tellers until I confess I became very much the sort of a man he is. [Renewed laughter.] I have recovered from it, Mr. Speaker. The difference between my friend from Georgia and myself is, I have repented and am trying to do works meet for repentance [renewed laughter], and my friend from Georgia still holds out with the sinners. [Laughter.] I shall only appeal to him saying:

While the lamp holds out to burn
Even my friend from Georgia may return.

[Renewed laughter and applause.]

It has been incumbent upon the Republican party thus far in this country to inaugurate every great political reform since 1856. There is not a question which has been definitely settled, put into the Constitution of the United States or upon the statute-books of this country, that the people of this country are not clamoring to change, that was not put there by the Republican party during that whole time. It is hopeless, it is vain to look to the Democratic party even to recognize the existence of a reform until it has been forced upon them by the adoption by the people and its popularity thereafter.

But, sir, they come our way in the end. To-day they do not controvert the propriety of the great political reforms the Republican party has adopted in this country. They follow us, and they come sometimes with wonderfully conspicuous alacrity along the pathway where we have traveled. As was once said by a Republican Senator, "They follow us, foot-sore and weary, camping to-night where we camped last night," hunting for some of the strayed or lost provisions of our commissary department, getting up again in the morning and going on, and when the Republican party assail a political evil, intrench upon a mountain, it may be of antiquity, and we dislodge and overthrow it, the Democratic party comes marching up the hill, waving our flag and claiming they were always of that way of thinking. [Laughter and applause.]

I make the prediction, Mr. Speaker—I may no tbe here to verify it. Some gentlemen have said on the other side, "Be careful of what you do; sometime the Democratic party may be in power on this floor, and we learn lessons with great aptness; we learn a great deal from the Republican party." If you will only take all your lessons from the Republican party you will be a great deal better than you are now. [Laughter.] I make the prediction, though I may not be here to receive my punishment for trying to rescue the representative power of this Government from the hands of a faction, but let me say to you, Mr. Speaker, should I have the honor to be a member of the Fifty-second Congress, I predict these rules will not be changed. I shall claim, if in the minority, for myself and those of my party, just what I claim to be the constitutional limits of the right of the minority.

I do not believe there is danger that this Republican majority in this House will pass bad legislation.

I heard the stentorian tones of the gentleman from Georgia and I heard the very eloquent and witty utterances of the gentleman from West Virginia telling us what dire calamities we were about to work out by means of this code of rules. I have two suggestions to make, Mr. Speaker. In the first place, I have confidence in the patriotism and wisdom of the Republican majority on this floor; and, in the second place, if I am to look about me somewhere for an adviser—somebody to warn me of impending and coming danger, somebody to point out to me where political evils lie and political dangers are to come from, with all kindness to the Democratic minority on this floor—I will look somewhere else; I will look anywhere else before I will ask advice of you. Your patriotism may be equal to mine; your love of country may be just as great as mine (I do not deny it), but your experience, your training, your history, your whole career as a political party forbid the inference that you are wise counselors in a crisis like this.

Mr. Speaker, what is the pending proposition? It is a very simple one. It is to take possession of the responsibility placed upon the majority of this House by the votes of the people of this country. I know of no plans to rob the public Treasury. If there be such I am not a party to it, and if such an attempt is made I shall fight it, whether it comes from the Republican majority, which I do not expect, or whether it comes from the Democratic side, which is just possible. [Laughter.]

I know of no plan to turn men out of Congress because they are Democrats and put in their stead men because they are Republicans. The gentleman from Georgia said something about the Felton case. If he will come to me in the privacy of my room or meet me in the corridor of the House, I will give him some information in regard to that case which may change his condemnation, in part, at least, from the Republican minority of the Fiftieth Congress and saddle a little more of it on the advisers in that party who sit on the other side of the House. Many of you were not anxious to seat Sullivan, and I honor you for it.

But, sir, the people of this country have called upon the Republican party to legislate—not "legislate" in the language of the eloquent gentleman from West Virginia, but to legislate along certain lines of public demand. They have called upon the Republican party to pass a tariff bill in keeping with the verdict of the American people in the great election of 1888, a verdict that proclaimed that the sentiment of the American people was in favor of protection to American industry. We are here to do it, and we are going to do it; and in order to do so we will remove all of the obstructions out of the way, whether they present themselves in the shape of rules of procedure which check the power of the majority to act, or from any other source.

The American people have sent us here to do justice at last to the soldier of the country, who has appealed in vain to the Democratic majority, and we have come here to get rid of the rules that impede justice and gag the sentiment of the House, which prevented the accomplishment of the will of the people in that direction, and there will be no obstruction by cunningly-devised schemes of parliamentary procedure to deter the majority from the execution of its duties in that behalf. There are many other things that we are here to do.

Now, my Democratic friends, let me appeal to you to shake off the ghost of "tyrannical power" that seems still to be haunting you; get rid of the idea that some one man in this House is greater than the whole House; get into your mind the idea that the Speaker of the House is but the servant of the House, created by the House, powerless without its authority; powerless unless supported by the House, and let us go forward in the discharge of our public duties, simply bearing in mind that this is a government of majorities, by majorities, and for the whole country.

The Republican party has ever been the party of constitutional government. It believes in the Constitution of the United States. It believes in the rights of the people thereunder. It fosters, upholds, and guaranties liberty of the citizen in matters of conscience, in matters of religion, in matters of politics, and in matters of national faith. It has laid its hand to the plow of reform in this regard. It will not look back. It has counted and estimated the opposition that stands across in its pathway. It recognizes the same old enemy of free government, of good government, of majority government. It recognizes as standing in its pathway the remnants of a political organization that denied the right of a majority in this country to elect a President and hold the nation as a unit.

It estimates that all over great value, the courage, the pluck, the determination of its enemy, but with the flag of constitutional government in its hands, the rights of the people ever cherished and held sacred, it will plant the banner of this great reform upon the sure ramparts of victory, and the people of the country will say, "Well done, good and faithful servants." [Great applause on the Republican side.]

Mortgage Indebtedness.

SPEECH

OF

HON. JAMES D. RICHARDSON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 15, 1890,

On the bill (S. 1181) to require the Superintendent of Census to ascertain the number of people who own farms and homes and the amount of mortgage indebtedness thereon—

Mr RICHARDSON said:

Mr. SPEAKER: I am glad that I have the opportunity of saying a word in favor of the passage of the pending measure. It is not exactly in words, though it is the same in substance as the measure I had the honor to introduce into the House on December 18, 1889, the first day it was in order to present bills and resolutions during the present ses-

sion of Congress. The joint resolution so introduced by me was in the following words:

Joint resolution to authorize the Superintendent of the Census to ascertain and show what percentage of the people own farms and homes and what percentage are tenants, etc.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be the duty of the Superintendent of the Census, in taking the forthcoming census, to ascertain and show what percentage of the people in this country occupy their own farms and homes and what percentage are tenants; and, of those occupying their own farms and homes, what proportion have their property free from debt; and, of the farms and homes under mortgage, what percentage of the value is so mortgaged.

SEC. 2. That there be appropriated out of any money in the Treasury not otherwise appropriated whatever sum may be necessary for the purposes of this resolution.

This joint resolution was passed on its first and second reading and regularly referred to the Select Committee on the Eleventh Census. I have endeavored to have that committee report this measure in the form in which it was introduced by me. The Senate bill under consideration having passed that body and being now before us for consideration, though differing somewhat from the measure I introduced, yet being substantially the same, I am willing that my measure be laid aside and the Senate bill be considered and passed, lest there be no legislation on this important subject.

The Senate bill provides that it shall be the duty of the Superintendent of the Census, in addition to the duties now required of him by law, to ascertain the number of persons who live on and cultivate their own farms and who live in their own homes and the number who hire their farms and homes, and the number of farms and homes which are under mortgage, the amount of mortgage debt, and the value of the property mortgaged; and, further, to ascertain whether such farms and homes have been mortgaged for the whole or part of the purchase-money for the same, or for other purposes, and the rates of interest paid upon the mortgage loans; and appropriates $1,000,000 for the purposes of the act.

The demand for this legislation on the part of the farmers and laborers of this country is widespread. Petitions and memorials in very large numbers from farmers all over the country, from farmers' and laborers' unions everywhere, have been poured in upon us all, more particularly upon those of us who represent agricultural communities, earnestly demanding the enactment of this or a similar measure. I have received a large number of resolutions and petitions from my immediate constituents asking this relief. I will not encumber the RECORD and make my speech too long by inserting all of the resolutions on the subject, received by me, but I will here insert a resolution from one of the organizations in my district. It is similar to many others sent me.

BEASLEY, *Marshall County, Tennessee.*

Whereas there is a growing belief that the farmers and other producers of the country do not obtain an equitable share of the wealth which they create, and that the farms and homes of the country are largely under mortgage; and

Whereas exact knowledge on this subject is of great importance in the study of the social and economic questions of the day: Therefore,

Be it resolved by District Wheel No. 10, That it is our judgment that the next United States census should show what percentage of the people occupy their own farms and homes and what percentage are tenants; and, of those occupying their own farms and homes, what proportion have their property free from debt; and, of the farms and homes under mortgage, what percentage of the value is so mortgaged.

These demands are reasonable, and in my judgment Congress should comply with them. It is demanded that the agricultural interests of the country shall receive more attention in taking the forthcoming census than has heretofore been given them.

Mr. Speaker, the working classes in our land to-day, those who labor in the mines and manufactories, but particularly all in the country districts who compose the farming population, are suffering and are in misery in many places. They are restless, unhappy, unprosperous, and uncertain as to what they shall do in the future. This, too, when they are surrounded and blessed by bountiful crops. I do not speak particularly of the complaints of the laboring classes in the cities, who are without work and are discontented and full of mutterings, but I speak of those in the country districts, who for nearly a hundred years, under the opportunities given them by a benign Government, have been prosperous and happy.

Those who till the soil now for a living and who have no other income or means of living realize that their condition is year by year growing worse, and that if there is not a change in their condition it will only be a matter of time when their homes will be lost to them.

The great masses of our people belong to the farming class—the producing class—and when they are in distress all other classes must suffer. The grievances which we hear from the farmers are not based on imaginary troubles, but those that are real. They have no protection under the law. The laboring men and farmers of the country need it most, but they go without protection in order that immense fortunes may be amassed by the few who are favored by partial laws.

Mr. Speaker, you must agree with me that there is something radically wrong with the laws of our country when I call your attention to a fact which can not be successfully disputed. It is this: When the late war between the States closed, there was a debt hanging over the Union, the like of which had never been known by its people before. This debt threatened by its magnitude to paralyze and finally destroy the vital interests of the country.

The ablest financiers, the most sagacious statesmen, the cool-headed conservative patriots of that day stood aghast as they reflected upon the immensity of this vast debt burden and in their wisdom wondered how it was to be met and discharged. They well knew it was resting and was to continue to rest like a mortgage upon the producers and the laboring class in our land, and that when paid it must be paid by them. The debt then amounted in round numbers to about $2,600,000,000.

Since that time the producers, the farmers and the laborers, have paid of this debt about $1,500,000,000; yet the strange and astounding fact exists and stares us in the face that, notwithstanding all interest has been kept down, we owe as much to-day as we did then. I do not mean to say we owe as many dollars in money, but what is worse, far worse, we owe as much of exacting labor and hard toil as we did then.

How do we pay debts in this country? It is by selling our productions. It will take as many bales of cotton to-day to pay the remaining portion of this debt upon us as it would have taken to pay the whole sum on us in 1866. It will take as many barrels of corn as it would then. It will take as many pounds of pork as it would then. It requires as much labor to produce cotton and corn now as it did at that date.

Then, I ask, do we not owe as much? We certainly do, notwithstanding the enormous sum of fifteen hundred millions of dollars has been paid on this debt, representing as it does the sweat, the cares, the labor, the life, and death of the toiling millions of the land for these long twenty-four years; it remains that the burden upon us is the same in weight and in its grinding exactions and hardships that it was in 1866, so far as the means of payment, the circulating medium in which it is to be paid, is concerned. Year by year, as the number of dollars we owed has been reduced, so correspondingly has been reduced the means of payment, the ability to pay.

Is this state of affairs to continue on and on indefinitely? Are times to be made harder and still harder each year, that the few who have money may be made thereby the richer, while those who are poor shall be made the poorer? These are questions the farmers are asking themselves. By and through their organizations they are pressing these questions upon us as law-makers. Millionaires are multiplying, while the people, the masses are becoming poorer? If the fault is upon us, us who make the laws, then it is a crime if we do not apply the remedy.

The farmers complain that the lands and farms of the West are being bought up at prices ruinously low, by reason of the hard times and great depression on the country, by large land syndicates, by the barons of the East, by foreign capitalists who have nothing in sympathy with us and our institutions. They think there is a partial remedy at least for some of these evils in the measure under consideration. It is very sure no remedy can be intelligently applied without the information upon which to act.

The proposed legislation is a step in the direction of obtaining this information. Let it, then, be adopted. I heartily favor the amendment of Mr. DOCKERY, of Missouri, just offered to the Senate bill, which provides penalties for the malfeasance of officers in connection with this work of taking the census, and also penalties for individuals and corporations who refuse to respond to proper inquiries. This is right, for otherwise the act when passed would be without force. Its provisions could all be dodged and evaded with impunity.

The gentleman from Georgia [Mr. BLOUNT] insists that this legislation is inquisitorial in its nature. So it is in some respects, as are all or nearly all the investigations for the census reports. He seems to fear this inquisitorial system, as he terms it, will give offense to the country.

Mr. BLOUNT. I believe we ought to pass this bill now. We ought to pass it instantly. If it is meritorious it ought to be done at once, and I trust we are not to delay this question by acting on this amendment and sending it back to the Senate. It is not likely that the Senate will consent to this inquisitorial proposition. Not at all. So when it goes back to the Senate it is likely to be rejected. We do not know when we get into this controversy how long it will last. Every day but adds to the unfortunate delay. And while I dislike to oppose the amendment offered by my friend from Missouri, I think if we insert this amendment into the bill it will never be agreed to.

Mr. BLAND. Are not mortgages public matters?

Mr. BLOUNT. I thank my friend for his question. They are matters of record.

Mr. BLAND. Are not these mortgages in the States matters of public record?

Mr. BLOUNT. You may say you are not content with this record.

Mr. BLAND. There may be matters outside of the record as to the value of the property.

Mr. BLOUNT. The object is to get any information that you may desire. But a mortgage may not express accurately the status of the indebtedness.

Mr. BLAND. But, as far as the objection of the gentleman from Georgia is concerned, the whole census is inquisitorial.

Mr. BLOUNT. Oh, no; not to that extent.

Mr. BLAND. Undoubtedly; to a certain extent, at least.

Mr. RICHARDSON. Besides that, let me say to the gentleman from

Georgia that the mortgage may be partly paid. In that event the record would not show it.

Mr. BLOUNT. That may be very true; but I doubt whether in a matter of private relations the Government has the right to extort or can extort the information that is sought to be obtained by this amendment.

Mr. RICHARDSON. A man would be only too glad to communicate the information if he had partly paid off his mortgage. Suppose, for instance, that the record disclosed the fact that there is an incumbrance on his place for $1,000; he would be very glad to be able to show that $500 had been paid.

Mr. BLOUNT. That may be very true; but why do you put a penalty in to compel it?

Mr. RICHARDSON. We want the penalty on the enumerators to compel them to perform their duties.

Mr. BLOUNT. That may be all very well; but this goes a great deal further than that.

Mr. RICHARDSON. It is only the penalty of the general law; nothing added to it.

Mr. BLOUNT. I think the gentleman will find on an examination that this goes much further than that.

Mr. RICHARDSON. The penalties provided in the Dockery amendment are identical with those in the general law for taking the census; no more and no less. This amendment will tend to insure accuracy in the report obtained. The appropriation in the bill of $1,000,000 is insignificant if the end sought is reached and an intelligent remedy found for the evils of which complaint is made. As legislators our duty will have been discharged when this measure is enacted as a law. When the information is obtained which is sought for it will become the duty of those who then fill the seats we now occupy to seek and apply the remedy by the enactment of such laws as in their wisdom will restore happiness and prosperity to the country.

Code of Rules.

SPEECH

OF

HON. JOSEPH D. TAYLOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1890.

The House having under consideration the report (No. 23) of the Committee on Rules—

Mr. JOSEPH D. TAYLOR said:

Mr. SPEAKER: I desire first to refute the charge made so often and so persistently on the floor of this House and in the Democratic press of the country that we are attempting to do business when we have no authority to do so without rules. The most important and the most difficult business of any legislative body is always done before any rules whatever are adopted. The organization of the body, the election of officers, and the appointment of committees always precede the formulation and adoption of rules.

It has always been decided by Speakers of the House of Representatives that this body is governed by general parliamentary law, both before and after rules are adopted. Rules are adopted simply for the convenience of the members of the House, and for no other reason. They give no authority to the House or to its members. On the other hand, the House gives the authority to a committee to formulate rules. The House authorizes the appointment of the committee and adopts or rejects or modifies the rules when they are reported by the committee, as we are doing now.

This House had just as much power and just as much authority before the Committee on Rules was appointed as it has now or will have after a system of rules is adopted. There is no particular time when rules should be adopted. This body has always transacted a great deal of important business before it adopted rules. As I have already said, rules are a matter of convenience, not a matter of necessity or a source of authority, and general parliamentary law governs assemblies of this kind as completely and as thoroughly as the common law governs courts of justice, and the one is just as well known as the other.

The directors of a bank, the members of a school board, the town council, the trustees of a college, the directors of a railroad, the New England town meetings, transact their business under general parliamentary law, as we have been doing in this House, and in most cases they do it without rules. They meet, select their officers, make motions, adopt resolutions, debate questions, enforce order, take the yeas and nays, take a recess, adjourn, and in this way the business of the country is transacted. And the courts never hesitate to enforce what these meetings do, although they involve the great bulk of the business of the country.

It is claimed that we should not consider an election case until we have first adopted rules, and the other side has filibustered and wasted a great deal of time trying to prevent the consideration of an election case, and they give this reason and no other for so doing. I think, Mr. Speaker, that this is just what we should do. I wish we could consider and determine every one of the seventeen election cases before we adopt a code of rules. What right have seventeen members whose seats are contested to vote to adopt certain rules, or upon any other question, until we first ascertain whether they are entitled to their seats? What right have they to help make rules to govern this body for the next two years if they are not entitled to their seats? What right have they, by their votes, to fasten upon this body a system of rules which shall govern this House after they have been unseated?

The first thing in every political body, in every convention, in every public meeting, in every board of incorporation of any kind, is to hear from the committee on credentials and ascertain the membership of the body. When this is done business can be transacted in a business-like way, and not till then. We did not need rules to consider this election case. No one has complained that the consideration of the election case was prejudiced in any way because we did not have rules. No one pretends that the hearing, discussion, or the result of this election case was influenced by the fact that we had no rules. We do not need rules to govern the hearing of an election case. No one pretends this.

They only claim that the adoption of rules ought to precede the consideration of election cases. The other election cases are not ready. If they were, they ought to be considered one after another, until we know who are and who are not members of this House. Each election case is considered in this House in its own way, in the manner determined upon by an agreement, or by a vote when the case is called up, and one case is no precedent for another.

It is said that the preparation of rules for the present Congress was delayed for the purpose of unseating Democratic members. If this be true, we have been very moderate, for we have only unseated one member, and he certainly never should have been seated. It is now admitted that he never should have received his certificate of election.

The report of the Committee on Rules has been delayed for several reasons. One member [Mr. RANDALL] has been ill and has not been able to take his seat during this session of Congress.

Another member [Mr. CANNON] was called to his home in Illinois on account of the death of his wife. The Speaker, who is also a member of the Committee on Rules, has had over fifty committees to appoint, and a hundred other duties to discharge, and as there are only five members of this committee, delay was unavoidable. And we should also take into account the importance and the difficulty of preparing a code of rules which will help, and not hinder, the transaction of public business. Besides, no interest has suffered because of this delay. The only loss of time which has been sustained is attributable to the other side of the Chamber, which has exhausted itself and trifled with the expectations of the people by a persistent effort to prevent the transaction of business. And now when the rules are reported, and when we are ready to consider and adopt them, the same disposition to filibuster and consume time is manifested.

Having said this much, I desire to come to the consideration of the rules themselves. It is said that we are proposing a very radical change in the rules, and that the changes we propose are revolutionary, unconstitutional, and without precedent. The Speaker has been called a usurper and a tyrant, a czar and a Cæsar, and the vilest epithets have been hurled at him from the Democratic side.

It is true that the changes we propose are radical and that we are proposing rules which are entirely new in this House. What are we proposing? We are proposing two important changes, and only two. All the other changes are auxiliary to these. We propose the following changes:

1. That no dilatory motion shall be entertained by the Speaker.
2. That the Speaker, in ascertaining whether there is a quorum, shall count all of the members present.

The other changes simply conform the rules to these two propositions. Hence these are the changes that are pronounced revolutionary and unconstitutional by the Democratic members of the House, and they seem ready to "die in the last ditch" in defense of the old rules which we propose to change by the adoption of these two new rules.

Let us examine these changes and ascertain whether they will overturn the Republic and destroy the liberties of the people, as some of our friends on the other side seem to apprehend. This House never witnessed such turbulent scenes before, and the scenes have been as disgraceful as they have been stormy.

DILATORY MOTIONS.

It is well enough to remember that the power and authority to entertain or to refuse to entertain dilatory motions is inherent in this body before the adoption of any rule, as is also the authority of the Speaker to count as present all of the members who are actually present in their seats, in ascertaining whether there is a quorum present to do business. Rules do not add to the powers of the Speaker or increase the authority of the House. On the contrary, they are intended to limit, qualify, and make specific the general parliamentary law which controls every legislative body.

If these powers do not belong to this body under general parliamentary law, we have no authority to make such rules. In other words, this House can not increase its authority or augment its powers by providing a code of rules which will give this body greater powers than it had before it adopted the rules. The trouble in this House has heretofore been that it tied its own hands and defeated the chief end of its organization by incorporating in its rules certain methods of obstruction. For instance, we had a rule that a motion to adjourn, a motion to adjourn to a day certain, and a motion to take a recess were always in order except on suspension days.

The result of this was that some obstinate member would stand on the floor of the House and make one of these motions, and when it was voted down he would make another, and when the second one was voted down he would make the third, and when the third was voted down he would make the first again, and because these motions were "always in order" we would spend a day or a week in marching round and round in this circle. And when this method grew somewhat monotonous he would move to take a recess to 3 o'clock or some other hour, and when this motion was voted down he would move to take a recess to 3 o'clock and 10 minutes, and when this was voted down he would move to take a recess to 3 o'clock and 20 minutes, and in this way he could travel around the dial of the clock all the hours of the day and all the days of the week.

In the last Congress, in an attempt to pass the direct-tax bill, a measure known to have the support of a large majority of this House, the bill was defeated by this kind of tactics after we had spent eight or nine days and nights in constant session. I have come through a number of sieges of this kind, one occupying four days and nights, at the very close of the last session of the last Congress, when every hour and moment of time was needed for the transaction of important public business.

In this way a few men could block the wheels of legislation for days and weeks. One man could do so, if he had the physical strength. Clause 10, Rule XVI, of the old rules, reads as follows:

No dilatory motion shall be entertained by the Speaker.

This is also the exact language of the new rules, but we have omitted the provision that certain motions shall always be in order, under any and all circumstances, except on one or two days in a month. The occupation of the filibuster is gone, but the rights of the members are carefully preserved.

Under these new rules the rights of every member and the rights which the American people have in this House are alike religiously cared for, and no obstructionist shall do in the future as he has done in the past, thwart all efforts at legislation and consume the time which belongs to the country in such absurdities as we have heretofore had to encounter. These demoralizing and disgraceful scenes may live in history, but it is to be hoped that no such shadow shall ever again fall across the national Capital.

The old rules and the new rules are precisely alike in providing that "no dilatory motion shall be entertained by the Speaker," and yet the other side of the House insist that the provision in the old rules which made dilatory motions possible shall be retained in the new rules. What is to be gained by providing in a rule in this House that a motion to adjourn, or a motion to adjourn to a day certain, or a motion to take a recess is "always in order," except on suspension days, two days in a month, unless the object be to make it impossible to do business in this House at the whim of a single member? The House can adjourn when it wants to or do anything else it wants to, if it is done in a proper manner. And if we have authority to prevent this filibustering on suspension days, we certainly have on other days.

If one member or a few members have a right to make endless dilatory motions, they have a right to defeat all legislation and destroy the object of all legislative bodies. If they have a right to defeat the consideration of one measure, they have a right to defeat the consideration of all measures, and could defeat the appropriation bills, stop the mails, disband the Army, destroy the Navy, overturn the Government. If a few members of Congress have this right, the men who vacated their seats in Congress in 1861 would have been wiser to remain in their seats and made dilatory motions until the Confederate army had taken possession of every town and city in the North, as in this way they could have prevented our making any preparations for war.

If a member of a town meeting in New England could make dilatory motions in this way under general parliamentary law, he could prevent the levying of the school tax, the poor tax, the bridge tax, and all of the other business done in such meetings, and the people would have to go without roads, without bridges, without schools, and the poor without support. If this right to make dilatory motions belongs to a member of any body or board or association, our whole system of government by majorities would prove a failure, and all forms of republican government would come to an end.

THE SPEAKER'S COUNT.

The other provision which so startles our Democratic friends is the decision of the Speaker, and the adoption of the rule, that members who are present in their seats can be counted to make a quorum. The practice has always been in this House that the fact of the existence of a quorum was ascertained by calling the yeas and nays, and if members sat in their seats and refused to vote or answer to their names, they were not counted as making any part of a quorum. This has been the practice in this House for a hundred years, but it has not been the practice in the English Parliament, nor in many of the State Legislatures, nor in many other bodies. The question is not one of precedent, but a question of principle, a question of constitutional law, a question involving the life or death of the Government we are sworn to protect and defend.

How, then, is the existence of a quorum to be ascertained under the Constitution? This is the whole question. The Constitution tells us what a quorum is, but it does not tell us how it is to be ascertained. The Constitution says that a majority of each House shall constitute a quorum to do business. And again it says that the yeas and nays shall be entered upon the Journal at the desire of one-fifth of the members present.

Beyond this the Constitution is silent. Members are presumed to be present when not excused by a vote of the House. They are paid for being present, and are privileged from arrest during the sessions of Congress and while going to and returning from Congress. When the Constitution was being adopted it never entered into the minds of the framers that it was necessary to do more than to provide that any number less than a quorum could compel the attendance of absent members. This they put in the Constitution, and men are often dragged out of the sick-chamber, and out of bed at night, and brought here to make a quorum.

How foolish to put this in the Constitution and to force men to come here from any part of the country, if they can, after they are brought in the House, sit in their seats and refuse to vote, and in this way avoid being counted in order to defeat the very object the Constitution has in view in authorizing their compulsory attendance! What is to be gained by compelling the attendance of members if they can refuse to vote when they get here, and in that way escape being counted? If they can do this our Constitution is a failure, because it contains no provision by which we can secure a quorum to do business.

It has been said that we have a quorum of Republicans and that we ought to have them here. So we have, but some of them are sick, the families of others are sick, and it is impossible, when we have such a small majority, to have a quorum of Republicans present. The Constitution does not contemplate that the party in the majority shall always have a quorum present; it only provides that there shall be a quorum present at all times, no matter whether they belong to the majority or the minority.

This is a republican Government, and a majority, no matter how small or how large, has a right to control. This is the foundation stone upon which our Republic is built, and if the majority does not govern wisely and well it should be turned out of power, and it will be turned out of power if it is forgetful of its duty. A majority in county and town and State and nation has the right to control, and must answer to the people for its record.

The Constitution contemplated that members of Congress would do their duty, that the only danger was in the absence of members, and it provided a remedy for this, and it never occured to the fathers that a hundred and fifty members would sit here from day to day and vote half the time and refuse to vote the other half, and insist on being counted as present half the time and refuse to be counted the other half. This they have done. They stand up and ask the Speaker to count them in order to make a sufficient number to require the yeas and nays, and then when the yeas and nays are ordered they refuse to answer to their names and insist that they should not be counted. This is too absurd to receive serious consideration.

The necessity for this change in the conduct of this House has come, and if there is no precedent it is time, and high time, to make a precedent. This is a progressive age and the American people are a progressive people. We are here to legislate for 65,000,000 people and to protect the interests of a great and growing country. We have made too many precedents already in the present century and startled the world too often to hesitate a moment on so plain a proposition as this.

To say that a Speaker can not be trusted to count the members present is simply to say that Congress can do nothing. The Speaker is the executive officer of the House, and when tellers are demanded he counts the number making the demand. When the yeas and nays are demanded he makes the count. When a division is demanded he makes the count. And in all cases he makes the count and he announces the result. This "one-man power," of which we have heard so much is a necessity, and without it we could have no Congress. We had "one-man power" under the old system, and, as between "one-man power" on the floor of the House and "one-man power" in the chair, I prefer the latter. We must leave this power somewhere, and I prefer to leave it to the Speaker who has been elected by the House, rather than to some crank on the floor.

The Speaker of the English Parliament, whence we derive our parliamentary law, does precisely what Speaker REED has done: he counts every member in the House in ascertaining whether there is a quorum present or not, no matter whether the members vote or not. Speakers of the State Legislatures have done this almost without exception,

and in all cases where legislative or business transactions have resulted in litigation the courts have held that all who are present should be counted as making a part of the quorum. This is common sense, and any other view is absurd and ridiculous. But they tell us that these new holdings and new rules will go into oblivion when the Democrats get control of the next Congress. I shall venture the prediction that these new rules will stand for a hundred years to come, as unshaken as the old rules which unfortunately took root and prevailed in this House for the last hundred, and the world will wonder why this old practice was permitted to remain so long.

This change is a necessity. The deplorable condition of the country is owing to the defeat of important legislation by these very methods. We need new pension legislation. We need a revision of the tariff and an increase of the duty on wool. We need an election law which will give us everywhere, North and South, a free ballot and a fair count, and under the new rules it will be possible to consider these and other important questions. Over two hundred million dollars go out of this country every year for articles which we ought to grow and manufacture ourselves, and we complain of the scarcity of money and the depression of prices, and yet we have been unable to legislate on these questions.

I have seen one man consume several weeks of the time of this House in his determination to defeat a river and harbor bill, and subsequently I have seen that same bill taken up and passed on suspension day, when it could not be amended, a bill that ought never to pass under such circumstances, as it contained many millions of dollars that ought to have been stricken out and might have been stricken out if the bill could have been considered on any other day.

Members who refuse to vote complain that they have a personal grievance against the Speaker on account of his naming them as present and refusing to vote. It is the duty of every member to vote, and if they do not vote they are wrong-doers, and it is an old maxim that a man can not take advantage of his own wrong. They should vote, and if they do not vote they should be counted. The only way they can break a quorum is to remain absent. This is the way the Ohio senators did a few years since, and it is the only way our brethren on the other side can break a quorum, but I presume they are afraid they will be sent for. They seem to have respect for that constitutional provision which compels the attendance of absent members.

During the second session of the Forty-ninth Congress Mr. RANDALL, who had formerly been Speaker of the House, and other members of Congress who are now present, asked Speaker CARLISLE to recognize one of them to consider a bill that was supported by a majority of the House, and he refused to recognize any Democrat for this purpose, and continued to refuse them till the end of the session. This correspondence can be seen on page 2688 of the RECORD of the second session of that Congress, and shows how arbitrarily this power of recognition was exercised by ex-Speaker CARLISLE whom the other side have extolled and whom we have all honored as a fair Speaker. This correspondence, extending from January to March, shows clearly that the charges of tyranny and despotism lie as much against CARLISLE as against REED, and more, because the rulings of Speaker REED express the will of the majority and facilitate the transaction of business, while the position taken by CARLISLE obstructed business and defeated the will of the majority.

Before closing I want to say a word in regard to the claim made on the other side that the Democratic party is now and always has been the keeper and defender of the Constitution. The gentleman from Arkansas who has just taken his seat [Mr. ROGERS] makes this claim very broadly.

In reply to Mr. GROSVENOR, who had claimed that the Democrats had been following the Republicans, occupying one night the same camp that the Republicans had occupied the night before, he said that there was one thing the Democratic party had never done, and that was it had never camped outside of the Constitution of the United States. When he makes this broad statement he forgets that it was a Democratic United States Supreme Court that rendered the decision that a colored man had no rights which a white man was bound to respect. He forgets that the Democratic members of the Southern States vacated these seats that we now occupy, in 1861, to destroy the Constitution and the flag of their country. He forgets that the most of those who remained here sat in their seats for four long years refusing to vote men or money to put down the rebellion. He forgets that Democratic leaders sat here in these same seats and voted to divide this Union and obliterate the Constitution. And the Democratic party in my own State made the leader of this movement their candidate for governor, and voted for him while he was over in Canada.

Does the gentleman not remember that it was a national Democratic convention, held in Chicago in 1864, that declared the war a failure and insisted on calling our soldiers home? Does he not remember that it was a national Democratic convention, held in New York in 1868, that declared the constitutional amendments unconstitutional, revolutionary, and void? If these amendments were unconstitutional, revolutionary, and void in 1868, as then declared by the Democratic party, what are they now? This talk about the Democratic party being the keepers and defenders of the Constitution is very much like the talk about the Cæsarism and the czarism of the Speaker: it must be taken with many grains of allowance.

The gentleman on the other side [Mr. ROGERS] also said that he had been here long enough to discover the fact that the Republican side of this House had no regard for the laws or the Constitution. To this I shall make no reply, but I regret that a question like the one now before the House, which is not in fact a political question, but a great constitutional question, can not be considered in an orderly and statesmanlike way. The Republican party has simply done its duty. If a wrong like the rulings in this House has grown up and become hoary with age, the sooner a remedy is provided the better for all. If the Republican party is in the majority by the votes of the people it should govern. If the Democratic party is in the majority it should govern. This is republicanism and this is right. Let us have a system of rules and rulings under which we can do business.

The minority has ample opportunity to go on record, by speech and by vote, against a measure, and when it has done this it has done its duty, and the responsibility rests with the majority. In the campaign of 1888 the country put the Republican party in power and has a right to expect that it will redeem its pledges and make good its promises. Long before Congress convened the air was full of Democratic threats foretelling how they proposed to keep Democratic members in their seats and prevent Republican legislation.

This was the situation, and as a few members in the last two Democratic Congresses prevented the consideration of many bills which two-thirds of the members favored how could we, under the old rules and rulings, expect to accomplish anything that had bitter opposition in the House? If dilatory motions were allowed to prevail, if every Monday could be consumed in reading the Revised Statutes, simply because a member called the book a bill, if members could stand up and demand the yeas and nays and then refuse to vote when their names are called and demand a quorum and escape being counted as a part of the quorum because they sit in silence at that particular roll-call, the result of the election in 1888 would avail nothing to the Republican party or to the country.

Seeing this situation and believing that a majority has a right to rule, the Republicans have undertaken to revise the rules of this House and provide against the abuse of its privileges.

These filibustering methods are of modern invention and are inconsistent with the dignity of the American House of Representatives, and owing to the extent to which they have been carried the time has come when a remedy must be provided; and the American people owe a debt of gratitude and admiration to the Speaker who has thus bravely led the way.

The letters to which I have referred are as follows, and I want the other side to remember in this connection the high compliments they have paid ex-Speaker CARLISLE:

HOUSE OF REPRESENTATIVES, *Washington, February* 5, 1887.

DEAR SIR: At the instance of many Democratic members of the House, we appeal to you most earnestly to recognize, on Monday next, some Democrat who will move to suspend the rules for the purpose of giving the House an opportunity of considering the question of the total repeal of the internal-revenue taxes on tobacco. Many Republican members, we have reason to believe, are anxious to make such a motion. We believe the country is ready for the repeal of these taxes and that a large majority of the House will so vote when an opportunity occurs.

For a Republican to make the motion would give the Republican party all the credit accruing therefrom and would almost certainly cause the loss to the Democracy of not less than two Southern States at the general election in the year 1888. This is an isolated proposition, and we believe will command more votes than any other measure pending before the House looking toward a reduction in taxation; and favorable action on this proposition will not interfere with other efforts that are being made to reduce the burden of the people.

Yours, respectfully,

GEORGE D. WISE.
JOHN S. HENDERSON.
SAMUEL J. RANDALL.

Hon. JOHN G. CARLISLE,
House of Representatives.

MR. CARLISLE'S REPLY.

SPEAKER'S ROOM, HOUSE OF REPRESENTATIVES,
Washington, February 7, 1887.

GENTLEMEN: Your favor of the 5th instant, requesting me to recognize some Democrat "who will move to suspend the rules for the purpose of giving the House an opportunity of considering the question of the total repeal of the internal-revenue tax on tobacco," was duly received and has been carefully considered.

A week ago, in compliance with the request made by you and other gentlemen, I consulted fully with the Democratic members of the Committee on Ways and Means for the purpose of endeavoring to formulate some measure for the reduction of taxation which would meet with the approval of our political friends and enable us to accomplish something practical in that direction during the present session of Congress. The bill which you then submitted for their consideration proposed legislation upon both branches of our revenue laws, and on the 3d instant it was returned to you with such modifications and changes as were necessary in order to make it acceptable to the gentlemen to whom it had been submitted.

In order, however, that our efforts to secure reduction of taxation might not fail on account of our inability to agree upon a measure in advance, we at the same time submitted certain alternative propositions, some one or more of which we hoped might be acceptable to you. Among other things we proposed to submit the entire subject to a caucus of our political friends, with the understanding that all parties would abide by the result of its action; and in case that course was not satisfactory to you we informed you that we would at any time, upon a reasonable notice, support a motion to go into Committee of the Whole on the state of the Union for the purpose of considering House bill 9702, introduced by Mr. RANDALL at the last session. That bill relates to internal-revenue tax on manufactured tobacco, snuff, and cigars.

We have received no response to that communication, and I consider that it would not be proper under the circumstances for me to agree to a course of action which would present for the consideration of the House a simple proposition for the repeal of the internal-revenue tax on tobacco, snuff, and cigars, to the exclusion of all other measures for the reduction of taxation.

Sincerely hoping that some plan may yet be devised which will enable the House to consider the whole subject of revenue reduction,

I am, very truly, yours,

J. G. CARLISLE.

Hon. GEORGE D. WISE,
Hon. JOHN S. HENDERSON,
Hon. SAMUEL J. RANDALL.

Oklahoma.

SPEECH

OF

HON. JOHN A. PICKLER,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 18, 1890.

On the bill (S. 895) to provide a temporary government for the Territory of Oklahoma and the bill (H. R. 6786) to organize the Territory of Oklahoma, to establish courts in the Indian Territory, and for other purposes.

Mr. PICKLER said:

Mr. SPEAKER: Much has been said in this Hall in praise of the people who settled Oklahoma Territory. Much more might be truthfully said of them.

Admitted as were this people into this much-advertised country that had been made famous by the many raids of the historical Captain Payne, the John the Baptist of this great army of occupation, they furnish a history exciting and interesting.

A country of prairie and woodland, with genial clime and sunny skies, watered by numerous creeks and rivers, a land of much promise, it had attracted the attention of the home seeker as well as the speculator.

No Territory of the West had been so much talked of before settlement. For a decade men had gone into this land, sought to make settlements and build towns, only to be removed by the order of the Government, and again and again returning were again and again marched out of this forbidden land by United States soldiers. Each recurring crusade gathered new strength, drew more friends, until at the close of the last Congress, and in the dying hours of that memorable session, a law was passed providing that this land of promise should upon proclamation of the President be opened to settlement. The law, however, only provided for settlement upon public land. No provision was made for a Territorial government; no officers were provided for, neither township, county, nor municipal.

On the 23d day of March, 1889, the President issued his proclamation declaring that Oklahoma Territory would be open to settlement on the 22d day of April, 1889, at 12 o'clock m., and forbidding all persons from entering said Territory and occupying said land before 12 o'clock on said 22d day of April.

During these thirty days from the date of the proclamation to the day of entry men gathered on the confines of this land of promise, gathered by thousands, but, restrained from entering by Government troops, they as a rule waited patiently for the coming day.

Kansas, on the north, separated from this territory by the Indian country known as the Cherokee Strip, 56 miles in width, was the rendezvous of far the greater number of these assembling thousands. At Purcell, a handsome town of 1,500 inhabitants, on the south bank of the Canadian River, in the Chickasaw Nation, the comers from the South gathered. So along the Indian country of the Iowas and Kickapoos, on the east, and likewise along the Indian country of the Cheyennes and Arapahoes, on the west, were camped large numbers waiting the hour of occupancy. At high noon April 22 the military officers stationed along the borders of Oklahoma Territory discharged their revolvers in air, the signal that the hour of entry had arrived.

The race began. One train after another, each with ten laden coaches, at intervals of from fifteen to thirty minutes, chased each other southward along the Santa Fé road until evening. These trains were met by others from the south at Oklahoma City, Edmond, and Guthrie. By wagon, carriage, horseback, and afoot likewise came the people to Oklahoma.

At nightfall there were fifty thousand people within this new land where six hours before there were scarcely a thousand souls. A large majority were men, a few boys, very few women.

From the excited reports in the newspapers, collision and bloodshed were expected, and as a consequence nearly every man wore a revolver, which was supplemented by a Winchester rifle to about every fourth man.

Fifteen thousand people at Guthrie, 8,000 at Oklahoma City, 4,000 at Kingfisher, 200 at Edmond, half as many at Alfred, and the remainder distributed at other villages, and settled upon nearly every quarter-section of this beautiful country. Strangers, competitors, opponents in choice of lots and lands, without a Territorial government, without a governor, without a sheriff, constable, judge, justice of the peace, or any other officer. What will be the outcome of this unprecedented assemblage of people? Will there be anarchy or order; will there be government or disorder; will there be peace or bloodshed?

Sir, when we know that these men were largely of the best citizenship from every State of this great nation, much may be expected of them. How proudly they have sustained the honor of the American Nation you have already heard eloquently protrayed by the distinguished gentlemen of this House, who so wisely visited that people to inform themselves of their needs and who are held in the highest esteem by this people, as I personally know from subsequent intercourse with the residents of that Territory.

How nobly these people demeaned themselves through all the conflicts and controversies concerning valuable lots and lands is known to the nation. In a week after arrival they laid aside their revolvers and hid their Winchesters, ashamed that they had ever supposed they would need them among such a people.

The history of Guthrie is much the history of the other towns and settlements. A pure democracy without laws, a large town meeting was held on the confines of the Government acre on the evening of the first day, April 22.

A gentleman from Ohio was chosen chairman, a secretary was selected, and, on motion, the roll of States and Territories was called and the representatives from the various States each selected one delegate to represent them in this council of States. Twenty-seven were thus selected and these became a provisional city council. A mayor was selected by a committee of seven prominent men, and under general instructions of the town meeting this mayor and council surveyed the town, laid off streets, alleys, and lots. They passed city ordinances, created city police, and appointed a police judge with more extensive jurisdiction and greater powers than any United States district judge ever dreamed of exercising. The ordinances were radically searching and covered all questions, civil and criminal. And these ordinances were respected and enforced.

Under this provisional city government, in a few weeks a permanent city council and mayor were elected by the people. Delegates to a charter convention were elected at the same time; this convention framed a charter, and this was adopted by a vote of the people, and under this charter the government of the city of Guthrie has been well administered, peace preserved, and life and property protected. Such, in the main, is the history of the other towns.

Mr. Speaker, with such a proud record as these people have made, under such peculiar and trying circumstances, an honor to themselves and an honor to the American people, I submit that it is due these people that they should now have the help and advantage of liberal laws by this Congress to aid them in the future development of this country.

I am in favor of the passage of this bill in the main, and that right speedily; for nearly a year this people have lived in doubt and suspense, and they are our brethren and deserve immediate assistance. I am in favor of extending a Territorial government over the Oklahoma strip, and while I admire the earnestness with which gentlemen here have opposed this measure and contended it is for the interest of the Cherokee Indians to withhold a government, I believe it is a mistake.

It is a beautiful country, 56 miles in width and 150 in length. There is no Indian there, and only the white men who watch the great herds of cattle, and it is the cattle-men much more than the Indian that are opposed to a government over this country.

I further hope that the future negotiations of the present commission to confer with the Cherokees as to this strip may be speedily successful, and that this land may be opened to settlers. The Cherokees do not need this land; the money will be far better for them than this territory; they already have an abundance where they live, and are the richest people per capita upon the earth.

But, Mr. Speaker, this bill, in my opinion, to do justice to the people, the white people of Oklahoma—and I am interested in seeing justice done them as well as the Indian—should be amended. The laws as to homesteads should not entail greater burdens on the settlers of Oklahoma than are imposed upon this class in any other Territory.

And I am opposed to the provisions of section 13 of the House bill which requires of the Oklahoma homesteader what is not required elsewhere. By the provisions of this section, if I understand it, the men who made settlement when this Territory was thrown open and who went away for six months to prepare to move their families to these new homes, as they had a right to do under the existing homestead laws, will be deprived of their land, for commencing in line twenty of said section we find this provision:

And no right of an alleged settler as such shall attach to any land in the Territory until date of his actual, bona fide continuous residence upon the tract he proposes to enter.

Section 13 is a bundle of restrictions and burdens placed upon Oklahoma people that are unnecessary and are unfair, and, as reported, in my opinion should be stricken out.

I find no provision in this bill protecting the honest settler against

the man who entered the Territory before the time fixed by the President's proclamation and in violation of law, and no bill should pass this House that does not provide such protection, whether the bill relates to lands, town lots, or both.

In line with the discussion of the extraordinary good order and exemplary conduct of this people, I desire to refer to section 7 of this bill. The good order of this people may be attributed to two reasons:

First, that they are American citizens who love order and self-government and have a pride in maintaining good citizenship.

Second. The other great and potent reason, however, Mr. Speaker, insuring the peace of that people, is that the Government of the United States has refused to allow the sale of intoxicating liquors in the Territory of Oklahoma. And wisely, Mr. Speaker, did the Government refuse to allow the shipment of intoxicating liquors into this Territory. In my judgment, had liquor been allowed to be sold in that Territory during the settlement, no such record of order and bloodless history of occupancy would have been known as has become the history of Oklahoma.

It seems to me, Mr. Speaker, that during the coming contests concerning the organization of counties, the locations of county seats, the selection of the capital of the Territory, the election of officers, and, more than all, the exciting contests concerning the ownership of the lands and town lots of this Territory, wherein one man will be dispossessed and the title declared in another, and in the many other exciting scenes and contests that must ensue in the organization of this Territory, it would be far better that the Congress of the United States should continue the policy heretofore pursued by the General Government of preventing the sale of intoxicating liquors in this Territory until they are organized and have themselves legislated upon this question.

As I understand it, under the laws of Nebraska, which under this bill govern this people and to which I object, upon the petition of 30 freeholders a license is granted for the sale of intoxicating liquors. Under this law from three to five hundred saloons will be opened in Oklahoma in a remarkably short time after the passage of this act.

Mr. Speaker, in the interest of a peaceable organization of that Territory, in the interest, the harmony, and good name of this people, who are a grand people, and for whom, after months of intimate intercourse with them, I have the highest respect and regard, I do not believe Congress should permit this great promoter of discord to be brought among them.

Why not substitute the laws of Kansas instead of Nebraska? I believe one-fourth of the people in that Territory were former residents of Kansas; they are acquainted with the laws of Kansas and the administration of Kansas laws and the procedure in Kansas courts. Mr. Speaker, they have acted largely under Kansas laws in their proceedings so far in this Territory. The city of Oklahoma adopted the laws of Kansas in its organization.

This Territory is in the jurisdiction of the courts of Kansas, the United States marshals ordered to that Territory to preserve the peace are Kansas officers, and they are the officers who now are in this Territory preserving order. Prisoners arrested therein are sent to Kansas for trial, and from every standpoint, it seems to me, Kansas laws should be the ones for the present government of this people, and under these laws the sale of intoxicating liquors would be prohibited. And I know it is the desire of the people of that Territory that Congress should protect them in this regard as the Government has in the past.

Now, Mr. Speaker, I regret that this bill could not have been perfected in Committee of the Whole, that these and other amendments might have been made; but as this action of the committee brings the bill on for consideration, without any opportunity of amendment, I shall still, anxious as I know the people are for a Territorial government in Oklahoma, vote for the bill, with the hope that the amendments suggested may be made in the committee of conference. And I predict, Mr. Speaker, that, with a government and laws, that people will speedily erect a Commonwealth, the State of Oklahoma, which the sisterhood will be proud to welcome into the Union.

The Code of Rules.

REMARKS
OF
HON. MARK H. DUNNELL,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1890.

The House having under consideration the report (No. 23) of the Committee on Rules—

Mr. DUNNELL said:

Mr. SPEAKER: While listening to the mournful picture presented in the language of the gentleman from Illinois [Mr. SPRINGER], I confess that I was very much relieved when I came to reflect upon the character of our political institutions. It is only next November before we are to have a general election, to elect a new House of Representatives. In so short a time these terrible evils which the gentleman so graphically pictures, may be wholly wiped out. The Republic will live under these rules for this short time, and then if the people of the country desire to restore Democratic power in this House, they will have the opportunity to do so.

I look with a good deal of pleasure at the character and genius of our Government. I am not disposed to take so gloomy a view of the future as the gentleman. Some gentlemen on the other side seem to think we are on the brink of ruin because, perchance, the political majority here proposes to adopt some new rules for the government of the House. The Republic will not suffer very much because this majority have the privilege of changing the present order of things, if they see fit so to do.

I have become reconciled to the new code, Mr. Speaker, because I think the majority in the House has a right to be heard and a right to legislate. Not everything in this new code pleases me. Some things I do not like; but I do accept the code as a whole because its object is to allow the majority of the House to control it and to legislate.

What is the significance of a popular election? After an election, to illustrate, it goes out that the Democrats have carried the House. What is expected by the country? What has it the right to expect? It has a right to expect that the known principles of the Democratic party are to be advocated and enacted into law. If the report goes out that the Republican party has carried the country, what may the country expect? They may expect and have a right to expect legislation in harmony with the principles and views of that party.

Now, a revolution may take place here every two years. I am glad of it. We are safe, Mr. Speaker, under this provision of the government. I am not alarmed, for if the American people desire to return the Democratic party to power next November, it is their privilege to do so. The Republic will still live. We may not be ruined if it does come into power. I never can feel any distrust of the Republic when the people shall intelligently pass upon the issues. I insist that it is their duty to punish a party in power if it does wrong.

A great deal has been said here about "Cæsarism" and "czarism." Well, I dislike these words. They are mean, miserable words in the American Congress. There is no czarism in America; there is no Cæsarism in America; and I am firm in the belief that there never can or will be. Does anybody suppose that Mr. REED in the chair is to inaugurate in this House a reign that can be denominated a reign of tyranny or Cæsarism? No. Mr. REED is a representative Republican, and his party will hold him responsible for a just, fair, and honest administration of his high office.

The House of Representatives is the body in our Government which represents the people and displays therein the genius of the Government, and the House may come into power or go out of power at the will of the people. The popular expression in the Presidential election of last year resulted for the Republican party. A Republican President was elected and a Republican House of Representatives came into power. What should that Republican House of Representatives do? It should respond to the Republican sentiment of the country. It should legislate in harmony with the platform of that party. It should have the power to do so. Now, we will assume that it has the power. I believe, Mr. Speaker, as I have said, in the genius of our Government as seen in this popular branch. What is it? It is that the majority shall rule.

Mr. LANE. According to law.

Mr. DUNNELL. Let it rule badly if it will, but let it have the power; and if I were to give any advice to the Democratic side of this House I should say let the Republicans have the power and let them exercise it. Let them then be held responsible to the country. It is democracy to let the majority rule. A minority may resist. A minority has its rights, but the genius of the Government is that the majority shall rule.

I favor this code because it recognizes a great characteristic principle of our Government, the majesty, the dignity, and the supreme right of the majority. I ran through Elliott's Debates the other day. I read over the motions that were made in that body of great men. Was there any filibustering there? A vote of 5 and 6 and 6 and 5, a quiet acquiescence in the will of the majority, is seen at every stage. The outcome was the Federal Constitution.

That Constitution so clearly recognizes this great principle that I have marveled that the determination to abide by it here in this House is so stoutly resisted. If the new rules shall be the death-knell to filibustering, the country will applaud the party that shall bring it about, and the country will also applaud the distinguished Speaker who has with so much dignity and forbearance taken the assault and the abuse of the minority.

Filibustering has been a crime. The country has tired of it. The time for its overthrow has come. It dies hard, but its death will be acceptable by all the people.

It will not be claimed that these rules are perfect or need no amendment. Their practical use will disclose defects, and the majority will be held responsible if it does not amend them in the interest of good legislation.

In advance of their adoption I can find fault with some of them. They do not secure sufficient time for the transaction of private business. The Friday which is nominally given to this kind of business in not less than half of the weeks will be taken up with other business, and two or three cases on the Calendar will consume half of the Fridays that remain. There are many private bills, not claims, which must be lost each session, and lost because not reached.

There are many just claims against the Government brought here year after year which fail from lack of time. Our Government is cruelly unjust to thousands of its people. Many men and women die in this city here asking the Government to be just to them. It is a shame that their claims are not met and paid. Congress should provide a court for their full examination.

Again, too much time under this proposed code is given to the District of Columbia. Two days each month constitute too much time. One day each month is enough for all the legitimate and needed legislation. This extra time only invites here schemes and measures for gain to their projectors.

Acts of incorporation are brought into one House, put through one House, only to be sold out to those interested in franchises which are thus put in peril.

There are too many calendars provided for in these rules. They become the sepulchers to the great mass of the business prepared with great labor by the various committees. The committees should be allowed to report any business upon which they have taken final action, and not be confined to the business which shall go to the House Calendar.

I am not inclined to say much more than to express the profound hope that this new code will be found adapted to use in this House in the transaction of the vast volume of business which the multiplied interests of the people of this great nation call for.

Our developed and developing industries call for much legislation. Congress is called upon each year to regulate these industries, foster some of them, or restrain them when so used as to infringe upon the rights of the people.

No patriot should wish to see this popular branch of the Government hampered by rules which will not allow it to give a quick response to any and every call upon it made by the people or any portion of them. It should be the popular branch in fact as well as in name. If these new rules shall tend to make it easier for the people to be heard and have their prayers answered, there should be no objection to them. They must be vastly better than the rules which we have had here for the last ten years. In the belief that they will prove such, I shall cheerfully vote for them.

Contested Election—Featherston vs. Cate.

SPEECH

OF

HON. CHARLES A. HILL,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 5, 1890,

On the contested-election case of Featherston vs. Cate, from the First Congressional district of Arkansas.

Mr. HILL said:

Mr. SPEAKER: This case comes to us from the First Congressional district of Arkansas. That Congressional district comprises seventeen counties and extends from the Mississippi River across the State to Louisiana. It is said to have a voting population of over 40,000. The contest now before us is between Democrats. Mr. Cate was the regular Democratic nominee; Mr. Featherston was the nominee of a secret organization, composed largely of farmers, known as the Wheel, an organization similar in character to that known in the West as Patrons of Husbandry or the Grange. Both contestant and contestee have been life-long Democrats. About ten days before the election of November 6, 1888, Mr. Featherston received the indorsement, it is claimed, of the Republican party, and the contest was fought out to a conclusion mainly between these two contestants.

There was, however, as appears from the record in this case, an independent Republican candidate in the field, a Mr. Barrett, who received some votes in several of the voting precincts, and the returns show that in one of those precincts Mr. Barrett received 169 votes. It thus appears that the voters of both the great parties, Republican and Democratic, were under the influence of a divided allegiance. The organization known as the Wheel was composed mainly of Democrats, and they were called upon to forsake the old Democratic party and vote for the candidate of that organization. The Republicans, on the other hand, by their indorsement of the Wheel candidate, were called upon to forsake the party of their choice and cast their votes for a life-long Democrat. Under such circumstances all experience shows that neither Republicans nor Wheelmen could be relied upon to forsake their party and vote for a candidate at the expense of their own party organization; and this consideration, to my mind, explains in part the result of the election.

According to the returns to the secretary of state, Cate received 15,576 votes, Featherston 14,228, making a majority in favor of Cate of 1,348, and accordingly Mr. Cate was declared elected and received the certificate of election; and we are now called upon to determine which of the two candidates was in reality elected. By the Constitution of the United States the House of Representatives is made the judge of the "election, returns, and qualifications of its members." By the very terms of that instrument the members of this House are now called upon to act in a judicial capacity as judges, under their oaths, in determining this contest. To my mind it should be determined only by the record containing the pleadings and evidence in the case; it is not, and should not be made, a political question. The simple and only inquiry should be, which of the two opposing candidates received a majority of the votes cast?

I have listened, Mr. Speaker, with the deepest interest to the discussions on the floor of this House, extending over a period of more than two days. I have also examined with great care the printed record of the pleadings and evidence, containing nearly 300 pages, and the majority and minority reports of the Committee on Elections, and have devoted more time to the consideration of this matter than of any other which I have been called upon to act during my brief term of service as a member of this House; and, Mr. Speaker, my deliberate conclusion is, after such examination, that the sitting member, Mr. Cate, was elected by over 500 majority.

With me it is a matter of deep conviction; and however I may differ from the majority of the House, I feel that there is but one thing left for me to do, and that is to vote according to my convictions. In doing so, however, I do not wish to have it understood that I am in any way impeaching either the honesty or good faith of the majority. They have the same right to a free and unrestrained exercise of their own judgment as I claim for myself; and if I had not taken the pains to examine the record and to compare that record with the conclusions reached by the majority of the committee I might perhaps have been found voting with the majority to-day.

Now, Mr. Speaker and gentlemen of the House, after these preliminary remarks, I ask your attention to the case as made by the record. The statute law of the United States requires the contestant in an election case to give the opposite party, the contestee, notice of the proposed contest, particularly specifying the grounds on which the contest is to be made. Acting under that law, the contestant, on the 17th day of December, 1888, served upon the contestee, Mr. Cate, a notice in writing, the first clause of which is as follows:

Hon. W. H. CATE, *Jonesborough, Ark.:*

SIR: On the 21st day of November, 1888, the governor of the State of Arkansas, in pursuance of section 2708, Mansfield's Digest, made proclamation wherein it is declared that you received 1,342 more votes for Representative in Congress from the First Congressional district than I did. You are hereby notified that I shall contest your right to occupy a seat in the House of Representatives in the United States of and from the First Congressional district of Arkansas in the Fifty-first Congress on the following grounds.

And then follows a long list of specifications of the grounds upon which the contest was made, sixty in number, and covering fourteen pages of the printed record. On page 228 of that record will be found a certificate from Samuel Keel, clerk of the circuit court of Crittenden County, Arkansas, from which I read as follows:

Abstract of poll-books of election held on the 6th day of November, 1888, for Representative in Congress for the First Congressional district of the State of Arkansas, in Crittenden County, at the following precincts or voting places, and not certified to the secretary of state on account of irregularities of poll-books, appearing therein that the judges and clerks of said election were not sworn as the law directs:

	Total vote.	W. H. Cate.	L. P. Featherston.
Mound City	147	14	133
Walnut Grove	189	49	137
Hoadley	208	4	195
Edmondston	90	15	75
Riceville	45		45
Gilmore	45	7	35
Scanlan	64	61	2

By the simple process of addition and subtraction it will be found that the six voting precincts embraced in this table, not including Scanlan, net an aggregate majority to Featherston of 531. It is manifest that this majority of 531 should be counted in favor of Featherston. Cate's majority in the district was 1,348; deducting, leaves a majority of 817 in favor of Mr. Cate. The precinct of Scanlan, which, according to this same certificate, gave Mr. Cate 61 votes and Featherston 2, remains to be considered. And over this precinct the contest has raged for more than two days in this House, one side claiming that 59 majority shown by the certificate should be counted in favor of Mr. Cate, and the other side insisting that the returns as to that precinct have been overcome by oral evidence establishing a majority of 73 votes in

that precinct in favor of Featherston. Let us look at the facts. And, first, as to the pleadings. I read from page 6 of the record as follows:

That at the township of Scanlan, in the county of Crittenden, in said precinct, by fraudulent and unlawful conduct of the judges of said election of said township, who were partisans of yours, 163 legal voters of said township went to the voting place in said precinct between the hours prescribed by law for holding elections, on said 6th day of November, 1888, aforesaid, for the purpose and with the intention of voting for me for Representative, and were prevented from doing so by the unlawful and illegal conduct of said judges of election and by intimidation of your partisans. I shall therefore claim on contest that I be allowed the votes of 163 persons aforesaid, who would have voted for me but for the unlawful and illegal conduct of said judges of election and the intimidation of your partisans.

This was contestant's only claim as to the precinct of Scanlan, and, as will be seen, he makes no claim whatever that that precinct did not give, as shown by the evidence, 61 votes in favor of Mr. Cate, his claim simply being that 163 voters went to the polling place in that precinct, "with the intention of voting for me for Representative, and were prevented from so doing." This specification, Mr. Speaker, is in the nature of a declaration in an action at law. It states the claim made by the contestant; by that claim in this contest, by all rules of law and evidence, he is bound. The returns show, under this stipulation, introduced by contestant himself, upon their face that 61 votes were cast for Mr. Cate and 2 for Featherston.

There is not a word of proof in this record that they were not so cast. No witness testifies that the returns in that respect were not correctly made. The majority of the committee, however, in the face of those returns and acting upon *ex parte* testimony of three witnesses, whose evidence appears in the record, have ignored the returns in favor of Mr. Cate, and upon that *ex parte* testimony found a majority of 73 at that precinct in favor of Featherston. And that, Mr. Speaker, brings us to one of the most important inquiries in this case. Turning to page 185 of the record I find that on the 25th, 26th, and 27th days of February and on the 2d and 4th days of March, 1889, the evidence of twenty-seven witnesses was taken before E. M. Avery, a notary public, at Memphis, in the State of Tennessee. The evidence of these twenty-seven witnesses, if evidence it could be called, covers more than forty pages of the printed record.

By the statute of the United States it is provided that a party desiring to take depositions in contested-election cases shall give the opposite party notice in writing of the time and place when and where the same will be taken, of the names of the witnesses whose depositions are to be taken and their places of residence, and the name of the officer before whom the depositions will be taken. This provision of the statute was entirely ignored in taking the testimony of these twenty-seven witnesses. One of these witnesses was W. B. Eldridge, one of the attorneys for contestant, who says (I read from page 227 of the record):

I notified Mr. L. P. Berry, the attorney of Mr. Cate, that Mr. Featherston would take proof in Memphis, Tenn., at my office, on the Congressional contest; and on February 24 Mr. Henry Walsh and myself both notified Mr. Berry that we would begin taking proof at 59 Madison street, Memphis, Tenn., at 9 o'clock, February 25, 1889.

This was the only notice given, or claimed to have been given, and clearly it was insufficient. It was not in writing; it did not give the names of the witnesses or their places of residence or the name of the officer before whom the depositions were to be taken; and Mr. L. P. Berry swears in an affidavit filed in this case that no notice, verbal or written, was ever given him, and he never knew of such evidence until he saw it printed in the record in this case.

No opportunity for cross-examination was given. Neither the contestee nor his attorney was present. It was, to my mind, a clear, palpable, and open violation of the express provisions of the statute requiring notice in writing of the time and place, names and residences of the witnesses, and name of the officer; and testimony taken under such circumstances ought not, in my judgment, to be considered by this House. And what excuse is here made for this open violation of the statute? It appears from the evidence of Mr. Eldridge, the attorney for contestant, that he went to Crittenden County to take proof in this contest, and here is what he says:

Q. Mr. Eldridge, what sort of a reception did you meet with over there?
A. I was not received at all.
Q. What do you mean by saying you were not received at all? And please state fully how you were treated by the people over there.
A. The people seemed displeased at my presence there, as also Mr. Featherston; and I was not invited in their places of business or residences, or in any way was I shown that common politeness that citizens of a town are supposed to extend to strangers who were there for legitimate business.
Q. What town was this?
A. Crawfordsville, Crittenden County, Arkansas.
Q. You say you were not invited into any place of business or in any house. What was the condition of the weather at this time, and did you suffer any inconvenience on account of this inhospitality?
A. My associate counsel, Mr. Henry F. Walsh, and myself were together and remained about two days and a half. The first day was bitter cold, which we spent in a saloon with the doors open and no place to sit. The second day was spent under the cover of the porches of the stores. We did this because we had nowhere else to go, and no one invited us in out of the cold and weather. We had some difficulty in getting anything to eat, which we finally secured from negroes, who allowed us to eat it in an open room adjoining where it was cooked. We came very near freezing there. This was a negro eating-house. Such a place I never was in before. The night coming on we looked in vain for a place to rest, and I thought we would have to pass it in the open street. We finally induced a negro by the name of Logan to allow myself and Mr. Walsh to pass the night on a lounge in a room of his house, which was about half a mile from town. We received the only courtesy from this negro and his wife that we had there at all.

This was the reason or excuse, call it what you will, for taking the testimony at Memphis. But surely it affords no excuse whatever for not giving such a notice as the law requires. Such a notice could and should have been given.

Now, Mr. Speaker, it was on testimony so taken, on a mere verbal notice, denied on oath by the party to whom it is claimed it was given, that the majority of the committee have acted in this case, not only as to the township of Scanlan, but as to other voting precincts, to which I shall call the attention of the House. And here for the first time, brought out by this *ex parte* testimony, we hear of the fraudulent tin ballot-box with a double slot, of which we have heard so much in this case. It makes its first appearance in the hands of contestant's attorney. But where it came from the evidence does not disclose.

Willis McGee, whose *ex parte* evidence was taken on March 2 at Memphis, was asked these questions:

Q. This tin box, made Exhibit "A" to your deposition, that I now have in my hand here, did you ever see a box like that in the State of Arkansas?
A. I did, sir.
Q. When?
A. The time the election was going on.
Q. For what purpose, if any, was the box then used?
A. To put votes in.
Q. What election is that you refer to?
A. The Presidential election. It was used at both elections, at the Presidential election and State and county election.
Q. Are you absolutely certain it was a box of this precise description that you saw at those two elections?
A. Yes, sir.

Thus by a leading and direct question this witness is made to testify to the use of the ballot-box at the elections in Arkansas, precisely like the one in the hands of contestant's attorney, without its even appearing anywhere in his evidence, if evidence it could be called, that he had ever particularly examined either of the ballot-boxes used in the election or the one then before him. Without a careful examination he could not determine whether it had a double slot or not.

Another witness, John Johnson, whose *ex parte* testimony was also taken at Memphis, testifies as follows:

Q. Were you there at the last general election?
A. Yes, sir.
Q. What is about the usual vote of the precinct?
A. Well, from 100 to 123 or 4.
Q. How many of those are Republican?
A. Well, about 110 or 112.
Q. How many are Democratic?
A. About 8 or 9.
Q. You say you were at the Presidential election?
A. Yes, sir; I am at all of them, but then I was there anyhow, at that one expressly.
Q. What time did the polls open?
A. Well, they said they was to open in the morning at 9 o'clock, and close at 4. I could not tell you the real hour they did open They may have opened before 9 or after 9. That was the time they were said to open, at 9 o'clock.
Q. Was there some people come out to the polls that day that did not vote?
A. They wanted to vote, but was afraid.
Q. How many people voted there?
A. I counted up 73, and they was voting on; I did not go away, but then I went off down the river a little piece and sat around; but everybody that talked to me after I come up said they was voting Republican. There was not but two colored men that voted the Democratic ticket, and one of them would not have done it if they had not made him do it; he was a kind of ignorant sort of person, and they gave him the ticket and he went on and voted it.
Q. You say they voted a Republican ticket?
A. Yes, sir.

And on this testimony, Mr. Speaker, the majority of the committee say "the contestant shows that he received 73 and perhaps more votes, and these, we think, should be allowed him," and they were allowed him; and more than that, Mr. Speaker, not only do the majority of the committee on this purely *ex parte* testimony of one witness, almost wholly without corroboration, override the official returns from that precinct, showing a majority of 59 in favor of contestee, but count 73 majority in favor of contestant. To my mind this is wholly unwarranted by the evidence. I do not believe that testimony so taken, in open violation of law, should be made the basis of such action. Those official returns were made under oath by the judges and clerks of election, five in number, and surely are entitled to greater weight and more respect at the hands of the committee.

Adding, then, the 59 majority in favor of Cate at Scanlan precinct, as shown by the official returns, and we have 876 majority in favor of Cate.

CAT ISLAND.

Much has been said, Mr. Speaker, in this contest about the election at Cat Island precinct. I shall not detain the House with a long examination of the evidence as to the vote at that place. I ask the attention of the House, however, to pages 6 and 16 of the record, where the claims and counter-claims of the contestant and contestee as to this precinct will be found. I read from page 6 as follows:

That at the precinct of Cat Island, in the county of Crittenden, in said district, at the election held on the 6th day of November, 1888, I received for Representative 183 votes, and you received 15. That the election officers of said township, who were partisans of yours, through fraud or mistake returned that I received 120 votes, and that you received 88. That the votes as thus returned by the election officers of said township were by the county clerk of said county certified to the secretary of state, and by him laid before the governor, and by him counted in determining which of us received the greater

number of votes in said district. I shall therefore claim, on contest, that I be allowed 63 more votes that were returned and certified for me in said township, and that 73 votes which you did not receive in said township, but which were returned and certified for you, be stricken from your vote in said township.

To this, on page 16 of the record, contestee makes answer:

That as to the precinct of Cat Island, in said county of Crittenden, I received 48 votes, while you received 120 votes, and that said votes were correctly counted, returned, and certified. I deny that you received 183 votes, or that the election officers were partisans of mine, or that there was any fraud or mistake in the returns.

This, then, was the issue to be tried, so far as Cat Island was concerned. Contestant claimed 183 votes. The majority report gives him 193, ten more than he claimed. And on the testimony of one witness, George Hendly, taken at Memphis, without legal notice to contestee and in violation of law, the majority of the committee have added 73 votes to the 120 returned for the contestant. He was asked this question (I read from page 88 of the record):

Q. Did the Republicans all vote the Republican ticket in the last election?
A. They did, so far as I know; in fact, I saw most of them all vote; they all voted it; they all told me they would vote the Republican ticket; I saw a great many of them vote and the majority of them told me afterwards that they had voted the Republican ticket.

On this and like uncertain evidence the committee act. But two witnesses were examined as to the vote at this precinct. Neither of them testifies definitely to any certain number of votes voted, except Robert Abernethy, who says he voted the Republican ticket. To my mind the evidence is clearly insufficient to override the returns as to this precinct.

PHILLIPS COUNTY.

Turning now, Mr. Speaker, to Phillips County, I find on page 184 of the record a stipulation from which it appears that in two precincts of that county, Hicksville and Lake, Featherston is entitled to a credit of 132 votes. I read from the stipulation:

First. In Hicksville precinct, of Hickory Ridge Township, Phillips County, 48 legal votes were cast, of which said votes L. P. Featherston, the contestant, received 33 votes and W. H. Cate, the contestee, 15 votes. That the judges of said election, in making their returns of said election, so certified the result; but that they inclosed the said returns with the ballots, and sealed them all up, by reason whereof the board of canvassers, who by the law are prohibited from opening the package containing the ballots, did not count the votes thus cast in said voting precinct, and made no return thereof to the secretary of state; and that in said precinct the contestant had a majority of 18 votes over the contestee, of which he was, by reason of the error aforesaid, deprived.

Second. That in Lake Township, Phillips County, 137 legal votes were cast for Representative in Congress from the First district of Arkansas, of which L. P. Featherston, the contestant, received 127 votes, and the contestee, W. H. Cate, 10 votes; but that in making the returns of said election to the county clerk of said Phillips County the judges of said election, by mistake, certified that L. P. Featherston received for said office 70 votes, and the contestee, W. H. Cate, 67 votes; and that the board of canvassers so certified to the secretary of state of Arkansas, who, in counting up the returns for said office, followed the returns thus made; and that in truth and in fact the contestant, L. P. Featherston, had in said Lake Township a majority of 117 legal votes over the contestee, W. H. Cate, for the office of Representative to the Fifty-first Congress of the United States from the First district of Arkansas, instead of a majority of 3 votes, as certified to and allowed to him as aforesaid.

As thus stipulated, the net majority in those two precincts in favor of Featherston is 132 votes, and deducting these votes from the 876 leaves 744 majority for Cate still remaining.

CROSS COUNTY.

As to the township of Smith, in Cross County, I find the following as contestant's claim. I read from page 12 of the record:

That at the township of Smith, in the county of Cross, in said district, at an election held on the 6th day of November, 1888, I received for Representative 115 votes, and you received 84. That the election officers of said township, who were partisans of yours, through fraud or mistake, returned that you received 84 votes and that I received 15 votes. That the votes as thus returned were by the county clerk certified to the secretary of state, and by him laid before the governor and by him counted in determining the number of votes cast for each of us in said district. I shall therefore claim on contest 100 more votes in said township than were returned for me.

To this claim contestee makes answer as follows. I read from page 20 of the record:

As to the election of the township of Smith, in Cross County, I deny all the charges of fraud and mistake, and say that the votes were correctly counted, returned, and certified. I deny that you received 115, but say that you received 15 votes, while I received 84 votes. The election officers were not all partisans of mine.

Here, then, is a plain, unmistakable statement by contestant, confirmed by the reply that contestee received 84 votes in that precinct. By that admission contestant, by all rules of pleading in evidence, should be bound. They are not allowed him in the majority report. I read from that report (page 42), as follows:

In the township of Smith, in Cross County, Featherston is returned as receiving 15 votes, and he proves up 29 votes. This overthrows the return and leaves the parties to prove up their votes. The result is, Featherston gets 14 more votes, and Cate, not having proved any votes, loses 84, making a difference in favor of Featherston of 98.

And Featherston is then credited with the 98 votes. Clearly this is a mistake as against Mr. Cate of 84 votes. Contestant having conceded that contestee had received 84 votes the contestee was not called upon to make any proof as to the number of votes he received. Parties in a contested-election case, the same as in an action at law or a suit in equity, should be bound by their pleadings and their admissions in those pleadings. Not a word of proof is in the record showing, or tending to show, that Cate did not receive those 84 votes. All that the contestant did was to prove that he (contestant) received 29 votes instead of 15 returned for him. Having already been credited in the returns with 15 votes the contestant should receive a further credit of the difference between the 15 returned and the 29 proved up. Deducting these 14 votes from the 744 previously found for contestee, leaves a majority for contestee of 730 still remaining.

ST. FRANCIS COUNTY.

Turning to the township of Franks, in St. Francis County, I find about the same condition of things. I read from page 12 of the printed record, in which the contestant, in specifying his grounds of contest, says:

That at the township of Franks, in the county of St. Francis, in said district, at an election held on the 6th day of November, 1888, I received 271 and you received 129. That the election officers of said township, who are partisans of yours, through mistake or fraud returned that you received 269 votes, and that I received 131. That the votes as thus returned were by the county clerk of said county certified to the secretary of state, and by him laid before the governor of said State, and by him counted in determining the number of votes cast for each of us in said district. I shall therefore claim on contest that I shall be allowed 140 more votes than were returned for me in said township; and that 140 votes which you did not receive, but which were returned and certified for you, be stricken from your vote in said township.

To this claim contestee makes reply (I read from page 20 of the record):

As to the election in the township of Franks, in said county of St. Francis, I deny the charges of fraud and mistake and say that the votes were correctly counted, returned, and certified. I deny that you received 271 votes, but say that you received only 131 votes, while I received 269 votes. The election officers were not all partisans of mine.

Here, then, is a plain admission by contestant that contestee received 129 votes. The returns show that contestee received 269 votes, and 129 were conceded by contestant. He should be bound by that admission. And as the returns were shown incorrect and contestee failed to prove that more than 129 votes were cast for him, that number, 129, should be deducted from the 269 returned for him, leaving 140 votes to be taken from contestee's majority. Deducting the 140 from the 730 previously found, leaves 590 majority still remaining in favor of contestee.

Contestant, however, proved that he received 195 votes in that precinct instead of 131, and he should be credited with that difference. Deducting that difference, 64, from the 590 previously found, leaves 526 in favor of contestee. Here, then, in the majority report is a plain mistake in this precinct against contestee of the 129 votes conceded by contestant as having been polled for contestee. My statement corrects that mistake.

LEE COUNTY.

As to Lee County the claim of contestant is as follows (I read from page 7 of the record):

That at the precinct of Independence, in the county of Lee, in said district, at an election held on the 6th day of November, 1888, I received 397 votes and you received 224 votes. That the election officers of said township, who are all partisans of yours, through fraud or mistake, returned that I received 89 votes and that you received 224. That the votes as thus returned by the election officers of said township were by the county clerk of said county certified to the secretary of state, and by him laid before the governor of said State, and by him counted in determining the number of votes cast for each of us for Representative in said district. I shall therefore claim on contest that I be allowed 308 more votes than were returned and certified for me from said township.

To this claim contestee makes reply as follows. I read from page 17 of the record:

As to the precinct of Independence, in the county of Lee, I deny all the charge of fraud and mistake, and say that the votes were correctly counted, returned, and certified. I deny that you received 397 votes, but you received 89 votes, and I received 244 votes in said precinct or township.

Here then is a plain admission by contestant that contestee received 224 votes in that precinct. Notwithstanding this concession the majority report gives contestee no credit for those votes. Not a word of proof was introduced on either side showing, or to my mind tending to show, that contestee did not receive that number of votes. Upon this point the majority report says. I read from page 46 of that report:

What is claimed as a concession by contestant that the contestee received 224 in this township is contained in the notice of contest on page 7, as follows.

Then, after quoting that part of contestant's claim as to Independence township, which I have just read, the majority report proceeds:

This is not a concession that contestee received 224 legal votes, but is in the nature of a recital of the state of facts which he would be able to establish by proof.

But, Mr. Speaker, upon whom devolved the burden of showing or proving that those votes were not legal? They were received and returned as such, and counted as such. In his notice of contest contestant made no claim that these 224 were not legal votes. His contention was that he, contestant, received more votes than were returned for him. I quote:

I shall therefore claim on contest that I be allowed 308 more votes than were returned and certified for me from said township.

The majority report further says:

The contestee did not treat this statement as a concession that he received 224 votes, but on the contrary he filed the following answer.

They then quote contestee's answer as above given on page 17 of the record, in which he claims that he received 244 votes in said precinct or township. And then the report further says:

Instead of the record making a stipulation or concession that contestee had received 224 legal votes, the number of legal votes was not admitted by contestant,

nor was the alleged concession accepted as such by the contestee in lieu of evidence, but he set up a claim to 244, instead of 224, which he now claims as having been conceded. The parties having failed to agree upon the matter, the question stands upon the proof, which shows that a fraudulent return was made by the election officers.

And the majority report then proceeds, upon the testimony of one witness only, to overthrow this entire return, and to credit contestant with 227 more votes than were returned for him by the officers of election, entirely disallowing the 224 votes conceded by contestee.

Mr. Speaker, I had always supposed that the greater included the less, and that when contestant admitted of record that contestee received 224 votes, and contestee, in reply, claims that he received 244, the 244 included the 224, and that contestee should be credited with that 224 votes. It was not, as claimed by the majority of the committee, a matter of agreement, but an admission of record by contestant, and by that, I think, he should be bound, especially in the absence of any proof in the record that contestee did not receive those 224 votes.

In this contest as to Independence Township, contestant proved by one witness that he received 92 votes. The returns show 89 for him, a difference of only 3 votes. I do not believe that these returns should be upset or overturned on the testimony of one witness only. Those returns were made and sworn to by officers of the law acting under oath, five in number, three judges and two clerks, and it ought to take more than the testimony of one witness to overcome them. That witness was Milton Powell. I read from his testimony, page 26 of the record:

Q. 9. What voters voted that ticket that day?
A. The Republicans voted that ticket; it is a Republican ticket.
Q. 10. What was the result of your work?
A. I kept count of 92 of those Republican tickets that went out of my hands.
Q. 11. What was done with those tickets—92?
A. They were voted.
Q. 12. How do you know they were voted?
A. I went with them to the ballot-box and saw them put in.
Q. 13. How many votes were polled here that day?
A. Something over 600.
Q. 14. What is the political complexion of this district; which has the majority?
A. The Republicans have a large majority.
Q. 15. Can the majority of the colored people read and write?
A. The majority can not read and write.

And again, on page 27, I read from his testimony as follows:

Q. 36. Did they all vote for Mr. Featherston?
A. They all voted the red ticket, like the one filed; I saw them put it in.
Q. 37. From the time you gave them the ticket to the time they voted did any one have an opportunity to change the name on the ticket?
A. No, sir.
Q. 38. Then you positively swear that those 92 persons voted for Mr. Featherston?
A. Yes, sir; that is my belief.
Q. 39. Are you positive or not that said 92 men voted for Featherston?
A. I am positive they voted for his name on the red ticket.
Q. 40. Are you positive that Mr. Featherston's name was not scratched on a single one of those tickets you gave out?
A. I am positive.

On this evidence of one witness only, who testifies that he saw 92 votes cast for Featherston, the majority report, as I have before stated, proceeds to set aside the entire election returns and count a majority in that precinct in favor of Featherston of 227 in addition to the 89 shown by the returns. I read from the majority report, page 45; after quoting from Mr. Powell's testimony they say:

There is under the proof circumstances and facts sufficient to impeach the returns and to put the parties to proof. It is satisfactorily proven that the township is largely Republican; that 632 votes were cast, showing a full turnout, and the contestant is only returned 89 votes. The vote for Presidential electors was as follows:

Harrison	435
Cleveland	196
The Republican majority	239

Here, then, is a case where we have 239 votes not counted for any one for Congress. And this, too, in the face of testimony of witnesses showing that the Republicans turned out well and were in the majority and voted the party ticket.

I have only to say, Mr. Speaker, that to my mind the report upon that point is not satisfactory, much less conclusive, and in any view that can be taken of this matter the 224 votes admitted to have been cast for contestee should be counted for him. This was not done. The returns show 89 votes for contestant. The evidence of Milton Powell, if deemed sufficient to overcome the returns on that point, would give him but 3 more. Deducting those 3 from the 526 previously found for contestee leaves a majority of 523 in his favor.

Now, Mr. Speaker, I have gone over this entire ground as carefully and fully as my limited time would permit. My conclusion is that contestee was elected by over 500 majority and is entitled to his seat. A few words more as to the general aspects of this case and I have done.

Much has been said on this floor concerning certain outrages that were committed in this Congressional district, both before and after the election in November, 1888.

It appears that in July, 1888, a band of about one hundred men, armed with Winchester rifles, waited upon several of the leading Republicans of Crittenden County, at Marion, the county seat, and forcibly drove them from the State. It also appears, not from the record in this case, but from letters and communications read on this floor, that in May, 1889, over six months after the close of the election now in controversy, and even after the proofs in this case had been taken, a riot occurred in another part of the district, in which several men, all Republicans, were killed. Mr. Speaker, I am no apologist for crimes. The perpetrators of them should be punished, and that speedily and to the full extent of the law; but, so far as I can discover, these crimes had no connection whatever with the election now in controversy. That election was held peaceably and quietly, without riot, violence, or intimidation, so far as I can discover or this record discloses.

In Crittenden County, to which I have referred, and where the acts of violence were perpetrated, 2,120 votes were cast, of which contestant received 1,660 and contestee 460, a majority in favor of contestant in that county alone of 1,200 votes. These facts speak for themselves, and show to my mind that the election was held without intimidation or violence. I believe, Mr. Speaker, in a "free ballot and a fair count," and will go as far as any man on this floor in preventing fraud or intimidation at the polls. Therein lies the only safety for free institutions or a republican form of government; and I will go as far as any man on this floor in preserving the sacred rights of the ballot to the voter North and South, East and West.

But, Mr. Speaker, in this contest I can not shut my eyes to the fact that after allowing contestant every claim in his favor which can be reasonably made there still remains a majority of over 500 in favor of the sitting member. In cases of this kind I know of but one safe rule of action, and that is, for each member to be guided by his own judgment and sense of justice, upon the facts as they appear in the record. At the other end of this Capitol we have heard the gospel of justice to all men, white and black alike, preached by the silver-tongued orator from Kansas, Mr. INGALLS. I believe in that gospel of justice, not merely for the black man, but for the white as well, for all men; and, believing that contestee has been fairly elected I shall vote to retain him in his seat.

Election Contest—Atkinson vs. Pendleton.

SPEECH

OF

HON. R. P. C. WILSON,

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 27, 1890.

The House having under consideration the following resolution:

"*Resolved*, That George W. Atkinson was duly elected a Representative to the Fifty-first Congress from the First Congressional district of West Virginia at the election held November 6, 1888, instead of John O. Pendleton, and that said George W. Atkinson is entitled to his seat as such Representative"—

Mr. WILSON, of Missouri, said:

Mr. SPEAKER: If nothing else worthy of interest has transpired during this debate, it has developed the fact that there are more idiots, lunatics, persons of unsound mind generally, and paupers in West Virginia than any other State in the Union. [Laughter.] We are indebted for this information to the majority of the Committee on Privileges and Elections, to the minority of which I have the honor to belong.

Go and come from and to this Hall whenever you may, when a case from that State is under discussion and some member of the majority is upon the floor, the last thing you hear when you leave and the first when you come in is the same sad refrain: "Fool, idiot, lunatic, and pauper." [Renewed laughter.]

According to the statements of our Republican friends of the committee, verily this State must be the paradise of fools. If the people of West Virginia do not embrace the first opportunity presented to resent the insults thus visited upon them by the majority and the obloquy thus heaped upon them, I will conclude that my friends of the majority of the committee are about right, and that that State is indeed populated with cravens as well as fools. They owe it to themselves to drive with scorpion lash from this floor those who by the authority of the majority here have usurped some of the seats of their legally chosen Representatives; for I fear the fiat has already gone forth that Pendleton is to follow Jackson, and the seat now so ably occupied by him is to be filled by one of their own appointment.

Permit me to remark in this connection that however low may be the intellectual standard of the people of the First district of West Virginia, according to the gospel of the other side, it will certainly compare favorably with that of the thousands and tens of thousands of voters in the Southern States upon whose discriminating intelligence they rest their hopes of political domination in that part of the country.

And now, Mr. Speaker, I will proceed to address myself more directly to the merits of the case, and in so doing will endeavor to confine myself within the record as nearly as the nature of the case will admit.

On the face of the returns the contestee, Mr. Pendleton, was elected by a majority of 19 votes. In order to overcome the *prima facie* right of the sitting member, the contestant, Atkinson, alleges that in the

county of Wetzel fraud was committed in the recount of the ballots by the county court of that county at two precincts therein—Martin's School-house and Archer's Fork—by which he lost 14 votes at the one and 10 votes at the other, and Pendleton gained 2 votes. He also claims that contestee received 256 illegal votes.

The contestee specifically denies each and every allegation made by contestant, and counter-charges that a large number of legal votes were rejected which rightfully should have been counted for him, and many illegal votes were cast for contestant. The issues are thus sharply defined. I will not consume the time of the House and weary both you and myself, Mr. Speaker, by entering upon an analysis of the large number of votes charged to be illegal on both sides, for this duty has been performed with signal ability in the exhaustive argument already submitted to you by my colleague on the committee [Mr. O'FERRALL]. Indeed, so thorough and conclusive has been his argument on this branch of the case that, in my judgment, no one who attentively listened to him can reach any other conclusion than, admitting everything claimed by the contestant as to Martin's School-house and Archer's Fork precincts in Wetzel County, still, Pendleton is elected by a clear majority; and, feeling that it would be a work of supererogation in me to reargue this branch of the subject, I will pass to a consideration of the charge that there was fraud practiced by the scratching of the ballots at the two precincts alluded to, and which seems to be the main point on which this contest is based.

Mr. Speaker, I am not accustomed to speaking to juries that have made up their minds, and if this be the case here, I might as well pitch straws against the wind as to attempt it with the hope of any favorable result; but with the hope, however small that may be, that this is not altogether the case, I will proceed.

I am at a loss to understand how any man with an unbiased and unprejudiced mind can deliberately go through the testimony touching the scratched votes and reach any other conclusion than that the scratches on those ballots were overlooked by the election officers during the original count, and first discovered by the county court of Wetzel during the recount. It seems to me the conclusions arrived at on this point by the majority of the committee are bottomed on a wrong conception of the facts and circumstances attending the matter.

The majority appear to have proceeded upon the hypothesis that the county court of that county in its two or three weeks' session was principally engaged in the recount for Congressman; that that was the principal business of its session and absorbed the attention of everybody in that part of West Virginia. As a matter of fact, Mr. Speaker, the recount for Congress was of minor consideration in Wetzel. When the fact is recalled that the court was engaged during the weary weeks of its session in a recount for governor in the memorable contest between Fleming and Goff in that State, as well as some of the other State officers engaged in the recount for State senator, for sheriff, and, above all, in a recount of the ballots for the removal of the county seat of the county, which, it is well known, usually dwarfs every other consideration during an election—I say, when these facts are considered, you will be prepared to look with distrust upon the wild, groundless charge of "conspiracy" upon the part of the county court of Wetzel, and more especially of its presiding judge, Earnshaw, the officers of his court, including the deputy (Snodgrass), with two prominent citizens of Marion County, Wells and Arnett, General St. Clair, and others to defraud the contestant of his seat upon this floor.

Now, in the report of the committee, which seems to have been made up mainly from the brief of the lawyer hired to come here by the contestant to "make the worse appear the better reason," great stress is laid upon the visit of Wells and Arnett to the county seat of Wetzel during the recount, and also upon a telegram directed to them, signed McG., and dated November 24, 1888, which is as follows:

CHARLESTON, W. VA., *November* 24, 1888.

To C. E. WELLS or W. N. ARNETT,
New Martinsville, W. Va.:

St. Clair says he can go to Wetzel on Monday if necessary. Have the court adjourn until counsel can be heard.

McG.

Now, when it is considered that Wells and Arnett are not citizens of the First West Virginia Congressional district, but live nearly 70 miles away in another district; that they are the near neighbors, notably Arnett, and confidential friends of Judge Fleming, the Democratic candidate for governor, who was then contesting before the Legislature of West Virginia the governorship with the Republican candidate Goff, and that at the time of the visit alluded to by the committee the recount in Wetzel for governor as well as Congressman was going on, and that St. Clair had no more to do with Pendleton's case than any man in Europe, but that he was Judge Fleming's counsel, as were Wells and Arnett, his close neighbors and friends; that at that time Pendleton had personal acquaintance with few if any of the parties, had no special counsel or friend there at all, but had through his local counsel there reposed the whole matter of the recount, so far as he was concerned, where the law placed it, in the honest hands of the county court; that Charleston, whence the telegram asking the proceedings of the county court in the recount to be staid was sent, is 400 miles away from Wheeling, where Pendleton then was; that the telegram was not even received by Wells and Arnett, who, as I have shown, had no connection with Pendleton whatever, and that, finally, the Republican minority of the committee appointed by the Legislature of West Virginia, because of their eminent fitness, to investigate the title to the governorship of that State, as between Fleming and Goff, after a careful investigation of months (not hours or days of consideration) could find nothing whatever to complain of in the county of Wetzel, except an objection to two names, which they say "should be stricken from the sum of Fleming's vote, to wit, those of Reuben Hedges and Bode Davis"—I say in view of all these things it is amazing how any fair-minded man could reach the conclusion stated by the majority of the committee that there was a conspiracy by these men to defraud in Pendleton's interest.

The evidence discloses the presence of the attorney of Judge Fleming, the Democratic candidate for governor, at the time of the recount of the scratched ballots, and I think of a representative of Goff, the Republican candidate, the chief interest in all the political counts in the various counties of West Virginia centering upon that of governor, and not that of Congressman, as I have before stated; and I will read his testimony in a few minutes.

It is a well known rule in interpreting the actions of men to examine into the motives that impel them. Certainly no man ever committed an act, good or bad, without some motive.

Now, in this matter permit me to appeal to the unprejudiced upon this floor and ask what motive impelled Judge Earnshaw and his fellow-judges of the Wetzel County court, what object could they have had in view, in conspiring with anybody to swindle this contestant out of his seat by conniving at ballot-scratching in the recount for Congressman, when as a matter of fact they took more interest in the recount for any and all the other offices, and especially more in the county-seat question, I have no doubt, than in that of President of the United States?

Mr. KERR, of Iowa. Will my friend permit me to ask him a question there? Is there any evidence that any other names were scratched between the count made by the election judges and the count made by the court except the name of the member of Congress?

Mr. WILSON, of Missouri. Well, sir, I do not know that I altogether comprehend the drift of the gentleman's question, but the evidence only discloses 24 scratched ballots.

Mr. KERR, of Iowa. According to the statement——

Mr. WILSON, of Missouri. As returned by the election board.

Mr. KERR, of Iowa. Well, the election board—that is, the county election board.

Mr. WILSON, of Missouri. Yes, sir. The county election board found that there were only these 24 ballots scratched.

Mr. KERR, of Iowa. But they were not scratched at the time the votes were counted by the election officers.

Mr. WILSON, of Missouri. They were scratched.

Mr. KERR, of Iowa. Oh, no.

Mr. WILSON, of Missouri. Oh, yes; that is the controversy.

Mr. KERR, of Iowa. They say they were not.

Mr. WILSON, of Missouri. I say the weight of evidence is they were scratched and were overlooked. I am just coming to that.

The election in Wetzel County was one of unusual excitement. In addition to the fact that it was a Presidential election and also a general election for State and county officers, a special election was held at the same time on the question of moving the county seat in that county. The judges of the election for Martin's School-House and Archer's Fork were farmers, and mostly old men, unaccustomed to labor of that kind and to being confined in a room crowded about as would naturally be the case there during election day and for the two days and nights nearly while the count was going on.

Mr. LACEY. Will the gentleman permit a question?

Mr. WILSON, of Missouri. Certainly.

Mr. LACEY. Is it not true that Judge Brookshire was only about twenty-seven or twenty-eight years old—one of the judges that made this count?

Mr. WILSON, of Missouri. I do not say they were all old men, but I do say that most of them were and that there is a limit to human endurance, even in young, stalwart men. I do not know whether in his young days my friend from Iowa has ever been a judge or clerk at a Presidential and general election; but, if he has, "he knows how it is himself," as I do, and can readily understand how mistakes of this kind can easily be made under the trying circumstances which by day and night environed those old farmer judges of election, and which almost tortured the life out of them.

Streight, the Republican judge at Martin's School-house, says "they commenced counting immediately after the polls closed, and counted until about 2 o'clock next morning, then quit and got something to eat and went to sleep, etc., and commenced next morning again and counted until they got through."

The other judges and the clerks of the election substantially agree with Streight, saying in addition that they continued the count until far into the night of the next day. The judge who took the ballots from the box at that poll was between sixty and seventy years old, and a Republican. The judge who read them off used glasses, and does not say how he voted, though he says "he usually votes the Democratic ticket."

When the county court recounted the ballots from this poll, it was found that 14 Republican tickets were scratched, and 2 had the name of Pendleton inserted and had the name of J. W. Yeatee substituted. At Archer's Fork things went pretty much the same way.

At both places after the most fatiguing and confining labors, and when nearly worn out by the events and labors of the day, these old men, unaccustomed to having their rest broken, were compelled under the law of West Virginia to proceed at once to the count, which they did under the most trying circumstances.

By the uncertain light of flickering lamps and lanterns these old men and their clerks staggered painfully along through the weary hours of the day, and part of two nights, with the usual noise around them; every now and then making a mistake which either they would discover and rectify themselves or some bystander would for them, all of which was perfectly natural, even with trained men, and absolutely inevitable with men like those having charge of things at these two precincts.

Occasionally some one would halloo out, "Here's a straight Harrison ticket, all wool and a yard wide," and then the counter-yell, "Here's a Cleveland ticket, all wool and a yard wide," with other like confusion, kept up off and on, made it simply impossible, I say, for those old, spectacled, worn-out judges, by those dim lights and in those smoky rooms, to see and detect dim pencil marks on the long, long ballots—ballots doubtless as long as this paper I hold in my hand [illustrating], running from President to constable, including the vote on the county-seat removal.

Why, sir, the evidence is that at Archer's Fork two of the old fellows dropped off to sleep and left the other sleepy judge and the no less sleepy clerks to keep up the count and the struggle of human endurance.

The great wonder with me is how they got through without making more mistakes than they did. The erasures of the 24 names at those two precincts were made with pencil, as is usual about the polls; they were not uniform in appearance; some were scratched one way and some another, some manifestly made with hard pencil and some with soft; some marked with crosses running all along the name, and some by straight and some by crooked marks, and all bearing upon their faces indubitable evidence that the scratching had been done by as many hands as there were scratched ballots, and in as many ways; and when it is further remembered that these abraded, pocket-rubbed tickets were crowded up together and handled over and over again by the men who voted them and by the judges in receiving, how could the pencil marks be otherwise than dim? I say that men with lynx eyes, young men, would be liable under such circumstances to overlook these dim pencil marks in the day time, much more at night, especially when situated as those old judges were.

It is in evidence also that the judges looked at the top of the tickets in many instances, as is often the case at a general election and during a party contest, especially when the tickets are as long as these were, and supposing the names heading them characterized the politics of every one upon the ballots, would call out "straight ticket," when in fact the pencil-mark, though dimmed for reasons given, had done its deadly work on contestant's name.

It must be remembered also that the race for Congress in West Virginia, in that county especially, was overshadowed by other elections of more absorbing interest to the masses: by those of sheriff, and the removal of the county seat, and State senator, and member of the Legislature, the two latter involving the election for United States Senator then pending in that State.

In my judgment, then, Mr. Speaker, the conclusion is inevitable that the ballots in controversy were scratched by the voters themselves. If they were not so scratched, when and by whom were they scratched? The committee says the scratching was done by virtue of a conspiracy to elect Pendleton, corruptly entered into by the county court of Wetzel County, and more especially by Presiding Judge Earnshaw, and the deputy clerk, Snodgrass, with Messrs. Arnett and Wells, of Marion County, outside the First Congressional district, with General St. Clair and other parties.

As I have stated before in the course of these remarks, the recount was going on at the same time for both governor and member of Congress; that the chief interest in the recount centered in that of governor; that both Governor Fleming and Mr. Goff were there represented; that Wells and Arnett, while strangers to Pendleton, were the neighbors and friends of Fleming; that both the court and everybody connected with the so-called conspiracy were, for the most part, strangers personally to him, having no interest in him whatever beyond that of well-wishers as members of the same party, and that General St. Clair, who is alluded to in the committee's report in the telegram signed McG. and dated at Charleston, W. Va., and whose name has helped furnish the mole-hill which the committee has magnified into a mountain, was Judge Fleming's leading counsel.

The mere statement of the plain truth in this matter destroys the poor pretense of a "conspiracy" gotten up to defeat the will of the people in the district. Does the evidence disclose any motive in these people to do that which is charged against them? None whatever; on the contrary it discloses an utter absence of motive for wrongdoing, and that none was done.

Now, it may be well to go a little further and take the testimony of the ballots themselves. In this connection I direct your attention to the testimony of Mr. Umstead, a gentleman of very high character in that State, who was present the most of the time during the recount as one of Judge Fleming's counsel and who had every reason to scrutinize and did scrutinize these ballots. His evidence on this point is as follows:

George H. Umstead, a witness for contestee, of lawful age, being by me first duly sworn and examined, on oath deposes and says:

Q. 1. State if you were present during the special session of the county court of Wetzel County in November, 1888, when the said court was engaged in recounting the vote cast at the several voting places in this county on the 6th of November, 1888; and, if so, state in what capacity and what vote was being recounted while you were present. I mean the vote for what officers.

A. 1. I was present most of the time during the recount of the vote for governor and for member of Congress of the First Congressional district, as one of counsel for Judge A. B. Fleming, candidate for governor.

Q. 2. State whether or not you were present when the vote cast at Martin's School-House, a voting place in Green district, Wetzel County, was being recounted by the county court; and, if so, state whether or not you inspected the tickets or any of them upon which the names of G. W. Atkinson or John O. Pendleton or Nathan Goff or A. B. Fleming were scratched or erased.

A. 2. I was present and inspected all of the tickets, I think, on which the names of either A. B. Fleming or Nathan Goff was scratched, and nearly all of those upon which the names of Atkinson or Pendleton was scratched.

Q. 3. State from your recollection how this scratching was done.

A. 3. It was done by pencil evidently, different pencils, as some marks were darker in color than others; some of the marks were heavy and distinct; on other tickets marks were made lighter and some were hard to distinguish as a pencil mark at all without pretty careful inspection. The marks on the different tickets were not uniform.

Q. 4. State, from your inspection of the tickets, whether the scratch you observed seemed to have been made by one person or by a number of persons.

A. 4. As I have stated, the marks were not uniform, but presented the appearance of having been made by different persons.

Q. 5. State whether you were present in said court when the ballots cast at Archer's Fork, a voting place in Grant district, Wetzel County, were being recounted by said court for the offices you have named and for the same candidates; and, if so, state whether you inspected the tickets upon which the names of the said candidates had been scratched.

A. 5. I was present, and looked at all the tickets on which the name of Goff or Fleming was scratched, and nearly, if not all, the others upon which either name was scratched.

Q. 6. State from your recollection how this scratching was done.

A. 6. My recollection is the scratching presented the same general appearance as that upon the tickets to which I have before referred.

Q. 7. Do you mean that the scratching on the tickets at Archer's Fork appeared to have been executed by the same persons that had done the scratching at Martin School-House? Or, if not, state what you mean by saying the same "general appearance."

A. 7. There was nothing in the scratching on these tickets to indicate that it had been done by the same persons who had done the scratching at Martin School-House, and I mean by what I said that the tickets presented the appearance of having been scratched by different hands with different pencils of different colored lead, and different degree of sharpness as to point, and did not present that uniformity that would probably have been in appearance if made by the same person, at the same time, and with the same pencil.

And further this deponent saith not.

GEO. H. UMSTEAD.

It will be observed that Mr. Umstead swears that there was nothing whatever in the appearance of the ballots to indicate that they had not been scratched by different persons at different times and with different pencils, as would naturally be the case on election day around and about the polls at any hotly contested precinct in the United States on election day, and that it required careful inspection in some cases to detect the pencil-marks even in the daytime when under inspection to learn the facts.

I invoke your attention also to a portion of the evidence of Mr. McEldowny, who, like Mr. Umstead, is also a gentleman of excellent professional and moral standing, and, like my old friend, Judge Earnshaw, is incapable of steeping his soul in fraud and perjury—especially in the absence of all motive to do so—but who, unlike the judge, has been so fortunate as to escape the "conspiracy" net thrown out by the majority of the committee in the interest of the contestant. He swears:

I was present during the session of the county court when the ballots cast at Martin's School-House, a voting place in Green district, were recounted by said court. Said ballots seemed to me in good condition. They were strung as ballots usually are strung, and rolled up into the shape of a wheel, forming a compact package, and were bound together by a strong cord or piece of twine tied around the outside or circumference of the package. I saw these ballots once before they were taken up for recount upon the offices of Congressman and governor, which was when the county court was considering the motion of E. H. Snodgrass to recount the ballots upon the question of the removal of the county seat.

At that time the county clerk was, as it appeared to me, endeavoring to untie the cord or piece of twine which bound the ballots together, from which he stopped at the request of some member of the county court, who indicated to the clerk that they had about concluded not to recount the ballots upon that question. When I next saw these ballots the clerk was again endeavoring to untie the knot, preparatory to presenting the ballots to the county court for recount upon the offices of Congressman and governor, and they seemed to be in the same condition they were when I saw them the first time, as before stated. The clerk failed to untie the knot, and at his request Charles Howell, a reporter for the Pittsburgh Times, who was present, cut the cord with a penknife.

I did not keep any memorandum of how the ballots at Martin's School-House were scratched, that is, as to the form or character of the scratches, but I remember distinctly one or two ballots upon which the name of G. W. Atkinson was scratched or erased by small crosses, thus (x x x x), made with a pencil. There were also two or three erasures of the name G. W. Atkinson by heavy pencil marks, that were somewhat similar in appearance, and these were all that I noticed particularly. All the erasures were made with pencil, I think, and for some reason, when considering the erasures upon the ballots, the county court held them up to the light as if unable to decide whether the ballots were scratched at all, but when the ballots were exhibited to counsel for contestant and contestee there was no disagreement as to the fact of the ballots being scratched, as I remember.

The only scratches of which any note was taken or which were considered by the court were scratches of the names of G. W. Atkinson and John O. Pendleton, candidates for Representative in Congress for the First West Virginia Congressional district, and of the names of Nathan Goff and A. B. Fleming, candidates for the office of governor of West Virginia, and the recount on both these offices was made at the same time; I did not then, after inspecting the ballots, nor do I now, believe that the scratching of the name of G. W. Atkinson was the work of one person, although all the scratches that I remember were made apparently with a lead pencil or were lead-pencil marks, and the same may be taken as my statement of the scratching upon the other candidates.

And now, Mr. Speaker, I invoke your attention and that of the House to another feature of the evidence in this case that should convince any gentleman upon this floor, even against his own will, when taken in connection with the other facts I have alluded to, that these ballots were scratched when they were voted, but overlooked by the weary, almost prostrate judges during the nights in question, when, by the uncertain, treacherous light of the lamp and dimly burning lanterns, they attempted to decipher the almost interminable tickets of that year, not only in West Virginia, but in all the States where the Presidential and general State, Congressional, district, and county elections come on at the same time, to say nothing of the additional exciting local contest involving the removal of a county seat.

The Legislature of West Virginia appointed a committee to investigate the contest for governor between Fleming, the Democratic candidate, and Goff, the Republican candidate.

I hold now in my hand the minority report of that committee, composed of gentlemen of high standing in the Republican party in that State and of unquestionable professional ability. These gentlemen, after not days, but months of unremitting labor, during which time they scrutinized and carefully analyzed all the evidence now before you in this voluminous record, including this contention over the scratched ballots, failed to make any allusion whatever to it in this report, though a partisan press teemed with the same wolf cry we have been listening to here concerning them.

Though silent, yet it furnishes negative testimony so strong that it should of itself overwhelm the miserable pretense of a conspiracy to defraud the Republicans of the First district of West Virginia.

Mr. KERR, of Iowa. Now will my friend answer?

Mr. WILSON, of Missouri. If members of the committee desire to interrupt me, I prefer they should do so directly, and not through others. I decline to give way to the gentleman, but I may have some time left which I will give him with pleasure if he desires to take part in this debate.

Permit me, Mr. Speaker, to direct your attention to another matter in connection with the recount in that district, as appears in this report. In the county of Ohio, the judges and clerks of a certain precinct all swore that there had been no mistake made; that they were certain of it; yet on the recount by the county court it was discovered they were mistaken, and the mistakes cost John O. Pendleton 8 votes.

Did the honest mistake of those election officers in Ohio County—mistakes discovered after they had sworn that there had been none made, nor could there be any mistakes in their work, as in this case claimed by the officers at Martin's School-House and Archer's Fork—I say, did these mistakes cause the wolf cry of fraud! fraud! conspiracy! conspiracy! to go up from the Democrats? Do you suppose for a moment a Democratic Congress would have tolerated the pretensions of Mr. Pendleton, had the circumstances of this case been reversed, founded upon such a pitiable plea as put forth by the contestant?

In taking leave of this miserable charge of conspiracy permit me to ask if there be one unprejudiced or one fair-minded man, notwithstanding his political prejudice, upon this floor who, now, for a moment believes that there was any conspiracy to defraud the contestant in this case, even on the part of poor Snodgrass, the deputy county clerk, whose great sin seems to be, in the eyes of our friends of the majority, that he tried to sell something he didn't have in order to relieve the chairman of the Republican State committee of West Virginia of some of its "surplus fat," and he came very near being successful. And it occurs to me that there is very little, if any, difference between the moral status of one who gives or proposes to give a bribe and one who entertains the proposition, and that Snodgrass stands upon a plane equally as high, if not higher, than the man who tried to bribe him.

The testimony is that Snodgrass never thought of such a thing until it was suggested to him by a conversation he held with one Grall after the recount was over. Grall swears he first approached Snodgrass and told him McIntyre, the friend of contestant, was trying to bribe him to tell something he didn't know, and Snodgrass replied, "Tell him you will tell him all you know for $1,000," and, when Grall declined, Snodgrass said he would himself enter into the speculation and sell something he never possessed, and for Grall to send McIntyre to him, which Grall proceeded to do.

The memorable political contest of 1888 will not soon be forgotten. Great issues were at stake, and both the two great political parties endeavored to put forth their strongest men as standard-bearers. Especially was this the case in most of the closest Congressional districts throughout the country.

West Virginia certainly furnished no exception. In the first district, the standard of his party was placed in the hands of John O. Pendleton, the contestee. The sequel proved it made no mistake in so doing. The very name he bore was in itself a tower of strength to him in the campaign. He had received it stainless from a long line of ancestry who had been distinguished in Virginia in camp and council for generations. The grandson of Alexander Campbell, the founder of one of the most powerful religious denominations on the continent, he united in his veins a double tide which made him very, very close indeed to the hearts of hundreds in the mountains of West Virginia, who had walked the earth with that grand man, while yet in the flesh, and had caught inspiration from his lips before he left for the other shore to commune with the teachers and disciples of old, who were with Christ on this earth, and whose footsteps he has endeavored to follow and to influence hundreds of thousands of others to follow.

Human nature is the same the world over. It is in testimony that a Republican stated he would not vote for Atkinson because he was a Methodist, and that another very active Republican in Wetzel County was a relative of Mr. Pendleton, and said that he intended to and did support him. Blood is thicker than water, and my observation and experience teach me that nothing will make men cross political lines sooner than church and kindred.

When you add to these things as incentives to the support of the people of that district, without reference to party, the superior ability of Mr. Pendleton, his unselfish devotion to principle, and the scars of honorable political warfare received in many a hard-fought contest in West Virginia it will not appear at all wonderful that he outran the field in his district (including Grover Cleveland), and now holds his seat by as clear a title as any member on the floor.

The character of the man and the memory of those from whom he sprang forbid the idea of his being a usurper, and I am authorized by him to say that if there was the least stain upon his title here he would not wait to be driven out by a majority as remorseless as death, but would voluntarily pass out of this marble Hall never to cross its threshold again. But, sir, should the party decree be obeyed in this case, and the people of the First district of West Virginia be deprived of their chosen Representative by the majority of this body, its action will but place a stain upon the records of this House which shall endure as long as they are preserved, both a menace to the right of the people to govern through their chosen Representatives and a painful reminder of one of the most reckless acts of a decaying, dangerous, and desperate party seeking to perpetuate its power without scruples as to the means employed. [Applause.]

The Powers of the Speaker and of the House.

SPEECH
OF
HON. WILLIAM J. STONE,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 12, 1890.

The House having under consideration the report (No. 23) of the Committee on Rules—

Mr. STONE, of Missouri, said:

Who is the Speaker of the House? I do not refer to his personality, but to his official character. Perhaps I should change the pronoun and let the question rather be: What is the Speaker of the House? THOMAS B. REED came here simply as a Representative from the State of Maine, as I came here a Representative from the State of Missouri. Our constitutional and legal rights as members of the House are identical. Three hundred and thirty members came here with equal rights, powers, and privileges. That membership in the aggregate constitutes the House of Representatives. Whatever powers are conferred upon it by the Constitution and laws of the country are conferred upon it, and must be exercised by its authority, as a body, as a political entity, as the House of Representatives. The very first section of the first article of the Constitution provides:

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

The second section of the same article provides that—

The House of Representatives shall be composed of members chosen every second year by the people of the several States etc.

I repeat, whatever power has been conferred upon the House belongs to it as a body. Whatever power is constitutionally exercised by this House, must be exercised by it as a body, or by its authority as a body. The House itself is not omnipotent. The Congress, composed of both Houses, is not omnipotent.

Each House, or both Houses combined, constituting the Congress of the United States, is surrounded by restraints imposed by the limitations of the Constitution. "All legislative powers herein granted shall be vested in a Congress of the United States," etc., is the language of

the Constitution. You can not lawfully create or enlarge your powers; you can only exercise such as are granted to you. The House of Representatives—the Congress of the United States—can not create its powers; it simply receives its powers.

I deem it of the first importance that this fundamental proposition should be kept in mind: that the House as a body is the recipent of whatever powers the Constitution has conferred upon it. It has absolutely no powers except such as have been conferred upon it by the express or necessarily implied grants of the Constitution; and those powers, and each of them, whatever they may be, must be exercised, if exercised at all, by the House as a body or by its authority as a body. No one member of the House has any greater authority or power than any other member of the House. No one member of the House, on his own motion, can do a thing, or direct anything to be done, and make it the act of the House. Mr. REED, a Representative from Maine, can not exercise any authority in this House which Mr. CRISP, a Representative from Georgia, has not the right to exercise, unless it be that Mr. REED has been specially authorized and empowered by the House as a body, acting within the limits of its constitutional powers, to do some particular thing as the organ of the House.

I know the pretension is now advanced that what he has done and what we are protesting against was done by him as the organ of the House. But he can not lawfully do a thing as the organ or representative of the House which the House, by its own act as a body, has not previously authorized and empowered him to do or unless the power to do it attaches to his position by virtue of some grant in the Constitution or by the force of existing law. This House has not authorized the Speaker to do this remarkable thing by any rule which it has adopted or by any action it has taken. Then, if the Speaker has this power, he has it by reason of some provision of the Constitution, or of some statute passed by authority of the Constitution, vesting it in him as the presiding officer of this body. There is no existing statute upon the question. There is no rule of the House. The only constitutional provision which mentions the Speaker at all is this:

> The House of Representatives shall choose their Speaker and other officers; and shall have the sole power of impeachment.

The office of Speaker is simply created; no powers are conferred upon the incumbent. The House makes the Speaker—creates him. The House has great powers conferred upon it; it holds great powers in the grasp of its hands; but the House does not transfer those powers, or any of them, to one of its members by the mere act of choosing him to preside over its deliberations.

The act of the Speaker, therefore, is without the sanction of the Constitution, without the sanction of any statute, without any sanction of any rule of the House, without the sanction of any precedent of the House. It is an effort to exercise a great and dangerous power which has not been conferred upon him by the Constitution, by the statutes of the country, or by any rule of the House; and it can not be justified by, because it is opposed to, the established usages of the House.

What is the Speaker? He is one of the members of the House, selected by a majority of the other members of the House to preside over the deliberations of the House. He is simply the presiding officer of the House. He is not the House. He can not take the place of the House in the exercise of powers conferred upon the House. He is the servant of the House, not its master. He holds his office of Speaker at the will of the House. At page 121 of Jefferson's Manual, I find this:

> A Speaker may be removed at the will of the House, and a Speaker *pro tempore* appointed.

What are his duties—his powers? As the presiding officer it is his duty to aid the House in the preservation of order and decorum, to enforce its rules, to execute its orders, and to perform such other duties and execute such powers as may be imposed upon him by the affirmative action of the House or as may be specially required by existing law. But always he acts merely as the agent or servant of the House, and can act lawfully only when he acts within the limits of his authority. When he goes beyond that limit or attempts to go beyond it, he does an unlawful act. When he persists in it with his eyes open, merely to obtain a temporary party advantage, his conduct is more than usurpation, it is monstrous; his act is more than arbitrary, it is a crime.

I am not now discussing, and have not discussed, the powers of the House. If it be conceded for the sake of argument that the House has the constitutional right to make a rule, as was attempted in the Forty-third Congress, to authorize the Speaker, as one of its officers, to count members as present, against their will and protest, whether they participate in the business of the House or not, that is a power conferred upon the House as a body. If it exists at all, and that I deny, it exists as a power conferred by constitutional implication upon the House itself in common with all other powers granted to it as a legislative body. And there is no more reason for saying that the Speaker can assume arbitrarily to exercise that power on his own motion and without express authority from the House than there would be in saying he can in the same manner exercise any other power belonging to this House as a body. Whatever may be said as to the power of the House to authorize the Speaker to do this thing it is perfectly clear that the Speaker can not lawfully do it until such authority is previously given.

As to whether the House itself has the constitutional power to do what the Speaker has assumed on his own motion to do is a question which perhaps might be more appropriately discussed when the House itself shall undertake to assert that power by some regular method of procedure. Still, I will submit one or two observations on that head in addition to what has been already said.

What is the question at issue? It is this: When a yea-and-nay vote is taken by the House on any question pending before the House, and it appears that less than a quorum has voted, can the House itself, by rule or otherwise, direct the Speaker, as its presiding officer, to count as present members who did not vote, who intentionally refrained from voting, and have their names entered on the record as present, against their will and direction, in order to show a quorum present in the House, and thereupon declare the question carried, although, I say, less than a quorum actually voted? That is the question. I answer, No. Let me call the attention of the House to the seventh section of the first article of the Constitution:

> Every bill which shall have passed the House of Representatives and the Senate, shall, before it become a law, be presented to the President of the United States; if he approve he shall sign it, but if not he shall return it with his objections to that House in which it shall have originated, who shall enter the objections at large on their Journal and proceed to reconsider it. If after such reconsideration two-thirds of that House shall agree to pass the bill, it shall be sent, together with the objections, to the other House, by which it shall likewise be reconsidered, and if approved by two-thirds of that House, it shall become a law. But in all such cases the votes of both Houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the Journal of each House respectively.

Now, in order to pass a measure over an Executive veto it requires that two-thirds of the members present and voting shall agree thereto. I examined to-day the vote in the Senate on the question of passing the direct-tax bill over the veto of President Cleveland in the last Congress. On that question 45 Senators voted yea, 9 voted nay, and 22 did not vote. The President *pro tempore* in announcing the vote, said:

> Two-thirds of the Senators present having voted in the affirmative, the bill is passed notwithstanding the objections of the Executive.

Less than two-thirds of all the Senators voted in the affirmative, though more than a quorum voted.

I repeat, then, it requires the affirmative vote of two-thirds of the members present and voting, and a quorum must be present, to pass a bill over the Executive veto. The Constitution requires that in all such cases the vote "shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the Journal of the House."

Now, Mr. Speaker and gentlemen, suppose the question before the House to-day was whether a bill should be passed notwithstanding the veto of the President. Suppose 162 members should vote yea and 2 should vote nay and a question of no quorum should be raised. What would you do? Have it entered on the record that such and such members were present, but did not vote? Suppose you did. Would that meet the requirements of the Constitution, which says that—

> In all such cases the votes of both Houses shall be determined—

That is the word—

> shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the Journal, etc.

What does that mean—necessarily mean? It means that the result of the vote shall be determined by those who actually vote yea or nay. That is exactly what the Constitution says in so many words. Shall be determined by the yeas and nays as entered upon the Journal—not by those who do not vote at all, whether actually present or absent.

Now, is this rule peculiar to Presidential vetoes? Why should not the same rule apply when the yeas and nays are called on the passage of the bill in the first instance. In the first instance, the yeas and nays are not ordered as a matter of course, but upon the demand of one-fifth of those present. In the first instance, again, the bill is passed by a majority, vote instead of two-thirds. But that is the sum of the difference. In each case the Constitution requires the yeas and nays to be entered on the Journal. In the case of Presidential vetoes the Constitution expressly declares that the result shall be determined by the yeas and nays. Upon what reasoning can it be said that the result shall not likewise be determined by the yeas and nays, as entered upon the Journal, in cases where the bill is put upon its passage in the first instance?

It seems to me this is sufficient to demonstrate the meaning and intention of the Constitution. And the very fact that that view has been acquiesced in and sustained whenever questioned for more than a hundred years ought in all conscience to put the matter beyond cavil or doubt.

Mr. Speaker, has "conscience fled to brutish beasts, and have men lost their reason?" Shall party exigency rise above all law and right? Shall constitutional restraints be set aside by the mere force of numbers? To what absurdities will this course lead you? Let me suppose a case. Let me suppose the House, brought to a vote upon some important question, finds itself without a quorum—finds that only 165 members, or one less than a quorum, has voted—and the point of no quorum is made. Let me suppose that all the other members have intentionally absented and concealed themselves—all but one. That one may be sick, temporarily insane, incapable of acting with intelligence.

You send your officer and bring him by force to the bar of the House. He may be dying; he may be raving with the wild hallucinations of fever and disease, wholly unable to think or act as a man. Shall you count him present and thereby make your quorum? The case is extreme, but it illustrates the folly of your contention.

I had hoped, Mr. Speaker, that some gentleman on that side would rise above the pressure of party and speak for the Constitution, as others from that side, in similar emergencies, have done in the past. But Blaine and Garfield have no champions here. They are without honor. A new master has arisen of a different type. He puts the Constitution under his feet; he tramples upon rights guaranteed for a century to the minority, and laughs and laughs as Nero or Caligula might have laughed, and not one of all of you have the courage even to protest. You sit like dumb, driven cattle in your seats, or you stand applauding while this great crime, now being attempted, approaches its culmination.

The World's Fair.

SPEECH
OF
HON. SILAS HARE,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 20, 1890,

On the bill (H. R. 6883) to provide for celebrating the four hundredth anniversary of the discovery of America by Christopher Columbus by holding an international exhibition of arts, industries, manufactures, and the product of the soil, mine, and sea, in the city of , in the year 1892; and the bill (H. R. 6881) to provide for celebrating the four hundredth anniversary of the discovery of America by Christopher Columbus by holding an international exhibition of arts, industries, manufactures, and the product of the soil, mine, and sea at the national capital in the year 1892.

Mr HARE said:

Mr. SPEAKER: There are two propositions under consideration:

First. Shall we have a world's fair in 1892?

Second. Where shall we have it?

So far as I have heard, the first proposition is already decided in the affirmative, and all that remains is to choose the place and appropriate the necessary sum to make it a success.

Mr. Chairman, would it not be well for us to give some attention to the first proposition. That is, shall we have a world's fair? Because that involves, what shall we have it for, and who is to be benefited by it? If it is clear that our people, considered as a community, are to receive aid material to their welfare, then our Constitution authorizes it. If not then our Constitution in its welfare clause forbids it. Let us see. We determine to have the fair and to make it a success. We appropriate a certain sum of money. That money comes from the people through the means of indirect taxation, and is taken out of circulation and placed in the Treasury. From the Treasury it is paid into the hands of those who are to manage this fair. So far we see no benefit to the people as a community, but on the contrary, the earnings of the masses are taken from them and paid to a class.

But it is said there will be an ultimate benefit. Well, how? Why, there is to be a show, and all the people can go and see it. Can they? I venture that not one in a hundred of those who, by taxation contribute, have the ability or disposition to attend this grand display. And the hundredth man who does attend, and for whom a show has been provided by those who do not attend, will pay dearly for his whistle. He pays his own expenses, and the very fact that he does this, and expends so much money in the city selected, is the primary cause of all the contention and clamor on this floor between cities as the proper place. Is the public benefited by any of these facts? Is it not patent that so far the money of the people is taken and turned over to speculators to enable them to further rob the people?

But then it is said the world will come and gaze in wonder and admiration and spend vast sums of money while they are doing it. This is the merest clap-trap, and I pity any one that could be deceived by it. More money will be paid to foreigners in prizes and the like than they will expend. But what do we, as a people, care whether foreigners gaze or not? What profit is it to us to tickle our vanity by foreigners admiring? Is there any portion of the habitable globe that does not now know where and what the Government of the United States is? This bosh, let the nations of the earth see. I am perfectly willing for them to see if they will do it at their own expense, or at the expense of voluntary contributions, but when it comes to taking my money by force and giving it to somebody else, and with a view of enabling that other person to further rob me, I enter my objection.

This whole business looks to me like a swindling scheme. I see no benefit the people as a community can derive, and, therefore, I shall vote against appropriating one dollar for any such purpose. The zeal manifested here by the advocates of the different cities, and who have so eloquently portrayed the beauty, grandeur, and glory of each, is wholly inspired by a longing desire to reach into the people's Treasury and draw from it the very essence that is to make the music lively. Let us not be deceived. This is one more grand scheme of robbery under the guise of "our glorious country."

Oklahoma.

SPEECH
OF
HON. MARCUS A. SMITH,
OF ARIZONA.

IN THE SENATE OF THE UNITED STATES,

Tuesday, February 18, 1890.

On the bill (S. 895) to provide a temporary government for the Territory of Oklahoma and the bill (H. R. 6788) to organize the Territory of Oklahoma, to establish courts in the Indian Territory, and for other purposes.

Mr. SMITH, of Arizona, said:

Mr. SPEAKER: I have paid as much attention to the debate on the present bill as could well be expected from one who has no right to a vote on that or any other measure before the House. But strange as it may seem the denial to us of our constitutional rights by Congress does not allay our interest in public affairs or chill our warm devotion to our country, from which we have the right to expect so much, but from which we have received so little.

So it seems to me not inappropriate now to call brief attention of the House of Representatives to the great and inexcusable injustice to which we of the Territories are constantly subjected, and you will pardon the protest which the love of liberty in the American heart here makes against the disgraceful servitude which you continue to impose upon my people. It is not only a great patriotic longing in my heart to see my people free, but in the calcium light of the late Silcott defalcation, where I without my fault stood voiceless by and saw my money voted away—saw all I had passing from me—with no right to do other than protest vainly against that peculiar exhibition of patriotism on the part of those uninjured, it became to me a very close personal matter and probably illustrated still more strongly to the House, as well as to me, the injustice of denying to any taxed citizens the right to real representation on this floor.

But, seriously (if that loss does not seem serious enough), I wish your attention directed to this Territorial anomaly in a boasted Republic. Taxed without representation; imposed upon by carpet-bag office-holders; in a condition as deplorable as the admitted condition of rebel States during reconstruction; in a condition worse by far, and suffering indignities more degrading than those which called as one man our patriot fathers from the field of labor to the fight for liberty.

Think of it! One hundred thousand citizens of the United States, touched as much by adverse legislation as the citizens of any State; having as deep an interest in public affairs; educated far beyond the average citizenship of any State in the Union; having as much material wealth per capita as any political division of this great country; maintaining a school system superior in its liberality and equal in advantages to any in our land; treasuring in an extreme degree that patriotic devotion to flag and country which has signalized the life and adorned the history of our Republic; remembering with reverence every struggle of man for liberty; holding sacred the matchless institutions of our representative Government; yet we are denied any voice in its affairs and are relegated to the poor right of petition for the redress of grievances—a poor right once unheeded by the English throne and one to which Congress is now equally deaf.

This is not all; would that it were. You will not let us administer our own estates. We are not permitted to spend our own money as we please. We are refused the right to elect our own officers. We are prevented from passing on the ability, honesty, or integrity of our judges. Sirs, such an outrage is a dark, disgraceful blot on the otherwise fair page of our political history. It is a denial of justice. It is a denial of decent recognition to those who bear with you the burdens of our common country. The insult to our manhood is more grievous and enduring, with far less extenuating features, than that which led our fathers to break the ties of love and reverence which bound them to the mother country and ended in the Independence of the colonies. Is it not strange that while we extol on our natal day the glorious achievement of liberty for America, over one hundred years afterwards we still have within our borders a political status more servile in its nature, carrying within it less of right, less of justice, less of liberty than England in her tyranny ever thought of imposing on the colonies?

It is the constitutional right of representation, the constitutional right to manage locally our local affairs, the constitutional right to do as we please with our own, and the constitutional right to select our own officers for which we contend.

A few days ago the Senate had reported to it a bill from the Committee on Territories with a recommendation that it pass. This bill was introduced at the request of a man now playing the too heavy tragic part of governor of Arizona. It was a very modest bill. It only compassed the passage again, and by Congress, of obnoxious measures repealed by the local Legislature. Among its modest provisions was one giving an appointed governor power to remove every officer in the Territory whenever his excellency's judgment, caprice, desire, or personal interest might dictate.

The same bill is now before the Committee on Territories of this House. I am running between the two ends of the Capitol doing my best to preserve what little I can of local self-government for Arizona. Is it not preposterous that I should be called on to even protest against such vicious legislation? This is only a sample of what I have to contend with. Even in the light of what has thus far been submitted, I find that the Federal office-holders holding a commission either from Washington or from some one appointed at Washington are opposing statehood for Arizona on the alleged ground that she is unable to bear the burdens of statehood. My God, if she can stand the infliction of this class of revenue patriots for three years longer she would have started out before their advent fully able to bear in smiling patience and uncomplaing love one-half the national debt.

Consider, if you please, what she has already borne in this particular, and you will conclude with me that statehood ten years ago would have been a benediction, falling like the gentle dews of heaven on the heads of those overtaxed and scandalously misused people. I am referring to no particular Administration in general remarks. It is as much an outrage for a Democratic Administration in Washington to control our offices and feed its incumbents on our taxes as for a Republican or an Independent or Prohibition Administration to do it. The question is too great and the story too long for me here to particularize. It is the unrepublican, anti-democratic principle involved against which I inveigh.

How long, oh Lord, shall Thy servants suffer; how long wilt Thou turn Thy countenance from us?

Mr. Speaker, the remarks thus far submitted were prompted by opposition on this floor to the creation of Oklahoma Territory. If those people are in such a stress of tempestuous weather as to desire the haven of Territorial dependence, then I am heart and soul for the bill. But while we are making such a fuss about creating a Territory I deemed it not inappropriate to suggest the creation of a few new States, and give hurriedly some "reasons for the faith in me." But I deem further remarks on this branch unnecessary now, reserving the right to be heard more at length when the direct question presents itself.

But I can not resign the floor in justice to Arizona without calling the attention of the House and the country to the grave mistakes made here by the self-constituted champions of the Indian cause. If their sympathy and its attendant oratory were always confined to the Cherokees I would have nothing to say. It would do the orator good and me (and probably the Indian) no harm. But when that sentiment and that oratory expands so far as to embrace, as it has at times on this floor, all tribes, then I may and should be excused for recording my dissent. The misguided policy of the Government has almost hopelessly complicated and has certainly indefinitely postponed any sensible settlement of the "Indian question."

Ardent admirers of that extinct tribe of Fenimore Cooper Indians that never did exist come on this floor, and in the public press, and, with blazing indignation at fancied wrong perpetrated on "Poor Lo," dare assert that we have been the heartless aggressor and the Indian the meek victim of our cupidity, avarice, and crime. With an imagination at white heat and a temper in warm sympathy with their mistaken zeal, they have succeeded in landing themselves on the highest peak of frenzy, from the lofty battlements of which they hurl anathema after slander at the unoffending head of every man of the white race who dares go west to provide, if may be, a better home for his needy family. I, for one, am sick of this tirade. It is loaded to the muzzle with zeal, but empty of fact. There is noise and smoke in the explosion fitly reminding one of the carnage and other general results of a mock battle. I am tired of seeing your sympathetic tears for the Indian falling into the river of blood which his murderous hand has drawn from the hearts of your innocent kindred.

It would be more interesting than profitable here to inquire into the history of those States from which the zealous defenders of Indian rights hail and review the treatment of the Indian there, and speculate on the probable share of the stolen plunder actually enjoyed by the advocate. Oh, it is so sweet to repent where no retribution is required! The argument reduced to its lowest terms leads simply to this: "In days of old the Indian was robbed. To be just we must pay him. We will take what thou hast and give it to him. The Indian as a class will be repaid and we of the East will lose nothing." It reminds me of a prayer of a modern Dives, "Lord, prosper the rich; the poor can work for a living." Instead of giving Indians a monopoly of your sympathy, why not weep a little over the mound-builder and the Aztec whom he robbed of land, love, and home.

Mr. Speaker, we of the West are not brutal or even unjust to the Indian, but we sympathize more with civilization than with savagery. We much desire to see the Indian improved and the white man protected. We wish to see a human being made out of an Apache Indian. "How vain the delusion," until very different measures are adopted in his management. Mark my words, gentlemen, the Indian of Apache blood will remain a bloody Indian as long as he is left on reservations and fed by taxes wrung from the scant earnings of our overburdened poor. The Apache is demeaned, if not utterly disgraced, by labor, and you encourage this in him by forgiving his murderous diversions, by protecting him from the civil law, and by feeding him from the public crib, which he had no hand in filling. He sees his white neighbor bearing on bended shoulders the burden of toil, while he sits in delightful dirty idleness, doing "sweet nothing," yet sharing the fruit of labor to which he never lent a hand, and, under present conditions, never will.

All this should be changed. The reservations should be abolished. The lands should be parceled in severalty. The Indian should be made to work for his living, as the white man, the negro, and the Chinaman work for theirs. Of what peculiar stuff is he made that he alone of all mankind should escape the curse of Adam? Is it possible that he was excluded from the curse on all humanity? Estimating him by the fruits of his history we might well conclude that the general term did not include him. Let us look at the Apache as he is. Brutal, murderous, fiendish in his savagery, without one instinct of heart or one word of language indicating humanity, kindness, gratitude—delighting in torture to an extent that in absence of a human victim he mutilates his patient horse. In all the history of his race not one line of "peace and good-will to man" appears. An Ishmaelite, whose hand is against the world, and from whose hand to the world no deed of love or mercy ever came. All peaceful tribes of Indians have found in him a hereditary foe. Kindness has never touched his heart, nor friendship modified the asperity of his nature. Every blandishment which ingenuity could suggest has not availed against the brutal instinct which dominates that peculiar tribe.

Unoffending friends of mine—honest, patient, industrious men—pursuing in peace their honest avocations hundreds of miles from the reservation, have been foully murdered and brutally mutilated by these fiends on whom so much sympathy is here worse than wasted. And of all their countless victims I challenge any man, here or elsewhere, to point to one who ever did a wrong to his murderers or their tribe. I throw in the face of all your "societies for the elevation of the Indian," in the face of all your "friends of the Indian," in the face of all your sentimentalists here the challenge to show one single outrage perpetrated against the Apache in Arizona by any citizens of that Territory. Yet those citizens have been murdered, their houses burned, their property destroyed, and the Government has sheltered the murderer and refused any recompense to the wronged.

How long shall such inhumanity to the white man successfully masquerade in the garb of "justice to the Indian?" When we tell you that our property has been stolen by your wards and we want redress, by your action you answer "that your fathers stole from the Indian and the debt is squared." When we tell you that we are being murdered you answer that "the blood be on your own heads; you are the cause of the trouble."

This we deny, but deny in vain. Our protest avails nothing against the unsupported charge of officious and misguided people and of a horde of irresponsible sycophantic hypocrites who too often in God's holy temple assume to "speak forth the words of truth and soberness," but make an awful failure in the effort where an Indian is involved. We have no fight with the merciful churches of God. We only ask that those who proclaim to the world the matchless precepts of the meek and lowly One will obey Him in bearing no false witness against a neighbor. If only the simple truth were known, how easy of solution the Indian question would be.

Much that I have said may not seem pertinent to the bill opening the Territory of Oklahoma to settlement. But so much has been said in praise of the Indian; so much of sympathy has been created here in order to defeat the just claims of the white man that I thought it not inappropriate to submit the foregoing facts, as well as to take advantage of this opportunity to enlighten the House somewhat on the character of the Indians with whom my people have to deal. Why should there be objection to the "Oklahoma bill." The justice of the measure, the necessity of it, has been already fully demonstrated in the able arguments of the gentleman from Kansas [Mr. PERKINS] and the gentleman from Illinois [Mr. SPRINGER].

So ably indeed has it been done that further legal argument were an act of supererogation. But it does become me to ask: Are vast tracts of the public lands to be withheld from our homeless people in order to give the Cherokees an "outlet" to nowhere? Are valuable lands to be withheld from our poor that idle Indians, having no claim in law or equity, no right save that growing in the imagination of sympathizing orators on this floor, may roam to and fro, about, and over it, and in all this nomadic occupancy reduce not one foot of it to the uses of man or the arts of peace and civilization? Of just such sentiment as this grows the howling desire to remove Geronimo and Chatto and their braves from their present quarters in Alabama to Fort Sill, where they can in a few days revisit Arizona, New Mexico, and Sonora with

another reign of death and terror. The Senate has actually passed a joint resolution looking to such removal of these Indians.

Luckily we have met the resolution in the committee of this House and have almost, if not quite, defeated it there. Days and nights of my time have been devoted in argument and importunity against this outrage. I have brought to my aid every possible proper consideration to influence the committee. The Mexican Government has been informed of the proposed measure and joins with Arizona in an urgent protest against the proposed action. This correspondence between the two Republics has been requested by the committee, but if by any chance that resolution should ever reach the House for action I beg in advance that it be defeated.

Pardon me a further word or two in this connection, for you will all bear witness that I never trouble this body with any trivial matters. The deep interest of the people who sent me here must be my excuse for referring to this matter now. Their lives and property are involved. I can not remain silent. Geronimo and his band would not stay six months at Fort Sill. I am not alone in this opinion. The gallant General Miles, who followed these Indians over 2,000 miles of the roughest country on earth and finally brought about their unconditional surrender, shares fully my apprehension. He knows the Apache Indian. On this question the judgment of no man living is of greater value than his.

A few days ago there were sixteen outlaws (Indians) in the mountains of Arizona. I am assured by General Miles that some of that number were arrested by him three years ago and sentenced to ten or twenty years' imprisonment at Alcatraz, Cal. The same sympathy shown now for Geronimo influenced their release. One of the renegades, I am likewise assured, is an Indian who got off the cars near St. Louis when being sent east, and made his way back to Arizona, and is now on the war-path. There is at least one, if not more, among those at Mount Vernon who was with the Mescaleros in New Mexico, and has been across that plain to Fort Sill and back again, and knows well the trail. General Miles informs me that in his opinion the proposition to send these Apaches back to Fort Sill is simply madness. We are now moving one hundred of the turbulent element from San Carlos to Fort Union, N. Mex. That San Carlos reservation should be broken up. That large camp has been a disturbing element and a constant menace ever since its establishment.

In a letter bearing date February 26, 1890, directed to the chairman of the Committee on Indian Affairs of the House of Representatives, General Miles says, in relation to the proposed removal of these Apaches to Fort Sill, in proximity to the Kiowas, Cheyennes, and Comanches:

> It involves the peace and safety of the people of two Territories. These Apaches are all now east of the Mississippi, disarmed and dismounted. They can be as readily given occupation and civilized east of the Mississippi as west of it, and why put the most vicious band of savages with semi-civilized, or semi-savage, tribes there now? Mr. Chairman, when Lieutenant Kennon was a boy, two years before he entered West Point as a cadet, and that is only about fifteen years ago, I conducted a campaign against those same Kiowas, Cheyennes, and Comanches, forcing them to give up their white captives, whom they had carried over that same trail through Western Texas.
>
> It is only eleven years ago that a band of Indians, escaped from the Indian Territory, swept through Kansas, Nebraska, Wyoming, and far up in Montana before they were captured, going through two military departments, crossing railways, and leaving a black trail of desolation behind them. I think it is safe to say that during that time they killed at least one hundred and fifty people.
>
> Only four and a half years ago there was great danger of the Cheyennes and part of the Kiowas breaking out again; they can at any time do so, for they were never better armed and mounted. As to the Apaches not being desert travelers, there are no Indians that can excel them in that respect.
>
> I will notice but one other statement made by Lieutenant Kennon regarding their possible escape, which reads as follows:
>
> "They would have to pass through a line of troops, four thousand of them."
>
> Mr. Chairman, you will see by the inclosed official map that, starting from the highlands immediately west of Fort Sill, there is not a single mounted soldier in that belt of country, 200 miles wide, through which the Indians would pass before reaching the mountains in Chihuahua, Old Mexico.
>
> Of course, there are troops at Fort Sill, but they would be left behind by the Indians and could only pursue.

Every word in that communication is true. My people accord all praise to him who was a gallant defender in time of trouble and a true friend in time of peace.

Mr. Speaker, he needs no encomium at my hands, here or elsewhere. The name of General Nelson A. Miles is embalmed in Arizona's grateful heart. I invoke proper consideration of his mature judgment in this matter.

We have had enough of Geronimo. We want no more of his "ways of pleasantness" and peculiar "paths of peace." We are doing well enough now. "Let us have peace."

Sir, if my service on this floor, with all the vexing labor and perplexing trials which attend it, can be the means of aiding in the defeat of a measure like this joint resolution, I will feel that I have not labored in vain.

In conclusion, then, Mr. Speaker, the good people of Arizona want to see the Oklahoma bill pass. They want to see Geronimo no more forever. They want a survey of the public lands so that our school lands may be protected. They want to see silver restored to its former and rightful position. They want to see justice done. Therefore they desire above all to see their much-slandered yet wonderful Territory discard the swaddling clothes of dependence and assume the proud habiliments of an independent State. Such a condition is of right hers. She longs to assume it. No abnormal ambition spurs the desire; it springs responsive to the voice of justice. She desires to command a situation from which she can save herself the infliction of Federal appointment to local office, where she can do as she pleases with her own, where she can have a chance to grow and flourish, where she can, as she soon will, rise with resplendent glory and shine the brightest star in our matchless galaxy of States.

Compulsory Attendance of Witnesses before Registers and Receivers of Land Offices.

SPEECH
OF
HON. JAMES E. COBB,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 8, 1890.

The House having under consideration the bill (H. R. 7216) providing for the compulsory attendance of witnesses before registers and receivers of land offices—

Mr. COBB said:

Mr. SPEAKER: At the expiration of the morning hour the day before yesterday, I was beginning to point out to the House some of the objections, as I conceive them, to many of the provisions of the pending bill. The amendment which I offered was hastily prepared, and fails to meet these objections. Since that time I have prepared another amendment which I propose to offer as a substitute to the one before the House.

Mr. PAYSON. If the gentleman from Alabama will permit me a suggestion here, I will state that the Committee on Public Lands have considered the amendment offered by the gentleman, and if he will take a vote upon it they are prepared to accept it, unless the gentleman desires to consume the time.

Mr. COBB. I have assured the gentleman from Illinois that it was not my purpose to consume this hour merely to force this bill to the Calendar. It seems to me that he might have been contented with that assurance. My amendment is offered in good faith, and the observations which I propose to make will be made in good faith, because I believe that the pending bill in many of its features is highly objectionable, and because I further believe that, if the attention of the House can be arrested, it will refuse to allow the bill in its present shape to become law. The amendment, as I remarked, that I have offered, and which the gentleman is willing to accept, was prepared hastily, and does not cover the ground of the objections which I have to the bill. It is true that on the former occasion I desired the bill to go over; not for the purpose of obstructing legislation, but purely and simply that I might have opportunity to look more carefully into its provisions and to prepare an amendment which I think ought to be adopted. The third section of the bill I will ask the Clerk to read.

The Clerk read as follows:

> SEC. 2. That any person neglecting or refusing obedience to such subpœna or neglecting or refusing to appear and testify when subpœnaed, his fees having been paid if demanded, shall be deemed guilty of a misdemeanor, for which he shall be punished by information or indictment in the district court of the United States. The punishment for such offense, upon conviction, shall be a fine of not more than $200, or imprisonment not to exceed ninety days, or both, at the discretion of the court: *Provided*, That if such witness has been prevented from obeying such subpœna without fault upon his part he shall not be punished under the provisions of this act: *Provided further*, That in case any party to a contest shall be unable to pay witness fees and shall make and file with the register or receiver an affidavit that he is unable to pay said fees and that he has a meritorious cause, and set forth in said affidavit what he can prove by said witnesses, if the register or receiver shall believe and so certify that the testimony so set forth is material to the issue, said witnesses shall be subpœnaed and attend without first having their pay, and in such case the subpœna issued shall state that the witness is required to attend without prepayment of fees or mileage, and all the provisions of this act, for the attendance of witnesses, shall apply to said witnesses, and they shall receive certificates of attendance from the officer before whom he is subpœnaed, which certificates shall be a liability of the person at whose instance they were subpœnaed.

Mr. COBB. Now, in lieu of a part of that section the amendment which I will after a while offer reads as follows:

> That any person willfully neglecting or refusing obedience to such subpœna or neglecting or refusing to appear and testify when subpœnaed, his fees having been paid if demanded, shall be proceeded against as follows: The register or receiver shall, if required so to do by the party in whose behalf the witness is summoned, return the original subpœna and affidavit of the person who executed the same, together with a statement from such register or receiver that the witness failed to obey the subpœna, to the district court of the United States, which court shall, on motion by said party who caused the subpœna to issue, cause a conditional judgment in the sum of $100 to be entered against said defaulting witness, which judgment may be made absolute, in whole or in part, if said witness fails, on notice issuing from said court and served on him at least ten days previous to final hearing, to make sufficient excuse either in person or by evidence deemed satisfactory by the court. Said conditional and final judgments shall be in the name of the United States, and the recovery had shall be disposed of as a fine collected in said court.

Now, Mr. Speaker, I do not assert that even the adoption of this

amendment will cure entirely the objections to the pending measure. There are other vital objections, as I conceive; but if this amendment is adopted it will modify to a considerable extent the evils that would otherwise result from the proposed legislation. It will be observed that in the first section of the bill the register or receiver is not only empowered to issue subpœnas for witnesses, but it is also provided that these subpœnas may be executed by any person whomsoever that the register or receiver may see proper to appoint for that purpose.

This in itself is highly objectionable and paves the way to an unlimited amount of abuse. Any man who has had experience as a legal practitioner has discovered the danger that results from committing the execution of process issued from a court to the hands of any person except an authorized and bonded officer. We have experienced difficulties at this point in our State courts, and have seen the sheriff of a county subject himself to severe reproof from the bench because he had committed process issuing from the court to the hands of an agent appointed by himself, and, assuming its execution to have been duly made, had returned it indorsed to that effect; and this, too, in civil causes. But the evil becomes greater when a criminal process, or a process the refusal to obey which may become a criminal offense, is committed for execution to an irresponsible party.

But I pass now to the third section of the bill, in which the chief objections to the whole measure are found. As I had occasion to remark when I had the floor the other day and as was remarked by other gentlemen taking part in the discussion, this third section creates a crime hitherto unknown to the law, either State or Federal. Never before, according to my recollection, has the failure of a witness to obey a subpœna been considered criminal. It is true that in every court of superior jurisdiction there is inherent power to punish witnesses, as for contempt, who willfully refuse to obey a summons issued to them; but that punishment for contempt, or that contempt, if you please, has never before been raised to the dignity of a crime. It is further true that in most States——

Mr. PAYSON. Did the gentleman ever know and can he cite an instance where a contempt of court was ever treated as of a less degree than a misdemeanor?

Mr. COBB. Yes.

Mr. PAYSON. I would be glad to hear one instance cited.

Mr. COBB. My point, Mr. Speaker, is this: that a contempt of court of this character has never heretofore been considered a crime in the strict sense.

Mr. PAYSON. What? A failure to obey a summons or subpœna?

Mr. COBB. Yes, sir.

Mr. PAYSON. It is always regarded as a criminal offense, never anything else.

Mr. COBB. The text-books treat of it as only quasi-criminal. They do not treat of it as a crime proper, as a technical misdemeanor or felony. And here a distinction should be drawn between witnesses who fail to respond to summons and witnesses who are in strict sense recalcitrant. It is against the latter that the punishing power of which I now speak is most usually called into exercise.

Inherent power to punish as for contempt the willful failure to respond to summons issuing therefrom exists in courts of general jurisdiction. That is true. I have not denied it. But I do deny that such contempt has ever, in recent years at least, been deemed worthy of criminal prosecution by indictment.

Now, I was about to say that, in most of the States, if not in all, this power of courts has been regulated by statute; and if these statutory regulations are examined it will be found that they are on the line of my amendment. They provide for civil judgment against a defaulting witness in the first instance of default, and nothing more.

If this has been the result of experience in the States and if this mode of dealing with defaulting witnesses has been found to produce the desired result, why, in this day, should we take the step which is here proposed? More than a century of our judicial history has been "added to the years beyond the flood," and through this long period it was not discovered that the harsh legislation of this bill was necessary. Nay, verily. The tendency, on the contrary, has been towards leniency in judicial methods. I would like the gentleman, if he can, to point out a single instance where one of the States in the Union has made it an indictable offense for a witness to refuse to obey summons to attend court. I wait for an answer.

Mr. PAYSON. If the gentleman desires an answer I will give it to him at once, if he will yield for that purpose.

Mr. COBB. With pleasure.

Mr. PAYSON. It is for the reason that in every judicial tribunal any one failing to obey a subpœna the court has the inherent power to inflict punishment for that failure to attend before that tribunal. The Interior Department has recommended, year after year, to give to some tribunal such power. There was no tribunal upon which it could be conferred. Of course a court of competent jurisdiction always has such power. It is always in the form of criminal proceeding: The State of Alabama against John Roe. As I have said, it is always in the nature of a criminal proceeding under the inherent power which the court has.

Mr. COBB. I will ask you a question, and you can answer.

Mr. PAYSON. With pleasure.

Mr. COBB. Where the States have undertaken to fully regulate the matter of punishing witnesses in default, does the gentleman not believe that such statutory regulation supersedes the inherent power of which he speaks?

Mr. PAYSON. That may be. The courts of competent jurisdiction of course have the right, but the power does not exist on the part of a register or receiver of the land office to punish witnesses for failure to attend their summons. Before the gentleman is through, if he thinks there ought to be some measure provided, as we are advised and believe there is, by which the attendance of witnesses can be compelled, what has he to suggest, let me inquire, in better form than is provided in this amendment? To save time, however, for myself and other members of the committee sitting about me, I will say we are willing to accept the amendment the gentleman offers, not because we think it is better, but out of a desire to get along with the public business.

Mr. HERBERT. Congress has the power under the Constitution to create from time to time such courts of inferior jurisdiction as it may see proper.

Mr. PAYSON. Undoubtedly.

Mr. HERBERT. Congress under that power could undoubtedly confer upon the register of the land office, or receiver either, the powers of a court. Congress could confer on these officers, under that provision of the Constitution, power to compel witnesses to answer for contempt in failing to obey the summons issued by them.

Mr. PAYSON. Undoubtedly this may be done in the opinion of the gentleman, but in the opinion of the Attorney-General and every lawyer upon the Public Lands Committee for a dozen years it can not be done.

Mr. HERBERT. Why?

Mr. PAYSON. Becau-e registers and receivers of the land office are not judicial officers, nor are they in any way connected with the judicial establishment of the United States. They are merely civil officers who, under the Constitution, can not be invested with judicial power in my judgment and in the judgment of other lawyers on the committee.

Mr. HERBERT. My position is that the Congress has the right to confer upon them judicial power if it seems proper to do so——

Mr. PAYSON. But it can not be done——

Mr. HERBERT. And create them an inferior tribunal.

Mr. PAYSON. The judgment of the Attorney-General and others who have given consideration to the subject is that it can not be done.

Mr. HERBERT. It is not necessary to say that that is the judgment of the Attorney-General or anybody else, because we go to a higher authority than that. Here is a Constitution which says plainly that Congress has the power to create such courts of inferior jurisdiction as it may see proper to create, and why the Congress can not confer judicial powers upon the registers and receivers I certainly can not understand.

Mr. COBB. My colleague is using my thunder as well as my time, Mr. Speaker. [Laughter.]

Mr. LACEY. Will the gentleman from Alabama yield to me a moment to allow an answer to the inquiry propounded by him as to whether this kind of proceeding had ever been attempted before? The gentleman from Alabama asks whether it has been attempted by any State. I answer that it has been attempted by Congress. That in a proceeding to take testimony in an election case, for instance, the subpœna issues from a court, it is true, but the witness appears before the commissioner, and if he refuses to testify in obedience to the authority conferred upon the commissioner his refusal is made a misdemeanor. So we have precedents in the action of Congress itself in that class of cases.

Mr. COBB. Well, if we have a precedent along that line, I can only say that it is more honored in the breach than in the observance.

But, Mr. Speaker, I was, when interrupted, attempting to impress this thought: that the experience of all of the State courts has been ample to indicate the course of legislation that ought to be pursued in this case. I say that experience has demonstrated the fact that it is not necessary to proceed against a citizen of the country, as for the commission of a crime, in order to induce him to appear and testify in a court or before any officer of the Government authorized to take testimony. Now, if that be true, it is not wise at this day to multiply statutory offenses. I deprecate, for one, the tendency to the multiplication of such offenses. I do not believe it is either desirable or necessary to pursue the citizens of the United States with the thumb-screw and the lash in order to drive them to duty. And I further believe that, the more you follow this oppressive course, the more you harass them by the multiplication of statutory crimes, the more you tend to degrade rather than to uplift the moral tone of communities. This is true in the States and with reference to State legislation. This is the Government of all governments on earth, where, as was said so eloquently and forcibly by the distinguished gentleman from Texas who sits before me [Mr. MILLS], the rights of the citizen, his personal rights and privileges and interests, should be of all things the most highly regarded.

Government is necessary, it is true; and it is also true that obedience to the law is imperative; but when you have secured that obedience without harsh and oppressive measures you will have adopted the wiser

and the better course. "That people are governed best who are governed the least."

Now, Mr. Speaker, if the observations I have thus far made with reference to the administration of the laws in the States be true, if the States have never found oppressive legislation necessary to enforce obedience to process, why should we commence the inauguration of a new departure in the Federal courts of the United States?

These tribunals were not established for the exercise of extensive jurisdiction, even of a civil character. It was intended by the framers of the Constitution that the civil jurisdiction of these courts should be limited in extent, and with greater emphasis it may be said that the purpose was that their power to punish should be restricted.

It is to be deprecated that their criminal jurisdiction has been enlarged in recent years; and it is yet more to be deplored that they have been swift to exercise the power given by statute and extended by construction, with relentless and oppressive hands.

We have felt this oppression and we want no more of it. I speak now of my section of the country.

Few there are on this floor or within sound of my voice, from that section, who would not testify from observation and experience to the cruelties visited on the humble and defenseless through their far-reaching machinery.

Their commissioners, constituted a committing magistracy, have grossly abused in many instances the authority given them. They have dragged men many miles from their homes on frivolous complaints, have thrown them in the common jails, and have held them there, finding excuse to avoid the approval of bonds offered, only to be forced to ascertain at last that there was no evidence to justify arrest.

Mr. COWLES. The fees came, all the same.

Mr. COBB. Yes; as suggested by my friend, the fees came, all the same; and that, it may be, to a large extent accounts for the milk in the cocoanut.

I could give instances, but time presses and I forbear.

My purpose is to call the attention of the House to the danger of conferring on these courts any additional powers criminal in character. They have no business with extended criminal jurisdiction. The State courts are ample to meet all of the necessities of our citizens. The State courts are competent to deal with questions of right as between the citizens, and have ample authority to coerce obedience where there is a willful refusal to obey. And, Mr. Speaker, only under a restriction of the power of the Federal courts can the best interests of the citizen be secured and our system of government preserved in its integrity. And by subserving the best interests of the individual citizen we secure most effectually the ends of good government.

Now, then, here is a new crime, never before known to the law. The gentleman from Illinois can not refute this assertion. He says that every contempt is a misdemeanor. The failure to obey summons is a contempt; *ergo*, the failure to obey summons is a misdemeanor. That is his syllogism. It is fallacious in both members. Bear in mind we are speaking of misdemeanor in its technical sense as an indictable crime, and none of the courts of the country, none of the text writers on criminal law, have ever classed it amongst such crimes, unless, indeed, my memory is grievously at fault.

Further, I press on him a fact already adverted to, that this inherent power to punish a merely defaulting witness is superseded whenever the State Legislatures provide a different remedy and do not retain the power. He admits it. Now, what have the State Legislatures done? One by one they have gone forward along the line of mitigating the severity of legal methods in this regard by making civil judgments the means and measure of punishment. If the several States are jealous of the rights and interests of the citizens as against the exercise of irresponsible power by their judiciary, how much greater should be our hesitancy to confer such power on Federal tribunals?

Mr. SMITH, of Arizona. In the Territories the courts have no power to do it, and they will be forced to go to the Federal courts.

Mr. COBB. I am talking about States. You ought not to be a Territory; you should be in better luck.

Mr. SMITH, of Arizona. You mean that we should have no Territories. I agree with you about that.

Mr. COBB. The reasoning here is obvious. It is upon the surface. It is that proceedings in State courts by legislative direction, as I have described, have been found by universal experience to be sufficient. And I repeat here, by way of emphasis, that wholesome legislation is in the direction of the lessening, rather than the increment, of criminal enactments. Let us have all the law necessary to restrain the lawless and protect the law-abiding, but I protest against the assumption of a necessity which experience has not discovered. But I want to hurry on. I will pass as rapidly as I can. I fear that my friend from Illinois [Mr. PAYSON] will be confirmed in the thought that I was insincere in my assurance to him.

Mr. PAYSON. Do not hurry. The hour is nearly gone, anyway.

Mr. COBB. Do not be uneasy; you will have time enough. I wish to show the operation of the law as you have framed it, and this is a matter of no slight importance, at least to the people I have the honor to represent. I have called attention to the fact that the first section contains an objectionable feature in allowing an unauthorized person to execute process.

Now, let us see the operation of this bill if it shall become a law. A register or receiver issues a subpœna. He may do so in good faith and only at the instance of a party litigant or he may do so of his own motion. The subpœna is committed for serving, at the discretion of the officer issuing it, to an irresponsible person.

Here are three persons, any one of whom may carelessly or designedly lay the foundation for harassing by criminal prosecution the best citizens of the country; and, if it should chance that the three desired to conspire together for evil purposes, the opportunity and invitation are in the law. The issuance of summons, its return executed, and a statement of default by the register or receiver, make a *prima facie* case of crime, for the commission of which a Federal grand jury would feel constrained to indict.

Mark you, Mr. Speaker, it is not necessary that I press the probability of wrong-doing; it is sufficient that opportunity and temptation to it exist in the terms of the law.

Let us pursue this line of thought a little further. An indictment is found against the witness supposed to be in default; a capias issues, and he is arrested, carried far away from home and friends, and lodged in the jail in default of bond; or it may be that before indictment he is arrested on warrant issued by a commissioner, for the law would certainly confer such power on commissioners. This is bad enough, but it is by no means all.

The witness now becomes a defendant in a criminal proceeding, is put on trial in a court remote from his vicinage, before strange jurors, and confronted by witnesses whose interest it is to convict him in order to sustain the regularity of their conduct, if for no baser motive.

This is the picture; it is not overdrawn; and it takes on a darker hue when we remember that the men who will thus be subjected to annoyance and punishment are the worthy poor.

But the bill has another operation, evil in tendency, which I will hastily notice.

The third section not only provides for the indictment of witnesses who fail to appear before the register or receiver, but also of those who fail or refuse to testify.

Let us test that a little. A witness is before one of these officers. He is asked a question, which as a man of intelligence he knows to be improper and which he should not be forced to answer. It may criminate him to give an answer. He refuses, and yet through ignorance of the law the register or receiver persists in his demand. If the witness is persistent in refusal to testify, he is deemed recalcitrant and is subject to indictment, with no opportunity to have his rights fairly examined until he is arraigned for trial. His acquittal in the end is no recompense for the hardship to which he has been subjected. He may be sustained by the ruling of an intelligent judge and discharged from the indictment, but he has been punished all the same.

Mr. Speaker, I will not further press these arguments. They could be greatly amplified and extended. I said in the outset to the gentleman from Illinois [Mr. PAYSON] that I was not quite sure that the amendment here proposed by me was the best. I incline to agree with my colleague [Mr. HERBERT] as to the power of Congress to give to the register or receiver the right to proceed against defaulting witnesses.

These officers are certainly invested by the bill with judicial functions. They may make an issue between contending parties, may hear evidence, and determine rights.

They are *pro hac vice* judicial officers. But the gentleman from Illinois is quite confident in his opposition to the views of my colleague. He may be right, but, if so, it is an anomaly in the law, to say the least.

But I do not care to go into investigation of this matter, for the reason that it is not expedient, if constitutional, to invest registers and receivers with power to punish. But why may not the aid of the State courts be invoked?

Mr. PAYSON. Does the gentleman desire an answer at this point?

Mr. COBB. I do.

Mr. PAYSON. I answer, first, because nearly all the public lands that are left in the Union are in the Territories and, second, because this is purely a Federal question, dealing only with public property belonging to the United States. The disposition of the public lands being entirely under acts of Congress, the questions presented are purely Federal questions. Also, for the further reason that Congress has no power whatever to confer upon a State court in such cases jurisdiction which the State court would be bound to exercise. I submit that point to the gentleman as a lawyer, and I ask him to state whether, in his opinion, Congress can confer powers upon a State court in matters involving only Federal questions, which the State court would be bound to exercise?

Mr. COBB. I think the gentleman is right about that.

Mr. PAYSON. Then how can what the gentleman suggests be done?

Mr. COBB. But Congress may invoke the aid of the State courts, and if they consent to afford that aid——

Mr. PAYSON. But they can not be compelled to do it.

Mr. COBB. Compulsion is not necessary. It is no new experiment to call on State officials to aid in enforcing Federal laws.

Every justice of the peace is now invested with the rights of a commissioner to hear and determine criminal cases and hold men to bail for the commission of criminal offenses against the United States.

Mr. PAYSON. An ordinary State justice of the peace?

Mr. COBB. Yes, sir. I ask the distinguished gentleman from Texas [Mr. CULBERSON], who has long served on the Judiciary Committee, if I am not right.

Mr. CULBERSON, of Texas. It is in the first judicial act passed, and it never has been repealed.

Mr. COBB. Every justice of the peace is invested with power to hear and determine such cases.

Mr. BRECKINRIDGE, of Kentucky. Is it so now?

Mr. COBB. Yes, sir; it is so now.

Mr. BRECKINRIDGE, of Kentucky. Has it not been limited?

Mr. COBB. No, sir; it has not been limited. The justice of the peace and the commissioner are put on the same footing and are invested with like authority to hear these cases and to hold the party to bail, if the necessity exists, to answer in the district court of the United States for the offense charged against him. Yet, in the face of this law, which has existed since the first judiciary act was passed, we find that offenders or presumed offenders against the laws of the United States are carried past these authorized State officers that they may be brought before commissioners at points distant from their homes.

I have remarked on the tendency which the Federal courts have shown, since the war particularly, to seize power. This tendency may well excite apprehension and cause resistance to further encroachments. "For if they do these things in a green tree, what shall be done in the dry?"

My friend from Tennessee [Mr. MCMILLIN] has been kind enough to hand me a criticism or two made by Mr. Jefferson many years ago. In writing to a friend this great statesman says:

> The great object of my fear is the Federal judiciary. That body, like gravity, ever acting with noiseless foot and unalarming advance, gaining ground step by step and holding what it gains, is engulfing insidiously the special governments into the jaws of that which feeds them. The recent recall to first principles, however, by Colonel Taylor, by yourself, and by Alexander Smith will, I hope, be heard and obeyed, and that a temporary check will be effected. Yet, be not weary of well-doing. Let the eye of vigilance never be closed.

Again he says:

> Our Government is now taking so steady a course as to show by what road it will pass to destruction; to wit, by consolidation first, and then corruption, its necessary consequence. The engine of consolidation will be the Federal judiciary; the two other branches the corrupting and corrupted instruments.

And yet again:

> I fear, dear sir, we are now in such another crisis, with this difference only, that the judiciary branch is alone and single-handed in the present assaults on the Constitution. But its assaults are more sure and deadly, as from an agent seemingly passive and unassuming. May you and your contemporaries meet them with the same determination and effect as your father and his did the alien and sedition laws, and preserve inviolate a Constitution which, cherished in all its chastity and purity, will prove in the end a blessing to all the nations of the earth.

These things were written without reference to the exercise of criminal jurisdiction by Federal courts. If they were true when Jefferson lived, how much more alarming do they become in the light of subsequent events?

The sage of Monticello was sagacious and far-seeing, but within the range of his prophetic vision there never came the scenes which have been enacted in these courts and before their subordinate officials in the last quarter of a century, scenes well calculated to remind us of Jeffreys and the bloody assize.

The SPEAKER. The time of the gentleman from Alabama has expired.

The People's Homes Taken for Florida Railroad Lands Under Grant of May 17, 1856.

SPEECH

OF

HON. WILKINSON CALL,

OF FLORIDA,

IN THE SENATE OF THE UNITED STATES,

Friday, February 28, 1890.

The Senate having under consideration the following resolution:

"Whereas the Florida Central and Peninsula Railroad Company claims the right to sell the alternate sections of land on the line of the railroad from Waldo to Tampa, Fla., under the act of Congress approved May 17, 1856; and

"Whereas the said grant was made to the State of Florida, subject to the disposal of the Legislature of the State of Florida; and

"Whereas the Legislature of the State of Florida has never disposed of said land; and

"Whereas the State of Florida in 1868, by a joint resolution of her Legislature, declared to Congress that the State had not complied with the conditions of said act of Congress, and prayed for a new grant on conditions that excluded the Florida Railroad Company, from which the said Florida Central and Peninsula Railroad Company claims the right to said land: Therefore,

"*Be it resolved*, That the Attorney-General of the United States be, and he is hereby, directed to institute such proceedings as will prevent any further sales of such lands until Congress shall provide such laws as will give patents to all actual settlers for 160 acres of land, and to all purchasers in good faith, for land not exceeding 160 acres, and to all purchasers of lots in town sites, and for opening the remainder of said land to homestead entry and settlement"—

Mr. CALL said:

Mr. PRESIDENT: The resolution which I have introduced is one which the dignity of the Senate and the proper assertion of its power require to be immediately considered and adopted. The House of Representatives for the last ten years have passed bills of forfeiture affirming the duty of the Government to carry out the pledges of the two political parties in this country that lands that had been granted, the terms of the grant of which had not been complied with, should be forfeited and restored to the public domain. In the case of this grant, if we may call it such, under the act of 1856, the last House of Representatives, by a large majority, I think more than two-thirds or much larger than that, perhaps three-fourths, I think, practically without any dissenting vote at all, passed a bill alleging it to be the duty of the Government to restore the land embraced in this reservation to entry and settlement.

PATENTS FOR ACTUAL SETTLERS AND PURCHASERS.

The Senate, by section 8 of the bill of forfeiture passed last session, provided as follows, and the committee of conference of the House agreed to it:

> SEC. 8. That all actual settlers on any of the public lands in the State of Florida, affected by the grants, who made actual settlement on any of said lands after the time limited in the granting act for the construction of certain lines of railway in said States, approved the 7th May, 1856, which lies adjacent to the part of the lines of railroad built under and in pursuance of the act of the State of Florida entitled "An act to encourage a liberal system of internal improvements in the State of Florida," approved January 5, 1855, within the time limited by Congress in the granting act, and which were granted to any of said companies by the Legislature of the State of Florida in accordance with said act of Congress, and are held by purchase in good faith from said companies made before the year 1866, are hereby confirmed to such purchasers: *Provided*, That a mortgage in pledge of said lands by any of said companies shall not be considered as a sale for the purpose of this act.

That provision of the act giving titles to actual settlers who had settled upon this land after the expiration of time limited in the act of Congress for the construction of the roads met the approval of both Houses of Congress. It left the remainder of the grant (if Congress had this power, which the House had repeatedly asserted and which the Senate here asserts) subject to disposal under the land laws of the United States, except in so far as a former act of Congress granted a patent to purchasers in good faith from the railroad companies claiming it. In defiance of this action of the House of Representatives and of this action of the Senate of the United States a railroad company, now known as the Florida Central and Peninsular Railroad Company designated in the resolution by this title, but which, if the proceedings in the circuit court of the United States for the northern district of Florida in the suit of I. Wailes *vs.* The Florida Railroad and Navigation Company *et al.* contain the true statement of the case, is only the agent of certain private parties, is proceeding to sell these public lands of the United States claimed to be embraced within this grant, depriving the actual settlers of their homes, frightening them into paying large sums of money, three, four, five dollars to the acre, as I am informed by letters from them, and even higher prices.

FLORIDA CENTRAL AND PENINSULAR RAILROAD COMPANY HAVE NO RIGHT OR TITLE.

They have absolutely no right, or claim of right, or pretense of right, and it is one of the extraordinary cases where men are allowed to take possession in their own individual and personal interests of millions of acres of the public domain and the homes and improvements of the people without even a shadow or pretense of a law either of Congress or of the State to justify them in it. That is the fact in regard to this matter. No man can truthfully state even a plausible ground of claim either in law or equity on the part of this railroad company, or of Mr. E. N. Dickinson, or of the Florida Railroad Company, the charter, franchise, and property of which were bought by him and his associates in 1866 as a completed road, and by him assigned on certain terms of personal advantage to him and his associates to a corporation formed under the general incorporation law of the State of Florida in, I think, the year 1880, or 1881, or 1882, and known as the Florida Railroad and Navigation Company.

A FRAUD AND CRIME TO TAKE AWAY THE PEOPLE'S HOMES.

The deprivation of these people of their homes and their improvements upon these public lands, and of their right to free homes under the land laws, is a fraud and a criminal act under the laws of the United States, for which, under an honest and proper administration of the Government, the persons concerned in it would be prosecuted; yet it is going on, and I think about 550,000 acres of the public domain, worth probably two millions of dollars, has been and is now being appropriated to their own personal use by a few individuals who are carrying on the business of selling the homes of the people for personal profit to themselves.

I ask in the name of the people protection for their homes and that titles should be given to them, and that the perpetrators of these wrongs shall be held to proper and just account under both the civil and criminal laws of the United States. It is the duty of Congress to grant a title to every actual settler on these lands to 160 acres of land, and to every purchaser in good faith of a limited quantity of land, and

to all owners of lots in town sites, thus giving repose and security to titles and to every man's home.

It is equally a duty to hold the men who have been taking the money of the people from them on these false pretenses accountable for the wrong they have done to the people. Congress has given them notice and the Secretary of the Interior and the State Legislature have given them notice that they had no title or right to this land, and that it was a part of the public domain and subject to the people's right under the land laws of the United States.

Yet they have continued to sell the land, depriving the people of their homes on it, by some action of the Interior Department, or some of its clerks, under color of a reservation made by Mr. Schurz in 1881, fifteen or sixteen years after the expiration of the ten years required in the act for the completion of the line of railroad, and thirteen years after the State, by a joint resolution, had notified Congress that she had not complied with the conditions of the act and made no claim to it, notwithstanding the fact that the State had never by any act of the Legislature made any disposition of the land under the act of 17th May, 1856.

The act of Congress (R. S. 2449) is as follows:

When lands have been, or may hereafter be, granted by any law of Congress to any of the several States and Territories, and where such law does not convey the fee-simple title of the lands or require patents to be issued therefor, the list of lands which have been, or may hereafter be, certified by the Commissioner of the General Land Office under the seal of his office, either as originals or copies of the original deeds, shall be regarded as conveying the fee-simple of all the lands embraced in such lists that are of the character contemplated by such act of Congress and intended to be granted thereby; but when lands embraced in such lists are not of the character embraced by such acts of Congress, and are not intended to be granted thereby, the lists, so far as these lands are concerned, shall be perfectly null and void, and no right, title, claim, or interest shall be conveyed thereby (10 Stats., 346; 18 *id.*, 475; R. S., 2449; House Miscellaneous Document, Forty-seventh Congress, second session, volume 16; Digest of Decisions.)

This statute is very plain, and makes any certificate by a Commissioner of land not embraced in an act of Congress and not intended to be granted thereby absolutely null and void.

LAW GIVES FLORIDA CENTRAL AND PENINSULA RAILROAD COMPANY NO RIGHT.

Let us inquire whether a grant of land to a State of alternate sections along a line of road required to be disposed of by the Legislature of the State for the construction of a line of railroad only as such railroad shall be actually built, and that the entire line of road shall be built and completed in ten years from the date of the act, where the Legislature had not disposed of the grant, where no location of the line of road was made in the lifetime of the grant, so as to fix the locality or place of the alternate sections, where the Legislature of the State not only failed to dispose of it, but by an act of Legislature declared that the State had not complied with the conditions of the grant, and asked for a new grant on new conditions—let us inquire whether a certification of lists of land twenty years after the expiration of the grant, and after its surrender by the Legislature to a company or person to whom the Legislature has not granted it, is embraced in the act and intended to be granted by the act which prescribes these conditions as necessary to the validity of the grant, and we see at once how entirely and absolutely void is the title claimed to be given by the persons representing themselves as a railroad company owning this grant, and how absolutely void is any certification of lists of land to them. We may begin, then, to form some idea of the wrong and iniquity of these persons in taking great sums of money from the people and giving them a worthless quit-claim deed to this land.

NO GRANT FROM WALDO TO TAMPA.

Mr. President, on the 17th May, 1856, an act was approved granting to the States of Florida and Alabama the alternate sections upon lines of railroad which were to be constructed in those States, the lines of railroad in Florida designated by the act being from Pensacola to Jacksonville and from Fernandina to Tampa Bay. The third section of that act provides:

SEC. 3. That the said lands hereby granted to the said State shall be subject to the disposal of the Legislature thereof for the purposes aforesaid, and no other.

(The entire act of 1856 will be found at the end of this speech.)

In 1859, on the third of November, there is a letter from the governor of the State of Florida, M. S. Perry, to be found upon the records of the office of the Commissioner of Public Lands, notifying the Department that the State of Florida had not disposed of this land, and that remains true to day. There has never been a disposal of this land by the State of Florida as required by the act, and here is the official notification of the governor, which I will print in these remarks, to the Secretary of the Interior, declaring that there could be no location, nor acceptance, nor selection by the governor of the State of the alternate sections, because the Legislature of the State had not disposed of it under the act of Congress. There could be no grant and no right vested in any one without the previous action of the Legislature of the State. But the Legislature of the State in 1863, following up this letter of the governor declaring that the State had not disposed of it, by a joint resolution in the form of law, notified the Government of the United States that the State had not complied with the granting act, and did not claim this grant of land.

FALSE CLAIMS UNDER TWENTY-FIRST SECTION INTERNAL-IMPROVEMENT ACT.

Nor is that all. The only pretense of a claim which is made to this grant was that under the twenty-first section of the internal improvement act of the State of Florida it had been declared that the railroad companies which, under the authority of that act and in pursuance of its provisions, should complete the lines of road indicated in the act, should have (the governor directing the selection of it) the right to the land. (See twenty-first section in appendix.)

This internal-improvement act served its purpose, and in 1866 and 1868 and 1869 the railroads that were constructed under it, for parts of the lines were sold as completed roads, and the remainder of the lands of the State have, by various legislative acts, been disposed of for other purposes, disconnected with and entirely different from the construction of these lines of road, so that, in effect, the object of the trust was declared by the Legislature to be ended.

So that if the trust created under the act of the State Legislature of 1855 remains in existence it is a trust without an object, and certainly without any connection with the construction of this line of railroad from Waldo to Tampa, or from Chattahoochee to Pensacola, all the land embraced in that trust and all the means created by it having been conveyed and appropriated by the Legislature to other and different objects. To the end that this may be understood, I here state that the State of Florida had granted to her by acts of Congress, as follows: In 1845, on her admission into the Union, 500,000 acres of land for internal improvements. In 1850 "the swamp and overflowed lands rendered thereby unfit for cultivation, to pay the expense of levees, ditches, and drains" to make the swamp and overflowed land dry and fit for cultivation.

Under this act of 1850 about 11,000,000 acres out of the 37,000,000 acres in the State were patented to the State under the confirmatory act of 1857; thus making 11,500,000 acres of land, or about that quantity. In 1855 the State Legislature enacted an "act to encourage a liberal system of internal improvements." The act will be found at the close of this speech. It conveyed to the trustees of internal improvement the 500,000 acres of internal-improvement land then remaining unsold and all the swamp and overflowed land granted to the State by the act of 1850.

The trustees were the governor, comptroller, treasurer, attorney-general, and register, and their successors *ex officio* trustees. The objects and powers of the trust were to sell the lands and apply the proceeds to the payment of the interest on certain and limited amounts of bonds of such companies as should accept the benefits of the act and build certain lines of railroad or parts of the lines designated in the act. These lines of railroad were "a line of railroad from Pensacola, or Escambia Bay, to Jacksonville, on the St. John's River," and a line of railroad from Fernandina to Tampa Bay, with an extension to Cedar Keys, Fla. It will be noted here that the land proposed to be granted to the State in the act of May 17, 1856, is no part of the land conveyed to the trustees by the act of January 5, 1855. At this time the act of Congress of May 17, 1856, had not been passed.

But by the twenty-first section of the act of the State Legislature of January 5, 1855, it was provided that if Congress should thereafter grant lands to the State in aid of these lines of railroad the companies building the lines of railroad under the provisions of that act should have the benefit of them, and the governor should direct the lands to be selected for them.

The Florida Railroad Company was authorized under its amended charter to build a railroad from Fernandina to Tampa and Cedar Keys, and accepted the provisions of the act from Fernandina to Cedar Keys, and afterwards claimed to accept it from Fernandina to Tampa Bay.

The Florida, Atlantic and Central Railroad Company accepted the provisions of the act from Jacksonville to Pensacola or Escambia Bay. The Pensacola and Georgia Railroad Company accepted the act from Tallahassee to Jacksonville, and from Tallahassee to Pensacola, thus covering the same line as the Florida, Atlantic and Central Railroad Company.

The Pensacola and Georgia Railroad Company constructed the road from Tallahassee and Quincy to Lake City and met the Florida, Atlantic and Central Railroad from Jacksonville at Lake City. Neither company ever built any other part of the line westward to Pensacola.

The Florida Railroad Company constructed the road from Fernandina to Cedar Keys and never built any other part of that line to Tampa.

All these parts of the lines were built before 1861.

In 1866 and 1869 all of these railroads were sold by the trustees under the powers of the act creating the trust (as they alleged) as completed roads, the act only authorizing them to sell after completion.

In 1859 the governor informed the Legislature and officially notified the Commissioner of the Land Office that the State Legislature had not disposed of the land granted in the act of May 17, 1856, to any of the railroad companies, and that no certification of selections could be made. The governor also informed the Legislature that the Florida Railroad Company had not accepted the act for the line between Waldo and Tampa; and also that the Florida Railroad Company was not building the road from Waldo to Tampa. The Legislature of 1869 char-

tered another railroad company to build the line from Waldo to Tampa, and granted to this company, namely, the Peninsular Railroad Company, the benefits of the internal-improvement act. Neither the Florida Railroad Company nor the Peninsular Railroad Company built the line or any part of it from Waldo to Tampa.

Edwin N. Dickinson and associates purchased, in 1856, at trustees' sale, the Florida Railroad franchises as a completed railroad running from Fernandina to Cedar Keys.

LEGISLATURE IN 1868 DENIES THE RIGHT.

In 1868 the Florida Legislature, by a joint resolution, declared that the State had not complied with the conditions of the act and prayed Congress to make a new grant on condition that none of the railroads chartered before the war should have any benefit from the grant.

This joint resolution has two aspects, one as a disclaimer of any right or claim to the grant; second, as a refusal to dispose of it for the benefit of the Florida Railroad Company which had then been newly organized for two years.

In 1870–'71, the railroads having all been sold as completed railroads, the Legislature passed "An act to perfect the public works of the State," granting money bonds instead of lands.

Mr. President, here is a joint resolution of the Legislature of the State of Florida of 1889, containing recitals which I will not read, but will, if there shall be no objection, print with these remarks—a joint resolution of the Legislature of Florida which did not become a law, but which received the vote of a majority of both houses of the Legislature and is an expression of opinion on the part of the people of that State and of their Legislature of the facts in regard to this matter. It recites the facts which are apparent from the records and laws of the State. This resolution alleges and sets forth that the State Legislature has never disposed of this land; that they refused to dispose of it; that they notified the Congress of the United States in 1868 that they had not complied with the conditions of the grant and that they made no claim to it, and asked Congress to dispose of it upon conditions which excluded all companies chartered previous to that time.

(See joint resolutions in appendix.)

HISTORY OF THIS WRONG ON THE PEOPLE.

Mr. President, following this story along by which to-day the homes of the people in Florida over a large area of the very best portion of the State are being appropriated, not for the construction of railroads, but, as appears by the records of the circuit court of the United States at Jacksonville, solely in the interest of the personal fortunes of two or three or four individuals who have no shadow of right, title, or claim under the terms of any law either of Congress or the State of Florida—following this narration of facts, commencing in 1855 and ending in 1869, the roads which were authorized to be built under the internal-improvements act of 1855, which were none of them constructed except in part and were all sold as completed roads, and their connection with this statute which is the only statute that ever made any mention whatever of this grant of land contained in the act of Congress of the 17th of May, 1856, ceased and the statute became inoperative and no longer had or could have any connection whatever with this railroad or with any other.

I said this was the only statute of the State which ever made any mention of this grant. There is a statute which disposes of so much of this grant as lies between Pensacola and the Alabama and Florida boundary line, in the direction of Montgomery, to the Florida and Alabama Railroad Company, but this has no relation to the subject, except that it emphasizes the failure and refusal of the Legislature to dispose of the grant from Pensacola to Jacksonville and from Fernandina to Tampa.

Nor is that all. The Florida Railroad was sold in 1866 as a completed road and was bought by Mr. E. N. Dickinson, a person of great distinction in this country, a resident of New York, as a completed road terminating at Cedar Keys, and the Legislature of the State granted the right to the new company (see the act in appendix) to build a line of road from Waldo, the present point of connection, to Tampa Bay, and limited them to a certain time for the completion of that road.

That time expired; the limit was again extended and expired, and no road was ever built. Thus for a series of years this matter stood, the lands embraced in this alleged grant never having been mentioned or disposed of in any shape, manner, or form by one word, syllable, or reference in any law of any description whatever, the joint resolution of the State passed in 1868 declaring that the State had not complied with any of the conditions of the grant and made no claim to it, and with no other legislation whatever except the acts of the Legislature which disposed of all the land of the trust created by the internal-improvement act of 1855 to other and entirely different routes and companies.

Not only the joint resolution of the Legislature declaring that the State had not complied with the conditions of the act of May 17, 1856, and asking a new grant on condition that none of the railroad companies chartered before the war should have the benefit of the new grant, but the history of the sale of all these railroads as completed roads, and the retirement of their bonds guarantied as to interest by the internal-improvement fund, which was the swamp and overflowed land grant of 1850, and 500,000 acres of internal improvement land, and the passage of the act to perfect the public works of the State, granting the money bonds of the State to the purchasers of the Pensacola and Georgia Railroad, under the name of the Jacksonville, Pensacola and Mobile Railroad Company, and to the new Florida Railroad Company, or any other company which should build a railroad to Tampa, all prove, beyond a possible doubt, that the Florida Railroad Company never had a claim or right to the grant of May 17, 1856, from Waldo to Tampa, and that the Legislature of the State never disposed of the land from that day to this to this company or to any other company.

CLAIM OF TITLE UNDER MR. E. N. DICKINSON.

The claim of title of Mr. Dickinson and associates, and of the Atlantic and West India Transit Company, and of the Florida Railway Navigation Company, and of the Florida Central and Peninsular Railroad Company, all these being the names at different times of the same company, and all claiming through Mr. Dickinson's purchase of the old Florida Railroad from Fernandina to Cedar Keys as a completed road, and by assignment from him, rests on an absolute fiction and has not a single fact to support it, but is contradicted by the laws, the records, and the public history of the State.

This road having been bought as the property of this person, this franchise of a completed road, with the right, under its charter, to build a road to Tampa, not as a part of the internal-improvement act, not as a road having any kind of aid or subsidy in land from the State, not as the beneficiary of the grant to the State under the disposal of the Legislature, but having a mere charter right to go to Tampa, in 1881, thirteen years after the Legislature of the State had declared to Congress that they made no claim whatever to this land, and had complied with none of the conditions of the act, and thirteen years after the Legislature had refused to dispose of the land to the new company, this company appeared in the Interior Department and obtained a reservation. Under Mr. Secretary Chandler this was refused, he acting in conformity with the joint resolution of the State Legislature in surrendering this grant and declaring that it made no claim to it, and asking for a new grant upon different conditions; but Mr. Secretary Schurz, without authority of law, in defiance of the action of the State of Florida declining to make claim to this grant and stating that the State had not complied with any of its conditions, made a reservation for the benefit of what he called the successor of the Florida Railroad Company. We have seen that the Florida Railroad Company had been sold as a completed road to Cedar Keys, and the internal-improvement act had at that time ceased to be operative because of the disposal of all the lands for other and different purposes, and that the only possible connection between the old Florida Railroad Company and this grant under the act of May 17, 1856, was that the twenty-first section of the internal-improvement act provided that the companies which should build the lines of road designated in that act, and under the authority of that act, should, under the direction of the governor, have the right to the land which Congress should thereafter grant; and the fact that the old Florida Railroad Company had built under that act a road from Fernandina to Cedar Keys, not to Tampa, and had claimed the right to accept the provisions of the act and build the road to Tampa in 1856, 1857, and in 1858, and had claimed to have graded a part of the line, namely, from Waldo to Ocala, 40 miles, only before the war.

FACTS WHICH PROTECT PEOPLE'S RIGHTS.

But just there came in the difficulty. The governor of the State officially informed the Legislature in 1858–'59 that the Florida Railroad Company had not accepted the provisions of the internal-improvement act of 1855, and was not building a railroad to Tampa. The Legislature of Florida, in pursuance of the governor's recommendation enacted a statute chartering another and different railroad company, and giving to this railroad company, and not to the Florida Railroad Company, the right to accept the provisions of this act and to have the benefits of the internal-improvement act from Waldo to Tampa.

Thus the Florida Railroad Company was left without the right to the benefits even of the internal-improvement act from Waldo to Tampa.

Another difficulty was that neither the Florida Railroad Company nor the Peninsular Railroad Company ever constructed any part of the railroad from Waldo to Tampa nor even located any line of railroad under the authority of a disposal by the Legislature to either of them of the grant of May 17, 1856.

The Florida Railroad Company did survey a line to Tampa under its general charter, but, as we have seen, without being recognized by the governor or the State Legislature as the beneficiary of the internal-improvement act, which the Legislature and the governor had expressly refused to allow.

Even if it had been such beneficiary of the internal-improvement act, we have seen that the granting act of 17th May, 1856, required an act of the Legislature disposing of this grant and authorizing the location of the line and building of the road, and the governor, in 1858, informs the Legislature and informs the Commissioner of Public Lands that no such disposal had been made, and the laws of the State inform us and informed the Interior Department that no such law exists or ever existed.

The laws of the State further inform us that if the internal-improvement act enacted two years before the act of 17th May, 1856, had disposed of the grant of May 17, 1856, and if the old Florida Railroad Company or the new Florida Railroad Company had acquired any rights under this act of 1855 to the line from Waldo to Tampa, none of which propositions are true, yet the fact that the internal-improvement act ceased to operate and was virtually repealed by the sale of all the roads as completed roads and by the appropriation by the Legislature of all the land conveyed to that trust for other and different lines of railroad would have prevented the purchasers of the Florida Railroad from Fernandina to Cedar Keys from acquiring any rights under the internal-improvement act of any kind whatever.

If the Florida Railroad had never been sold and was still alive under its former charter, with all its rights, it would not have even a pretense of a right to the land granted by the act of Congress of May 17, 1856: first, because the Legislature of the State not only never disposed of the land to it, but, secondly, because the Legislature expressly refused to dispose of the land by incorporating another company in 1858–'59 on the express ground that the Florida Railroad Company had no right to the benefits of the internal-improvement act of 1855, and had not accepted the same, and was not building the road, and further because if the Florida Railroad Company was alive to-day the internal-improvement act having ceased to be operative and all the objects of the trust having been abandoned, and the trustees become merely "naked trustees," without any beneficial uses, and the State, the beneficiary of the trust, having asserted its power to dispose of the internal improvement and the swamp and overflowed lands, these being all the lands conveyed in the trust, there could be nothing derived from that act by the Florida Railroad Company if it were alive to-day.

These observations all apply with equal force to the part of this grant which lies between Chattahoochee on the Apalachicola River and Pensacola in West Florida, the claims of right being equally bare-faced and fraudulent in every possible view of law or equity or common sense. There are some facts which distinguish this part of the grant from that part which lies between Waldo and Tampa, which will be the subject of separate consideration.

The message of Governor M. S. Perry in 1858–'59 and the act of the Legislature of February 1858–'59, denying the right of the Florida Railroad Company to the benefits of the internal-improvement fund and chartering the Florida Peninsular Railroad Company and granting the benefits of the act of 1855 to this company, and the acts of the Legislature appropriating the land to other objects and creating a new system of internal improvements, under the title of "An act to perfect the public works of the State," will be found at the close of this speech.

ARGUMENT VERY PLAIN.

The argument is very plain.

First. The granting act of May 17, 1856, required the Legislature to dispose of the lands before the inception even of a right could take effect.

Second. The Legislature did not dispose of the land so far as that part of the grant lying between Waldo and Tampa is concerned, and has not disposed of it even to this day.

Third. The grant was of alternate sections within 6 miles on either side of a line of railway required to be actually built before any right to the alternate sections could be acquired under this act.

Fourth. There must have been a location of a line as the beneficiary of the grant before there could be even an incipient right acquired under the act to the alternate sections of land along the line of road.

Until the Legislature disposed of the land and authorized the location of a line of road as the beneficiary of the grant, no rights could attach to any particular land, namely, to the alternate sections of land along a line of railroad not authorized to be located or built by the Legislature as the beneficiary of the grant.

This must be done during the lifetime of the grant and not after the Legislature has declared its failure to comply with the conditions of the granting act.

Fifteen years after the purchase of the Florida Railroad these persons, the purchasers of the old Florida Railroad as a completed road from Fernandina to Cedar Keys, appeared in the Interior Department under the name of the Atlantic and West India Transit Company, successor of the Florida Railroad Company, and obtained this reservation; and what then? They claim a right to complete this road as a part of their franchise, the franchise being the purchase of a completed road, and the record shows that the Legislature of the State had in 1859 declared that the Florida railroad which they bought as a completed road had no right, title, or interest in this grant. They had none of the rights, under the internal-improvement act, to the line from Waldo to Tampa, so that, even if that act had been in existence, they could have bought nothing, because the Florida Railroad Company, whose franchise they bought, had been declared by the Legislature of the State to have no right, title, interest, or claim whatever under the old internal-improvement act to the line from Waldo to Tampa; and, further, because the Legislature of the State, so far from disposing of the land to the New Florida Railroad Company, subsequently the Atlantic and West India Transit Company, two years after the purchase, by an act of the Legislature, after disclaiming any right to the grant under the act of 1850, urged Congress to make a new grant on the condition that none of the companies (Florida Railroad Company included) chartered before the war should have any right or interest in the grant.

Here is the letter of the governor of the State stating that the State had not authorized even a location, even the inception of a right. I have here the letter of Governor Perry in 1859 and the act of the Legislature of the State expressly notifying the Government of the United States and the Commissioner of the General Land Office that the State of Florida had not even commenced to vest the right in any grantee, because her Legislature had not disposed of the grant. We all know that there could be no right vested in any corporation or natural person except through the disposal of the grant by the Legislature. Those are the terms of the act. The grant expired in its lifetime without any disposal by the Legislature.

In 1868, after the ten years limited for the completion of the entire line had expired, the State again notifies the Congress of the United States and the executive department by a joint resolution that she had not complied with any of the conditions of the grant, which must be held to refer to the fact that she had not even made a disposal of it to any railroad company. And yet, with these facts of record in her laws and giving notice to all persons that under the authority of the Legislature of the State there has never been a beneficiary of this grant designated; that the grant expired without the construction of any railroad; that the road of the railroad company under which these people pretended to claim was sold as a completed road terminating at Cedar Keys; that unless it had been a completed road in the sense of the law there was no authority to sell it, because the terms of the internal-improvement act are that after the completion of the several lines of railroad mentioned in this act the trustees may seize and sell; therefore, if it had not been completed at that time, there could have been no authority to sell it.

After purchasing a completed road, which unquestionably meant a road that had no franchise to go any farther, because if it had a right to go farther it could not be a completed road—after purchasing this completed road the purchaser appeared in the Interior Department fourteen years afterwards and after Mr. Chandler had opened the land to settlement by the people of the country; after railroads had been built by private capital under other inducements furnished by the State paralleling almost and penetrating this same section of country; years after the grant had expired and after the Legislature of the State had notified the Commissioner of Public Lands, in 1859, that the Legislature of the State had failed to make any disposal of it; after the Legislature, in 1868, had by law enacted that none of the conditions had been complied with, and therefore asked Congress to make a new grant upon a condition which excluded the Florida Railroad Company from having any right or interest whatever in it; with these facts of record here, of record in the laws of the State which I will print, of record in the declaration of a majority of the members of both houses of the Legislature, in 1889, of record in the fact that the statute of the State to-day contains no word, no syllable, no reference to a grant of the benefits of the act of the 17th of May, 1856, to the Florida Railroad Company, the alleged predecessor in the grant of this Atlantic and West India Transit Company, with the fact that the Florida Railroad was sold as a completed road by the authority of the trustees of the internal improvement fund and bought as a completed road, these persons claim the right to sell, and are selling, and have been selling vast quantities of this land, to the amount probably of from one to two million dollars of money extorted from the labor of the people of Florida and the citizens of the United States, for that which the Government and the law has given to them for free homes for themselves and their wives and children. Is there any language which can adequately describe the enormity of this offense? Is there any punishment too great for these acts; this business of selling the homes of people which, by public laws, have been guarantied to them, and taking from their wives and children the comforts of life?

NO JUSTIFICATION FOR SUCH A FRAUD.

How is it that such a fraud can be perpetrated? How is it that representing the State and the people here, that with the authority of the National Government, we can not take action to prevent these men from enriching themselves by selling the homes of these people, and extorting from them years of toil for that which the plain letter of the law openly and palpably denies them a right to?

Mr. President, I challenge denial and answer of these statements. I will repeat them. I will print the act of the 17th of May, 1856, which contains these words:

That the said lands hereby granted to the said State shall be subject to the disposal of the Legislature thereof for the purposes aforesaid, and no other.

I will not read the provisions of this law of 17th of May, 1856, which provides that this entire line of railroad shall be completed in ten years. That raises a subject of contention in reference to the decision in the Schulenberg *vs.* Harriman case. The point I make is that the law required the Legislature to dispose of the land granted, and there could be no beneficial interest or right acquired except through an act of the

Legislature; and in 1869 the governor of the State of Florida, M. S. Perry, in his letter states as follows:

The Legislature has as yet made no further disposition of the lands inuring to this State under the Congressional act of May 17, 1856.

The "further disposition" meaning that the Legislature had disposed of the part of the grant between Pensacola and the Alabama and Florida boundary line in the direction of Montgomery, to the Pensacola and Montgomery Railroad Company, I think was its title, and "no further disposition had been made."

This is an official fact, and if it be not true, or if there has been a disposal by the Legislature since, the laws of the State of Florida will show it. I aver there has been none for the land from Waldo to Tampa. What follows? Does it not follow that this land beyond even a possible doubt is and has always been public land, the grant having expired in 1868, the State having not only not disposed of it in the mean time, but having notified Congress that she had not complied with any of the conditions of the granting act and asked Congress to dispose of it in a new grant? Following that, in 1866 and 1869, all the railroads under the internal-improvement act were sold as completed roads.

Their new franchises were disconnected with the internal-improvement act, relieved from its obligations and unaided by its provisions, excepting only a lien for 1 per cent. annually for their old first-mortgage bonds remaining unpaid, with other and different inducements in the shape of money bonds instead of land subsidies for the construction of the roads. Under all these acts the roads failed to be constructed. In 1882 the purchasers of the old Florida Railroad and of the Florida, Atlantic and Central Railroad and of the Pensacola and Georgia Railroad organized under the general incorporation law of the State under the name of the Florida Railroad and Navigation Company, and had transferred to it by the purchase of the charter of the old Florida Railroad an assumed right to the grant of land made by the act of Congress of the 17th of May, 1856, which the State had declared she had never disposed of, which her laws show she had never disposed of, which her resolution of 1868 affirmed she had never disposed of, which her laws show had never been granted by the State, with notice in the public laws of the fact that the State had repealed the provisions of the internal-improvement act of 1855.

Mr. President, the facts may be briefly stated thus: Here is an appropriation of a large part of the public land in Florida by virtue of an order of reservation obtained from the Interior Department in defiance of the action of Congress, in defiance of the letter of the governor of the State and the laws of the State of Florida, a reservation obtained in the Department here by a few persons, strangers, non-residents, not belonging to the people of Florida, and they proceed to levy a tax of from one to three or four million dollars upon the labor of the people of Florida and of the people of the United States as a condition of the occupancy of this land of the United States which has been by the laws of the United States given to the people for free homes. There is a letter of Mr. Teller on this subject, notifying those people that they bought subject to the action of the Interior Department, and that this company had no right to sell, and that they took their land under the penalty or the menace of a loss of it by the action of Congress or the future action of the Interior Department.

A CRIME UNDER THE LAWS.

Notwithstanding that, these individuals have, in violation of the criminal laws of the United States, been allowed to proceed and to sell to these people their homes upon this land—in some cases to corporations, in other cases individuals and speculators, in others compelling the people who are there applying for homes under the homestead law to pay to them large prices. They had to forfeit their improvements or to borrow money at high and confiscatory rates of interest. These persons purchased the franchise of the old Florida road as a completed road, paying for it the sum of three hundred and some thousand dollars which was invested in the old bonds of the road, the first-mortgage bonds as they were called, at 20 cents on the dollar, a nominal consideration.

These purchasers of this old Florida completed road acquired no right as we have seen, because the Florida Railroad Company never had been the grantee from the State. I challenge the production of any act of the State of Florida that gave to the Florida Railroad Company any benefits whatever in this land grant of the 17th of May, 1856, from Waldo to Tampa, or in any other part of it. The purchasers of this completed road, to whom the Legislature had never granted any right in these lands, who the Legislature had declared were not even entitled to the benefits of the internal-improvement act from Waldo to Tampa, but had organized another company years before the war in 1859, and given to it the benefits of the internal-improvement act; these purchasers of the old Florida Railroad charter, a completed road, sold by the trustees as a completed road, sold under a provision of the law that they should not and had no power to sell until after the completion of the line of road indicated in the act: these purchasers set up a claim in the Interior Department, not before any court of law, to these lands, and the reservation was made notwithstanding the law of the State of 1868, the governor's letter of 1859, the acts of the Legislature of 1859, declaring that the Florida Railroad Company had never had any interest, or right, or grant in this land; that the State had made no disposal of it, notwithstanding the joint resolution of 1868 declaring that the State had not complied with any of the provisions of the act, and the terms of the act which said that after ten years expired the State should be prohibited from any sale of the land.

PEOPLE MUST PAY MR. WAILES AND OTHERS $404,000.

The decision of the Supreme Court of the United States, in Harriman vs. Shuleiman, does not touch this case, because this is a case where the Legislature of the State not only did not dispose of the land, but where, after the grant had expired, they notified the Congress of the United States that they did not claim it. Here stands this purchaser of this completed road, doing what? Transferring to this company, organized in 1882 or 1883, this grant to the State of Florida of the 17th of May, 1856, and under that assumed title more than a million of dollars have been extorted from the people. Here is this record of the United States circuit court. Mr. S. I. Wailes swore that they agreed to give him 81,000 acres of this land valued at $3 an acre ($243,000); for what? For obtaining from the Interior Department this reservation, for services as a lobbyist here in Washington City (see extracts from the record in the appendix), and yet the act of Congress required that the land should be disposed of by the Legislature only for what? For the construction of the specified line of road, and only as the road was actually built. Was it constructing a line of road to give a Washington lobbyist 81,000 acres of valuable land at $3 an acre?

Another 83,000 acres of it is testified by him to have been disposed of by the persons (E. N. Dickinson and others) holding under this assignment from the purchaser of the old Florida road, 87,000 acres of it to pay the taxes on the completed road. Here is $404,009 in one statement paid by the people of Florida, not for building a railroad, but for the personal benefit of individuals.

I here insert an extract from my speech of January 14, 1890:

PERSONAL INTERESTS ACQUIRED OUT OF THE PUBLIC LANDS.

Let us make a summary of the individual and personal interests in these selections of swamp and overflowed lands, and of land claimed under this grant of May 17, 1856 (on the ground that it is for constructing railroads), as appears from official papers on record:

S. I. Wailes, 1881-'82:	Acres.
Indemnity certificates assigned for services	75,010.22
Sold S. I. Wailes, on his account as State agent at Washington in adjusting land	70,782.97
1881-'82. Entered by S. I. Wailes, under his contract with trustees of April 13, 1878	21,664.03
Certificate No. 1, being 20 per cent. of whole amount, for recovering same under his contract with trustees	1,073.96
	168,531.19
Nov. 1, 1881. Eight per cent. of patents	1,956.92
July 25, 1881	5,800.00
	176,288.11
May 31. Indemnity certificates assigned S. I. Wailes, agent at Washington	1,677.92
Assigned Mr. Wailes for services	17,141.76
To Mr. Wailes, 825,810.36, in land	5,162.07
April 23. Mr. Wailes, for services	4,639.51
Total	214,909.37

In addition to this I estimate that under his contract for 2 cents an acre for all selections 7,000,000 acres have been and will be selected, making 214,909.37 acres of land and $140,000. In addition, Charles Pomeroy, clerk and agent of L. G. Dennis, has received 5,800 acres for making selections; Williams, Swann & Co., 3,614.66 acres for making selections, and John A. Henderson, 29,580.21 acres for making selections; making 253,000 acres of land and an estimated sum of $140,000 paid and to be paid and dependent on the validity of selections of land as swamp and overflowed and thereby rendered unfit for cultivation, made since 1857, and on proof made since 1857 that land sold by the United States since 1850 was swamp and overflowed and rendered thereby unfit for cultivation.

Here, then, is a sum of reasonably estimated values of between four and five hundred thousand dollars, belonging chiefly to two or three persons, dependent on these selections being made valid.

Let us now add to this the private and personal interest of a few men in the alleged grant to the State under the act of May 17, 1856, for the construction of railroads:

Mr. S. I. Wailes, swamp and overflowed lands, 214,909.34 acres, at $1 an acre	$214,909.34
In money, $140,000	140,000.00
Grant of May 17, 1856, for a railroad between Waldo and Tampa, 83,000 acres, valued at $3 per acre	249,000.00
	603,909.34
Wailes	603,909.00
Johnson, of New York, 85,000 acres, $3 per acre	255,000.00
Edwin N. Dickinson, esq., 350,000 acres, at $3 per acre	1,050,000.00

Estimating by conjecture the land grant agent of the Pensacola and Atlantic Railroad Company to be one-half the value of Mr. Wailes as a lobbyist, we would have $300,000 private and personal interest in that obsolete grant in West Florida. We find $2,208,909. If we add to this 450,000 acres of land, valued at $450,000, for the Pensacola and Atlantic Railroad Company, assignees, the amount will be $2,659,000 antagonistic to the people having free homes upon it, interested in withdrawing it from the laws which dedicate it to the people for free homes.

This great amount of value paid to a few individuals from the labor of the people on this land for making the public lands a grant to the State and preventing the people from owning their homes and improvements, and from acquiring free homes under the land laws of the United States, and, instead of reserving it for the use of citizens of the State, making it subject to be sold to foreign syndicates, carrying with the sale the right to exact tribute from the labor of citizens of the United States as the condition of its occupancy and cultivation.

SETTLERS, PURCHASERS, AND PEOPLE DEFRAUDED.

Mr. President, here stands the case before the Congress of the United States. The actual settler, the homesteader, whose protection both political parties have pledged themselves to, whom the laws give the right,

who has gone upon the land or who wishes to acquire a home on it, is met by an unauthorized order from the Interior Department, made in defiance of the State law and of the act of Congress, under which agents of these speculators claiming under this fraudulent title demand of him that he shall pay to them three and four and five and ten and twenty dollars an acre, as it may be, for his home, for his orange groves. Hundreds, perhaps thousands, of letters have come to me asking why Congress permits this condition of things to continue. It is not necessary to say that the laws make this criminal. It is no justification for us or the Interior Department to say that the laws punish the men who impose these fraudulent pretenses upon the people. The fact remains that it is done, and that under our laws this injustice and this wrong is being committed upon the people living on and others desiring homes on the public domain. These wrongs touch the pocket and the means and the labor and the comfort of the people. They are carried on solely in the interest of the personal fortunes of a few men, and not for public improvements.

I challenge denial of these facts. Here are the records of the State, here is the action of the last Congress of the United States, here is the action of the House of Representatives, here is the declaration of a majority of both houses of the Legislature of Florida containing these recitals, here is the fact plain, distinct, and evident that we are permitting a few individuals under color of an unauthorized reservation made in violation of law by the Secretary of the Interior, in defiance of the notice of the governor of the State in 1858–'59, in defiance of the resolution of the Legislature of the State by a public law that she had not complied with any of the conditions of the grant and made no claim to it—we are permitting individuals claiming without the pretense of a right under this reservation, by the acquiescence of officials, to dispose of this land, and making what? Quitclaim deeds to it for the benefit of these personal interests.

A PENITENTIARY OFFENSE.

If I were to enter upon some part of the public domain under color of some unauthorized reservation and without authority of law execute deeds, take the money of the people and give them nothing but my quitclaim deed for it, I would be arrested, convicted, and sent to the penitentiary. In what respect do these men differ from me if I were to do that? In nothing except the great profits they have derived and are deriving from the business of selling the homes and improvements of the people. Has our Government come to this, that public officials can not be found who will protect the poor man in his rights, the farmer and fruit-grower against the despoiler of the people's homes, the corruptionist, the foreign syndicates owning our free home land and drawing princely revenues from the toil of our people.

Are we not called upon to protect the people against this condition of things? Is it not the duty of the legislative department of the Government to do something, or are we as Senators so far separated from the people of the country that we look with indifference upon such a violation of the law, such an invasion of the rights of our people to the soil on which they live and labor?

NATIONAL FARMERS' ALLIANCE.

Mr. President, I have before me a resolution passed by the National Farmers' Alliance, a great and powerful association which is destined to tell with influence and power upon the political fortunes of this country, and a happy circumstance it is that it is growing into power and can speak potentially to us, commanding us to protect the people in their homes. I have this resolution here demanding that the Senators and Representatives of the States shall exhaust all their power to protect the people in their homes, to secure them free homes upon the public domain, to protect them against the speculations of foreign capitalists, to see that the land of the country is reserved for homes for the people, that thereby free government may be preserved:

Resolved, That the public lands are the rightful heritage of the people, and should be reserved for actual settlers, and that vast holdings of land by corporations, and especially by alien landlords, tending to create in our now free America a land and tenant system, is un-American in its nature and subversive of that equality of which we are justly proud.

We therefore demand that Congress and the Legislatures of the several States exhaust all their constitutional power to secure our domain to actual settlers, to the end that home ownership may be encouraged and extended and the life of popular government be preserved.

I bring now to the attention of Congress again, as I have done for years past, as forcibly as I may, the fact that the titles of the people of the State of Florida are being involved in confusion and difficulty; that they are being compelled, by fear of ejectment from the homes which the people's Government has granted to them upon the public lands, to take quit-claim deeds from this corporation, or rather from the individuals who have assigned their pretended right to this corporation, and that they are being deprived of their money without even a title to the land. I can not find words adequately to describe this shameless business of selling the homes and improvements of the people without right and without law, and the supineness or negligence of the public officials by whom it is permitted.

PATENTS MUST BE GRANTED TO SETTLERS AND PURCHASERS.

I have asked for an act giving title to all purchasers in good faith of limited quantities of this land to settle this question; I have asked and I now ask that all actual settlers shall be protected, as was the purpose and intention of the last act of Congress, and that patents be given to them, and I ask that the remainder of this public domain be opened to homestead settlement for free homes for the people, and that the Attorney-General shall be directed to institute proper suits for the protection of the people upon that land against these fraudulent and illegal claims, and that this shall be done without delay, so that these unlawful proceedings shall be arrested and the perpetrators be brought to justice and the people's homes protected and secured to them.

OUR PEOPLE'S HOMES MUST NOT BE OWNED BY FOREIGN SYNDICATES.

The sales of these worthless claims to great bodies of the soil of our State to foreign syndicates with the right to tax our people for years for the occupation of their own land, their own homes, which the public law has given to them under the established policy of our country, should be prevented now before they are consummated. What a shame, what a disgrace to our Government, that such a state of things shall be permitted to exist.

Here is a case where there is not a particle of right, not a shadow or even a pretense of law or equity, not a single ground of reason or argument, where the law, the right of the case, the public welfare, the established policy of the country all concur, and still the fact is that a few individuals have been able, and are still able, to nullify the law, to overthrow all these just considerations, to deprive hundreds and thousands of families of their homes, and many more of their right to homes, and to collect now and in the past or future millions of dollars from the people who are to live upon and cultivate the soil. For in the end all this price and value and cost and litigation will come upon the farmer and the fruit-grower. What is the mysterious power by which this can be accomplished?

THESE MEN HAVE NO RESPECT FOR CONGRESS OR LEGISLATURES.

Mr. President, what respect have these people for the Senate of the United States and the House of Representatives in the presence of the fact that for five years the House has been passing forfeiture bills which cover these grants in principle, and that in the last Congress they passed a bill forfeiting this grant absolutely and opening it to settlement, and that the Senate amended it by applying the condition that actual settlers should have a patent and that purchasers of limited quantities should have a patent from the United States, and thus the bill went to the committee of conference and received the approval of both Houses? What respect for the Congress of the United States have these people who, in the face of this action and with the knowledge that both houses of the Legislature of Florida in 1889, by a large majority in each body, passed a resolution reciting the facts of record in the legislation of the State as I have stated them, that being the third time that the Legislature of the State of Florida had authoritatively declared that neither this railroad company nor its alleged predecessor nor any other railroad company had ever had a grant of this land from the State or that it had been disposed of by the Legislature in any way whatever?

Have we arrived at that condition in which it is only necessary to make a false claim against the Government large enough to place it beyond the possibility of defeating it? Such seems to be the opinion of these men. I will not believe it.

PEOPLE'S HOMES TAKEN.

With this condition of facts, Mr. President, is it not wonderful that in this country thousands of people have their homes, their improvements, their labor for years, their rights to occupation on the public domain as free homes upon over a million of acres, upon a territory nearly as great as Oklahoma, which was the other day made a Territory—that an area of country as great as that should be absolutely put in the pockets of a few men in defiance of the act of Congress and of the acts of the Legislature of the State of Florida?

Why, Mr. President, this is the public domain. The duty of the law officers is plain. The facts are remarkable, it is true, but I aver them and I challenge denial. Here are the laws, here is the recital of a majority of each house of the last Legislature, and a true recital of facts. I challenge denial; I aver that this land and the homes of these people are being sold and disposed of without the least authority and in defiance of the public law. Under other circumstances and unsupported by powerful influences and the large amount of money which is involved in sustaining the title to these lands and the ownership of these individuals, the persons who are selling this land would be promptly prosecuted by public authority.

They are poor men who live upon these lands, they are laboring people from all the States of the Union with their wives and their children, whose humble homes and little possessions are at stake here. The great capitalists who have bought this land from the original claimants—claimants, as I say, without a shadow of right; claimants under the title of the Florida Railroad Company, which never had a title or a grant or a word or a syllable in the laws of the State to give it a right under the act of 17th May, 1856—these large capitalists, some of them aliens, if they have a right could go to law and litigate it, but the poor people of the country to whom the laws have pledged this land, many of whom are living upon it, who have been frightened into the purchase of the land from the claimants, need the action of Congress and of the public authorities in their protection.

I have here a letter which I will print with my speech. The letter is from Mr. Bullard, in the county of Putnam, an honest man and a useful citizen. I give it to you as an indication of the wrong and the injustice which is being perpetrated by our permission upon the people there. This man says that he bought a tract of 80 acres of land from the United States, entered it, had his certificate of entry, paid his money for it, sold it, and it was improved. This railroad company's agent came along under this assignment from Mr. Edward N. Dickinson, as the purchaser of the Florida Railroad Company, and years after his entry from the United States and his payment and his sale and his improvements, with a valuable orange grove grown upon it by the purchaser, this young man, with his little family of two or three children, who had been laboring all his life for this little competency, is met with a demand and threats of a suit for $4,000 for the alleged failure of title by the fraudulent claim of this railroad company, and his life threatened with cloud and gloom for years. He writes to me to represent the condition of his family, and the alarm which they were under lest his little earnings for his lifetime would be swept away, and by a pure and absolute fraud.

CLOUD ON EVERY MAN'S TITLE.

Shall the men who are inflicting these wrongs upon the people be allowed to continue it with impunity? Shall every family's home be cursed with a false and unreal title in order that these agents and nonresidents shall fill themselves with the hard-earned money of the people?

This is but one of hundreds and thousands of cases and we should not permit it. I could occupy the whole day in reading letters to you from the people who are upon this grant and now being sold out by these persons and compelled to purchase their lands at three and four dollars an acre, and yet, as I aver to you, without one word in the law of the State of Florida or of the United States which gives to them the slightest interest whatever, but in defiance of the repeated action of the Legislature of the State of Florida, and yet the Interior Department permits it.

PATENTS FOR SETTLERS AND FOR PURCHASERS AND EVERY HOME MADE SECURE.

The remedy for this great public wrong is plain. Congress must give a patent for 160 acres to every actual settler and to every purchaser of a limited quantity of land, thus making secure every man's title and giving titles where now they have none, and giving repose and security to the titles to the lands of the State and securing its ownership to our own people, and not to foreign capitalists. They must open the remainder of this land to homestead or cash entry in small bodies, and hold accountable the persons who have taken these great sums of money from the people on these false pretenses.

Every falsehood which malice could invent and money could induce has been circulated against me for defending the people's right to their homes, and endeavoring to obtain the passage of a law which would make the titles of property in our State secure where now there is no title. A few persons, through the action of the Interior Department, claiming under the Florida Railroad Company, have been allowed to appropriate to their own personal use a vast amount of the public land of the people of the United States and to impose a tribute of millions of dollars on the labor of our people. They have made the construction of a railroad a pretense for the imposition of this burden on the people.

This has been a mere pretense, and has nothing to do with the construction of the road.

The enterprise and liberality of such men as Mr. H. M. Flagler, Mr. H. B. Plant, and Mr. Coleman, and of the late Mr. Barnum, of Connecticut, has built lines of railroad, great hotels, and splendid steamships which are models of naval construction. These have developed the young city of Tampa into a present condition of flourishing vigor and a bright promise of future growth into a great commercial metropolis on the Gulf, and St. Augustine into a marvel of architectural beauty and grace, and given to Jacksonville increased growth and prosperity and assured future of commercial power and development, while her sister city of Fernandina, with her splendid bay, is opening her arms to attract a part of the great commerce that is to pass through the ports of this part of the State. All along the line of this connection the growing and attractive towns and cities of Palatka, Sanford, Orlando, Tavaseres, Kissimmee, Lakeland, Bartow, Fort Meade, Arcadia, Fort Ogden, Punta Gorda, Manatee, and Fort Myers are becoming places of business and delightful sojourn and residence.

Palatka, on the St. John's River, with her new railroad connection to Macon, Ga., and thence to the North and West with her entire lines of railroad, feels the impulse of rapid progress. Ocala, Gainesville, and Leesburgh are becoming cities with bright promise of future greatness, and many other towns are springing into new growth. The long lines of the Florida Central and Peninsula Railroad, running through the State from Chattahoochee to Tampa, Fernandina, and Cedar Keys, pass through a country which is adapted by nature to be the home of a prosperous and happy people. Cedar Keys, on the Gulf, will develop a coast trade and become prosperous from the revenues of her own immediate section, while she will seek to compete with other places for the trade of the Gulf of Mexico. Middle Florida, with its beautiful cities of Tallahassee, Quincy, Monticello, and Madison are becoming places of attraction to the wealthier people of the United States, and East Florida, with Live Oak, Lake City, and Jasper, all connected by rail, have advantages which will attract to them at an early day multitudes of people from all parts of our country.

In the west we have the growing city of Apalachicola, at the mouth of a great river, which is beginning to regain her former commercial strength and prosperity. The beautiful town of Marianna, in the splendid farming county of Jackson, with Washington, Holmes, Walton, Santa Rosa, and Escambia, with the flourishing towns of Chipley, De Funiak, Milton, and others, all connected by rail; the town of St. Andrews already growing into notice and only waiting a railroad connection to attract general attention.

Then last but not least there is the ancient city of Pensacola, with a bay and harbor having no superior, with an assured future of great power and prosperity, holding such natural geographical relations to the great mineral and agricultural wealth of Alabama that she can not be divorced from union with and control of them and awaiting only additional and wisely managed railroad facilities to assure to her great wealth and population as a port of shipment and of naval construction for the commerce of the Gulf of Mexico and of Central and South America and the countries of the Pacific. With these great advantages in the State shall we in Congress permit the greed and avarice of a few small men to stand in the way of the prosperity of the people of that State?

The great investments in railroads can only be valuable when the soil is cultivated and owned by the people who cultivate it. Every public interest demands that the policy of home ownership of the public domain shall be favored, and not be allowed to be defeated by such unlawful methods as have been and are now being used in reference to this grant of May 17, 1856.

As to the part of this grant which is situated between Pensacola and the Apalachicola River, the facts of the case are equally clear and render the claim to it entirely fictitious. The reservation was made of the alternate sections along a line which it was supposed would be located and built by the Pensacola and Georgia Railroad Company under the internal-improvement act, and under the assumption that the State Legislature would dispose of the land under the act of May 17, 1856, to this company. This reservation was made under this assumption in 1856, soon after the passage of the act.

The Legislature did not dispose of the land to this company as the beneficiary of this grant; did not authorize the location of any line of road from Apalachicola River to Pensacola as the beneficiary of this grant.

No line of road was ever located under the authority of a disposal of this grant by the Legislature.

No road was ever built and the Pensacola and Georgia Railroad, running from Quincy to Lake City, was sold as a completed road by the trustees in 1869, and became an extinct corporation and was prohibited by statute from any further extensions, and died without a successor.

In 1880-'81 the Legislature chartered the present Pensacola and Atlantic Railroad Company to build a road from Chattahoochee to Pensacola, and gave them 20,000 acres to the mile, or about 3,000,000 acres, of the swamp and overflowed land grant under the act of 1850, and of the 500,000 acres internal-improvement grant of 1845, and in addition gave them all the right which the State had under the act of the 17th of May, 1856, so far as the land lay along the road that should be actually built.

This was about fourteen years after the Legislature had refused to claim the land and six or seven years after Secretary Chandler had decided that this land was public land and open to settlement and entry. The claim of the agent of this company is not to the right now to make a selection of the unoccupied land in six miles on either side of the road actually built, but that the old unauthorized reservations made in 1856 for the extinct Pensacola and Georgia Railroad Company, which never was the grantee from the Legislature of the State, which never located a line of road under a "disposal" by the Legislature, which never built any road, which finally was sold by the State officials as a completed road, which was forbidden by the Legislature of the State to be extended to Pensacola, belongs to the Pensacola and Atlantic Railroad Company, and that 600,000 acres of the public land has been thus taken away from the operation of the laws which grant it to the people for free homes.

It is believed that this or a large part of it is the land which the newspapers report is about to be sold to a foreign syndicate by whom tribute of millions of dollars is to be taken from the toil of our people to be spent in foreign lands, after paying a large share to the land-agents who make the sale.

This is taking the land away from the people, and making a business of sacrificing the homes and the happiness of our people to satisfy the unlawful cupidity and greed of a few men. It is only necessary to state the facts of the case to show how absolutely void is this claim of title, and how great the wrong and injury to the honest and hard-working people of the State, committed by the men who have been taking their money from them for this worthless claim of title.

Mr. President, that is all I have to say in regard to this resolution.

I ask leave to print with my remarks such of the documents as I have referred to, if there be no objection, as I think proper; and I will

further say that I have no objection to the reference of the resolution now to the Committee on Public Lands.

The PRESIDENT *pro tempore*. The Chair hears no objection to the request of the Senator from Florida to print certain papers in his remarks, and if there be no objection the resolution will be referred to the Committee on Public Lands.

APPENDIX.

[Extract from joint resolution which received a majority vote of both houses of the Legislature of Florida relating to land grant made by the United States to the States of Alabama and Florida by the act of Congress approved May 17, 1856.]

Whereas by the act of Congress entitled "An act granting public lands in alternate sections to the States of Florida and Alabama, to aid in the construction of certain railroads in said States," approved May 17, 1856, it was provided as follows:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That there be and there is hereby granted to the State of Florida, for the purpose of aiding in the construction of railroads from St. Johns River at Jacksonville, to the waters of Escambia Bay at or near Pensacola, and from Amelia Island on the Atlantic to the waters of Tampa Bay, with a branch to Cedar Key, on the Gulf of Mexico; and also a railroad from Pensacola to the State line of Alabama, in the direction of Montgomery, every alternate section of land designated by odd numbers for six sections in width on each side of said railroad and branch. But in case it shall appear that the United States have, when the lines or routes of said roads and branch are definitely fixed, sold any sections or any parts thereof, granted as aforesaid, or that the right of pre-emption has attached to the same, then it shall be lawful for any agent or agents to be appointed by the governor of said State to select, subject to the approval of the Secretary of the Interior from the lands of the United States nearest to the tiers of sections above specified, so much land in alternate sections or parts of sections as shall be equal to such lands as the United States have sold or otherwise appropriated, or to which the rights of pre-emption have attached as aforesaid; which lands (thus selected in lieu of those sold, and to which pre-emption rights have attached aforesaid, together with the sections and parts of sections designated by odd numbers as found and appropriated as aforesaid) shall be held by the State of Florida for the use and purpose aforesaid: *Provided*, That the land to be so located shall in no case be further than 15 miles from the lines of said road and branch, selected for and on account of each of said roads and branch: *Provided further*, That the lands hereby granted for and on account of said road or branch severally shall be exclusively applied in the construction of that road or branch for and on account of which such lands are hereby granted, and shall be disposed of only as the work progresses, and the same shall be applied to no other purpose whatever: *And provided further*, That any and all lands heretofore reserved to the United States by any act of Congress or in any other manner, by competent authority, for the purpose of aiding in any object of internal improvement or for any other purpose whatsoever, be and the same are hereby reserved to the United States from the operation of this act, except so far as it may be found necessary to locate the routes of said railroads or branch through said reserved lands, in which case the right of way only shall be granted.

"SEC. 2. That the sections and parts of sections of land which by such grant shall remain to the United States within 6 miles on each side of said roads or branch shall not be sold for less than double the minimum price of the public lands when sold, nor shall any of said lands become subject to private entry until the same shall have been first offered at public sale at the minimum price.

"That the lands hereby granted to said State shall be disposed of by said State only in the manner following: that is, a quantity not exceeding 120 sections for each of said roads and branch, and included within a continuous length of 20 miles of each of said roads and branch, may be sold; and when the governor of said State shall certify to the Secretary of Interior that any 20 continuous miles of any or either of said roads or branch is completed, the entire quantity of land hereby granted, not to exceed 120 sections for each of said roads or branch having 20 continuous miles completed as aforesaid, and included within a continuous length of 20 miles of each of such roads or branch, may be sold; and so, from time to time, until said roads or branch are completed; and if any or either of said roads or branch is not completed within ten years, no further sales shall be made, and the lands shall revert to the United States.

"SEC. 3. That the said lands hereby granted to the said State shall be subject to the disposal of the Legislature thereof for the purposes aforesaid, and no other; and the said railroads and branch shall be and remain public highways for the use of the Government of the United States, free from toll or other charge upon the transportation of any property or troops of the United States.

"SEC. 4. That the United States mail shall be transported over said roads and branch, under the direction of the Post-Office Department, at such price as Congress may by law direct: *Provided*, That until such price is fixed by law the Postmaster-General shall have power to determine the same.

"SEC. 5. That a similar grant of alternate sections of public land is hereby made to the State of Alabama to aid in the construction of a line of railroad from Montgomery, in said State, to the boundary line between Florida and Alabama, in the direction of Pensacola, and to connect with the road from Pensacola to such line upon same terms and conditions in all respects as hereinbefore prescribed." Approved May 17, 1856.

And whereas the Legislature of Florida has never granted the said lands, or any part of them, to any railroad company, either within ten years from the date of the passage of said act or since that time, except that in the act of the Legislature of Florida entitled "An act to incorporate the Pensacola and Atlantic Railroad Company, and to grant certain lands to the same," approved March 4, 1881, nearly fifteen years after the said act had expired and ceased to be of any force and effect by its own terms of limitations so far as authorizing the construction of any line of railroad; the following enactment is made:

SEC. 16. That the State of Florida hereby grants to the said company, its successors and assigns, all powers and privileges and all the title and interest of the State in and to the lands granted by act of Congress, approved May 17, 1856, entitled "An act granting public lands in alternate sections to the States of Alabama and Florida," for the construction of certain railroads in said States, so far as said lands lie along the proposed railroad from the Apalachicola River to the waters of Escambia Bay for the uses and purposes mentioned in said act of Congress; and upon the completion of each and every section of 10 miles of said road all the right, title, and interest of the State in the alternate sections granted by said act opposite said section of 10 miles, shall vest in said company.

The said act of Congress of 12th May, 1856, grants the alternate sections for 6 miles on either side of a line of road, which shall be actually constructed within ten years from the passage of said act, and whereas the reservation under said grant was of 6 miles on either side of a line of railroad projected by the Pensacola and Georgia Railroad Company, which said line of railroad was never built by said Pensacola and Georgia Railroad Company, but the charter of said Pensacola and Georgia Railroad Company expired by limitation of law, and the said corporation was prohibited by the statutes of this State from any further exercise of corporate power or right in the construction of said line of railway, and became defunct for the purpose of such construction without any succession in privilege or right in any person.

Whereas by said section 16 of the act of the Legislature of Florida, approved March 4, 1881, it is provided that "all the right, title, and interest of the State in and to the lands granted by act of Congress, approved May 17, 1856," so far as said lands lie along the proposed railroad from the Apalachicola River to the waters of Escambia Bay, are granted to said Pensacola and Atlantic Railroad Company; and

Whereas many of the lands in the reservation made for the defunct Pensacola and Georgia Railroad Company, without the authority, sanction, or approval of either the Legislature or governor of the State of Florida, do not lie along the then "proposed (and now completed) railroad from the Apalachicola River to the waters of Escambia Bay," and are not within "6 miles on either side" of said railroad, and are not within either the terms or the intent and spirit of said act; and

Whereas the said Pensacola and Atlantic Railroad Company has not made any claim of a right now to select under the authority of the State and to have a new reservation made by the United States of the public lands now unoccupied for 6 miles on either side of the completed line of said Pensacola and Atlantic Railroad, but said railroad company do claim the reservation made for the Pensacola and Georgia Railroad Company without authority of law and without the sanction or approval of the Legislature or governor of Florida, as appears from the journals of the Legislature and the letter of M. S. Perry, then governor of Florida:

* * * * * * *

[Section 2 of Senate bill 1430 "to forfeit certain lands heretofore granted for the purpose of aiding in the construction of railroads, and for other purposes," Fiftieth Congress, first session, which passed the Senate May 10, 1888.]

"SEC. 2. That in all cases where persons are in possession of any of the lands affected by any such grant and hereby resumed by and restored to the United States, under deed, written contract with, or license from, the State or corporation to which grant was made, or its assignees, executed in good faith prior to January 1, 1886, they shall be entitled to purchase the same from the United States, in quantities not exceeding 320 acres to any one such person, at the rate of $2.50 per acre, at any time within two years from the passage of this act, and on making requisite proofs and payment to receive patents therefor."

* * * * * * *

And whereas the committee of conference of the two Houses of the Fiftieth Congress on Senate bill No. 1430, before set forth, did report and recommend the passage of the following as the agreement of the two Houses of Congress, namely:

"SEC. 8. That all actual settlers on any of the public lands in the State of Florida affected by the grants who made actual settlement on any of said lands after the time limited in the granting act for the construction of certain lines of railway in said States, approved the 7th May, 1856, which lies adjacent to the part of the lines of railroad built under and in pursuance of the act of the State of Florida, entitled an act to encourage a liberal system of internal improvements in the State of Florida, approved January 5, 1855, within the time limited by Congress in the granting act, and which were granted to any of said companies by the Legislature of the State of Florida in accordance with said act of Congress, and are held by purchase in good faith from said companies made before the year 1866 are hereby confirmed to such purchasers: *Provided*, That a mortgage in pledge of said lands by any of said companies shall not be considered as a sale for the purpose of this act.

"P. B. PLUMB,
"I. N. DOLPH,
"E. C. WALTHALL,
"*Managers on the part of the Senate.*
"WM. S. HOLMAN,
"L. E. PAYSON,
"*Managers on the part of the House of Representatives.*"

And whereas the Senate of the United States refused to concur in the amendments of the House of Representatives, and entered into a conference with the House; and

Whereas there never was at any time a reservation of any land under the grant made by authority of the Legislature of the State, as will appear from the following letter of Hon. M. S. Perry, governor of the State of Florida:

"EXECUTIVE CHAMBER, *November 3, 1859.*

"SIR: I have noticed a paragraph going the rounds of the papers to the effect that certified lists have been issued by your department for the lands lying along the line of the Florida, Atlantic and Gulf Central Railroad, being a portion of the land inuring to this State conditionally under the Congressional act of May 17, 1856. McWells, the land agent of the State, and agent for the Florida, Atlantic and Gulf Central, and Florida and Alabama, and Florida Railroad Companies, informs me that he has received the certified lists for lands to which the Alabama and Florida Railroad Companies are entitled by virtue of the Congressional act of May 17, 1856, and the act of the State Legislature of December 27, 1856; that when he left Washington he understood it to be the opinion of your department that the certified lists could not issue to the companies direct for lands to which they may be entitled, for the obvious reason that the grant, being a grant in its entirety to the State of Florida, subject to the disposal of the Legislature thereof for the purposes aforesaid, your department could not recognize third parties to whom no assignment had been made by the State.

"In this view he concurred, and did not ask for certified lists from your office for lands which the Florida, Atlantic and Gulf Central Railroad will be entitled to receive from the State. By the act of the Legislature dated December 27, 1856 (which I herewith inclose), the State of Florida accepted the lands granted to her upon the terms, conditions, and restrictions imposed in the Congressional act of May 17, 1856, and by the second section of the same act disposed of that portion of it to which the Alabama and Florida Railroad Company are entitled and have received.

"The Legislature has as yet made no further disposition of the lands inuring to this State under the Congressional act of May 17, 1856. That body will again be in session within the present month, when they will undoubtedly make such disposition of these lands as in their wisdom they deem proper.

"In the mean time I request that the adjustment of the grant to the State may be brought to a speedy conclusion as the labors of your department will permit, and that lists of the lands be made out in the name of the State and forwarded to me, that I may lay the matter before the proper body for disposition, as provided for by the third section of the act of Congress of May 17, 1856, making the grant.

"Very respectfully, your obedient servant,

"M. S. PERRY.

"To Hon. THOMAS A. HENDRICKS,
Commissioner of the General Land Office, Washington, D. C."

Therefore be it resolved, That the lands embraced in the act of the Congress of the United States entitled "An act granting lands to the States of Alabama and Georgia for the construction of certain lines of railway," approved May 17, 1856, should be restored to the public domain, and the right of actual settlers thereon to 160 acres to each head of a family should be recognized, and a patent to the same granted by the United States.

Second. A patent should be granted by the United States to all innocent purchasers in good faith to 160 acres of land; also, to all town sites.

Third. That in all cases where persons have been in actual possession of land within the assumed limits of the reservation of public lands under the act of Congress approved May 17, 1856, and have been dispossessed, either by force or by any other means, the patent should be granted by the United States to the persons so dispossessed who were in such actual and peaceful possession.

Fourth. That the Congress of the United States is hereby requested to enact such statutes as will carry into effect these resolutions as to all lands in the State of Florida within the assumed limits of the grant contained in the act approved May 17, 1856.

Fifth. That the Secretary of Interior of the United States be requested by the governor of this State to take such action as shall aid in carrying into effect these resolutions.

EXTRACT FROM THE LETTER OF MR. TELLER, SECRETARY OF THE INTERIOR.

In the matter of the sale of lands by the company known as the Florida Railway and Navigation Company, your attention is invited to the following extract from the letter of Hon. H. M. Teller, Secretary of the Interior, dated June 9, 1884:

* * * * * * *

All persons purchasing from the railroad company are chargeable with notice of the conditions upon which the title of the State under the grant, and of the title of the company under the laws of the State, is liable to be defeated, and in event of the failure of the railroad title, through an enforcement of the forfeiture of the grant or from other sufficient cause, they can not be regarded as innocent purchasers.

The whole matter of the recognition, confirmation, or forfeiture of this grant is now before Congress, and the claims of the company and of settlers upon the land are subject to the action of that body.

McMEEKIN, FLA., *September* 18, 1889.

DEAR SIR: A year ago, perhaps, Dr. McMeekin wrote you concerning a Government purchase I made several years ago of land near Johnson Station on the Florida Southern Railroad, made before said road was built. You thought Congress would take some action in the matter by last March and that I would be safe. It seems that it did not, as the Florida Railway and Navigation Company have had the case decided against me. I entered my appeal at Washington and recently they decided against me and so notified me.

The land cost me $1.25 per acre at the time, and I was told in the Gainesville office that it was offered land. I paid it and they gave me a receipt; never got a patent. The Florida Railway and Navigation Company now charges me $800 for it, and having sold it, and it having been improved to the amount of $4,000, I presume there is no other alternative but to pay the amount or defend my title. The company (Florida Railway and Navigation) represented by a Mr. Tucker seems to be hard with me, in ill-humor, because I sent in this plea and at the same time told them why I did so, and told them what you had written, etc. Mr. Tucker at once hallooed to one in an adjoining room, and sneeringly remarked: "Here's another Call man on this case."

Now, I know that Dr. McMeekin had implicit faith in you as a man, and in your judgment; and I, while unacquainted, would like to know, should I purchase this from railroad company again, will there be any chance ever to get this money refunded by an act of Congress or can I enter suit anywhere in any court where there is a chance to get damages? My reason for asking this now is that the United States Government has sent me a blank to fill out; and this blank, in form, is simply a relinquishment in full to the land. This, when done, will get back the purchase only. Must I sign it? Should I sign it would I not then lose all claim on Government? It is a very important matter, and I shall do just as you say. I am willing to risk your judgment.

The doctor is gone (his death, I suppose, you have heard of), and can no longer advise, so I leave it with you, and trust I will hear from you at once. I know you are the people's friend, and in the coming election they will show their appreciation of you.

I am, yours very truly,

GEO. F. BULLARD.

Hon. WILKINSON CALL.

[Extracts from McClellan's Digest of the Laws of Florida.]

SEC. 7 (pages 995, 996) [Atlantic, Gulf and West India Transit Railroad]. In case any company engaged in building the said unconstructed part of the line between Amelia Island and the waters of Tampa shall prefer to take bonds of the State instead of indorsed bonds, as provided for in the two preceding sections, the governor of the State is hereby authorized to substitute State bonds similar in character to those issued in aid of the Jacksonville, Pensacola and Mobile Railroad Company in virtue of the provisions of this act, and in such case the governor shall demand and receive the company bonds for the same amount in exchange for such State bonds in the same manner as prescribed in the case of the Jacksonville, Pensacola and Mobile Railroad Company: *Provided, however*, That such bonds shall only issue in proportion as sections of the road are completed according to the stipulations of the last preceding section.

SEC. 9 (page 996). The Florida Railroad Company is hereby required to commence operations on the construction of the road, commencing at a suitable point on their present line of road and running southward to some point on the Gulf coast, within twelve months next succeeding the passage of this act, and to complete said road as far south as the town of Ocala, in Marion County, within two years from the date of the passage of this act. That in case of failure of said company to comply with the provisions of this act all exclusive right of way between said road and Tampa Bay heretofore granted to said Florida Railroad Company by this State shall cease to exist.

SEC. 28. In order to secure the speedy completion, equipment, and the maintenance of a connection by railroad between Jacksonville, on the Atlantic coast, and Pensacola, on the Gulf coast, and Mobile, in Alabama, running through the State of Florida, the following-named persons, viz: George W. Swepson, Milton S. Littlefield, J. P. Saunderson, J. L. Requa, William H. Hunt, their associates, successors, and assigns, are hereby constituted a body politic and corporate, under the name of the Jacksonville, Pensacola and Mobile Railroad Company. * * *

SEC. 31 (page 1066). The Jacksonville, Pensacola and Mobile Railroad Company shall have the exclusive right for twenty years to build a railroad, with one or more tracks, from the terminus of the late Pensacola and Georgia Railroad, now the Tallahassee Railroad, at Quincy, Gadsden County, to the dividing line between the States of Florida and Alabama, running through the counties of Gadsden, Jackson, Holmes, Washington, Walton, Santa Rosa and Escambia, crossing the Pensacola and Louisville Railroad, with the privilege of continuing the same to Mobile and of connecting with any railroad running to Mobile: *Provided, however*, That in the construction of said railroad the line west of the Chattahoochee River shall not in any instance be run or the road built nearer than 15 miles of the north line of the State of Florida.

SEC. 36. In order to aid the said Jacksonville, Pensacola and Mobile Railroad Company to complete, equip, and maintain its road, and to aid in perfecting one of the public works embraced in the internal improvements of the State, the governor of the State is hereby directed to deliver to the president of the said company coupon bonds of the State to an amount equal to $16,000 per mile for the whole line of road and length of railroad owned by or belonging to said Jacksonville, Pensacola and Mobile Railroad Company, in exchange for first-mortgage bonds of said railroad company of the denomination of $1,000, when the president thereof shall certify upon his oath that the road or parts of road for which he asks for an exchange of bonds is completed and is in good running order.

SEC. 47 (page 1072). * * * That the said railroad [Jacksonville, Pensacola and Mobile Railroad] shall be completed from Quincy to the Apalachicola River by the 1st day of July, A. D. 1870, and the whole line within this State shall be completed within five years from the passage of this act; otherwise all chartered rights vested in this act shall be forfeited to the State, be so altered and amended as to read as follows: That the said railroad shall be completed from Quincy to the Apalachicola River by the 1st day of January, A. D. 1871, and the whole line within this State shall be completed within five years from the 28th of January, 1870, otherwise all chartered rights vested in this act shall be forfeited to the State. All laws and parts of laws conflicting with the true intent and meaning of this act, which is to extend the time of completing the railroad from Quincy to the Apalachicola River to the 1st day of January, A. D. 1871, be, and the same are hereby repealed.

SEC. 52 (page 1063). In all cases of seizure and sale of the railroad property and franchises of any company by the trustees of the Internal Improvement Fund, under the provisions of the act to provide for and encourage a liberal system of internal improvement, the purchaser or purchasers shall be entitled to do whatever acts may be necessary to enable him or them to exercise and enjoy the franchises granted by the charter of incorporation, under the provisions of the said original charter and the amendments thereto. And in order to prevent doubt, it is hereby declared that all the provisions of the internal improvement act above referred to, and which act constitutes a contract between the State and the companies, shall continue to apply to the said corporations so newly organized, in the same manner as the same were applicable to the corporations which existed under the same charters prior to the sale: *Provided*, That this section only applies to roads built under said internal improvement act. * * *

SEC. 54 (page 1064). All the rights, franchises, privileges, and conditions granted and prescribed in this act are hereby granted and applied to any company that is now or hereafter may be organized for the purpose of building a railroad from the waters of Tampa Bay and Charlotte Harbor, on the Gulf, by the way of Ocala, and ending at Gainesville, on the Florida Railroad and from Marianna, in the county of Jackson to the waters of St. Andrew's Bay, in West Florida, and also to the waters of Apalachicola Bay, in West Florida, and to a point on the Choctawhatchie Bay between the mouth of the Choctawhatchie River and Boggy Bayou, and from Palatka and Mellonville, on the St. John's River, to the nearest practicable point on the line of railway from Tampa Bay or Charlotte Harbor to Gainesville, as far as the same can be constitutionally granted. The said railroad company from Palatka is hereby authorized to connect and be entitled to all the benefits of section 30.

Pension Appropriation Bill.

SPEECH

OF

HON. HARRISON KELLEY,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 18, 1890,

On the bill (H. R. 7160) making appropriations for the payment of invalid and other pensions for the fiscal year ending June 30, 1891, and for other purposes.

Mr. KELLEY said:

Mr. CHAIRMAN: The discussion on this bill has not only been interesting but it has been edifying. A stranger to the last thirty years of our history, listening to the debate to-day and not knowing what was in the bill, might be excused for thinking that the debate was over the question whether there were more Democrats than Republicans in the Union Army during the late war for the Union. Hearing the Republican speeches only, he would be led to the conclusion the war was fought by Democrats on one side and Republicans on the other; hearing the Democratic speeches only, he would probably conclude it was a war between the two great factions of the Democratic party, and that the Union faction had been wise enough to employ a few Republican officers, and thereby achieved success. Hearing the speeches on both sides, he would naturally conclude the question had finally resolved itself into the one, whether the Democrats or Republicans were most in favor of the passage of a service-pension bill for the ex-Union soldier at this time, and from the remarks made on this floor to-day he would probably be in doubt as to the latter question.

But as to the important question, as to the early success of that great measure of justice, after hearing the remarks of the gentleman from Indiana, Mr. BYNUM, who, speaking for the ten Democratic members from that State, pledged the 10 votes solid for the prompt consideration of the service-pension bill, and hearing the eloquent, burning words of that glorious old patriot Democrat from New York, Mr. SPINOLA, who in the name of patriotism, gratitude, and Democracy, pledged his earnest efforts for a service pension to every honorably discharged Union soldier, and the earnest, eloquent words of Mr. CHEADLE, Mr. GROSVENOR, and others on the Republican side, he would readily conclude that so far as the action of this House was concerned that measure was a foregone conclusion, and in that judgment he would not be mistaken; and, Mr. Chairman, there are so many reasons why this should be done that I desire to refer to a few of them.

First, it is an act of justice to the soldiers, justice in too many instances long delayed. The soldier enlisting in 1861 or 1862 and serving three or four years, as most of them did, entered at a stipulated price, usually $13 per month, which at the time meant gold or sil-

ver. He was paid in paper that was worth on an average during his service 58 cents on the dollar. The difference between what he received and what he should have received under the contract would, if placed at interest at 6 per cent. and compounded, amount to more at this time than an eight-dollar-a-month pension would amount to the rest of his life.

A further fact is that he saved this country from being divided, and thereby saved to the country the expense of a standing army along the frontier between the Northern and Southern Confederacies, from the Atlantic to the Pacific, the expense of which to either government would be more than enough to pay the entire pension account, service and otherwise. The expense of these armies would have been perpetual, while the pension-expense account will soon evaporate and disappear.

Again, Mr. Chairman, the simple presence of these hundreds of thousands of trained veterans in our country, for the purposes of defense against a foreign country, is equivalent to a standing army of the same numbers. A foreign country, in counting the cost and the chances of success in a war with this country, would make their estimates on this basis, and the restraining influence would be very great, and for the purpose of defense against foreign foes this country is enabled to get along with one-fourth the expense she would, were it not for the presence of these veterans.

Again, Mr. Chairman, the soldier entering the Army left some occupation that he had been used to and had filled for years and expected to follow for a livelihood. After three or four years' service in the war he returned, if at all, not only with impaired health or maimed, but to find his old occupation gone and his place filled by another. He had to seek employment elsewhere, and finding nothing better to offer emigrated to the West to get him a home and catch on again by dear experience to the new and to him unusual methods of business. On the basis of the then prices of farm produce he went in debt for a part of the purchase-money of his land or of his improvements, concluding, as he fairly had a right to conclude, that by industry and economy he could work out and pay off the mortgage; and he went on, looking forward to the time when he would be out of debt, and with his wife and children around him in a home all his own he could look forward to the declining years of his life with a calm and peaceful prospect; and in glancing at the past he would behold a country prosperous and a people happy, with the proud consciousness that he had helped to save that country from peril and had contributed somewhat to the general prosperity. But now, alas, he wakes to find the happy dream has vanished; he peers and delves into the causes of his poverty to find also that while he toiled and sweated others had legislated, and that legislation had been all against him and in the interest of the man who twenty years before had taken a mortgage on his farm, and that, it having been once or twice or thrice renewed, with interest paid semi-annually, it now requires double the amount of produce to pay interest and principal as when it was given.

He investigates further for the cause of this and finds that during that twenty years, while the population and business of the country have been constantly expanding and increasing, the currency per capita of the country has been constantly contracting and decreasing; he finds that consequently as the price of his produce decreased the worth of the money of the mortgage-holder and bondholder increased, and as his poverty increased the wealth of the other fellows increased also. He dives a little deeper into the mysteries of the legislation that has brought about these conditions, and he finds that, to accomplish it, at one fell swoop in 1873 silver was demonetized; he finds that to accomplish it the money power slipped a provision into a bill surreptitiously and slyly, and that Congress passed it, a majority of those who voted for it not knowing it was in the bill, and that the President who approved it did not know it; that it was a swindle everybody knows and everybody admits, yet seventeen years have passed and the swindle remains on the statute-book only half remedied. He looks again and beholds sixty millions—sixty millions of the money in the plethoric Treasury of his country has been loaned to certain banks without interest, only to be again invested by the banks in bonds and mortgages at a high rate of interest.

As he contemplates these things and then glances at his toil-worn but faithful wife, in her faded calico gown, who has cheerfully shared his joys and privations and sorrows, and glances again at his own plethoric corn-crib, and reflects that a wagon-load of it will only bring a dollar, is it any wonder that his memory goes back a quarter of a century or more to the time when he stormed the batteries at Chickamauga, when he so cheerfully followed the glorious flag up Missionary Ridge, when he lay in the trenches around Atlanta or Vicksburg, when he marched with Sherman to the sea, and when at last peace came how his heart leaped with joy at the prospect of again enjoying with his young wife the comforts of home and peace and prosperity? And do you wonder that when he contemplates the greatness and the power and the wealth of the country he did so much to preserve the thought creeps into his mind and in the minds of his comrades that it would be more just in the Government to place a few of its surplus dollars in their hands and less in the vaults of the Treasury or of the banks?

These thoughts, Mr. Chairman, are now occupying the brains of the Union veterans of the country, and especially the veterans of the West and Northwest, where most of them reside, and where monetary and agricultural depression prevails to a greater extent than elsewhere in the country.

These men are brave; they are modest, as brave men are always modest; they are growing old; they are for the most part poor; their age, their infirmities, their necessities justify them in doing as they are doing, asking the Government, not for charity, not for a gratuity, but for justice; they ask that their services may be recognized, and as fast as they reach the age of fifty years, which most of them have passed, that this Government pay them $8 a month the balance of their natural lives, and that it pay their widows the same after they are dead, or during their widowhood.

But gentlemen say it would be a violation of precedent; that the survivors of other wars were not placed on the service-pension roll until forty years after the war had closed; but gentlemen forget that the war for the Union itself was a violation of precedent, and that the Revolutionary war, the war of 1812, or the Mexican war were but skirmishes compared to the war for the Union. Gentlemen forget we were fighting Americans as brave, as heroic, as skillful as ourselves; gentlemen forget the immense destruction of life in our late war, which makes our losses in all other wars insignificant.

Mr. Chairman, to illustrate I read from the official report of the War Department the record of one regiment from my own State (Kansas), the list of killed in one engagement, Poison Springs, Arkansas, the battle lasting not more than six hours. The First Kansas, colored, comprising 463 men, in that engagement lost, according to this report, 111 men killed; then follows the name of each man killed. The First New Jersey, at Spottsylvania, out of 432 men engaged, lost in killed 1.6 men; the One hundred and forty-first Pennsylvania, at Gettysburgh, out of 198 men engaged, 49 were killed; the First Minnesota, at Gettysburgh, out of 262 men engaged, lost 75 killed; and so on we might enumerate indefinitely to show that such fighting and such loss of life never occurred in any of our former wars. And now, Mr. Chairman, it is high time a precedent should be established that such men, fighting in such a way, in such a war, for such a cause, and such a country, should receive, within a quarter of a century after the close of such a war, a service pension of $8 per month as a recognition of their services, and to continue the balance of their lives.

Where is the money to come from? some one asks. That is a very simple question. Where did it come from when they were in the field? After paying out the surplus in the Treasury and the money that will come in the Treasury every year, if more is needed I would issue greenbacks to make up the deficiency until a sufficient amount of money was in circulation, and that would increase both trade and production, and consequently the revenues of the Government, until the current income would pay all expenses of the Government for all purposes, pensions included; and thus, by a simple act of justice, as through justice always come, would come prosperity and relief.

Mr. Chairman, I am glad the service-pension bill is not to be a party measure, although the platform upon which I was elected indorsed it absolutely and positively. It is gratifying to me to know it is to receive hearty support from many Democrats on this floor. I know it would cheer the old soldier's heart if it should receive the vote of every Democrat and every Republican.

Aid to Common Schools.

SPEECH

OF

HON. W. B. BATE,

OF TENNESSEE,

IN THE SENATE OF THE UNITED STATES,

Thursday, March 20, 1890.

The Senate having under consideration the bill (S. 185) to aid in the establishment and temporary support of common schools—

Mr. BATE said:

Mr. PRESIDENT: It was not my intention to enter into a discussion of the bill now under consideration, being willing to content myself with silence in regard to it, except simply to cast my vote against it. But in the course of the discussion general statements have found their way into the RECORD in regard to the educational interest and its history in connection with the State that I have the honor in part here to represent, and I desire in what I shall say to try to place Tennessee correctly upon the record. That is the principal object I have in venturing to say anything upon the pending question.

It seems that during the discussion there has been a disposition to rather jeer and ridicule the States of Tennessee and North Carolina, especially by the Senator who is the author of the bill and who has its

conduct in charge. I do not think it proper that Tennessee should be considered as a laggard in regard to her educational interest, especially when we look to the appropriations which she has so liberally made for that cause and see the progress she has made in educational matters. Neither is she censurable for the manner in which she has conducted her educational affairs, nor for its results. On the contrary, I think it is demonstrable that Tennessee does not stand in the rear rank, and that she is not indifferent to the advancement of her children in education, but holds place in the front and is abreast not only of the times, but of her sisters in the Union.

Notwithstanding that, however, as I said, in the RECORD, on page 1481, in the speech of the Senator who conducts the discussion and who is the author of this bill, you will find language which I think does gross injustice to that State and people. I first wish to refer to that, and then to present the reasons why I say it is incorrect.

I find the language of the Senator on the page to which I have referred, wherein he, the Senator from New Hampshire, says:

I read what Mr. Jones had to say, and I had come to the letter from Superintendent Moses, of Raleigh, N. C., to State Superintendent Smith, of Tennessee.

Before I make this quotation permit me to say that with due respect to the letter of Professor Moses, of North Carolina, as to what are the facts, it becomes a part of the speech referred to and is indorsed with emphasis by the Senator from New Hampshire.

Says Professor Moses to the superintendent of education in Tennessee:

MY DEAR SIR: A few days ago a friend handed me an account of the proceedings of the State Teachers' Association, which held its annual meeting at Nashville in July last.

In a report bearing the signature of some of the leading educators of the State, yourself among the number, reference is made to the "remarkable progress" of the public-school system of Tennessee in the past sixteen years. I can but think you did not read the report before signing it or else that you did not notice the remarkable statement which the report contained in reference to the "remarkable progress" of your schools.

The Senator from New Hampshire then proceeded to say:

I wish the Senators from Tennessee were here. I wish some page would notify them of this statement, if nobody else does.

It is true I was not present, and perhaps neither was my colleague, but I certainly had been exceedingly courteous to the Senator from New Hampshire in remaining some four or five days listening to the logic of his facts, in his remarkable advocacy of this bill; but after the fourth or fifth day I must confess I became a little wearied and sought, in the House of Representatives, a refuge, where I could find perhaps a little more enthusiasm, fresher fields and greener pastures upon which to graze. I was then absent, after so long attention, and a very polite one, to the Senator from New Hampshire; and as for my colleague, who is always here, as you know, he was out, perchance in the cloak-room; so that neither of us heard these allegations made against our State at the time, and therefore it is perhaps necessary that I should now notice them and put the matter right upon the record.

Professor Moses proceeds:

You have traveled extensively in North Carolina and are well acquainted with schools in Tennessee. You will therefore doubtless agree with me in my position that the teachers of the public schools in Tennessee and North Carolina as a general rule are not only destitute of the slightest suspicion of culture, but to a very large extent ignorant even of a knowledge of the common-school branches.

This is the allegation made by the Senator from New Hampshire against the school-men of Tennessee in his indorsement of the utterance of Professor Moses. Again, the Senator said after that:

This is what he saw in Tennessee, but this is the superintendent of the capital city of North Carolina, who was born in Tennessee and taught school there for a long time, and is contradicting the flowery account given by the superintendent of Tennessee as to the condition of their schools, asserting that, if it be admitted that he is a man of truth, he must have signed the report without knowing what was in it, and going on to state the actual condition as he knows it, and writing this to that same superintendent.

Concerning this statement of Professor Moses the Senator remarked:

It seems to be about as good authority as you can get, and I read this as illustrating what I have been saying all along, that the school reports from many of the States of the South, and I know from many districts of the North, are simply real-estate advertisements. One instance came under my notice, where I knew the superintendent of the State.

Then he proceeds to quote from Professor Moses further, as follows:

It would cost something less than 5 cents a day to educate properly a child in our public schools. I would not send my child to that school for $5 a day.

Upon this the Senator said:

I suppose the idea is that he would not have his child killed or subject him to this process of murder for $5 a day.

He quoted from Moses again as follows:

It is needless to go further in this matter, for you could doubtless tell ten times as much as I can about the ignorance and incompetency of the great mass of the teachers who are to-day "molding the character and shaping the destiny" of hundreds of thousands of bright boys and girls in Tennessee. You know that the work of these teachers as a rule is grossly and shamefully inefficient.

The Senator then said:

Let us note the "remarkable progress"—

Quoting these words from the report—

of your schools from another standpoint. Please examine carefully these figures, which have been taken from a report sent me from your office.

Then the Senator added:

Now I wish this might be listened to.

He thus invoked the attention of the Senate especially to it.

Appropriation per capita in 1883, 26 cents; in 1889, 23 cents.

The Senator then said:

It had fallen from 26 to 23 cents in six years. That is the sort of gain that is going on, and the improvement, as far as money is concerned.

Again he quoted from Professor Moses, as follows:

Average salary of teachers in 1883, $29.79; in 1889, $29.71.

The Senator then said:

There again is a decrease, and you must bear in mind that the teacher has got to pay his board and his clothing and maintain his family, if he has one, out of this $29 a month. This is not so high as we Senators are paid, probably, in proportion to actual and necessary expenses.

Quoting again from Professor Moses, he says:

Length of school term in Tennessee in 1883, 15.6 weeks; in 1889, 16 weeks per annum.

What a progress that is! This man made the same exclamation himself. He says:

Such progress is indeed remarkable. In fact it may be said that its remarkableness is all there is of it.

Quoting further from Professor Moses:

But it is sometimes urged that extra "remarkable progress" is made in the cities. In your report especial reference is made to the schools of Nashville, and yet the fact stares us in the face that while the scholastic population of Nashville is 17,000 the total enrollment in her public schools is 7,000.

Those are the points made at the expense of Tennessee and North Carolina. Now, permit me to refer to some of the tables that have been published, as a part of his speech, by the Senator from New Hampshire. The first one I strike is Table 13, upon page 1476 of the RECORD, under the head of "Percentage classification of school revenue, showing the percentage of the whole revenue derived from each source named, mainly for 1887-'88." In the first column, under the heading "Interest on permanent funds and rent of school lands," he gives those in column order for each State, but when he comes to Tennessee he gives her no credit whatever for any permanent State school fund. You will find also that in Table 12, at the same point, under the head "Per capita," he gives Tennessee no credit whatever for any permanent fund.

Upon that point the Senator is clearly mistaken. We have in Tennessee a considerable permanent educational fund, and it has quite a history. It is a fund, a part of it, that belonged to the State of Tennessee preceding the late war, and when Fort Donelson fell, in February, 1862, that fund, along with the archives of the State, was carried South, and $700,000 in gold of it was carried from place to place during the remaining three years of the war and guarded by Confederates. I must compliment my colleague for being instrumental in having it done. He, being governor of the State at the time, had it in charge, had it taken during our varying fortunes from place to place for safe-keeping, and at the close of the war it was returned safely to the State. It is a part of the history of this country that Tennessee has a permanent State school fund. Not only so, but I further state that Tennessee has not only this "war relic," but additional funds which, including this, amount to $2,512,500. Yet we find here in the tables presented by the Senator from New Hampshire that Tennessee is not credited with a single cent as a permanent fund.

Furthermore, this fund was taken charge of by our people at the very moment when they emerged from the war clouds which had overcast our country. Scarcely had these clouds drifted away, making the débris more visible, and the workshops that had been so long silent become vocal with energy, and the desolated fields brought into fruitful response to the labor of the toiler, than the patriotic, virtuous, and intelligent people of that State, who were the tax-payers, and who had been denied the ballot for five years after the war, when they came into power, set to work at once to lay the foundation of a splendid educational system and to provide an educational fund. Of this it seems the Senator from New Hampshire is ignorant, and when he fails to put that "permanent fund" as a foundation stone in the column of his calculation, the column becomes unbalanced and must fall.

Making this a permanent educational fund and enlarging it was so grave a matter with the State of Tennessee that she named this "permanent fund" in the constitution and forbade future legislation from interfering with it.

I find in section 12 of the eleventh article of the constitution of Tennessee of 1870, the year after the restoration of authority to that portion of the people of the State who had been denied the ballot for five years, the following provision.

I especially commend the attention of the Senator from New Hampshire to this constitutional provision:

Knowledge, learning and virtue being essential to the preservation of republican institutions, and the diffusion of the principles and advantages of education throughout the different portions of the State being highly conducive to the promotion of this end, it shall be the duty of the General Assembly in all future periods of this government to cherish literature and science, and the fund called the common-school fund. And all the lands and proceeds thereof, dividends, stocks, and other property of every description whatever, hereafter by law appropriated by the General Assembly of this State for the use of common schools, and all such as shall hereafter be appropriated, shall remain a perpetual fund, the principal of which shall never be diminished by legislative appropriation, and the interest thereof shall be inviolably appropriated to the support and encouragement of common schools throughout the State, and for the equal benefit of the people thereof; and no law shall be made authorizing said fund, or any part thereof, to be diverted to any other use than the support and encouragement of common schools of the State.

Taxes derived hereafter from polls shall be appropriated to educational purposes in such manner as the General Assembly shall, from time to time, direct by law.

So it is seen that the constitution of the State of Tennessee recognizes a permanent school fund and requires that the Legislature shall legislate upon it in a manner that will forbid any tampering with it in the future. Then it is a "permanent fund," a fixture.

What did the Legislature do upon assembling immediately after this constitution was adopted, it being the first Legislature after the voice of the entire people of Tennessee was heard through the ballot? One of the very first enactments was in regard to this sacred fund, this permanent school fund.

Section 34 of the school act provides:

That the permanent school fund of the State shall be the $1,500,000 ascertained and declared by section 946 of the code, and recognized by the constitution of the State to be the permanent school fund. To this shall be added the interest which has accrued on the same, and not been paid by the State, amounting, on 1st of January, 1873, to $1,012,500, making this entire permanent State school fund $2,512,500. For this $2,512,500 a certificate of indebtedness shall be issued, signed by the governor, under the great seal of the State, and deposited with the comptroller of the treasury, and which on its face shall show the purpose for which it was issued, and shall provide for the payment of the interest thereon at the rate of 6 per cent., payable semi-annually on the 1st day of July and the 1st day of January in each year, commencing on the 1st day of July, 1873.

To the permanent State fund may be added, from time to time, the proceeds of all escheated property, of all property accruing to the State by forfeiture, of all lands sold and bought in for taxes, of the personal effects of intestates having no kindred entitled thereto by the laws of distribution, and donations made to the State for the support of public schools, unless otherwise directed by the donors. The principal of the said fund shall always remain unimpaired and entire; and the annual income arising therefrom shall be, and is hereby, dedicated to the support and maintenance of the public schools of the State.

Yet, in the face of the provision of the constitution, in the face of the acts of the State Legislature setting it apart as a sacred and permanent fund, I find here in the tabulated form of the Senator's calculation, No. 13, CONGRESSIONAL RECORD, page 1476 (a part of his speech), that this entire fund is ignored. That being so, I of course contend that his calculations are erroneous and misleading. I also find a like defect in Table 12 on same page, relating to the per capita revenue.

Suppose, however, they were without error, the Senator is wrong in other matters, as I will presently show. Permit me, in this connection, to say that the State of Tennessee has legislated and enforced a splendid school system, and I beg to read a few short sections from the school law of Tennessee, to show that the Senator is in error when he reflects upon Tennessee as being derelict or indifferent as to progress in school matters. I find the school law to read as follows:

SEC. 1. There shall be established and maintained in this State a uniform system of public schools.

SEC. 2. The public school system shall be administered by the following authorities, to wit: A State superintendent, county superintendents, and district school directors.

SEC. 3. The State superintendent shall be a person of literary and scientific attainments, and of skill and experience in the art of teaching, and who shall be nominated by the governor and confirmed by the Senate.

* * * * * * *

SEC. 8. There shall be a county superintendent for each county, who shall be elected by the county court at its April or July term, 1873, and after 1874 he shall be elected biennially in January, and no member of the county court shall be eligible to said office. He shall be a person of literary and scientific attainments and, when practicable, of skill and experience in the art of teaching, shall hold his office for two years, and shall receive such pay for his services as may be allowed him by the county court, to be paid upon the order of the chairman or judge of the county court by the county trustee.

* * * * * * *

SEC. 26. No teacher of public schools shall be employed or receive any pay from the public funds unless he or she have a certificate of qualification, given to him or her by the county superintendent for the county within which he or she is employed. No such payment shall be allowed if made, and any officer who shall make or sanction it shall also be subject to a penalty of not less than five nor more than fifty dollars; and for like services of male and female teachers like salaries shall be paid.

Thus showing how the question of education in my State has been guarded by requiring all teachers to pass the ordeal of an examination in the county before a competent, critical, and legally organized board. Does this look as though the law of Tennessee appeared disregardful of the character and qualification of those who have charge of the education of the children? Then what becomes of the ribald utterances of the Senator's chief witness as to this? Why, Mr. President, it is here seen that a certificate of qualification based on an examination by a competent, critical, and legally constituted board is prerequisite to the right to teach, and to teach in the public schools without this authority not only works a forfeiture of pay but subjects both teacher and superintendent to a penalty. Does this look as if ignorance and incompetency would be tolerated for a moment?

Here is a section to which I specially invite, not only the attention of the Senator from New Hampshire, but other Senators, because it may enter into the estimates of every Southern State as it does in Tennessee. It reads thus:

SEC. 30. The public schools shall be free to all persons between the ages of six and twenty-one years residing within the school district, and in special cases those children residing in different districts may be educated in school under such regulations as may be prescribed by the directors of the districts interested: *Provided*, That white and colored persons shall not be taught in the same school, but in separate schools under the same general regulations as to management, usefulness, and efficiency.

This marks the scholastic age in Tennessee, and the same period, from six to twenty-one years, may obtain in some other Southern States. Of this, however, I am not advised.

The New England and other States limit the scholastic age between six and fourteen years; thus making one-third more time in Tennessee in which the scholastic population is enumerated than in other States where the age is from six to fourteen years. Hence it is reasonable to believe that one-third more names are on the scholastic rolls (according to population) where the number is reckoned from six to twenty-one than where the age is from six to fourteen. Indeed, the per cent. would be increased beyond one-third where there is a colored population, inasmuch as between the ages of fourteen and twenty-one more poor children, white and colored, are kept from school than at any other age; and this for the very patent reason that their services are more useful to parents at home and command better wages away from home than when younger.

Furthermore, it will be conceded, especially in our southern country, that many within the scholastic age, say under twenty-one, marry and have families to care for, while others leave their parents, set up for themselves, and never return to school, yet their names, because under twenty-one, are carried on the scholastic rolls. It can not be denied that every one who keeps away from school for any cause whatever leaves that portion of the public school funds he or she would have been entitled to to be divided among the less number who attend. Certainly in that proportion the amount per capita is increased for those who attend and are on the rolls. I think one-third of the whole number between the ages of six and twenty-one is a fair estimate of those who do not attend, and thus leave a corresponding amount of one-third to be added to the common fund and divided among those entitled to it by virtue of attendance, thus really increasing one-third the amount paid for each child between the ages of six and fourteen, the recognized scholastic age in most of the other States.

SEC. 36. Every male inhabitant in the State subject thereto shall pay a poll-tax of $1 for the support of the public schools, which shall be collected as other taxes are, and paid over to the county trustee in the county where collected, and distributed therein to each school district according to scholastic population.

And now, in this month, the Legislature has in furtherance of this enacted that no man shall be allowed to vote unless he has paid his poll-tax. This will force collection and add from one to two hundred thousand dollars to the school fund.

SEC. 38. A tax of one and one-half mills on the dollar shall be, and is hereby, annually assessed upon all property subject to taxation for the support of the public schools, which shall be collected as other taxes are, and paid over to the county trustee in the county where collected, and distributed therein to each school district according to scholastic population.

From this source comes by far the larger portion of our public-school funds—nearly three-fourths—and insures the carrying on of the public-school system of Tennessee with liberality and success.

SEC. 39. When the money derived from the school fund and taxes imposed by the State on the counties shall not be sufficient to keep up a public school for five months in the year in the school districts in the county, the county court shall levy an additional tax sufficient for this purpose, or shall submit the proposition to a vote of the people, and may levy a tax to prolong the schools beyond the five months, said tax to be levied on all property, polls, and privileges liable to taxation, but shall not exceed the entire State tax.

Now, Mr. President, in the section just read (39) it is required by legislative act that public schools shall be kept for five months in each year in the school districts in each county, and if the fund falls short of accomplishing this it is made obligatory on the county court to levy an additional tax sufficient for this purpose, and to go even beyond the five months, if by the vote of the people of the county it is so desired. Added to this, by virtue of section 53 (of same law) cities and towns are empowered to supplement all this school fund derived from State and counties by an additional municipal tax to establish higher graded schools.

Tennessee, by legislative act, has recently also gone into the sentiment as well as utility of allowing our women to become county superintendents of education and has also set apart an Arbor day, requiring that trees be planted to beautify the surrounding of all public schoolhouses.

Does this, Mr. President, look as though the State which I have the honor in part to represent in this Chamber is indifferent to the proper education of her children and wanting in effort to accomplish it? Or does it make her justly amenable to the criticisms which have been indulged in by the Senator from New Hampshire in his recent remarkable and able speech on his educational bill?

I wish now to show some calculations I have made. They may be surprising to some Senators after hearing the criticism that has been passed upon the States of North Carolina and Tennessee in regard to an insufficiency of funds, the small amount that is paid per capita, the inadequate mode of conducting schools, grossly ignorant teachers and their insufficient pay, inferior school-houses, etc.

I find in the superintendent's report, in connection with the comptroller's office of Tennessee, from which I get the data for 1888, conclusive evidence of that "remarkable progress" in education which invokes the sarcastic irony of the Senator at the expense of the superintendent of Tennessee.

The following table of figures here referred to I will hand to the Reporter, and ask that the same shall be made a part of my remarks.

In these figures I go on to show the increase of each relatively, but not wishing to delay the Senate will only speak of the results in the totals and percentages.

TENNESSEE.

Scholastic population, 1885:	
White	448,172
Colored	155,659
Total	603,831
Scholastic population, 1888:	
White	489,674
Colored	162,834
Total	652,508
White increase (9 per cent. +)	41,502
Colored increase (4 per cent. +)	7,175
Total increase (8 per cent. +)	48,677
Pupils enrolled, 1885:	
White	292,989
Colored	80,897
Total	373,886
Pupils enrolled, 1888:	
White	326,168
Colored	85,433
Total	411,601
White increase (12 per cent. —)	33,179
Colored increase (6 per cent. —)	4,536
Total increase (10 per cent. +)	37,715

In 1888 the enrollment in public schools was 63 per cent. of the scholastic population (this includes all persons between six and twenty-one years). Put the estimate, as it should be, between six and fourteen years, and it reduces the enumeration one-third and increases the enrollment between those ages (the usual school ages) one-third, making the enrollment 84 per cent. It will be conceded by every fair-minded man that the fairest test is to be found in the available funds and the enrollment.

Available school fund: 1885, $1,330,839.17; 1888, $1,707,699.25; increase, $376,860.08, or 28 per cent.

Expended: 1885, $1,013,839.17; 1888, $1,157,930.12; increase, $134,090.95, or 13 per cent.+

On basis of fund expended: Appropriation per capita scholastic population: 1885, $1.67; 1888, $1.77. Appropriation per capita enrolled population: 1885, $2.71; 1888, $2.81.

On basis of entire or available fund: Appropriation per capita scholastic population: 1885, $2.20; 1888, $2.61. Appropriation per capita enrolled population: 1885, $3.56; 1888, $4.14.

Number of school-teachers licensed: 1885, 6,575; 1888, 7,387; increase, 812, or 12 per cent.

Average daily attendance: 1885, 192,403; 1888, 278,876; increase, 66,473, or 34 per cent.

Number of school-houses: 1885, 5,066; 1888, 5,972; increase, 906, or 18 per cent.

Total value of school property: 1885, $1,375,780.86; 1888, $1,934,374.86; increase, $558,594, or 41 per cent.

By this it is shown that the increase between 1885 and 1888 of the scholastic population was 8 per cent.; the enrolled (scholastic) population was 10 per cent.; the increase of available school fund was 28 per cent.; increase in expended fund was 13 per cent.; increase in licensed school-teachers, 12 per cent.; increase in average daily attendance, 34 per cent.; increase in number of school-houses, 18 per cent.; increase in total valuation of school property, 41 per cent., with corresponding increase of the per capita scholastic and enrolled populations, on bases of fund expended and of available fund, the enrollment per capita on basis of available fund for 1888 being $4.14 against the general statement of 23 cents by the Senator from New Hampshire, in his quotation, indorsed as it was by him, from Professor Moses, or an available per capita eighteen times as great.

But, Mr. President, the most interesting part of the statistical facts I present is obtained from Table 17, page 1475 of CONGRESSIONAL RECORD (a part of the speech of the Senator from New Hampshire), in which a comparison is made as between Tennessee and New Hampshire.

Estimated population 6 to 14 years (the New Hampshire period of school age): Tennessee, 1876–'77, 310,033; 1886–'87, 383,638; increase, 73,605, or 23.6 per cent. New Hampshire, 1876–'77, 47,017; 1886–'87, 51,255; increase, 4,238, or 9 per cent.

Enrollment: Tennessee, 1876–'77, 194,180; 1886–'87, 383,507; increase, 187,327, or 97.5 per cent. New Hampshire, 1876–'77, 68,035; 1886–'87, 60,770; decrease, 7,265, or 10.7 per cent.

The difference in favor of Tennessee as compared with New Hampshire being 108.2 per cent.; or, in other words, the State of Tennessee made more than ten times as much progress in enrollment during the ten years from 1877 to 1887 as did the State of New Hampshire. If, therefore, New Hampshire made any progress whatever, Tennessee made "remarkable progress," the assertion of Professor Moses, indorsed by the Senator from New Hampshire, to the contrary notwithstanding.

Expenditure: Tennessee, 1876–'77, $698,220; 1886–'87, $1,047,223; increase, $349,093, or 50 per cent. New Hampshire, 1876–'77, $537,153; 1886–'87, $614,248; increase, $77,095, or 14.3 per cent.

Showing an increase of 35.7 per cent. in favor of Tennessee, when compared per capita with New Hampshire as to their respective expenditures for public school purposes during the ten years.

I respectfully submit that this is "remarkable" when it is considered that it is drawn from the Senator's own figures.

The same table of the Senator, No. 17, further shows that Tennessee's percentage of increased enrollment for the same period is greater than any Southern State except Florida; and Table 13 shows a greater per cent. of local taxation for school purposes in Tennessee than in any Southern State except Florida and that she is within 3 per cent. of Florida.

Yet, because the superintendent of public schools in Tennessee dares, in telling the truth, to claim "remarkable progress" without the aid of "the Blair bill," he is ridiculed and derided, as are the superintendents and teachers throughout the State. Away with such unjust criticisms, erroneous utterances, and unwarranted assertions! I know the deep solicitude for educational interests in my State, as I do many of her noble, cultivated, and refined superintendents and teachers, men and women; and to say they are incompetent and inefficient is as unjust as it is untruthful, which the figures and facts presented indubitably show.

This same table, prepared by the Senator from New Hampshire, also shows that while Tennessee from 1877 to 1887 made an increase of only 23.7 per cent. in scholastic population she made an increase of 97.5 per cent. in enrollment, while on the other hand New Hampshire made for the same time an increase of 9 per cent. in scholastic population and a decrease of 10.7 per cent. in enrollment; and that during the same time Tennessee made an increase of 50 per cent. in her expenditure per capita on her scholastic population, while New Hampshire made a decrease of 1.7 per cent. At this rate it is evident that the day is not far distant when Tennessee, under the operation of her present public-school system, will be as far ahead of New Hampshire as the Senator claims New Hampshire to be ahead of Tennessee now.

Besides it will be noted that this table gives New Hampshire in 1877 21,018 more children enrolled than, according to the table, there are children in the State, and in 1887 9,522 more enrolled than there are children in the State.

Pardon me, Mr. President, while I mention *seriatim* the allegations referred to. It has been said with emphasis that the teachers in Tennessee, as a general rule, are not only destitute of the slightest suspicion of culture, but, to a very large extent, ignorant even of a knowledge of the common-school branches, "and to whom the science and art of education are subjects as mysterious as the hieroglyphics of Egypt."

Again, that the appropriation per capita in Tennessee in 1889 was 23 cents; that the average salary of teachers in 1889 was $29.71; that the length of the school term in 1889 was sixteen weeks.

Against all this in general I may quote from the superintendent of public instruction in Tennessee, who knows, presumably, more of the condition of affairs in Tennessee than does Professor Moses, so much quoted and relied upon by the Senator from New Hampshire—Superintendent Frank M. Smith, who has occupied the place of superintendent of Tennessee for some years, a gentleman who has worked faithfully and well, who was appointed by the governor and confirmed by the senate of my State, a man of energy and of character and a fine executive officer. He brought the schools up to a fine condition and has contributed much to the cause of education, and that man, thus indorsed, is thrown aside and his report not taken by the Senator from New Hampshire, while he introduces into his speech the letter of Mr. Moses, who has lived eight years in North Carolina and now lives there, receiving his bread and meat from that State while he makes her the subject of his ridicule. If the Senator had put in his speech the report of the Tennessee superintendent of education or if he had read from the constitution and laws of Tennessee in order to arrive at a correct conclusion as to her permanent and current school fund, the school system and its mode of operation, I would not gainsay it; and had the Senator taken the pains and had he relied more on the official reports in Tennessee and less on the "mistakes of Moses," I would not have been called on to respond to his facts and figures.

In his report for 1888 Superintendent Smith says:

> The accompanying statistics, when carefully compared with those of former years, will reveal the growth of public education in Tennessee. For, indeed, a school system is a growth, and, of necessity, must be a slow growth. But I do not hesitate to say that if the years from 1873 (the date when our present school laws went into effect) to 1888, inclusive, be compared with the same number of years in any other State in the Union, greater progress can not be shown than is manifested in those years. The average enrollment and the average daily attendance have increased nearly 100 per cent., and the same per cent. gain all along the line. In school-houses and school furniture the improvement is nearly 500 per cent.

The figures I have already presented show this to be a correct estimate.

As to the statement that the average salary of teachers in 1887 was $29.71, the report of the State superintendent of public instruction in

Tennessee for 1888 shows that there were during that year 7,439 teachers employed in the public schools, and that the sum of $996,923.38 was paid them in salaries for that year, or an average of $27.80 each per month during a term of five months of the year, and an average of $34.75 per month each for a term of sixteen weeks of the year. This statement, indorsed by the Senator from New Hampshire, is therefore manifestly inaccurate in either the average salary paid to teachers or the average length of the school term in Tennessee; for, if sixteen weeks were the average school term, 7,439 the number of teachers, and $996,923.38 the amount paid them, it requires very simple arithmetical operation to see that the average was $34.75 per month for each teacher.

As to the length of the school term, the law has already settled that, as I have stated, at five months.

Now, Mr. President, in this criticism of the State of Tennessee some of our cities have likewise been alluded to, among them the city of Nashville (trespassing upon my own domain, where I am a citizen). I know something of the schools in that city, and I know the character they bear abroad, and I believe there is not a child within the corporate limits of the city who can not get an education in the public schools if he or his friends desire it. The number and character of schools there justify this statement. There are four universities in that city not sustained at public expense it is true, four colleges and likewise more than twenty private schools, from the Kindergarten to the college. Of public schools there are fourteen, of fine architectural structure and well equipped, under the supervision of cultivated and skillful teachers.

The educational facilities there are so superior that persons are attracted to the city from the surrounding country that they may enjoy the benefits of the public-school system, and yet you see here injected in the speech of the Senator from New Hampshire, as a fact, that for seventeen thousand scholastic population in Nashville there are but seven thousand enrolled in the public schools. The numerous private schools, the universities and colleges, necessarily decrease the per cent. of enrollment in public schools. The private schools are largely patronized, many preferring to send their children to them rather than to the public schools.

In addition, Mr. President, to the ample provision made for the public schools, the State of Tennessee provided more than liberally for the deaf and dumb and blind, both white and colored. She pays one-half the expense of the Peabody Normal Institute in preparing teachers, white and colored, for those children for which the Senator and his friend, Professor Moses, send forth foreboding lamentations. Furthermore, this State has shown herself as humane as she has been liberal in educational provision, by expending in the last few years more than a million dollars in providing three large insane asylums for her unfortunates.

Mr. President, I think I have made good my assertion that "if there is a State which, up to this time, stands along in the front rank of the States of the Union in educational advancement, it is the State of Tennessee," and I am pleased in performing this duty of aiding to place her right upon the record and in refuting the allegations which have been made here and become a part of the public records.

Mr. President, much has been said in regard to the school lands that Tennessee has received from the Government. I have the statistical almanac (Spofford's) that was read, rather with an air of triumph, by the Senator of Virginia [Mr. DANIEL] on yesterday, to the effect that Tennessee had received 100,000 acres of school land from the United States, who seemed to regard it as an estoppel to the Senators from Tennessee in their opposition to this bill. Certainly, Mr. President, Tennessee did at one time receive that much land for school purposes, which she utilized. Permit me, in this connection, to emphasize the fact that, while Tennessee received the 100,000 acres, the amounts in the same column of the same statistical book show that every State named in that column has received largely in excess of that amount of land. Some of them received millions, and the lowest amount received by any State is more than 650,000, as shown in the same column where Tennessee received only her 100,000. Then she is less indebted to the Government of the United States for public-school funds than any State in the Union.

I here insert as a part of my remarks the figures referred to:

States and Territories containing public lands.	Areas of States and Territories containing public lands.	Grants for—

This table shows the area of the several States and Territories containing public lands and the quantity donated for educational purposes by Congress from 1789 to June 30, 1878.

The editor of the Almanac (Mr. A. R. Spofford) adds in a note to this table the following comment:

Under an act of Congress approved September 4, 1841, each State thereafter admitted to the Union was granted 500,000 acres of land for purposes of internal improvement; 46,080 acres (72 sections) for a State university; 32,000 acres (50 sections) for the purpose of erecting public buildings at the capital; and 32,000 acres for a penitentiary or State prison. The same grant of 500,000 acres was extended to the States of Alabama, Arkansas, Illinois, Indiana, Louisiana, Michigan, Mississippi, and Missouri. The quantity of land thus granted is estimated at 9,000,000 acres.

By act of July 2, 1862, each State, old or new, was granted 30,000 acres of the public domain for each Senator and Representative in Congress (or land scrip to that amount) for the purpose of endowing a college of agriculture and the mechanic arts in each State. Of the 9,600,000 acres estimated to be due the States under this munificent land grant about 8,200,000 acres have already been located.

When other States received millions Tennessee received only a pittance, and she has not now an acre of public land in her borders.

Mr. President, it so happened that when the act of September 4, 1841, passed, granting to each State thereafter admitted to the Union more than a half million acres of the public domain for various purposes, among others, for State universities, Tennessee already being in the Union, as shown in the note to the above figures, received none of it. Again, when the act of July 2, 1862, passed, granting 30,000 acres for each Senator and Representative in Congress for the purpose of endowing a college of agriculture and mechanic arts Tennessee (war being then flagrant) was, I believe, then without representation in the Congress of the United States, and at that time received no share of this grant, but subsequently received land scrip to represent Congressmen (300,000 acres, as I recollect) when they were admitted, which fund was for the specific purpose of establishing the agricultural college at Knoxville, Tenn., and not for general school purposes.

Again, Mr. President, it so happened that during our Revolutionary struggle upper East Tennessee (then called the State of Franklin, and which is now a part of Tennessee) was populated by pioneers from Virginia and North Carolina, who had a quasi-territorial form of government, of doubtful legal relationship to any colonial or other authority. And when this land became the territory of North Carolina and was subsequently transferred (on the 25th of February, 1790) by North Carolina to the General Government, her territory was extensive and valuable, and when (on the 1st of June, in 1796) she became a State, the Government gave her but a meager dowry, if any land whatever, even within her own borders, notwithstanding the fact that, when the night of revolution was darkest and fate seemed turned against the colonies, her hardy pioneers, holding at bay the savage hordes on their front, mustered their clans, and, under the leadership of Sevier and Shelby, left the beautiful valleys of East Tennessee, threaded the mountain passes, and with their Deckard rifles fought with heroic courage and won the battle of King's Mountain, which history has written as one of the turning-points in the Revolutionary struggle of our fathers.

Mr. President, Tennessee has received comparatively little or no aid from the General Government in land grants for public-school purposes, while other States with which she has been invidiously compared in educational progress can count their gifts by the millions.

Yet it is pleasing to know that from her own resources she has suc-

cessfully battled and placed her children on a high educational plane.

It is conceded that it has been, from the beginning, the policy of the General Government to donate public lands to the States for educational purposes, but not money drawn by taxes, directly or indirectly, from the people. In this connection I beg to differ with the Senator from New York [Mr. EVARTS] and with the Senator from Virginia [Mr. DANIEL] in the interpretation they give the language of Mr. Jefferson quoted by them. Indeed, the language just read by the Senator from New York seems, in its very terms, conclusive against him.

I read it again.

In his inaugural address in 1805, Mr. Jefferson, in speaking of revenue that might be expected to come in the Treasury, said:

> These contributions enable us to support the current expenses of the Government, to fulfill contracts with foreign nations, to extinguish the native right of soil within our limits, to extend those limits, and to apply such a surplus to our public debts as places at a short day their final redemption, and that, redemption once effected, the revenue thereby liberated may, by a just repartition among the States, and a corresponding amendment of the Constitution, be applied, in time of peace, to rivers, canals, roads, arts, manufactures, education, and other great objects within each State.

It will be observed that Mr. Jefferson says in substance that, after revenues are sufficient to extinguish the debts and meet all obligations, the revenue thereby liberated—that is, the balance or surplus—"may, by a just repartition among the States and a corresponding amendment of the Constitution, be applied, in time of peace, to rivers, canals, roads, arts, manufactures, education, and other great objects within each State." What, in this connection, can the words "a corresponding amendment of the Constitution" mean other than a condition precedent to doing the thing referred to and specified in the sentence? That is, there is no authority for doing so now in the Constitution, but there might be a "corresponding amendment" should this state of facts arise that would authorize such distribution. And as up to this time no such "corresponding amendment of the Constitution" has been made, there is, on the authority of Mr. Jefferson, no right to thus dispose of the accumulated or "surplus" revenue in the Treasury.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). The Senator from Tennessee will suspend for a moment while the Chair has read, by the Secretary, the order made by the Senate at a former session——

Mr. BATE. I know what it is. My time is limited, and I will yield the floor.

Mr. EDMUNDS. I ask unanimous consent that the Senator from Tennessee be allowed to conclude his remarks.

The PRESIDING OFFICER. The Senator from Vermont asks unanimous consent that the Senator from Tennessee be permitted to conclude his remarks. Is there objection? The Chair hears none, and unanimous consent is granted.

Mr. BATE. In a few moments longer, Mr. President, I shall conclude.

In regard to the grants of public lands it is admitted that it has been the custom to give them to the States from the beginning of the organization of the Government; indeed, the ordinance of 1785 set apart the sixteenth section of every township for common-school purposes. But at that time and for years after the public lands were regarded as belonging to the States and held by the United States in trust, and that the proceeds of the sales ought to be distributed among the States; hence, in setting apart the sixteenth section it was giving to the State what belonged to it in theory.

The gifts of public land to the States for educational purposes heretofore were very different from appropriating the proceeds of taxation of the people to purposes never contemplated in the Constitution. Illiteracy has existed ever since the fathers landed at Jamestown or Plymouth Rock, and whether proportionately greater or less to-day does not constitute a constitutional basis for Federal legislation.

But this bill is objectionable also on the ground that it tends to cause the people to look to and rely upon the Federal Treasury and the less felt but not lighter taxation by indirect methods than upon the more direct modes in the States for the support of the common schools.

We now have, Mr. President, a tried, a valuable, and effective public-school system, prosperous, progressive, and managed at home by local officials.

Under this bill the great head of the Department of the Interior will dispense the funds under national laws. How long after that will it be until this great dispenser of these many millions will carry the keys that unlock the doors of every school-house in the land? His girdle, from which will swing these one hundred thousand keys, will be as potent in politics as the scepter of any crowned head.

Let us stop the leak at the start and before the flood-tide comes to sweep away the barriers from local self-government.

Let the nation once assume control of the education of the children and it will hold on to it. Who has the hardihood to say it would let go, in these distempered times, such vast patronage? Ay, would it not be strengthened at every step and utilized in political campaigns by partisan demagogues?

Again, sir, this bill would absorb and do away with the present boasted public-school system.

Once established it would become a fixed national, not a State, system of schools. Parents and children who would become the recipients of the bounty, should it become a law, would then cease to look to the State, county, and district for educational aid, but would hold out their palms for educational alms to a great centralized, paternal government, as in the empires and kingdoms of Europe. What then would become of local self-government, that doctrine of our fathers, guarded in the olden time with so much jealousy? Rival political parties would seize hold of national education as a battle-cry and urge increased amounts until it would swell into an enormity; and when this tide sets in annually it would swell and sweep until no vestige of local self-government was left. And where, pray, has this $79,000,000 come from? Is it a tax upon the value of property or on polls? No, but it comes from the poor and humble, the every-day consumer who pays the indirect or tariff tax upon the necessaries of life. The bondholder and stock jobber pays none of it. The property-holder pays none of it, save as a consumer, he purchases the necessaries of life.

How is it now under the common-school system of the States, counties, and districts?

Why, sir, the tax from which the school money comes is levied upon property and polls, thus making property, real and personal, bear the burden, while the poor and needy receive it to an equal extent per capita. And who handles this fund? The people from whom it is daily drained.

The people being taxed directly, money out of their pockets, causes vigilance on their part, and they put in place as school officers only worthy and competent men. Mr. President, I emphasize the fact that local self-government is the secret to our present successful school problem.

Let us adhere to that good old adage, "Let well enough alone." We are progressing marvelously under its operation. I indorse in this regard what was so well and pertinently said by Senators HAWLEY and SPOONER.

When this $77,000,000 is gone, the system of common schools, now so successful, will also be gone—"a school boy's tale, the wonder of an hour"—and a political battle-cry will come up, not for $77,000,000, but perhaps for $177,000,000 more, and when that is obtained it will continue on and on, until it becomes like the cry of the daughters of the horseleech, "Give! Give!"

Yes, it will then become ingrafted on our politics (it is not now a party question) and be a question as to which candidate is for the largest amount for a national school fund. Thus insidiously gaining a foothold, it would find permanent lodgment and could not be eradicated. This would be followed by amendments, more in detail, more drastic even than this bill, regulating the character of school books and the appointment of superintendents, followed by a removal of all legal and social barriers between races and colors.

Educational channels are the most available conduits through which to send false doctrines and destructive political influences, and when disseminated by national law, from a great and powerful center, they neutralize all opposition and absorb the lesser into the greater power. Hence, Mr. President, in my opinion, this bill is dangerous in tendency. It woos to destruction as a siren of Caprea. It leads to centralism; it is a dagger behind the smile, a serpent coiled beneath the rose.

Pensions.

REMARKS
OF
WILLIAM S HOLMAN,
OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 21, 1890.

The House being in Committee of the Whole and having under consideration the annual pension appropriation bill—

Mr. HOLMAN said:

Mr. CHAIRMAN: I was not upon the floor of the House a few minutes ago to accept the courtesy of the gentleman from Kentucky [Mr. BRECKINRIDGE] of a portion of his time, so that I will now occupy for a few minutes the attention of the House. I received some weeks ago a letter from the State of Kansas from a very excellent gentleman, a Democrat who had served in the Union Army, calling attention to a letter from a distinguished member of the House from Kansas published in that State, expressing the opinion that the votes of only three members from Indiana could be relied on to support legislation for pensioning soldiers of the Union Army, and my correspondent expressed his indignation that Democrats from Indiana could have placed themselves in a position in Congress which might subject them to such criticism.

I wrote back to him that there was certainly a mistake; that that letter could not have been published as written by the gentleman from Kansas, because no measure beneficial to the soldiers of the Union

Army had ever encountered a single adverse vote of a Democratic Representative in Congress from Indiana since the original act for pensioning soldiers of the last war was passed in 1862, which I had the honor to call up at the time of its passage. For that reason, sir, I expressed my surprise that such a letter should have been written and expressed a doubt as to its being a genuine letter from a member of Congress. I said to him that the ten Democratic Representatives from the State of Indiana upon this floor, with, I had no doubt, their three Republican colleagues, would support every just measure brought before the House by the Committee on Pensions beneficial to the soldiers of the Union Army, including the service-pension bill.

The truth is, Mr. Chairman, that no measure has ever passed this House since the 4th day of July, 1861, when, by the proclamation of President Lincoln, Congress assembled to meet the exigencies of the then impending war, down to the present hour, beneficial to the soldiers of the Union Army, that has not received the cordial support of every Democratic member of the House from Indiana. I am certain that no measure will be reported to this House by the Committee on Pensions that will not receive the cordial support of every Democratic member from Indiana on this floor.

The two great demands now made upon the public Treasury are singularly different in their character and purpose. Adequate pensions for soldiers of the Union Army, their widows and children, on the one hand; on the other an almost undisguised purpose to make this Republic an imitation of European powers, a splendid government with all the embellishments and insignia that express power. Among the schemes in contemplation are a great navy beyond any precedent in our history, a system of fortifications which, while expressing power, will be found valueless, as past experience has demonstrated, in the hour of trial; the construction now in progress of ordnance for ships and forts and a vast supply of military stores, which, as was demonstrated at the opening of the late war, will be found worthless in the event of an actual conflict of arms.

More than that, if present indications shall be verified, millions more will be expended in bounties for the building of ships to enrich one class of our fellow-citizens already wealthy, and in bounties for the sailing of ships to further enrich a class of men of ample estates, not only citizens of our country, but capitalists of Europe, for European capital has an especial hold on your shipping industries.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CARLISLE was recognized, and yielded his time to Mr. HOLMAN.

Mr. HOLMAN. I thank the gentleman from Kentucky for this courtesy. Mr. Chairman, not only are such plans of public expenditure, involving hundreds of millions, in contemplation and ready for the action of Congress, only to be suspended temporarily, if at all, until the temper of the country shall be ascertained at the elections of the present year, but countless lesser schemes are in contemplation, the embellishment of this city with extended parks and other expressions of national opulence, at the expense of the public Treasury, enlarged salaries for the Federal judiciary who hold office for life, an unexampled number of new offices, and other large expenditures of like character—all tending to the same end, a splendid government and an impoverished people.

The expenditures for the coming year, permanent and annual, are estimated at the vast sum of $406,843,315.04, a sum equal to more than one-fourth of the money in circulation in the United States, and it will be found that even this vast sum is less than the appropriations that will be made, permanent and annual, for the coming year. Now, sir, which system of expenditure of the surplus revenue is best for our Government, pensions or subsidies?

It was obvious at the beginning of the late war that the great body of the men who would enter the Army would come from the mass of our people engaged in the pursuits of actual industry, men, as a rule, comparatively poor, and equally obvious that the wealth which would result from the war would inure to comparatively a small number of our people. That was obvious at the beginning and more than verified in the result.

All men are well informed of the enormous and unexampled profits which inured to capital in all its forms during the late war. At that time, and still, the great capital interests were in the eastern section of the Union, and it was there that the enormous increase in capital mainly occurred. Taxation itself was a source of profit; taxes on railroad corporations and manufacturing industries afforded, during that war, an opportunity for enormous gains by increased charges on the people, and such opportunities were never overlooked. The management of the public securities afforded an unprecedented opportunity to capital. Hence the unexampled growth of wealth in the eastern section of the Union; even the enormous grants of public lands made during the war period inured to the capitalists of New York, Boston, and Philadelphia.

Now, sir, measures of legislation are to be carried through Congress of the character I have named, all of the profits and benefits of which will inure to the same section of the Union—ships, fortifications, munitions of war, subsidies, national embellishments, involving hundreds of millions of dollars of the public wealth, greatly enlarging the centralization of capital of the last twenty-five years, by which a fearful chasm has been already created between the few who possess our wealth in overgrown estates and the great body of our people. The effect of this kind of legislation is at this time especially apparent in the condition of our agricultural industries, by far the greatest of the industries of our country, and the condition of capital invested in the countless forms of public securities, which in our time have been developed, and in the capital invested in manufacturing industries. Agriculture, the foundation of all true wealth, depressed, discouraged, and staggering under exasperating debts, is the natural result of the favoring by acts of Congress of all other forms of capital and industry during the last twenty-five years. Anything, gentlemen, that will stop this system of Congressional favoritism in encouraging the accumulation of great estates, will be fortunate for our country.

Now, Mr. Chairman, the patriotic people of Indiana whom the ten Democrats as well as the three distinguished Republicans represent upon this floor instruct their Representatives to support every measure which may be brought forward that is justly and fairly beneficial to the soldiers of the Union Army. Why not a service pension after these twenty-five years? Why not repeal, as a matter of fairness and justice, the limitation on the arrears of pensions imposed by the act of March 3, 1879? If the soldier was disabled by wounds, sickness, or otherwise during his service and, for reasons satisfactory to himself, delayed applying for a pension, and then finally applies, why should the Government in that particular case enforce a severe statute of limitation against him?

There is scarcely any other class of claims against the Government against which you interpose a statute of limitations; there are very few other instances where such limitations occur in your statutes, but as against pensions it is inexorably enforced. I see no just reason why this statute of limitations should not be repealed. As to service pensions, why should they not be granted after this long interval since the war closed? In my judgment Congress, in justice and honor, should pass both of those measures; I am for them on their own merits, but when considered in connection with the measures I have spoken of, which involve the expenditure of vast sums of the public money, drawn from the industry of the whole people for the special benefit of the few, can anybody doubt what is best to be done?

Is it not clearly best for our country that public revenues should be so expended that they shall return to the greatest possible number of our people, that the benefits shall fall upon the mass of our people, instead of being so employed as to build up a few imperial estates? Therefore I say with my colleagues that any just and reasonable measures which the distinguished gentleman having charge of the pension legislation may see fit to bring forward for the benefit of the Union soldier will receive the cordial support of the ten Democratic members from Indiana and, I have no doubt, of their three Republican colleagues upon this floor.

I hope I will not be misunderstood. I support the two measures in the interest of the soldiers of the Union Army which I have mentioned on their own merits. I support them, if possible, still more earnestly because I see in this form of expenditure of public revenues a means of diffusing the enormous wealth drawn from the whole people by taxation among the greatest number of our people. A greater number will receive under those measures this benefit of this surplus in the Treasury than by any plan of just expenditure that can be devised.

The greater number of soldiers of the Union Army and surviving widows and children are comparatively poor. They are to be found in every State of the Union; in much larger numbers, of course, in the States of the North, but in considerable numbers in every State of the Union.

Providence, as in all former years, is still with us. I thank God that the measures in contemplation by the gentlemen who now control this Government of an enormous navy in a time of peace, a system of fortifications involving ultimately hundreds of millions of dollars, an enlarged army, subsidies for building and sailing ships, increased salaries of judges and other officials with salaries now more than ample, all threatening to swell the expenditures of Government even beyond the enormous revenues of our Government, and all tending to one end, the enlargement of the fortunes of men already rich, will be arrested by measures which, just in themselves, will diffuse the accumulated and accumulating revenues of taxation among our people in all sections of the Union, among our people, generally poor, who deserve well of the Government by the services they have rendered in its defense.

LIMITATION ON ARREARAGES OF PENSIONS.

Touching the limitation on arrearages of pensions, which is of vital interest to the soldiers of the Union Army, I wish to correct a widespread misunderstanding. It seems to be understood that the act of January 25, 1879, which opened up the limitation on the arrearages of pensions, also limited the filing of pension claims, with benefit of arrearages, to the 1st day of July, 1880. This is not true. The title and first section of the act of January 25, 1879, which repealed the limitation, are in the following words:

An act to provide that all pensions on account of death, or wounds received, or disease contracted in the service of the United States during the late war of the rebellion, which have been granted or which shall hereafter be granted, shall commence from the date of death or discharge from the service of the United States; for the payment of arrears of pensions, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all pensions which have been granted un-

der the general laws regulating pensions or may hereafter be granted in consequence of death from a cause which originated in the United States service during the continuance of the late war of the rebellion or in consequence of wounds, injuries, or disease received or contracted in said service during said war of the rebellion, shall commence from the date of the death or discharge from said service of the person on whose account the claim has been or shall hereafter be granted, or from the termination of the right of the party having prior title to such pension: *Provided*, The rate of pension for the intervening time for which arrears of pension are hereby granted shall be the same per month for which the pension was originally granted.

There are other provisions in this act of January 25, 1879, but none that apply to the arrears of pensions.

It will be seen that this act of January 25, 1879, absolutely repeals the old act, which cut off the arrears of pensions unless the claim was filed within five years after the disability occurred or after discharge from the Army, a repeal without limitation or condition.

On the 27th day of February, 1879, one month and two days after that act of the 25th day of January, 1879, was passed, the House bill making appropriation for the payment of the arrears of pension, entitled "An act making appropriations for the payment of the arrears of pensions granted by act of Congress approved January 25, 1879, and for other purposes," came up in the Senate for consideration, and the following proceedings occurred:

Mr. INGALLS. I offer, from the Committee on Pensions, an amendment to the bill, which I ask to be reported

Mr. MORRILL. Will the Senator from Kansas allow me to offer an amendment which comes in here appropriately?

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Vermont?

Mr. INGALLS. Not now, please.

The PRESIDING OFFICER. The Secretary will report the amendment proposed by the Senator from Kansas [Mr. INGALLS].

The SECRETARY. It is proposed to add to the bill the following.

The amendment embraced a number of provisions, the last of which, with a single amendment as to the time where the limitation should take effect, was adopted by the Senate and became the second section of the House bill making appropriations for the payment of the arrears under the act of January 25, 1879, and is as follows:

SEC. 2. All pensions which have been or which may hereafter be granted in consequence of death occurring from a cause which originated in the service since the 4th day of March, 1861, or in consequence of wounds or injuries received or disease contracted since that date, shall commence from the date or discharge of the person on whose account the claim has been or is hereafter granted if the disability occurred prior to discharge, and if such disability occurred after the discharge, then from the date of actual disability or from the termination of the right of party having prior title to such pension: *Provided*, The application for such pension has been or is hereafter filed with the Commissioner of Pensions prior to the 1st day of July, 1880, otherwise the pension shall commence from the date of filing the application; but the limitation herein prescribed shall not apply to claims by or in behalf of insane persons and children under sixteen years of age.

This act was approved by President Hayes on the 3d day of March, 1879.

It will be seen that this section 2 is substantially the same as the original act of the 25th of January, 1879, except the proviso. That proviso restores, as will be seen, the old statute of limitations as to arrears on all claims for pensions filed after July 1, 1880.

So it appears that after Congress had absolutely repealed the limitation on the arrears of pension, on the 25th day of January, 1879, the limitation was absolutely restored on the 3d day of March, 1879, to take effect on the 1st day of July, 1880.

Now, it is obvious that either the act of January 25, 1879, was absolutely wrongful and unjust or the repeal which took effect on the 1st day of July, 1880, is indefensible. It is reasonably certain that in the short interval between the 25th day of January, 1879, and July 1, 1880, multitudes of Union soldiers and their widows would be wholly uninformed of the state of our legislation, and knew absolutely nothing about the restored limitation, which took effect on the 1st day of July, 1880. The effect of this extraordinary legislation was that the well-informed filed their claims promptly and obtained their arrears; the multitude of Union soldiers and their widows who were uninformed as to the state of our pension legislation, and that perhaps larger number of soldiers whose condition of health, although impaired in the service, did not at the time seem to justify an application for a pension, failed to receive the arrears of their pensions.

If there is any one thing on which our people are united, it is that "equal rights and fair play" should pervade our legislation. What better right in justice have the soldiers who filed their applications for pensions prior to the 1st day of July, 1880, to their arrears of pensions, than those who filed them after that day and are able to establish their claims. The spirit of our Republican institutions demands equal justice to our people. A republic can not afford to be unjust to the men who imperil their lives in the national defense. They are entitled, at least, to exact and equal justice.

But the argument in favor of the limitation on arrears of pensions imposed by the act of March 3, 1879, is and always has been that the amount required to meet the claims for arrears of pensions is beyond the capacity of the public Treasury. I would yield to this argument if, in fact, the resources of the Treasury were insufficient to meet this demand. These soldiers of the Union Army and their widows bear their fair share of the burden of taxation that rests on all our people. If the industries of the country, which in fact bear the burden of taxation, would not justify greater liberality, a higher measure of justice to the soldiers of the Union Army, then the argument would have to be accepted. But the fact is the amount required to carry out the two measures is just now greatly exaggerated, and, as I have already shown, the public wealth is being expended largely for the benefit of favored classes who have no claim on Congress, and the increase of whose wealth is an absolute injury to the Republic.

The bills now pending and certain to pass for fortifications and Navy carry the unexampled sum of $26,673,201 in this hour of peace. The fact should not be overlooked that the wealth of the country up to this time bears a small portion of the taxation that swells the surplus in the Treasury. These measures of justice to the soldiers of the Union Army would result in a juster system of taxation, would compel great estates to bear their fair share of taxation; and, more than that, it would, for this generation at least, secure a result which, in my humble judgment, is of the highest and greatest importance: it would compel just and reasonable economy in the current expenses of our Government, honest government, which I think should be the first care of a member of the Congress of the United States. The rapid growth of these current expenses ought to arouse the interest of every citizen.

These current expenditures of Government in a fearful degree centralize the wealth of the country. The vast sums of money drawn into the Treasury by taxation of the whole people in the current administration of our Government inure to the benefit of the few. A just and reasonable system of pensions for valuable services rendered to the Republic would diffuse the accumulated revenues not imperatively demanded for the administration of Government among a great multitude of people, instead of confining its benefits to a favored few, the latter tending to corruption in public affairs, the former to cheerful firesides and happy homes.

From any point of view, a just and reasonable system of pensions, such as the nation's honor demands, will, in the present state of our affairs, while doing justice, compel economy and honest administration of Government, a result of all others to be desired.

The concentrated wealth and overgrown estates which our legislation has fostered are the rocks, only partially concealed, in the pathway of our ship of state. If, in the future, the ship goes down (which I do not believe God in mercy to mankind will ever permit) great private estates, created by acts of Congress, with the arrogant assumption of power over legislative assemblies and the corrupting methods such estates naturally inspire in controlling public affairs, always fatal to honest government, will be found, by the verdict of impartial history, the fatal burden under which the gallant old craft foundered.

To arrest this now never-ceasing tendency of our legislation to encourage great private estates, with their ever attendant evil of prodigal and corrupting luxury on the one hand and engendering of poverty and wretchedness on the other, is, in my humble judgment, the highest duty of the American people.

It is now reasonably certain that this vast accumulation of wealth, drawn from the industries of our people by remorseless taxation, will continue. The employment of this ever-accumulating wealth, vastly beyond the necessities of an honest administration of our Government in meeting the just demands of that great body of our fellow-citizens who imperiled their lives for the preservation of the Union, their widows and orphan children, diffusing that public wealth throughout the whole land, largely among the destitute and the poor, made so in countless instances by services rendered in the ranks of the Union Army, and the misfortunes and widowhood and orphanage incident to war, gladdening countless homes, and bringing joy to multitudes impoverished by war, is a course worthy of our great Republic. Between a policy so just and beneficent and one that seeks to give the fruits of the labor of the many to the few, what friend of his country can hesitate?

The Late Edward J. Gay.

REMARKS

OF

HON. SAMUEL R. PETERS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 22, 1890,

On resolutions of respect to the memory of Edward J. Gay, late a Representative from the State of Louisiana.

Mr. PETERS said:

Mr. SPEAKER: I first became acquainted with Hon. Edward J. Gay during the first session of the Forty-ninth Congress. My acquaintance was confined entirely to such association as was incident to legislation in the House. He impressed me as being a man of much force, his power being largely augmented by a business experience that gave value to his suggestions. He was a man of dignified reserve, practical and conservative in his ideas, but adhering with great tenacity to his convictions. He was a very courteous gentleman, but so modest and re-

tiring in his disposition that unless associated with him in private life or in the discharge of a public duty his strength of character and intellect would not be disclosed. When therefore our mutuality of interest in the sugar industry brought me in consultation with him, I was surprised at his general knowledge of public affairs, as well as at the forcefulness of his methods of expression. During the sessions of the Fiftieth Congress my acquaintance became more intimate and my estimation of his worth as a man and a legislator correspondingly increased. He was conscientious in the performance of public duty, and hence was always in his place unless prevented by his impaired health.

The Fiftieth Congress closed and I saw him no more. In the morning of the summer time, in early May, he launched his bark upon the unknown sea dividing the life here and hereafter, and sailed away. To him I believe it was neither an uncertain nor an unexpected voyage, for his faith had crossed that unknown space in advance and was safely anchored in a haven where life's storms and sufferings could not follow.

In the evening of the summer time I was in his district and had some opportunity to learn of the estimation had for him by the people whose Representative he was and who knew him best. That estimation was then and is now more eloquent than human eulogist can be. From the humble abode of the sable laborer in the cane field, as well as from the mansion of the courteous planter, came nothing but expressions of admiration for his life and sincere regrets for its termination. To the wealth of this esteem I desire to add my own, together with the statement that I am the better for having known him.

Admission of Wyoming.

SPEECH
OF
HON. ALEXANDER M. DOCKERY,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 26, 1890.

The House having under consideration the bill (H. R. 982) to provide for the admission of the State of Wyoming into the Union, and for other purposes—

Mr. DOCKERY said:

Mr. SPEAKER: In the limited time allotted to me I can not hope to do more than merely outline my objections to the admission of Wyoming to statehood at this time. I am in favor of the admission of Territories into the Union as rapidly as their population and resources may warrant such action; but, sir, in the consideration of the pending proposition I find that the usual and necessary requirements have been wholly disregarded in the interest of the Republican party; and, viewing the proposition in this light, I shall not indulge in diplomatic language, but shall call a spade a spade.

Mr. Speaker, a fundamental objection to the admission of Wyoming is found in that clause of its constitution which gives to women the right of suffrage.

Section 1, article 6, of its constitution provides that—

The rights of the citizens of the State of Wyoming to vote and hold office is not to be denied or abridged on account of sex. Both male and female citizens of this State shall enjoy all civil, political, and religious rights and privileges.

The passage of this bill and the admission of Wyoming with the provision as to female suffrage commits the Republican party without equivocation to this new doctrine. It is a bold and radical departure, inasmuch as there is not only no State in the Union which contains a similar provision, but there is no government in the world which permits women to vote and hold office, except perhaps in school elections, while even this privilege is by no means general.

Mr. Speaker, no theory of the doctrinaire, no demand of expediency can subvert the great law of nature.

Woman is not "the lesser man." Woman is man's companion and helpmeet, but her true empire is not his empire.

Her sphere is in the home and in the heart. Her physical and moral constitution, as well as the authority of the Scriptures, furnish conclusive evidence why she should not be dragged into the arena of political strife. I do not care to elaborate this question at the present moment further than to say that the position of the Republican party in favor of female suffrage merits and will receive the condemnation of the people. The Democratic party is unalterably opposed to this new departure, and, in respect to this issue, will stand by the old paths, which are the paths of wisdom and safety, the paths in which our fathers have trod during the century of our constitutional life.

Mr. Speaker, I find that Wyoming was organized as a Territory by the act of July 20, 1868. By the Congressional Directory it appears that at the November election there in 1888 the Republican party cast 16,451 votes for Delegate to Congress; that the Democratic party "lagged superfluous" behind with 7,557 votes, while there were 2 scattering votes, making the total vote polled only 18,010, notwithstanding that the Territory had been organized more than twenty years. Of this total vote cast (18,010) the minority of the Committee on Territories estimate that at least 4,000 were cast by women, so that we have in fact of male voters in the Territory of Wyoming, as shown by the last election returns, only 14,010.

REPUBLICAN PARTISANSHIP.

In this connection I also desire to notice the proposed admission of Idaho, which is to follow very soon in the wake of Wyoming. There were cast in November, 1888, in the Territory of Idaho, 8,151 Republican votes for Delegate to Congress, 6,404 Democratic votes, and 1,458 votes which were classed as "divisionists," making an aggregate vote of but 16,013, although it was created a Territory under the act of March 3, 1863. Indeed, Mr. Speaker, adding the total vote of Idaho and Wyoming, including the 4,000 female votes, we have an aggregate vote in these two Territories of only 34,023, which is 4,203 votes less than were cast by the people of the ten counties of my own Congressional district in the recent Presidential contest.

Mr. Speaker, in the light of the experience this country has had with the rotten borough of Nevada, I submit, sir, whether it be not partisanship alone which demands that this action should be taken at the present time. Nevada was admitted into the Union more than a quarter of a century ago; yet at the last general election her total vote was only 12,603, an increase of but 4,000 within the entire period of her statehood.

The experience of Nevada is likely to be repeated and emphasized in Idaho and Wyoming. At all events, Mr. Speaker, the present population and resources of these Territories are utterly inadequate to entitle them to the high privilege of States in the American Union, for, whilst there is no constitutional requirement as to the population a Territory should have before its admission into the Union, yet in the very debate referred to by the gentleman who has just spoken [Mr. BARNES], the great Douglas expressed the conviction that a population sufficient to entitle a State to one Representative on this floor would be a wise condition precedent to the admission of a Territory.

Our present unit of Congressional representation is 154,325, a requirement of a greater population than is possessed by the Territories of Idaho and Wyoming combined. The table submitted by the gentleman from Georgia, showing the dates of admission of the States prior to 1889, the respective Representative ratio, and the population of each at the time of admission, reveals the fact that the unit of representation in this body has ranged all the way from 33,000 to 154,325, while in every instance, save in Kansas, Oregon, Nevada, Nebraska, and Colorado, the population of each Territory at the date of admission exceeded that required to secure representation in this Hall. This unwritten law of the Republic has been consistently maintained except in the cases cited, whilst we have but recently had an exemplification of the practice in the admission of Montana, Washington, North and South Dakota, where each possessed a population in excess of the ratio (154,325) at present demanded for representation in this House.

Mr. Speaker, the partisanship underlying this proposition is so plain that even a "wayfaring man" may readily discern it. It is not only apparent in the facts to which I have already adverted, taken in connection with the further fact that these Territories are overwhelmingly Republican, but it is alike manifest in the fact that New Mexico and Arizona are denied admission although they have a greater population, a larger vote, a more extended area, and greater wealth than either one of the Territories now proposed to be admitted. The only explanation, therefore, for the admission of the one and denial of the other is that the majority of the people of New Mexico and Arizona are Democrats whilst the majority of the people of Wyoming and Idaho are Republicans.

The intense partisanship which impels the admission of Idaho and Wyoming is further emphasized in the constitution of these proposed States, Wyoming admitting to suffrage Mormons, both male and female, because they are Republicans; Idaho denying to Mormons the exercise of the elective franchise for the reason that they are understood to be Democrats; and, numbering, as they do, more than 5,000 voters, the Republican party disfranchises them in the fear that if permitted to vote they would overthrow the Republican majority.

Mr. Speaker, in my humble judgment this bill is nothing more or less than a partisan measure intended to perpetuate so far as may be possible the power of the Republican party. Its proper title, sir, would be A bill to add three electoral votes to the Republican column in 1892, two Senators to the present Republican majority in the Senate, and one member to the Republican majority of this body. Taking into account the Territory of Idaho, which is also to be admitted, the effect of the bills will be to give six electoral votes to the Republican party in the ensuing Presidential contest, four votes to the present majority of that party in the Senate, and two additional votes to the Republican majority in this Chamber.

Mr. Speaker, I would favor the admission of Wyoming to the Union were its resources, population, and constitution such as to entitle her to that exalted privilege; but in view of the objections to which I have here adverted my voice and vote are against the proposition. [Applause on the Democratic side.]

Fortification Appropriation Bill.

SPEECH

OF

HON. CHARLES TRACEY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 1, 1890,

On the bill (H. R. 3891) making an appropriation for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service for the fiscal year 1891, and for other purposes.

Mr. TRACEY said:

Mr. CHAIRMAN: Within the past few years great changes have taken place in the building of war-ships, owing to the use of heavy iron and steel plating and equipment, with built-up steel guns of great length employing very heavy charges of powder and large projectiles. Our fortifications, which fifty years ago were the best in the world, are to-day absolutely worthless. We are consequently compelled to take steps to defend our coast, lest in the event of a war we may find ourselves powerless to prevent the destruction of our great cities.

For several years prior to 1888 considerable attention had been paid to the improvement of our Navy, and after the Naval Committee of this House obtained jurisdiction it secured appropriations which enabled the Navy Department to add to the service a number of first-class vessels. Through this committee's energy the gun foundry for the Navy was established at the Washington navy-yard. But the Army gun factory, the building of which at the Watervliet arsenal was recommended by the same board that selected Washington for the Navy gun factory, was entirely neglected until the first session of the Fiftieth Congress.

The subject of fortifications had been assigned to the Appropriations Committee, and, although bills were discussed and apparently an effort was made to effect legislation, nothing was accomplished. Then, two years ago, it became evident, if delay continued, jurisdiction of all army matters would be transferred to the Military Committee, in the same manner that everything pertaining to naval affairs had been intrusted to the Naval Committee. This situation forced the introduction and passage of a fortifications bill and it was signed by President Cleveland.

Both political parties are committed to the policy of carrying on works for the public defense. The Republican platform in 1888 said:

We demand appropriations for the early rebuilding of our Navy; for the construction of coast fortifications and modern ordnance and other approved means of defense for the protection of our defenseless harbors and cities.

The candidate of the Democratic party, Mr. Cleveland, who was then President, in his letter accepting a renomination, places among the objects of domestic concern deserving watchfulness and care—

The construction and equipment of means of defense to insure our national safety and maintain the honor beneath which such national safety reposes.

It is but natural that all the people of the country should expect that serious attention be paid to relieving us from our peril. The great war-ships of England, France, Germany, Russia, Italy, Turkey, Austria, Holland, Spain, Japan, Brazil, and Chili, in the event of war, can destroy our coast cities or compel us to pay enormous war indemnities, which the General Government could meet only by taxing the entire people.

Putting aside all questions of the humiliation of acknowledging defeat without an effort at resistance, let us estimate the possible loss that can be inflicted on us by hostile fleets. In New York City property could be destroyed worth $2,000,000,000; Brooklyn, $600,000,000; Jersey City, $100,000,000; Portland, Me., $33,000,000; Boston and Cambridge, $531,000,000; Baltimore, $220,000,000; San Francisco, $181,000,000; Newport, $24,000,000; Philadelphia, $790,000,000; New Orleans, $175,000,000; and in New London, Wilmington, Savannah, Mobile, Galveston, Portsmouth, New Haven, Norfolk, Charleston, St. Augustine, San Diego, Portland, Oregon, and important points on the Great Lakes an aggregate of about two billions more, making about $6,000,000,000 worth of destructible property.

The problem we have to solve, Mr. Chairman, is to remove this danger of loss and humiliation to the nation with the least possible outlay of the public funds. We have the recommendation of the board on "fortifications or other defenses" that twenty-seven ports be protected by mounting at them 527 guns, and the statement of that board that eleven of these ports should receive immediate attention and will require about 400 guns, these eleven ports being New York, San Francisco, Boston, lake ports, Hampton Roads, New Orleans, Philadelphia, Washington, Baltimore, Portland (Me.) Rhode Island ports and Narragansett Bay.

At present the only facility we have for producing these guns is the Watervliet gun factory, the northwest and center sections of which are being completed, and when fully equipped the output will be five 12-inch, seven 10-inch, and twelve 8-inch guns, or a total of twenty-four guns per annum. This would give guns for the twenty-seven ports in twenty-eight years and for the eleven ports in twenty-one years.

The additional wing provided for in this bill will increase the output by twenty 12-inch guns a year and give the guns required for the twenty-seven ports in fifteen years and for the eleven ports in thirteen years. To delay this appropriation by one year would delay the increased output of twenty guns for at least a year, and such a course might involve disastrous results. There is no way whereby the Government can procure so great a number of guns at so small an outlay as the measure provided for in this bill.

I question whether at any time it will be found better to contract for completed guns than to do as is now being done, namely, the purchasing of steel forgings from private manufacturers and assembling the pieces at the Government gun foundries under the supervision of the very able and conscientious officers of the Ordnance Corps. At all events, so far as economy is concerned, we know that the inducements offered in the fortification bill of 1888 have brought forward no offers from private enterprises, and the evidence of the bill prepared by the representative of manufacturers that year leads us to believe that these private enterprises would exact such a price for each 12-inch gun that the Government would save in three years from the time of the completion of the south wing of its own factory enough to pay for the entire cost of the building and machinery.

The 8-inch gun made at Watervliet, which has been completed and tested at Sandy Hook, has given better results than were ever before produced, and demonstrates the advantage to the Government of being in a position to direct careful examination of the separate forgings before the gun is built up. Secretary Proctor, in his statement before the Appropriations Committee, in reply to an inquiry respecting his views of the necessity for cutting down expenditures and the possibility of doing so by lessening the amount of this bill, said:

I should pare somewhere else. As a political public necessity, yes, I should complete this [the gun factory]. It is a work in hand, and I think it is economy to push and close it up and call it finished.

Mr. Chairman, this policy of fortifying the coast having been decided upon, it would be absurd to make a pretense of accomplishing anything, were Congress now to deliberately put obstacles in the way of the War Department in its efforts to gradually lessen the danger which is threatening the nation. I rejoice to see that even those gentlemen who object to large appropriations, and also those who think we might take the chances of there being no attack made on this country, are disposed to accept the situation and to permit the policy of coast defense to be carried out.

It is natural that the citizens residing in the district which I have the honor to represent are much pleased that after a careful examination the Government decided that the best point for the building of its first gun-factory was near their own homes. Among the reasons for this decision are the following:

Watervliet arsenal, at West Troy, N. Y., is centrally situated and has the immense advantage as a location for machine finishing shops on gun work of being located on tide-water. No other Government arsenal affords at the same time a place more secure from hostile operations and possessing such advantages for both rail and water transportation to the seacoast and the Great Lakes. The Delaware and Hudson Railroad passes close by the grounds and will give an easy grade into the shops of the arsenal. Within the distance of a few miles it connects with the great railroad center at Albany. The Erie Canal passes through the grounds, and shipments can be made direct to or from the Great Lakes or pass through the outlet of the canal into the Hudson River by this cheap means of transportation. In addition to this, the arsenal has a wharf upon tide-water in the Hudson River. The finished guns can be transported with but little trouble and expense to the testing grounds at Sandy Hook.

The water-power used at the arsenal reduces the amount of fuel required for making power, and the Legislature of the State of New York has recently passed an act to give such increased water facilities as may be needed.

Watervliet arsenal is safe from hostile operations; it has never yet been in possession of an enemy, although it has been on the line of hostile operations in two wars with Great Britain. In 1777 Burgoyne surrendered at Saratoga, and in 1814 the advance was stopped by our victory on Lake Champlain. If we succeeded then in keeping the enemy away, how much more easily can it be done now with our organized militia and vast population to draw upon. The arsenal proper needs no defensive works; we are seeking to fortify our exposed coasts. No one believes or fears that an enemy can successfully carry out an incursion with a field force over a distance of 200 miles into our territory, especially along the line from the Canadian frontier to Albany, which, on our side, can be so readily covered by the concentration of available forces.

Watervliet arsenal is sufficiently near the centers of trade, and is yet properly isolated from a large city, and gives ample room for building purposes. The arsenal grounds comprise over 100 acres. About one-fourth of this land, lying between the canal and Hudson River, is subject to partial overflow by the spring floods. The old shops are principally located on that area, but have been in operation for many years

without serious detriment from any overflow. However, the new gun shop is on the high ground west of the canal, and the new buildings for an extension of the gun factory would also be placed there upon good building sites with rock foundations.

The Government gun factory is not to include plant for forging or casting steel or other metals for guns. These products, it is understood, are to be left to private manufacturers. In order to supply the forgings as fast as the gun factory can utilize them, much work will have to be done in these private shops and there can be made available for the armament of fortifications in different years the following number of finished guns:

At the end of—	8-inch.	10-inch.	12-inch.	Guns per year.	At the end of—	8-inch.	10-inch.	12-inch.	Guns per year.
1891	3	.....	.....	3	1901	.....	136	129	39
1892	9	5	2	13	1902	.....	156	148	39
1893	19	12	8	23	1903	.....	176	167	39
1894	31	19	16	27	1904	.....	196	186	39
1895	43	33	26	36	1905	.....	222	209	43
1896	55	47	46	46	1906	.....	.....	.....	.....
1897	67	64	62	45	1907	.....	.....	.....	.....
1898	79	81	78	45					
1899	91	98	94	45	Total	102	222	209	.....
1900	103	115	111	45					

Undoubtedly, to properly fortify our coast, a large amount must be expended. But, Mr. Chairman, if by so doing we practically insure our people against great loss of property, a deplorable sacrifice of life, and the possibility of injury to our national honor, will we not have wisely invested the public funds? And we may justly claim we made these expenditures from no desire to cause suffering to others, but rather as a check to any disposition on their part tending to make unreasonable demands upon us. In this time of peace we prepare for war, that peace may be perpetual.

Irrigation of Arid Lands.

SPEECH

OF

HON. ROSWELL P. FLOWER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 2, 1890,

On the Senate amendment to the bill (H. R. 7496) to provide for certain of the most urgent deficiencies in the appropriations for the service for the Government for the fiscal year ending June 30, 1890, and for other purposes.

Mr. FLOWER said:

Mr. SPEAKER: Irrigation may be considered as a subject of economics, and to a nation densely populated, with a limited area of territory, is one worthy of attention.

Demonstration of its utility may be found in France, Italy, Spain, and India, and also in Japan, where, long before the christian era, some eight hundred irrigating canals were constructed and have since been in constant use, where, aided by a copious rainfall of from 60 to 100 inches annually, 12,000,000 acres of land, supplemented by irrigation, have clothed and fed 38,000,000 people and given a surplus sufficient to export several million dollars' worth of commodities.

The arid region of the United States begins midway in the great plains at about the one hundredth meridian, extends westward across the Rocky Mountains to the Pacific Ocean (excepting the Cascade Mountain region), and then, within those limits, sweeps the country north and south from the British Possessions to the Rio Grande, embracing more than two-fifths of the total area of our country. And within this vast area Major Powell says:

Only a small portion of the country is irrigable, the lowlands lying along the streams.

There is, however, no immediate demand for more land in this country, as in Japan, and the question arises whether at this period we should entertain the subject at all, and, if we do, whether in appropriating money from the public Treasury we should go beyond providing for mere scientific research.

Beyond that point I am totally opposed to the General Government spending one dollar in irrigation works. There have been introduced in this Congress some forty or fifty bills upon the subject of irrigation, straws which point toward the Treasury of the United States, any one of which that may become a law and provide for Government construction would be the entering-wedge to a vast outlay of the public moneys. It would establish a precedent which, if not unconstitutional, certainly has the color of unconstitutionality. It would be the initial step toward a gigantic system of improvements in a new field, comprising over two-fifths of our territory, which must necessarily result in benefiting a few capitalists who have yet to find a local habitation there and to whom the Government owes nothing, and to the injury of our farmers already settled in other localities, comprising 44 per cent. of our population, to whom the Government owes the prosperity of the Union.

If irrigation is to be considered a fit subject for the fostering care of the Government, it must take its place in the category of public improvements, together with public buildings, rivers and harbors, and national defenses. And if it is to be brought within the purview of the national welfare clause and is to be made a subject for appropriations by Congress, let us see where the burden will fall. The true valuation of property in the United States at the last census was $43,642,000,000. Of this, 45 per cent. was found in the North Atlantic States, 8.3 per cent. in the Southern Atlantic States, 33.8 per cent. in the Northern Central States, 8.3 per cent. in the Southern Central States, and 4.6 per cent. in the Western States.

The arid region proposed to be improved by irrigation is located entirely within the class of States denominated "Western," comprising Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Idaho, Washington, Oregon, and California. Shall we provide for an expenditure of the public moneys to improve and build up a particular section of country, which at the last census represented but 4.6 per cent. of its entire wealth, out of moneys of which 95.4 per cent. is derived from other sections?

Reserving the point that an improvement of a part is a benefit to the whole, I make these comparisons to show that the expense of Governmental irrigation in any of the States and Territories named would fall heaviest upon sections that have the remotest interest in the subject.

It would be improving, out of the public moneys, the farming interests of a section of our country whose farmers have contributed thereto by taxation on less than $400,000,000 of their property, while the farmers of other sections have contributed thereto by taxation on more than $9,800,000,000 of their property.

What class of our people would be benefited by these improvements made by the General Government? Would it be the farmer or the homesteader who would go into the arid region with his family, subdue his wild surroundings, build school-houses and churches and lay a broad foundation upon which to build up society?

For an answer I will quote from Major Powell, than whom there is no greater authority upon the subject. In one of his official reports upon the arid regions he says:

To a great extent the redemption of all these lands will require extensive and comprehensive plans, for the execution of which aggregated capital or co-operative labor will be necessary. Here individual farmers, being poor men, can not undertake the task.

And upon the subject of "aggregated capital or co-operative labor," to which Major Powell refers, I will quote from a public document entitled "Report of the Committee of the Senate upon the Relations between Labor and Capital," as follows:

We are in the midst of nothing less than an agricultural revolution. As if by magic, bonanza farms have sprung up in the West. Farms of thousands of acres are getting to be quite common. There is one estate of 350,000 acres, covering an area of 547 square miles. These huge farms are simply big food factories, with the temporary good of the factory system, the cheapening of its products, whether shoes or grain, but with the permanent evils of the factory system reproducing themselves in agriculture. These food factories are worked exhaustively, being mere speculations, from which capital hopes soon to retire, and in which, therefore, it has no regard for the future fertility of the land. The hired men have no hold of the land they work, nor does the land hold them.

Instead of a settled, free farmer population, building up homes, developing villages and towns, laying the foundation for a sound society, we have gangs of hired laborers, drawn from a distance, herded on the ground during the busy season and then turned loose to shift for themselves; men trained in alternate hard toil and loafing, making no homes, furnishing the recruits for those bodies of tramps which of late years, in dull times, the West has found roaming around with constant danger to society.

If this system continues and develops it will turn out a class of agricultural laborers wholly new to our country, incipient paupers and criminals where we looked to see a hardy yeomanry. The prospect is of an indefinite continuance of this state of things and of a vast increase of it.

Quoting further from the same work, William Godwin Moody, of Brooklyn, in his testimony before that committee, says he has devoted a great many years to an examination of the facts testified to; that four years prior (*i. e.*, 1879) he examined various farms in the West, running from 10,000 up to 100,000 acres, upon which there were from ten to two hundred and fifty laborers employed, but not a woman or child or fixed inhabitant upon the territory of one of them; that these men appeared when they were wanted and then disappeared when the work was done; that the number of farms of 1,000 acres and over in the North and West during the decade between 1870 and 1880 had increased 800 per cent.; that a very large amount of capital was being invested in these great tracts of land by foreigners, who were getting our lands into their possession in hundreds of thousands and millions of acres.

Mr. Moody further says:

Where the small farmer finds it impossible to get a living cultivating wheat by his own labor and selling it at from 50 to 60 cents a bushel as he does in Dakota (1883), the bonanza farmer is able to raise his grain at a cost not exceeding 14 cents a bushel; the large farmer does not sell his grain to the middle man or the merchant or the canvasser upon the ground; he sends it to market himself.

Continuing, he says:

I merely wish to show that farming is already overdone. There are more in it than can get a respectable support from it; and it is idle to talk about the small farmer or the man without capital going and cultivating the soil and getting a living out of it by his individual labor.

Hon. George P. Marsh, for many years minister at the court of Italy, speaking of the effects of irrigation generally in Europe, but from professional observation more particularly in Italy, says:

The tendency of irrigation, as a regular agricultural method, is to promote the accumulation of large tracts of land in the hands of single proprietors, and consequently to dispossess the smaller land-owners.

Mr. Speaker, is it not enough, in times of overproduction like these, that our farmers already established should meet the competition of those who, like themselves, have risen by their own efforts? Would you require them, by taxation upon over $9,800,000,000 worth of their own property, to contribute toward a subsidy in aid of competitors in their own industry, who must necessarily be what are termed "bonanza farmers," when that industry is already palsied by overproduction? Would it be fair and just to our farming class? Would you ask the business man, whose profits yield him a precarious living, to tax his merchandise in order to establish a competitor on a larger scale across the street?

Let us glance at the capacity of some of those great States and Territories of the Far West.

Washington has an area of 42,803,000 acres, of which one-third is denominated as "tillage and grass," one-third "woodland," and one-third "unproductive." In oats, with a yield of 37 bushels per acre, she leads as a producer every other State and Territory in the Union; and yet in 1888 she grew but 94,687 acres of oats, or 2 acres in the thousand of her total area. As a producer of wheat, with over 16 bushels per acre, she stands in the front rank; in 1888 11 acres in the thousand were cultivated to that crop. Of her total area only 3.3 per cent. is devoted to farming.

Montana's limits contain 92,998,400 acres, of which two-thirds is denominated as "tillage and grass" and one-third "unproductive." She ranks in the first class as a producer of wheat, with 17 bushels per acre. In 1888 only one acre in every thousand bore that crop. In the same year her crop of oats, yielding 34 bushels to the acre, covered one acre in every thousand. Of her total area, .4 per cent. only comprises farms.

Colorado embraces 66,460,800 acres, of which more than one-half is denominated as "grass and tillage." Her corn yield is 27 bushels per acre. In 1888 she planted to that crop one acre in every thousand. In wheat with over 19 bushels per acre, she leads, as a producer, forty-six States and Territories; while in 1888 only two acres in every thousand produced that crop. In oats she yields over 31 bushels per acre. In 1888 she grew but one acre in every thousand. Her farms comprise only 1.8 per cent. of her total area.

Nevada has 70,223,000 acres, of which 65 per cent. is denominated "tillage and grass." Her corn yield is 24 bushels per acre; she produces none. Her wheat yield ranks first class, with over 17 bushels per acre; she produced in 1888 one acre in every thousand. Oats, yielding 30 bushels per acre, covered in 1888 one acre in every thousand. Only .8 per cent. of her total area is under cultivation.

Let us glance at another section of our country, the South. Take Virginia, with her 25,680,000 acres of land, with but 26 people to the square mile; North Carolina, with her 33,433,600 acres of land, with but 30 people to the square mile; Tennessee, with her 26,720,000 acres of land, with but 37 people to the square mile; Georgia, with her 37,747,200 acres of land, with but 25 people to the square mile, and so on through contiguous States. What inviting opportunities for homes and enterprise, where crops of corn and tobacco, rice and wheat, oats and barley, hemp and rye may be raised above and through the cotton belt; where, amid grand and picturesque mountain scenery, lie undeveloped beds of gold, iron, and coal, marble and slate, zinc and lead, copper and mica, and salt, covered with forests of oak, poplar, ash, chestnut, walnut, elm, and pine; where water-powers with capacity to create an enormous amount of home industry run idly by; where harbors formed by nature, with undeveloped resources almost in sight, have never yet been disturbed by the din of commerce.

A brighter day has dawned upon that section, a day of prosperity. Neglected fields are now yielding better crops; the plow runs where but lately forests grew. The mountain solitudes of the South echo to the blast of mining, the shriek of the locomotive, the sound of the ax, the forge, and the smelter; and her skies are darkened by the peaceful smoke of manufactures. A great commercial awakening has come for the South, and a tide of Northern emigration has but lately set that way. With her abundance of land and resources she can hold the surplus from the North for many years to come.

Then, again, to demonstrate how little crowded our people are upon the land, let us glance at the subject from another standpoint. There lie east of the Mississippi River over twenty-two and a quarter million acres of old farm land, land that has been cleared, cropped for years, and finally abandoned as unproductive, aggregating an area larger than the State of South Carolina, larger than the State of Maine, larger than the combined area of the States of Massachusetts, Vermont, New Hampshire, Rhode Island, and New Jersey. These twenty-two and a quarter million acres of abandoned farms east of the Mississippi River are accessible to lines of traffic, and their improvement by new methods of fertilization will ultimately be brought about; but who can doubt that it will be done other than by private enterprise?

And just here let us compare the density of population of the United States with that of foreign countries. The census of 1890 will probably show that the United States has an average of 22 people to the square mile. France has 180; Italy, 300; Germany, 226; Belgium, 481; England and Wales, 426.

In 1860, by an act of Congress, the public land of the United States was set apart for homesteads, and under the homestead law, as passed in 1862, provisions were made for the benefit of the American people. Shortly after, a series of operations were commenced by which the public domain has been honeycombed in the interest of railroad companies, segregating millions of acres of the public land. The policy of the Government to give away to the railroads alternate sections of these enormous tracts of land, though selling the remaining sections at double the price it was originally held at, has had the effect to force occupancy before its time and cheapen the price of farm productions, with the result that it has been a prime factor in driving the farming class to the verge of bankruptcy.

The late depreciation of land values in the thickly settled section of the East and their rise in the sparsely settled section of the West presents an anomaly to be explained only by the cheapening rates of transportation which places the western product at the dock for foreign shipment as cheaply as that grown in its immediate vicinity. It costs no more to-day to move a car-load of freight from Minneapolis, Minn., to New York, a distance of 1,400 miles, than it cost twenty-five years ago to move a car-load of freight from Rochester to New York, a distance of 374 miles. Again, on land worth $5 per acre in Minnesota, the interest per acre, at 7 per cent., is 35 cents per annum. The interest on land in New York at $50 per acre is $3.50, or a difference of $3.15. Now, for this $3.15 you can ship the crop from 1 acre of land in Minnesota to Liverpool, England.

Mr. Dodge, the statistician, says:

There is almost universal complaint among farmers of all nations of the prevalence of low prices. In this country there has been an increase of production, even more rapid than the increment of population. Speculation first, and profitable utilization afterwards have been the motive for speculation and development which have astonished the world and caused overproduction and low prices. The corn crop for the last year exceeds 2,000,000,000 bushels; wheat approximates 500,000,000; oats exceed 700,000,000, and hay and potatoes have increased in similar proportion. It is difficult to force a market abroad for a surplus of any product. Every nation is seeking to produce its own food and as far as possible its raw materials.

The instinct of self-preservation compels the adoption of such a policy. We can not sell our crops abroad as a rule except to fill the gaps in supply that are made by bad seasons or other results of the inevitable. In wheat, overproduction has destroyed the growers' profit. The area of the crop of 1889 included about 10,000,000 acres more than the home consumption of the year will require, and the price in Liverpool has of late been the lowest for a century. The production of meat has also advanced faster than population. Thus the staple products of agriculture, by increase of farms, by railroad building, and land settlement, and the increase of agricultural implements, are grown to excess, still further lowering prices and intensifying dissatisfaction with the results of agricultural effort.

From a comparison of values of farm lands in the United States, as taken in 1870 and 1880, it will be found during that decade that, while Colorado advanced $21,723,475, Vermont declined $30,041,065; that, while Dakota advanced $20,315,819, New Jersey declined $66,627,543; that, while California advanced $120,811,254, Pennsylvania declined $67,792,172; that, while Kansas advanced $144,851,896, New York declined $216,681,025. If the figures were at hand for 1890 they would show a still greater decline of land values in the East.

This is not a cry of the East against the West. Look at Illinois, whose farm products are a drug in the market. As shown by the report of the agricultural bureau of that State, with a yield to the farmer of less than $6 per acre, the value of the corn crop in the State for the year 1889 was $58,000,000 and cost the farmer $68,000,000 to produce it. In Kansas, where a bushel of coal can be obtained for 20 cents, corn is burned as fuel. Throughout the country, on a general average, during the last year, wheat has returned to the grower less than $8 per acre.

Although prices are lower than ever before, our exportation demand has fallen off from 186,000,000 bushels in 1880-'81 in wheat and flour to 121,000,000 as the average of the past eight years; and the estimated surplus for the past year, 50,000,000 bushels, lying in our granaries, must be added to next year's crop.

In Great Britain the agricultural losses of the kingdom, incurred within twenty years, are stated to have been £1,000,000,000. Russia, Australia, the Argentine Republic, and other nations are under the same depression.

England has built her railroads in India and Canada, pushing them forward and developing agricultural resources which tend to cheapen. Russia has also pursued the same policy over vast tracts of land. These causes tend to develop the farming industry in all these countries with an artificial growth.

Our lands have been cheapened by this low rate of freight and overproduction, the same as the rate of interest has been lowered in this country by laying cables that reach immense sums of money at a low rate of interest in London, Paris, Berlin, and Holland. When the cables

were established the legal rate of interest in New York was 7 per cent. To-day it is 6 per cent. and will soon be 5. Whenever a scarcity of money arises a cable transfer from the cheapest market tends to make the rate uniform, and consequently continually lowers the rate of interest.

In the same manner the immense lines of domestic telegraph and railroads which have brought our country closer together in all its parts, combined with good banking facilities and a uniform currency, have solidified it and gradually affected the rate of interest in every State by the easy communication with New York. So this overproduction and cheap freights, like the swing of a mighty pendulum, first shrunk the values of lands in the East, is now beginning to be felt in the West, and, if by the stimulus of irrigation the area of production is still further enlarged, will again in time react upon the East.

Let it be borne in mind that I am not speaking against cheap transportation, for the dependence of the East upon it (where Massachusetts can furnish bread to her people for only a half day in the year) goes without question. But the unnatural stimulation of farming in the West, together with cheap transportation, has filled our warehouses with 50,000,000 bushels of wheat to be added to next year's crop.

The question now is, shall we go on and cheapen lands still more by irrigation?

It is far better that the people who may desire to settle in the arid belt help themselves than that they should look for aid in a subsidy from the General Government. It encourages them to be independent and teaches them the duty of taking care of themselves.

The pioneers in California, Nevada, Colorado, and Idaho went there for gold and silver. Agriculture was little thought of until cities sprung up, and then it became remunerative. It was then that the farmer and the capitalist in California, in Nevada, Colorado, Utah, and Idaho seized upon the rivers and water ways, and they have already inaugurated systems of irrigation. In California land originally worth but 50 cents an acre has been reclaimed by such systems and is now worth $300 an acre. Colorado has 6,000 miles of irrigating canals. In almost every valley in Utah the Mormons own the water for irrigation purposes, and it is brought down from the mountains in the proper season, making all those valleys blossom as the rose. In Washington and Montana they are boring artesian wells with great success, and, left to themselves, those hardy pioneers will work out this problem in their own way better than we can do it for for them from Washington.

Immense water ways run through Colorado and the western part of Kansas and Montana and Dakota, from which can be spared the supply for making those sections habitable by a large population. To illustrate, the Arkansas River rises in the Rocky Mountains in Colorado, as well as the South Platte, at an altitude of over 2 miles higher than the mouth of the Mississippi. They come flowing down through the mountains and valleys of Colorado, of Kansas and Nebraska, emptying finally into the Mississippi, bringing their mud with them and depositing it in that stream. All along in the cañons of the mountains—and these maps will point out where to do it—can be established reservoirs by private enterprise or by State aid, from which can be drawn supplies for irrigation without detriment to the people of the other States, and it would prove a great blessing to the people of the Lower Mississippi.

The Missouri, to which the Gallatin, the Jefferson, and the Madison are tributary, rising at a height of 8,200 feet, or a mile and a half in altitude above the mouth of the Mississippi, plows through its beds in Montana and Dakota, and water can be spared from it and its tributaries for irrigation purposes as fast as it may be needed.

On the western slope the Colorado River rises in the Rockies in Colorado and runs westward. It can be utilized in that section of the country for irrigation. So, also, the Snake, tributary of the Columbia, rising at an altitude of 8,000 feet near the Yellowstone and running down to the Pacific.

All these immense bodies of water can be utilized by private enterprise in making that country better, when a population of active, brainy men see the needs and the profit of the undertaking. But I deny the right of the General Government to undertake general legislation of this kind, that would benefit a sparsely settled country to the detriment of the older States. The older States never relied upon the General Government for any internal improvements of this kind. The State of New York expended $16,000,000 on the Erie Canal, and to-day the whole country is reaping the benefits of connecting the lakes with the ocean.

It would not be fair to the farmers of the other sections of the country at a period when land is continually depreciating in value, when we are threatened by general overproduction, with crops almost rotting on the ground for the want of a market—it is not fair, I say, to them, for this Government to spend large sums of their money for the improvement of arid lands in a remote section of the country, which will only enlarge the area of production.

Mr. Speaker, the accumulation of a large surplus in the Treasury is gradually but surely leading the people of the United States to look to the General Government for aid which ought never to be granted them. Irrigation, the educational bill, the meddling with the election law, and all subsidies are but fertile schemes suggested by a full Treasury and begotten of false notions of economy. This tendency to paternalism is battering down the boundary lines of the States and obliterating the principles on which our Republic was founded.

To reduce taxation to the economical wants of the Government is our first duty. Do this, and this class of legislation will all fail for want of funds. Do this, and the money so long confined in the Treasury will again flow into channels of trade and prove a blessing instead of a curse to the people. Do this, and the people who have so long been looking for relief will attend to their own domestic affairs in their own way in prosperous and contented homes.

I will admit that the irrigated lands of the world produce the best and the largest crops; but, as the necessity for its introduction by the General Government does not as yet exist, I would not spend one dollar of the public revenues for this object. I would leave this question to the people of the States to work out for themselves. I would leave them free and independent citizens, leave them where every man throughout the West has been left who has bought land of the Government in the past, on an equality with them.

It is a safe doctrine to assume, Mr. Speaker, that this Government should do nothing for the people that the people can do better for themselves.

Admission of Idaho.

SPEECH

OF

HON. JOSEPH E. WASHINGTON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 2, 1890,

On the bill (H. R. 4562) to provide for the admission of the State of Idaho into the Union.

Mr. WASHINGTON said:

Mr. SPEAKER: The gentleman from Idaho [Mr. DUBOIS], in defending the clause in the constitution of Idaho which disqualifies Mormons from voting and holding office, says:

> The gentleman from Tennessee [Mr. WASHINGTON] signs this report. Let us see what the constitution of Tennessee says on the subject of franchise. By article 9—
>
> "Ministers of the gospel are forbidden to hold office, also persons who deny God or fight duels."
>
> Yet, the gentleman from Tennessee signs a report which says:
>
> "We insist that in Idaho disqualifications for holding office shall only result from a conviction of crime."
>
> The people of Idaho say bigamists and polygamists shall not hold office in Idaho, the people of Tennessee say ministers of the gospel shall not hold office in Tennessee.

Now, sir, let me read you in full the parts of the constitution of Tennessee referred to. They are as follows:

> ARTICLE 9.
>
> SECTION 1. Whereas ministers of the gospel are, by their profession, dedicated to God and the care of souls, and ought not to be diverted from the great duties of their functions; therefore no minister of the gospel or priest of any denomination whatever shall be eligible to a seat in either house of the Legislature.
>
> SEC. 2. No person who denies the being of God or a future state of rewards and punishments shall hold any office in the civil departments of this State.
>
> SEC. 3. Any person who shall, after the adoption of this constitution, fight a duel, or knowingly be the bearer of a challenge to fight a duel, or send or accept a challenge for that purpose, or be an aider or abetter in fighting a duel, shall be deprived of the right to hold any office of honor or profit in this State, and shall be punished otherwise in such manner as the Legislature may prescribe.

Sir, these disqualifications are very different from what the statement of the gentleman from Idaho would lead one to suppose and radically at variance with the language and purpose of the sections in the Idaho constitution under discussion. A minister of the gospel is only disqualified to sit in the Legislature of Tennessee, and for the very excellent reason given in the constitution itself, because ministers of the gospel and priests are "by their profession dedicated to God and the care of souls, and ought not to be diverted from the great duties of their functions."

A minister or preacher is not prohibited from holding any other office in Tennessee. In my own judicial circuit, a Methodist preacher, and a good one, too, who had also acquired a knowledge of the law and been admitted to the bar, was elected to the office of prosecuting attorney and filled it with honor till his death.

Surely the gentleman can not object to that clause of our constitution which excludes from civil office the infidel who denies the existence of a God! How, forsooth, could such a person take an oath to support the Constitution? Upon whom would or could he call to witness the solemnity of his obligation? He could not swear by the earth, for it is God's footstool. He could not swear by any created thing, for it is less than the Creator, whose very existence he denies.

As to the clause excluding the duelist, surely this is as it should be. In this enlightened day can any one, even the gentleman from Idaho, excuse a man for shedding the blood of another on the flimsy pretext

that it was done under the laws of the so-called "code duello" "on the field of honor?" Tennessee was right when by this constitutional enactment she sought to put the brand of Cain on the brow not only of him who fights but of him who aids and abets a duel. May her edict against this relic of barbarism remain forever in her fundamental law.

But, sir, Tennessee does not stand alone among the States in excluding certain persons from the right to vote and to hold office. On the contrary, she has fewer restrictions of this sort than almost any other State. As the gentleman from Vermont [Mr. STEWART] alluded to my State, let me read from the Vermont constitution, chapter 2, section 12, which says each member of the Legislature before taking his seat shall make and subscribe to the following declaration:

You do believe in one God, the Creator and Governor of the universe, the rewarder of the good, the punisher of the wicked; and you do acknowledge the Scriptures of the Old and New Testament to be given by divine inspiration, and own and profess the Protestant religion.

This prohibits, if enforced, a Roman Catholic from becoming a member of the Legislature of the State of Vermont and certainly excludes every infidel.

I will not consume time by reading from the constitutions of all the States, but on the subject of dueling as a disqualification I will read the constitution of Kansas, article 2, section 5:

No person shall be deemed capable of holding or being elected to any post of honor, profit, trust, or emolument, civil or military, or exercise the right of suffrage under the government of this State, who shall hereafter fight a duel, send or accept a challenge to fight a duel, or who shall be a second to either party, or who shall in any manner aid or assist in such a duel, or who shall be knowingly the bearer of such challenge or acceptance, whether the same occur or be committed in or out of the State.

Article 5, section 2, ratified in 1867:

No person under guardianship; no *non compos mentis*; no person convicted of felony, unless restored to civil rights; * * * and no person who has ever voluntarily borne arms against the Government of the United States or in any manner * * * attempted to overthrow said Government * * * shall be qualified to vote or hold office * * * until said disability shall be removed by a law passed by a vote of two-thirds of all the members of both branches of the Legislature.

Kansas not only excludes the duelist, but, as you will see, she inserted a clause in 1867 which denies both the privilege to vote and to hold office to any man who served on the Confederate side in the late war; and that clause stands unrepealed to this day.

I have cited these cases to show that Tennessee has done nothing cruel, unjust, unusual, or contrary to the spirit of a free and enlightened government when she placed a few restrictions around the right to vote and to hold office, but on the contrary she has not gone to any such length as have the States which those who criticise her represent.

Now, as to Idaho; the constitution of the proposed State of Idaho reads as follows:

SEC. 2. Except as in this article otherwise provided, every male citizen of the United States twenty-one years old, who has actually resided in this State (or Territory) for six months, and in the county where he offers to vote thirty days next preceding the day of election, if registered as provided by law, is a qualified elector; and until otherwise provided by the Legislature, women who have the qualifications prescribed in this article may continue to hold such school offices and vote at such school elections as provided by the laws of Idaho Territory.

Mr. Speaker, I wish to call particular attention to the words, "if registered as provided by law, is a qualified elector," because on that hinges the whole machinery for disfranchising the Mormon voters of this Territory.

Section 3 sets forth in full who shall not vote. I will read it:

SEC. 3. No person is permitted to vote, serve as a juror, or hold any civil office who is under guardianship, idiotic, or insane, or who has at any place been convicted of treason, felony, embezzlement of the public funds, bartering or selling or offering to barter or sell his vote, or purchasing or offering to purchase the vote of another, or other infamous crime, and who has not been restored to the rights of citizenship, or who, at the time of such election, is confined in prison on conviction of a criminal offense, or who is a bigamist or polygamist, or is living in what is known as patriarchal, plural, or celestial marriage, or in violation of any law of this State or of the United States forbidding any such crime, or who, in any manner, teaches, advises, counsels, aids, or encourages any person to enter into bigamy, polygamy, or such patriarchal, plural, or celestial marriage, or to live in violation of any such law, or to commit any such crime, or who is a member of or contributes to the support, aid, or encouragement of any order, organization, association, corporation, or society which teaches, advises, counsels, encourages, or aids any person to enter into bigamy, polygamy, or such patriarchal or plural marriage, or which teaches or advises that the laws of this State prescribing rules of civil conduct are not the supreme law of the State; nor shall Chinese or persons of Mongolian descent, not born in the United States, nor Indians not taxed, who have not severed their tribal relations and adopted the habits of civilization, either vote, serve as jurors, or hold any civil office.

Nothing is said here about allowing these people to register or to take an oath in accordance with the Tucker-Edmunds act, which is now the law of the United States in all the Territories, that they are not bigamists or polygamists, and do not believe in or practice either. Nothing is said regarding the statute of Idaho on this subject lately affirmed as constitutional by the Supreme Court of the United States, on the taking of which any citizen of the Territory could vote, which is in substance as follows:

I do swear (or affirm) that I am a male citizen of the United States of the age of twenty-one years (or will be on the 6th day of November, 1888); that I have (or will have) actually resided in this Territory four months and in this county for thirty days next preceding the day of the next ensuing election; that I have never been convicted of treason, felony, or bribery; that I am not registered or entitled to vote at any other place in this Territory; and I do further swear that I am not a bigamist or polygamist; that I am not a member of any order, organization, or association which teaches, advises, counsels, or encourages its members, devotees, or any other person to commit the crime of bigamy or polygamy, or any other crime defined by law, as a duty arising or resulting from membership in such order, organization, or association, or which practices bigamy, polygamy, or plural or celestial marriage as a doctrinal rite of such organization; that I do not and will not, publicly or privately or in any manner whatever, teach, advise, counsel, or encourage any person to commit the crime of bigamy or polygamy, or any other crime defined by law, either as a religious duty or otherwise; that I do regard the Constitution of the United States and the laws thereof and the laws of this Territory, as interpreted by the courts, as the supreme laws of the land, the teachings of any order, organization, or association to the contrary notwithstanding, so help me God.

While the present law is in force any Mormon or any man of supposed Mormon proclivities can be challenged when he offers to register. If so, it is the duty of the registrar to swear him, and if he takes the oath he must be registered, and is then entitled to vote, but may be afterwards tried and, if guilty, convicted of perjury and of fraudulent voting. Not so, however, under this ingeniously devised new method in the constitution. There is not a word or a provision anywhere giving him a right to demand that he be allowed to take the test oath and be registered. On the contrary, the words are:

No person is permitted to vote, serve as juror, or hold civil office, etc.

Section 4 of this same article on suffrage reads as follows:

SEC. 4. The Legislature may prescribe qualifications, limitations, and conditions for the right of suffrage additional to those prescribed in this article, but shall never annul any of the provisions in this article contained.

No test oath is provided for in section 3.

The Legislature, by section 4, may prescribe additional limitations, qualifications, and conditions, but shall never annul any of the provisions contained in this article. Does that not prohibit the enactment even of a test oath and deny registration?

This, sir, leaves absolutely in the hands of the clerk of registration the right to say who shall and who shall not vote. If you, Mr. Speaker, whom no one here would suspect of any Mormon proclivities, were to become a resident of Idaho under this constitution and were to apply for registration, the clerk could deny it to you and thus deprive you of your vote, the country of your services, and this House of your wonderful ability to administer general parliamentary law, on the mere assumption that you were a bigamist or a polygamist or a Mormon, or, if not, that you "resembled one," and you would have no appeal.

It would do no good for you "to deny the soft impeachment" and insist that you could and would swear that the charge was false. The clerk would answer, "I am not compelled to allow you to take an oath expurgating yourself; read section 3 of the constitution. I say you are a Mormon; I believe you are a Mormon; that is enough. You can not either register, vote, or hold office."

Sir, I say that if this constitution is adopted without amendment such scenes as I have pictured will disgrace every election in this proposed State, and that no white man against whom the slightest suspicion of Mormonism can be raised will have any more chance to vote than "the Chinese or persons of Mongolian descent not born in the United States" and Indians not taxed, who are in this same section 3 disqualified.

Sir, it is not my province or my desire to defend bigamy and polygamy or those who believe in and practice them as a religious conviction. Such religious belief is repugnant to me. I can not reconcile such practices with the purity and holiness of religion. They are crimes against the civil law and degrading to society. As such, no man can claim the right to exercise them as a part of the practice of his religion any more than he could claim the right to offer up a human life in sacrifice to his God and his belief. Crime must not be tolerated under the name and cloak of religion no matter in what shape it appears.

It is treason to the State to claim a higher authority in civil matters than the Constitution and the laws of the State and of the United States. In dealing with organized crime, whether it comes as a band of anarchists, a mob of socialists, an armed force, or a church organization, let us be careful to keep within the metes and bounds of the Constitution and the bill of rights. Condemn no man unheard; convict no man without a trial, or without, at least, giving him the opportunity to expurgate himself by an oath. Having all the machinery of the courts, having the judge and the jurors, surely it should be easy in Idaho to convict any Mormon of perjury who should take the oath and register and vote, if he came within the limits of those inhibited by the law.

This is all we, the minority, ask. This is all we contend for. We strove earnestly in committee to get this constitution so amended, and we now make the appeal to the House.

The Republicans refused every offer we made in the committee, and we do not expect to see them change front on this floor. Partisanship has reached such a pitch these days that the general welfare is lost to sight. Party zeal makes men do and sanction things which they feel and know are not right. So steadfastly have the Republicans stood by this constitution in its entirety that I know they think they have some party supremacy to gain by keeping it as it is. The Mormon voters of Idaho number about 4,500. These all vote the Democratic ticket. Under this constitution they will be disfranchised.

The Delegate [Mr. DUBOIS] has repeatedly and boldly proclaimed,

"It is our purpose and our object to disfranchise them." Yea; and I say to the Democratic gentiles in Idaho, who it is said are clamoring for the immediate admission of Idaho under this constitution, beware; keep your eyes open, or these same Republican clerks of registration, who will refuse to register the known and acknowledged Mormons, when it suits their party purposes will find that, though you may not believe in the practices and teachings of the Mormon Church, you have contributed to the Sunday schools or given aid and comfort in some manner to the organization or its members, and therefore they will, without trial by judge or jury, disfranchise you.

Sir, I wanted to vote for the admission of Idaho into the Union. I have been assured by those in whom I have the utmost confidence that she has the population and wealth to sustain statehood; that her resources and possibilities, which can only be fully developed after admission, are such as will speedily place her in the front rank of States. I want to sustain the good Democrats who have been for years fighting the battle of the people in this Territory; but, sir, unless this constitution is amended, unless some modification is placed upon it, I shall feel compelled to withhold my vote.

Admission of Idaho.

SPEECH

OF

HON. BINGER HERMANN,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 2, 1890,

On the bill (H. R. 4562) to provide for the admission of the State of Idaho into the Union.

Mr. HERMANN said:

Mr. SPEAKER: Nothing so forcibly illustrates the wonderful expansion of the American Republic as the recent admission of new States into the Union. The busy industries of localities so thoroughly absorb individual attention that we remain unconscious of the marvelous development constantly in progress but a short interval beyond us. We hurriedly ponder upon the figures of the census and the current record of events, but these are so farreaching and so stupendous in their disclosures as to occasion rather a feeling of discredit than of admiration.

When, however, the official proclamation is heralded throughout the land that another sovereign State has united with the Union and another star has been added to the glorious constellation on the standard of the Republic, then it is that we arouse ourselves from our active surroundings to gaze across to the western confines of the nation and feebly comprehend the vastness, the power, the material prosperity, and magnificence of this proud land of ours.

Scarcely a year ago and the world itself was amazed and every patriotic citizen thrilled with rejoicing when four new States were welcomed to places in the Union, and each of them greater in population, in area, and material riches than many of the kingdoms and principalities on earth. In this Congress we have just witnessed the advent thus far into the Union, through this House, of Wyoming, when, rapidly following in her tread, comes the fairy form of the silvery sister of the Pacific Slope—Idaho.

This portion of the national domain is nearly 3,000 miles distant from the Dome of this Capitol! Can it be wondered that so little should be known among the people of the Atlantic, the Lake, and the Gulf shores as to these far-distant regions of the Republic? Still less should it be expected that much should be known of the quiet, steady, yet marvelous advancement of this new empire in the West.

But society in this country is in a continuous state of action. Indeed, it may be said that action is the essence of the American character. It conquers wherever it goes. There is nothing too great for its achievement. It has subdued the desert places and planted the fruits and grains of commerce where before grew the sage-brush and cactus. This has been especially true of Idaho. We have listened to the arguments in relation to the admission of this Territory into the Union. We have noted the gradual development of that vast region from its first entrance by the white explorers under Lewis and Clarke, when it was the exclusive home of the savage and the wild animal, to its present advanced prosperity. We have been reminded of the long years of isolation of the early settlers and of the dangers which confronted them, and have been told of their struggles through all the ordeals incident to the growth of society in the West, from that of the trapper, the hunter, the miner, the herder, the farmer, the manufacturer, to that of the capitalist, from that of the tented caravan of the pioneer and home-seeker to the paved towns and cities and to the richly tilled farms of the agriculturist. To the present generation of the Atlantic States such a narrative sounds more like fable than the hard lines of history.

Even the beautiful name of the proposed State seems to have its origin in romance. A former United States Senator from my State, Hon. James W. Nesmith, being in the Senate at the time of the organization of the Territory and familiar with its history, and an enthusiastic believer in its future possibilities, was one of those who decided to confer upon it the name it now bears. The discovery of this name was purely an accident. Two officials were traveling, one bright morning, over a lonely mountain trail, and while discussing the probabilities of Congress establishing a Territorial government over that country they suddenly reached the base of the mountain and emerged upon a small plateau, on the further end of which stood an Indian wigwam. While in plain view of this habitation an Indian woman came forth, and in a far-reaching voice called out several times the word "Idaho," or, as it sounded, Ed-dah-hoo-oo-oo. The call was answered by the sudden appearance of an Indian girl of about nine years of age. She was unusually prepossessing for one of the Indian race. The travelers naturally inferred that the word used was the name of the girl, but on inquiry could find no definition for it in the vernacular of the tribes, but being impressed with the comely appearance of the Indian maiden in that lonely abode in the Sierra Nevada range, they concluded that "Gem of the Mountains" would be a fitting translation, and it was so adopted, and subsequently accepted by Congress as the definition of the word "Idaho."

We are reminded of the area of this Territory. It contains 86,294 square miles, or 55,228,160 acres, and its north and south boundary is 140 miles in length.

The people of that Territory also tell us of their property valuation. The last annual assessment of real and personal property embraced an aggregate valuation of $25,000,000, being an increase in one year of $3,500,000, or 16 per cent. When it is understood that lands not patented are unassessable and that the rich mines, which yield an annual product of $14,000,000, are not taxed, we can appreciate the full extent of the real property valuation of the Territory.

They also remind us, sir, of the extended lines of railway which pass through their country and branch off from the trunk lines in all directions. Soon the Transcontinental, Chicago and Northwestern Railroad, from the East, will reach Boisé City and there unite with the Oregon Pacific and find its outlet on the Pacific Ocean through Yaquina Bay, in Oregon, for the Asiatic trade. The commerce of this country is not alone confined to land routes. It also possesses excellent water-way transportation. From Lewiston, on Snake River, immense shipments of wheat, oats, barley, flax-seed, wool, and hides find their way in steam-boats to the great Columbia River and thence to the sea. With the construction of the proposed boat-railway between The Dalles and Celilo and the completion of the canal and locks on the Columbia River, Idaho will have cheap, free, and unobstructed water-way communication with the Pacific Ocean.

Above all other resources of this highly favored land, we are more especially invited to behold the fabulous mineral richness of the mountain regions. Gold mining is not alone confined to placer gold, but extends to the more extensive and inexhaustible veins and quartz lodes. The operations in Owyhee County alone have contributed to the world over $26,000,000 from her gold and silver mines. In Logan County is situated the famous Mineral Hill mining district. This is a lead-silver-bearing zone. In the first seven years there were mined here 4,000,000 ounces of silver and $2,600,000 in value of lead. This is from one mine of the many in the same county. In the placer mines of the Leesburgh district, in still another county, over $10,000,000 in gold have been washed out from the gravel and sand of the hillsides. The indescribable richness of the Cœur d'Alêne mines, though comparatively recent in development, is well known. Already the silver and lead output here aggregates a cash value of $10,000,000. Authentic data before us now demonstrate that the production of the Idaho mines has yielded to the wealth of the country up to the present time, over $157,720,962. The yield last year alone amounted to $117,344,000.

Upon her admission as a State many restrictions now existing as to the investment of alien capital will be removed, and this additional capital, to operate the still undeveloped mineral regions, will at once advance Idaho to the foremost rank as the greatest bullion-producing State of the nation.

Then, Mr. Speaker, what reasonable or valid objection can be interposed to the admission of this magnificent Territory as a State in the Union? Is it because the area is not of the requisite surface? It may be answered that Idaho has a greater area than the State of New York. It exceeds that of Pennsylvania. Many of the Idaho counties are each larger than some of the States of this Union. One of her rivers has a volume of water equal to that of the Ohio River. Is it because there is a deficiency in the cultivable area? This is answered in the fact that Idaho possesses 16,000,000 acres of agricultural land. Both the deep soil of the valleys and the lands on the high plateaus are capable of the most varied productions of fruits, cereals, and esculents. The native timber is also immense. Over 10,000,000 acres of Idaho consist of forest lands. Is it because the people are not capable of self-government or lack in intelligence? A prompt answer to this is found in the educational statistics of the Territory. Commodious school-houses are everywhere to be seen, and the subject of education is closely

cared for by every citizen. These people are the peers of any community in the nation. They are fit for statehood. They are a loyal and patriotic people to the Republic, and they insist upon an equal participation in the benefits of the Union of States. What more can be demanded of them? What else must constitute the State? The answer of Idaho can be heard in the expressive words of Sir William Jones:

What constitutes a state?
* * * * * * *
Men who their duties know,
But know their rights, and, knowing, dare maintain,
* * * * * * *
And sovereign law, that State's collected will,
O'er thrones and globes el ite,
Sits empress, crowning good, repressing ill.

Possessing, then, all the requisite qualifications for the most advanced State in the Union, what motive can prompt a longer delay to the fulfillment of the cherished hopes of the people of Idaho?

Let us open the doors to this "Gem of the Mountains." Let us proclaim to the world that the forty-fourth child has been baptized in the Union of States and is now a sovereign among all the rest. A few more Territories and the last roll will be called. As the pioneer of this country has ceased to be, so will the Territories soon cease to be. Then the grand arch over all the States may be dedicated, for then the political structure of the Union will be complete. Then it will appear to us in the reality as it appeared only in prophecy to Bishop Berkley, when he said:

Westward the course of empire takes its way;
The four first acts already past,
A fifth shall close the drama with the day;
Time's noblest offspring is the last.

Bridging the Hudson River.

SPEECH

OF

HON. CHARLES S. BAKER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 2, 1890,

On the bill (H. R. 3886) to authorize the construction of a bridge and approaches at New York City across the Hudson River, to regulate commerce in and over such bridge between the States of New York and New Jersey, and to establish such bridge a military and post road.

Mr. BAKER said:

Mr. SPEAKER: This bill proposes to grant corporate rights by creating the North River Bridge Company, and confers the right to build and maintain a bridge over the Hudson River, connecting the States of New Jersey and New York. The project is unparalleled in its magnitude. The bill has had careful attention and consideration by the Committee on Commerce. We think that public rights and interests are fully guarded, and that its passage into law will insure an improvement most desirable, one grand in its conception. I commend to the House and Senate the statements embraced in the report of the committee, which contain all that can or need be said in relation to the bill.

I quote from the report:

The bill is by the substitute amended so as to embrace substantially the recommendations of the Secretary of War.

The committee have further provided by the new section, incorporated in the substitute as section 7, that the real and personal property of said company shall be subject to taxation in the States of New York and New Jersey the same as other real and personal property therein.

The committee submit herewith as a part of their report the several letters from the Hon. Secretary of War relating to the said bridge, and also the several exhibits embraced in the appendix, marked Exhibits A to P.

NECESSITY FOR BRIDGE.

The necessity for a bridge over the Hudson River at New York is well known, as was fully attested before your committee at the hearings on the subject.

The number of passengers crossing the Hudson River between the State of New Jersey and the city of New York is estimated to exceed 40,000,000 per year, about half of which are railroad passengers.

The danger of the present method of crossing the river by steam ferry-boats during fog in winter time from ice, together with loss of time by failure to make proper railroad connections, and also the inconvenience of landing along a water-front overcrowded with teams and vehicles of all descriptions, have been shown to the committee.

The necessity for such improvement as the proposed bridge will greatly increase from year to year, according to the growth of the country and increase of traffic to and from New York City, so that the speedy construction and completion of such a bridge, with its increased facilities for crossing the Hudson River, is of great importance, not only to the immediate neighborhood of New York City, but to the country south, west, and north of it.

Its commercial importance would seem to be as great as its engineering magnitude is unprecedented.

In the appendix is given a detailed description of the colossal structure proposed.

It will have a length, including the necessary approaches, of 5½ miles.

It it a commendable feature of this enterprise that the plans for the bridge and the method of its construction have, for several years past, engaged the careful attention of eminent engineers, who have succeeded in gathering together representatives of large capital, who express themselves anxious and willing to carry this great work to a speedy completion, provided the project is approved by Congress as one worthy of its recognition, as asked for in the bill which they have presented. And it is promised on behalf of the incorporators named in the bill that the structure which it is proposed to erect will surpass all that the world has yet witnessed in the art of bridge construction.

THE BRIDGE AS A NATIONAL WORK.

Your committee is of the opinion that the bridge should be a national work, built under national authorization, and its operation should be under the supervision of the National Government for the following reasons:

1. The bridge is not only of commercial importance to the immediate neighborhood of New York City, but to the whole country. It will be a gateway for the commerce of all the surrounding States into and out of the commercial metropolis of the country.

The traffic over the bridge will be wholly interstate, and therefore should be subject to national regulation under the United States interstate-commerce laws.

2. To prevent abuses of administration and conflict of authority in the regulation of its affairs under the incongruous laws of two States, the bridge company should be placed directly under the protection and control of the United States Government.

3. It has been, with apparent good reasons, shown to your committee that the raising of the vast amount of necessary money can be accomplished with less cost to the undertaking under one charter, and that to be a national one, than would be possible under the composite, conflicting, and patchwork legislation of two States, to be supplemented by an act of Congress of the United States. The legal reasons for this view, as submitted to the committee, are given in the appendix in the briefs of counsel.

4. The colossal magnitude of the work, the difficulties of its construction, and the vastness of its commercial importance make it a fit subject for direct national recognition.

In return for this national recognition it is provided that the United States shall pay no toll charges over the bridge for the transmission of the mails or for the right of way for United States postal-telegraph purposes. The saving which may be thus obtained for the Government is not accurately ascertained, but is estimated to be over $150,000 per year, and will be growing as the mail traffic increases with the growing population.

To throw proper safeguards around the enterprise against fictitious capitalization and against financial abuses, it is provided that the books of the company shall be subject to examination by expert accountants to be appointed by the Interstate Commerce Commission, to ascertain the actual cash cost of the whole work, and the tolls which the company shall be allowed to collect shall be based on that cash cost. The whole financial operations of the company are thereby subject to the most searching governmental inspection and control. As the traffic may increase over the bridge, the benefits therefrom are not to accrue to the company in the form of increased dividends, but to the people in the form of reduced toll rates.

It is also provided that the Government shall be under no pecuniary obligations of any kind in connection with the work.

The exhibits accompanying this report, marked A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, are hereby returned and made a part of the report, in order that a fuller and clearer understanding of the magnitude of the proposed undertaking may be had, and of the reasons which have led your committee to report the bill as proposed to be amended by the substitute. The title should be amended by inserting before the words "to authorize" the words "to incorporate the North River Bridge Company and."

I quote from the report the description of the proposed North River bridge at New York City, by Gustav Lindenthal, chief engineer:

It is presumed that all are aware of the present antiquated manner of landing passengers in New York City from the railroads now terminating on the New Jersey side of the Hudson or North River. There is annoyance and even danger to the landed passengers on overcrowded and nasty streets, and the demand for better facilities has repeatedly and urgently been made.

It has led to the attempt of tunneling underneath the river, but the difficulties are great, and though they can undoubtedly be overcome, they point to the necessity of a more convenient method of crossing the river, as far as the railroads are concerned. It is proper to state that this question of submarine railroad tunnels has been carefully considered and weighed in connection with the other possible method of crossing the river by a bridge. The investigations made for the purpose have led to the conclusion that submarine tunnels would afford no relief to the railroads. The heavy grades necessary for diving over 100 feet under the river; the heavy expense for maintenance in the form of pumping, lighting, and ventilating; the slow speed to be imposed on trains for reasons of safety; the manifestly greater risk to human life in case of wrecks or derailments; the well known aversion of travelers to submarine chilly and damp tunnels, with the incessant and unavoidable roar; the vast expense of an adequate underground terminal station in the lower part of the city, liable to be flooded by spring floods, and other conditions, have been carefully investigated.

A bridge with six tracks has been found to possess greater capacity for traffic volume than ten submarine tunnels. A bridge with ten tracks is equal to sixteen submarine single-track tunnels. It has also been found that a ten-track bridge, with the corresponding terminal facilities, would cost less than one-third the cost of the corresponding tunnel arrangement. Another advantage for the bridge is that it will not interfere with the streets in any manner, because the bridge approaches and terminal stations are to be on a level high above the streets, similar to the arrangement of the Pennsylvania Railroad station in Philadelphia.

Tunnel terminal stations can evidently not be elevated above the street. They can also not be on the surface of the ground, because there would then be grade crossings with the intersecting streets and such would not be allowed in New York City. The tunnel terminals, therefore, must be under ground and under the streets. We know from the London example what this means: Dark, dingy, damp, and unhealthy quarters, full of smoke and noise. Dirt and soot everywhere and unavoidable. Everybody glad to get out into the fresh air and into daylight. The bridge requires no pumping, lighting, or ventilating. All this great expense for submarine tunnels does not exist for a bridge.

But it is also proper to say that submarine tunnels under the Hudson River are a necessity for local travel and rapid communication between the lower part of New York City and Jersey City. The present ferry facilities can hardly be increased; there is no more room for ferry landings on the New York side; the ferry-boats are overcrowded mornings and evenings, sometimes to a dangerous extent. The only feasible relief for local communication will be by means of submarine tunnels, two of which are already in process of construction. The great height of the bridge and its location too far away from the lower part of New York City will not very much accommodate local travel, though it is considered the only feasible and practical solution as far as the railroads are concerned.

The obstacles to the construction of a bridge across the North River seemed insurmountable. The only kind of a bridge thought of was one with piers in the river. The foundations to rock would be very deep, nearly 200 feet; but the greatest objection was such that piers would greatly damage the large and steadily increasing commerce over the most magnificent river highway in the United States.

The writer was the first one to propose to bridge the North River, at New York City, in one single span, and to present fully worked out plans for the same. Descriptions and illustrations of the bridge have been widely published not only in this country, but everywhere abroad, during the last two years. The public is therefore well acquainted with the subject.

The importance of this enterprise, its benefits, and farreaching consequences to the city of New York and vicinity can hardly be overestimated.

The bridge is designed for six tracks, but will be built to carry four additional tracks, or ten in all, should it become necessary.

Only a fraction of the combined capital required for a number of double-track bridges will build a single structure, stronger and more enduring for the same number of tracks. For instance, a double-track bridge in one single span over the North River is estimated to cost $9,000,000 for construction alone, while a bridge capable of carrying six tracks is estimated to cost $15,000,000; and $1,000,000 additional will provide for four more tracks, or, in all, ten tracks on the same structure. Five single bridges for double tracks would therefore cost about $45,000,000 for construction alone, without the approaches, stations, and without right of way. This will show the economy, as well as the necessity, of providing one bridge large enough for all present and future needs and one station for all the Western roads coming into New York.

Of all the methods proposed and studied for an entrance into New York City, either by submarine tunnels under or by bridging over the Hudson River, the plan of one great multiple-track bridge has been found to be the relatively cheapest solution, as far as the railroads are concerned.

The construction of the proposed bridge, gigantic and unprecedented as are its proportions, will be a matter of much less relative difficulty than was the construction, at the time, of either the East River bridge or of the St. Louis bridge. In such a degree have the manufacturing and constructive facilities of the country improved and increased that the cost of the proposed bridge will be only little more than one-half of what it would have cost twelve years ago.

The plans are worked not only for the bridge, but also for the approaches and terminal stations at both ends, without which the bridge would be of no use.

The large passenger station in New York City, to be located in the most central part of it, is for two decks, accommodating together thirty tracks, 1,000 feet long. This arrangement has been chosen on account of the very costly right of way, which makes it advisable to use height, rather than width, for obtaining the required room. The track platforms will be reached by stairways and numerous elevators, at about the same height as the present elevated railroad stations.

The approaches will be on iron viaducts of the most solid construction, with buckle plate floors and stone ballast, and partly they will be (for the portion next to the station) on stone-arch viaducts, similar to those for the East River bridge. On the New Jersey side the approach will begin from the meadows between the Hackensack River and Bergen Hill. This latter ridge will be crossed in an open cut, 100 feet wide. The stone quarried out of this cut will not be sufficient by one-half to furnish the concrete material for the tower foundations and anchorages, which are both to be faced with granite masonry.

It will be seen, then, that there is other large work to be done besides building the bridge, and an idea of the cost can be obtained from the following estimate:

The North River bridge, including the anchorages, 6,500 feet long	$15,000,000
The approaches of stone and iron and the connecting railroad switch-yards, engine-houses, the grand terminal station building and appurtenances	11,000,000
Right of way, interest during construction, and incidentals	14,000,000
Total cost	40,000,000

Great as is this cost, it is fully justified by the traffic in sight. But the undertaking is feasible only when all the railroads can cross over; for not one of them—even the great Pennsylvania Railroad—would build the bridge and terminal improvements single-handed, because for the financial burden assumed it would certainly, by law, be obliged to let the other railroads cross over on the same terms, who thus would share in the benefits of the bridge without having shared the burden of creating it.

There are nearly one thousand trains arriving and departing at present per day from the terminal stations in New Jersey, opposite New York City, with nearly sixty thousand passengers.

The travel is growing all the time, and by the time the bridge will be finished (say ten years) the traffic may have doubled in anticipation of its completion.

The experience with the Broad Street station of the Pennsylvania Railroad in Philadelphia, with the Brooklyn bridge, with the elevated railroads in New York, with all of them, was that the most liberal estimates of probable traffic were largely exceeded, and that it keeps growing steadily to unforeseen proportions.

This points out the necessity of providing on the largest scale attainable in the plans for the bridge and the terminal station for a traffic, than which a larger and more important will not be in any part of the Old or the New World.

No engineering project was ever proposed of greater merit at its inception, and more carefully studied in its preliminary stage, nor of so great and pressing necessity.

Mere figures would not give an adequate impression of the gigantic work, but some idea of it can be obtained from a comparison with the great East River bridge, as will be seen from the following data:

	Brooklyn bridge.	North River bridge.
Length, including anchorage.....feet...	3,700	6,500
Height of anchorage.....do....	85	210
Weight of each anchorage.....tons...	60,000	660,000
Length of each land span.....feet..	930	1,500
Length of middle span.....do....	1,600	*2,850
Size of towers at high-water mark.....do....	140 by 59	340 by 180
Height of towers from high water.....do....	272	500
Height of tower from the deepest foundation to top.....feet...	350	690
Width of bridge.....do....	85	86
Height above high water.....do....	135	over 135
Length of one cable.....do....	3,580	6,100
Number of cables	4	4
Finished diameter of cable.....inches....	15½	48
Number of railroad tracks	2	6 to 10
Grade on bridge.....per cent....	2½	1½
Weight of iron and steel in the structure.....tons...	6,750	60,000
Allowable speed of trains.....miles per hour...	10	30
Cost from anchorage to anchorage, exclusive of land damages	$5,000,000	$16,000,000

*In the clear.

The North River bridge will differ from the East River bridge also in the character of its details.

Thus the anchorages will be accessible in every part, through commodious passages and chambers in the interior of the huge anchorage mass. In the East River bridge the anchors and chains are buried in the masonry, and it was not thought necessary to make them accessible.

The towers of the North River bridge will be built of steel, forming two half-towers with eight columns each, and strongly braced together to resist the action of tornadoes, which would not affect the structure any more than it would a solid mountain.

The columns will be 7 feet in diameter at bottom, and the taper to 5 feet in diameter on top; the towers can be erected without false works; but the greatest difference will be in the arrangement and construction of the cables.

Thus, in the East River bridge the cables are placed side by side a certain distance apart, and the required rigidity for the roadway is obtained through six stiffening trusses, also placed side by side.

In the North River bridge the cables are placed in pairs above each other, 50 feet apart, with the bracing between them, so that they form two arched girders of huge proportions, which are capable of giving very great rigidity to the roadway without the aid of stiffening trusses, and with a great saving of material and weight. But, as an additional precaution for the great concentrated loads of heavy locomotives, there is under each of these arch-girders a stiffening truss, two in all which will also aid in resisting the effect of tornadoes in combination with the wind-cables. These are four in number, placed on top and below the stiffening girders. Each wind-cable will have a diameter of 16 inches, or larger than the diameter of the East River main cables.

In this way the required rigidity for fast trains is obtained with the least possible weight of the suspended structure. In no other way can it be obtained with an equal economy of material and cost. It will be admitted that a bridge over which trains would have to run slowly would be inadequate for the expected traffic and would be behind the age. The regular working speed over the bridge is to be 30 miles per hour.

While in the Brooklyn bridge the cables are compacted and closely wrapped with wire into a solid cylindrical shape, in the North River bridge the cables will be also compacted into a cylindrical shape, but will be covered with a solid sheet mantle or steel envelope, leaving an air space of 2 inches all around the wires for the double purpose of protecting the cables against uneven temperature effects and against the weather. The water will be more thoroughly and certainly excluded by the solid sheet covering than can be the case with wire-wrapping only. The steel envelopes can be removed for the inspection of the cable whenever needed. The preservation of the cable is thereby made easier. Linseed-oil can be applied readily whenever needed, and the wires thoroughly soaked with oil, thus preventing rusting.

The architectural features of the bridge have been well considered. The graceful curves of the cables, the simple and strong form of the double towers, the large-featured architecture of the anchorages, all combine to make the structure grand and harmonious in all its parts without artificial devices or ornamentation.

There is no other place in the world requiring such a long span-bridge, and it is very probable that a longer span will never be proposed or designed anywhere. The much-talked-of bridge over the English Channel would be 20 miles long, but the longest spans proposed for it do not exceed 1,800 feet. It is the length of span and not of the bridge which taxes the ingenuity of man and the resources of science, for the longest bridge in the world does already exist in the city of New York in its elevated railroad, 33 miles long, as one continuous bridge. But no one would assume that as the greatest achievement in bridge engineering.

Thus the time has arrived when the manufacturing facilities of the country, its financial prosperity, and the resources of science combine to make the construction of this great work possible.

In his remarks before the committee the designer of this great project, in support of the same, said:

Mr. Chairman and gentlemen of the Committee on Commerce, the subject of our bill (H. R. 3886) is a large suspension bridge over the Hudson River at New York City, for which we respectfully submit our plans to illustrate the character of the work proposed. As to the necessity and urgency of this work others will ask permission to appear and to speak; I beg leave to confine myself to the salient engineering and business features.

The bridge is intended for railroads and other purposes, and is, as already remarked, to have one single span over the Hudson River at its narrowest part at Hoboken. It is intended to be at least as high as the Brooklyn bridge, and higher if the Secretary of War should so determine. This determination can not be fairly made except after a full official inquiry, undertaken after the final plans have been submitted to the Secretary of War, when an intelligent hearing of the representatives of the navigation and railroad interests can be had. Such a course was pursued for the great suspension bridge between New York and Brooklyn with quite satisfactory results.

The height of the Brooklyn bridge is 135 feet at the middle of the span above ordinary high water at 60° Fahr. The superstructure falls and rises in summer and winter, respectively, 2½ feet from the position at the above-named mid-temperature. We will be prepared to build the North River bridge of greater height if deemed necessary by the Secretary of War, after a full investigation. We respectfully ask for such a procedure as will give an opportunity for an intelligent judgment on the question of height. This we deem necessary for the safety of the public and passengers using it. You are aware of the very much greater expense of operating steep grades. To illustrate the point permit me to mention as an instance the mountain grade on the Pennsylvania Railroad from Altoona to Gallitzin. An express train arriving at Altoona from the East is cut in two and the halves are taken up on the Horseshoe and to the top of the mountain grade as separate trains, or an extra locomotive is attached to the whole train. This grade is only 95 feet per mile.

The grade on the New York approach will probably be steeper than 95 feet per mile, because the distance from the station in New York to the river will be necessarily short and can not be changed. If the bridge were made very high then the New York approach would become too steep and the railroads could not use the bridge. It would require three locomotives to get an express train over the bridge. On the other hand, great risk and danger would result from the unsafe operation of a train descending from a very high bridge into the New York station on rainy days when the brakes are liable to slip and cause a runaway.

It is obvious, therefore, that the question of height is one that should be decided only when all the facts can be known and weighed. Every inch of height that can be saved without injury to navigation will be a distinct benefit to the millions of passengers crossing the bridge for centuries to come.

The time of three years, eventually five years before the actual commencement of construction, is, in our judgment, the least which can safely be stipulated for this colossal structure. It will require from two to three years of hard work for the acquisition of the necessary lands and for the final plans and estimates depending thereon. The acquisition of the necessary lands under the laws of the States of New York and New Jersey may be delayed by litigation, as experience with similar undertakings, and particularly in the case of the Brooklyn bridge, has shown. Furthermore, it is now the rule with large investors and with financial institutions that plans and estimates must be fully worked out before the money is paid. The failure of some and excessive cost of other large engineering works have been caused by the insufficient prelim-

inary work and from the want of time for careful preparation. As long as the company has no right to enter upon lands it can not make borings for foundations, and a great part of the preliminary work depending thereon can not be done.

The proposed work is not only unprecedented in magnitude, but also in character of construction, and should not be mistaken for the routine work of an ordinary Missouri or Ohio River bridge, which can commercially be made to order in any of the existing bridge works and can easily be built in two years. The cost of our bridge will be greater than that of all the existing Missouri and Ohio River bridges put together.

The time of construction is always much shortened by a careful preparation and organization of the work before it is commenced, and, in this case, the acquisition of over $13,000,000 worth of property right of way is a condition precedent to construction. We respectfully submit that the company should be allowed to exercise common business prudence in the undertaking, and should have no unnecessary risks thrown upon it. The experience of all railroads in the acquisition of the necessary ground for large terminal stations in large cities shows that delays from litigation are almost unavoidable, and more time is usually consumed in the preparation than in the construction of such work.

In my opinion the bridge can be built in six to seven years after everything is ready for pushing the work, *i. e.*, the detail plans for every part of the structure worked out, estimates prepared, all needed tests and experiments made, all needed lands acquired, and the money ready in the treasury.

The interests of the bridge company will require a speedy completion in the shortest possible time, because the interest account on the capital invested during construction is a great and controlling item for the time of completion.

Furthermore, the investors can not receive a return on their capital and on the heavy expenses already had till the bridge is in operation. Self-interest is, therefore, the greatest incentive for the speedy completion of the work, and in fact of any work, undertaken by private capital.

The Brooklyn bridge required fifteen years for completion, although as a private undertaking it could have been completed in perhaps half the time. The Forth bridge, in Scotland, the largest now in the world, just opened to travel, was eight years in building. The intention of our company is, if possible, to have the bridge finished in the year 1900 as a fitting celebration of the end of the nineteenth and the beginning of the twentieth century.

The bridge is intended to be located so that all the railroads now or in the future terminating in New Jersey, opposite New York City, may use it with the same facility.

From our investigations we are convinced that less than six railroad tracks will not accommodate the traffic to commence with. It would be a great mistake to build the structure too small; therefore our bill provides in good faith for a bridge with a capacity of ten railroad tracks. The larger part of the traffic will be from passengers, and less from freight. It will be practicable to manage a very much larger number of passengers than could be the case if the freight traffic were predominating on the bridge, the same as it is on the connecting railroads before they reach the bridge. The number of railroad passengers on all ten roads is at present estimated at about 20,000,000 per year. The ten-track bridge, it is estimated, will accommodate 120,000,000 passengers per year, or a traffic six times as large, but which may not be reached till the middle of the next century.

In view of the great increase of the passenger traffic on the Brooklyn bridge, the provisions for the increase of traffic over the Hudson River bridge appear to be justified.

The number of passengers on the Brooklyn bridge—

In 1884 was	8,823,200
In 1885 was	18,000,000
In 1886 was	24,000,000
In 1887 was	28,000,000
In 1888 was	30,500,000
In 1889 was nearly	34,000,000

and it is still growing, so that in 1890 it will probably reach 36,000,000 passengers, or four times the number of passengers in 1884. But with all this immense traffic the Brooklyn bridge is yet very far from paying the interest on the cost of its construction.

As is well known, the Brooklyn bridge is already too small for the traffic which it has created, so to speak (for the traffic over the ferries to Brooklyn has not fallen off). The traffic grew faster than the most far-sighted man would have predicted seven years ago when the bridge was formally opened. By similarity of conditions we are justified in assuming that the traffic over the North River bridge will increase, though probably at a smaller ratio.

It must be clear, then, that to build a bridge over the North River merely for the existing traffic, or for a little greater one, would be a great mistake from a public point of view. I go even further and claim, in the light of the experience we now have, that a bridge built only large enough for the nearest prospective traffic, and capitalized up to all it will bear, and then compelling passengers who pay for full accommodations to be packed like sardines into the cars would be a fraud, if not a crime, against the people.

And one of the best methods to prevent it is to prevent the paying of profits on fictitious cost and capital. This our bill provides for. The books of the company will be subject to governmental inspection, so that the actual cash cost of the undertaking shall be known, and the prospective profits of the company are thus limited to be regulated by the toll charges based on the cash cost.

In this way it will be possible to build, from the start, a bridge with a capacity for ten tracks, which will be sufficient, probably, for the next fifty years.

The experience with our public works bears me out in saying that the bridge can be built cheaper and in half the time by a private company than it could be built by the Government or by the cities. With proper business prudence it can be done probably for half the money. Unless built economically and with the most competent and skillful management of its affairs, the undertaking could not be made a commercial success, as the experience with the Brooklyn bridge would indicate. The investors in the North River bridge may have to wait probably many years before they may realize a reasonable return on the capital invested, but the prospects of growing returns will not be a vain hope with careful and competent management.

An increase of business over our bridge under the provisions of our bill will have ultimately the effect of lower toll rates, and the public will therefore be sharers in the prosperity of the bridge without being sharers of the risks and vicissitudes of the work during construction and during the development of its business.

Surveys, general plans, and estimates have been made for the entire project, as far as was possible, up to the present time. The patient work of five years and a large amount of money have been expended on the project before submitting it for the authorization of Congress. We appear before you with the earnest purpose of building the bridge.

Our pride and honor are in it. We have gone through the period of ridicule and deprecation. Our aims and plans are not judged any more as visionary and impracticable; on the contrary, our work meets now with admiration and universal encouragement. Our purpose, to leave the royal Hudson River at New York City unobstructed with bridge piers, has met with unqualified approval. We have the assurances and command the confidence of large capitalists for the great expenditures of the undertaking and in our judgment and ability to carry out the work for which we ask your legislative aid. Our bona fide intentions are incorporated in the bill before you. We respectfully ask of you to put this work, the greatest yet undertaken, directly under national control and regulation. It should be a national work in the broadest and best sense of the word—a monument representative of this country's might, enterprise, and daring. The proposed world's fair in 1892, wherever held, can only be an ephemeral affair compared with the proposed bridge, which will last for ages, for centuries. We ask for your encouragement and for national recognition, and we promise you a grand monumental work, an honor to this nation and its civilization.

The other questions considered were discussed by gentlemen whose views were adopted by the committee, and their briefs made part of the report. I will read them as part of my remarks:

LEGAL BRIEFS AND OPINIONS BY JOHN K. COWEN AND E. J. D. CROSS.

DEAR SIRS: We have carefully examined the bill authorizing yourself and others to become a corporation and construct a bridge over the Hudson River at New York City, and are prepared to answer the questions which you have presented to us concerning the power of Congress to create a corporation for the construction of a bridge over an interstate stream.

1. Does Congress possess the power to create such a corporation?

2. Can it authorize a corporation created by itself to construct a bridge across the Hudson River between the States of New Jersey and New York for the purpose of accommodating interstate commerce?

The answer to the first question is in the affirmative. It has been expressly decided by the Supreme Court of the United States, in the case of McCulloch *vs.* State of Maryland (4 Wheaton, 316), that Congress can create a corporation whenever such a corporation was an appropriate means of carrying out any of the powers delegated to the United States Government. This is the leading case upon this subject, and has never been departed from since the date the opinion was delivered, in 1819.

The argument of Chief-Justice Marshall may be epitomized as follows: Congress is invested with great powers, among which are the following: The power to lay and collect taxes; to borrow money; to regulate commerce; to declare and conduct a war; and to raise and support armies and navies. Congress is necessarily, therefore, invested with additional authority to adopt all means which are appropriate or plainly adapted for the execution of any of the express powers with which the United States Government is clothed. That as Congress, for example, has the power of raising revenue and applying it to national purposes, this necessarily implies the power of conveying money from place, to place as the exigencies of the nation might require, and of employing the usual means of conveyance, and that among those convenient means or fiscal agencies a corporation was one, and, therefore, Congress had the discretion to adopt that means; that is to say, to create a corporation for the purpose of carrying out one of the express powers of the Government. Upon this basis of reasoning the validity of the act of Congress incorporating the old United States Bank was sustained, and the power of Congress in the matter has not been doubted since this decision.

We quote a portion of the opinion of Chief-Justice Marshall, particularly appropriate to this discussion:

"Although among the enumerated powers of government we do not find the word 'bank' or 'corporation,' we find the great powers to lay and collect taxes, to borrow money, to regulate commerce, to declare and conduct a war, and to raise and support armies and navies. The sword and the purse, all the external relations, and no inconsiderable portion of the industry of the nation, are intrusted to its government. It can never be pretended that these vast powers draw after them others of inferior importance, merely because they are inferior. Such an idea can never be advanced.

"But it may with great reason be contended that a government intrusted with such ample powers, on the due execution of which the happiness and prosperity of the nation so vitally depend, must also be intrusted with ample means for their execution. The power being given, it is the interest of the nation to facilitate its execution. It can never be their interest, and can not be presumed to have been their intention, to clog and embarrass its execution by withholding the most appropriate means. Throughout this vast Republic, from the St. Croix to the Gulf of Mexico, from the Atlantic to the Pacific, revenue is to be collected and expended, armies are to be marched and supported.

"The exigencies of the nation may require that the treasure raised in the North should be transported to the South, that raised in the East conveyed to the West, or that this order should be reversed. Is that construction of the Constitution to be preferred which would render these operations difficult, hazardous, and expensive? Can we adopt that construction (unless the words imperiously require it) which would impute to the framers of that instrument, when granting these powers for the public good, the intention of impeding their exercise by withholding a choice of means? If, indeed, such be the mandate of the Constitution, we have only to obey; but that instrument does not profess to enumerate the means by which the powers it confers may be executed, nor does it prohibit the creation of a corporation if the existence of such a being be essential to the beneficial exercise of those powers. It is, then, the subject of fair inquiry how far such means may be enjoyed.

"It is not denied that the powers given to the Government imply the ordinary means of execution. That, for example, of raising revenue and applying it to national purposes is admitted to imply the power of conveying money from place to place, as the exigencies of the nation may require, and of employing the usual means of conveyance. But it is denied that the Government has its choice of means, or that it may employ the most convenient means if to employ them it be necessary to erect a corporation.

"On what foundation does this argument rest? On this alone: The power of creating a corporation is one appertaining to sovereignty, and is not expressly conferred on Congress. This is true. But all legislative powers appertain to sovereignty. The original power of giving the law on any subject whatever is a sovereign power, and if the Government of the Union is restrained from creating a corporation as a means for performing its functions, on the single reason that the creation of a corporation is an act of sovereignty, if the sufficiency of this reason be acknowledged, there would be some difficulty in sustaining the authority of Congress to pass other laws for the accomplishment of the same objects.

"The government which has the right to do an act, and has imposed on it the duty of performing an act, must, according to the dictates of reason, be allowed to select the means, and those who contend that it may not select any appropriate means, that one particular mode of effecting the object is excepted, take upon themselves the burden of establishing that exception.

"The creation of a corporation, it is said, appertains to sovereignty. This is admitted. But to what portion of sovereignty does it appertain? Does it belong to one more than to another? In America the powers of sovereignty are divided between the Government of the Union and those of the States. They are each sovereign with respect to the objects committed to it, and neither sovereign with respect to the objects committed to the other. We can not apprehend that train of reasoning which would maintain that the extent of power granted by the people is to be ascertained, not by the nature and terms of the grant, but by its date. Some State constitutions were formed before, some since that of the United States. We can not believe that their relation to each other is in any degree dependent upon this circumstance. Their respective powers must, we think, be precisely the same as if they had been formed at the same time.

"Had they been formed at the same time and had the people conferred on the General Government the power contained in the Constitution and on the States the whole residuum of power, would it have been asserted that the Government of the Union was not sovereign with respect to those objects which were intrusted to it, in relation to which its laws were declared to be supreme? If this could not have been asserted we can not well comprehend the process of reasoning which maintains that a power appertaining to sovereignty can not be connected with that vast portion of it which is granted to the General Government, so far as it is calculated to subserve the legitimate objects of that Government.

"The power of creating a corporation, though appertaining to sovereignty, is not, like the power of making war or levying taxes or regulating commerce, a great substantive and independent power, which can not be implied as incidental to other powers or used as a means of executing them. It is never the end for which other powers are exercised, but a means by which other objects are accomplished. No contributions are made to charity for the sake of an incorporation, but a corporation is created to administer the charity; no seminary of learning is instituted in order to be incorporated, but the corporate character is conferred to subserve the purposes of education. No city was ever built with the sole object of being incorporated, but it is incorporated as affording the best means of being well governed. The power of creating a corporation is never used for its own sake, but for the purpose of effecting something else. No sufficient reason is therefore perceived why it may not pass as incidental to those powers which are expressly given, if it be a direct mode of executing them."

Then follows an elaborate analysis of the meaning of the words "necessary" and "proper" in that clause of the Constitution which provides, after enumerating the express powers given to Congress, that that body shall have the power of making "all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department thereof."

And the court holds that Congress is invested with the right of choosing any means that are appropriate and plainly adapted to the carrying out of any powers which are expressly given.

This decision, therefore, must be taken as settling, finally and for all time, the right of Congress to create a corporation to carry into effect powers which the Constitution has expressly conferred upon that body.

Second. The so-called commercial clause of the Constitution of the United States is found in section 8 of Article I:

"The Congress shall have power * * * to regulate commerce with foreign nations, and among the several States, and with the Indian tribes."

Under this clause of the Constitution it has been expressly decided by the Supreme Court of the United States that Congress can authorize the construction of a bridge or a railroad for the purpose of accommodating interstate commerce. These cases, which are reported in 127 U. S., page 1, under the head of California vs. Pacific Railroad Company, contain the last and authoritative statement of the Supreme Court of the United States upon this subject.

In these cases the corporations authorized to construct the railroads referred to in the opinion were, it is true, State corporations invested with franchises of constructing the railroad by the Federal Government. At page 39 of the report Judge Bradley, in delivering the unanimous opinion of the court, used the following language:

"If, therefore, the Central Pacific Railroad Company is not a Federal corporation, its most important franchise, including that of constructing a railroad from the Pacific Ocean to Ogden City, was conferred upon it by Congress. It can not at the present day be doubted that Congress, under the power to regulate commerce among the several States, as well as to provide for postal accommodations and military exigencies, had authority to pass these laws. The power to construct or to authorize individuals or corporations to construct national highways and bridges, from State to State, is essential to the complete control and regulation of interstate commerce. Without authority in Congress to establish and maintain such highways and bridges it would be without authority to regulate one of the most important adjuncts of commerce. This power, in former times, was exerted to a very limited extent, the Cumberland or National road being the most notable instance. Its exercise was but little called for, as commerce was then mostly conducted by water, and many of our statesmen entertained doubts as to the existence of the power to establish ways of communication by land. But since, in consequence of the expansion of the country, the multiplication of its products, invention of railroads and locomotion by steam, land transportation has so vastly increased, a sounder construction of the subject has prevailed, and led to the conclusion that Congress has plenary power over the whole subject.

"Of course the authority of Congress over the Territories of the United States and its power to grant franchises exercisable therein are and ever have been undoubted; but the wider power was very freely exercised, and much to the general satisfaction, in the creation of the vast system of railroads connecting the East with the Pacific, traversing States as well as Territories and employing the agency of State as well as Federal corporations."

This decision, of course, finally settles the question as to the authority of Congress, under the commercial clause of the Constitution, either to construct a bridge itself across an interstate stream "or to authorize individuals or corporations to construct" such bridges. Hence, in accordance with the opinion of McCulloch vs. Maryland, it necessarily follows that if Congress can build the bridge itself, it can use any means that are appropriate to that end, and among the means so appropriate a corporation is one, and it therefore can create a corporation for the purpose of constructing a bridge.

Indeed, several of the Pacific railroads were constructed by Federal corporations; in other words, by companies incorporated by the act of Congress, and not by the act of any State Legislature. Among the corporations so created were the Union Pacific Railroad Company, by the act of 1862, 12 Statutes, 489. Under this act the individuals therein named were "created and erected into a body corporate and politic, in deed and in law, by the name, style, and title of 'The Union Pacific Railroad Company.'" By section 14 of this act the Union Pacific Railroad Company was authorized and required to construct a single line of railroad and telegraph from a point on the western boundary of the State of Iowa to its western terminus fixed by other provisions of the act; and under this section the Union Pacific Railroad constructed the bridge across the Missouri River between Omaha and Council Bluffs. The discussion of questions concerning this charter will be found in Hall vs. Union Pacific Railroad Company, 91 U. S., page 343. The particular question discussed, to which we wish to call your attention, will be found on pages 346 and 347.

The Texas and Pacific Railway Company was incorporated by act of Congress approved March 3, 1871, 16 Statutes at Large, page 573. The title of the act is: "An act to incorporate the Texas and Pacific Railway Company and to aid in the construction of its road, and for other purposes." This company was incorporated by act of Congress for the purpose of constructing a railroad from Marshall, in the State of Texas, to El Paso, in the same State; thence through the Territories of New Mexico and Arizona, and thence through the State of California to San Diego, on the Pacific coast.

The two charters of the Texas Pacific and the Union Pacific Railroads are examined in the Pacific Railroad removal cases, found in 115 United States, page 2. These cases decide that each of the companies were corporations created under the laws of the United States and therefore were entitled to remove suits against them, under the act of Congress relating to the jurisdiction of the United States courts. The whole basis of the opinion is that the act of Congress created them Federal corporations, and, being Federal corporations, that suit a against them was a suit "arising under the laws of the United States," as had been held by Chief-Justice Marshall in the case of Osborne vs. The Bank of the United States, 9 Wheaton, 738.

The following instances of corporations created by act of Congress may also be referred to: The Northern Pacific Railroad Company, incorporated by act of July 2, 1864, 13 Stat., 365. This corporation was organized to construct a railroad from a point either in the State of Minnesota or Wisconsin to the Pacific coast.

The Atlantic and Pacific Railroad Company was incorporated by act of Congress, July 27, 1866, 14 Stat., page 292. This corporation was created to construct a railroad from Springfield, Mo., to the Pacific coast.

The validity of all these acts has been practically sustained by the decision of the Supreme Court in the case of Hall vs. The Union Pacific Railroad Company, 91 United States, and in the Pacific Railroad cases in 127 United States; and as far as we know the constitutionality of this legislation of Congress creating corporations to build railroads has never been questioned. The decisions of the Supreme Court of the United States and the practical construction given to the Constitution during a long series of years by Congress itself demonstrate two propositions:

1. That, under the power to regulate commerce, Congress can construct a bridge over an interstate stream or can construct a railroad for interstate commerce.

2. That Congress, having the power to do this itself, can employ any agency which is appropriate to accomplish the end aimed at; that is, the construction of the bridge or the railroad, and, therefore, Congress can organize a corporation for such purpose.

Third. The whole question of the power of Congress to authorize the construction of bridges across interstate streams was examined by Justice Bradley in the case of Stockton vs. The Baltimore and New York Railroad Company and the Staten Island Rapid Transit Railroad Company, 32 Federal Reporter, page 9. Congress, by an act approved June 16, 1886, had authorized the Staten Island Rapid Transit Railroad Company, a corporation of New York, to construct a bridge across the Arthur Kill, the stream separating New Jersey from that part of New York known as Staten Island. The Legislature of New Jersey, on April 6, 1886, had enacted a law providing as follows:

"That no bridge, viaduct, or fixed structure shall be created by any person or corporation, over or in any part of the navigable waters separating this State from other States, where the tide ebbs and flows, without express permission of the Legislature of this State given by statute for that purpose."

New Jersey, therefore, contended that no bridge could be built across the Arthur Kill except with her consent, and that the act of Congress conferring the power of constructing such a bridge, not only without her consent, but against her protest, was invalid.

Justice Bradley, and the two circuit judges who agreed with him, held that Congress could authorize a foreign corporation not created by New Jersey to build a bridge across the Arthur Kill. He used this language, pages 14 and 15 of the report:

"At all events, if Congress, in the execution of its powers, chooses to employ the intervention of a particular corporation, whether of the State or out of the State, we see no reason why it should not do so. There is nothing in the Constitution to prevent it from making contracts with or conferring powers upon State corporations for carrying out its own legitimate purposes. What right of the State would be invaded? The corporation thus employed or empowered in executing the will of Congress could do nothing which the State could rightfully oppose or object to. It may be added that no State corporation more suitable than the defendant could be empowered to build the bridge in question in this case, since one half of the bridge is in the State of New York and the railroad of the defendant is to connect with it on the New York side. In our judgment, if Congress itself has the power to construct a bridge across a navigable stream for the furtherance of commerce among the States, it may authorize the same to be done by agents, whether individuals or a corporation created by itself, or a State corporation already existing and concerned in the enterprise. * * *

"So that we are brought back to the question of the power of Congress to build a bridge and whether that power is independent of the consent and concurrence of the State government, and in our judgment this question must be answered in the affirmative. The power to regulate commerce among the several States is given by the Constitution in the most general and absolute terms. 'The power to regulate,' as applied to a government, has a most extensive application. With regard to commerce it has been expressly held that it is not confined to commercial transactions, but extends to seamen, ships, navigation, and the appliances and facilities of commerce, and it must extend to these or it can not embrace the whole subject.

"Under this power the navigation of rivers and harbors has been opened and improved, and we have no doubt that canals and water ways may be opened to connect navigable bays, harbors, and rivers with each other or with the interior of the country; nor have we any doubt that under the same power the means of commercial communication by land as well as by water may be opened up by Congress, between different States, whenever it shall see fit to do so, either on the failure of the States to provide such communication, or whenever, in the opinion of Congress, increased facilities of communication ought to exist.

"Hitherto, it is true, the means of commercial communication have been supplied either by nature, in the navigable waters of the country, or by the States, in the construction of roads, canals, and railroads; so that the functions of Congress have not been largely called into exercise under this branch of its jurisdiction and power, except in the improvement of rivers and harbors and the licensing of bridges across navigable streams. But this is no proof that its power does not extend to the whole subject in all its possible requirements; indeed, it has been put forth in several notable instances, which stand as strong arguments of practical construction given to the Constitution by the legislative department of the Government. The Cumberland or National road is one instance of a grand thoroughfare projected by Congress, extending from the Potomac to the Mississippi; after being nearly completed it was surrendered to the several States within which it was situated.

"The main stem of the Union Pacific commences at Council Bluffs, in Iowa, and crosses the Missouri by a bridge at that place, erected under the authority of Congress alone.

"In 1862 a bridge was authorized by Congress to be constructed across the Ohio River at Steubenville, between the States of Virginia and Ohio, to be completed, maintained, and operated by the railroad company authorized to build it, and by another company named, 'anything in any law or laws of the above-named States to the contrary notwithstanding.'

"Still it is contended that, although Congress may have power to construct roads and other means of communication between the States, yet this can only be done with the concurrence and consent of the States within which the structures are made. If this is so, then the power of regulation in Congress is not supreme; it depends on the will of the States. We do not concur in this view. We think that the power of Congress is supreme over the whole subject, unimpeded and unembarrassed by State laws or State liens; that in this matter the country is one, and the work to be accomplished is national, and that State interests, State jealousies, and State prejudices are not required to be consulted. In matters of foreign and interstate commerce there are no States."

Judge Wallace, of the United States circuit court for the district of New York, held the same view in the case of Decker vs. The Baltimore and New York Railroad Company and others, 30 Federal Reporter, page 723.

Fourth. We assume, of course, that no one questions the right of Congress to

exercise the power of eminent domain or to authorize a corporation to exercise that power in any case where it can employ a corporation as one of the agencies to carry into execution the powers vested in Congress by the Constitution of the United States. This point has been definitely settled by the case of Kohl vs. United States, 91 U. S., 367.

The conclusions, therefore, may be summed up as follows:

1. That Congress has express constitutional power to regulate commerce among the several States, and that by the decision of the Supreme Court of the United States the possession of this power enables the United States Government to either itself construct or authorize others to construct bridges across interstate streams.

2. That Congress, having the express power to authorize the construction of a bridge, can employ any appropriate means for the execution of that power, and there can be none more appropriate than the creation of a corporation for that purpose. As in the case of the United States Bank, it may be said that the creation of a body corporate to build such an improvement as that you propose across the North River is certainly a most appropriate means for carrying out the express power of regulating commerce.

3. In this instance Congress is the only body that can act, as New Jersey has by statute prohibited the construction of the bridge across the Hudson River.

4. That, as Congress can create a corporation and authorize it to construct a bridge, it can, of course, vest the corporation with full and complete power of eminent domain, the exercise of which is essential in any corporation that would attempt such a stupendous work as that of bridging the North River.

We have not, in this opinion, referred to the numerous decisions of the United States Supreme Court upon the subject of regulating interstate commerce, having thought it best to confine ourselves to the late opinions of that court upon the power of Congress to authorize the construction of bridges.

Nor have we thought it worth while to refer to the national-banking act, under which Congress created national banks in every State of the Union, because the whole subject was fully discussed in the opinion of Chief-Justice Marshall, from which we have quoted so largely.

We beg to say, in conclusion, that we have examined the bill which you have submitted to Congress, and see nothing in it whatever which is not clearly within the power of Congress under the commercial clause of the United States Constitution.

Yours, respectfully,

JOHN K. COWEN.
E. J. D. CROSS.

REMARKS AND OPINION BY CHARLES F. MACLEAN.

GUSTAV LINDENTHAL, JAMES ANDREWS, JORDAN L. MOTT, THOMAS F. RYAN, and others:

SIRS: The questions on which my opinion is asked in connection with the bill now pending before Congress providing for a bridge across the North River, between the States of New York and New Jersey, and for that purpose creating a corporation with the right of obtaining the necessary lands by process of condemnation, may be stated as:

1. Has Congress power to authorize the construction of the bridge?

2. Have the United States such right of eminent domain that Congress can authorize the compulsory condemnation of property? and

3. Can Congress create a corporation for the purposes of the bridge?

I.

The first of these questions has lately been passed upon respecting the Staten Island bridge, likewise between the States of New York and New Jersey.

In Stockton vs. Baltimore and New York Railroad Company, 32 Fed. R., 9, Bradley, J., there says:

"In our judgment, if Congress itself has the power to construct a bridge across a navigable stream for the furtherance of commerce among the States, it may authorize the same to be done by agents, whether individuals, or a corporation created by itself, or a State corporation already existing and concerned in the enterprise. * * * So that we are brought back to the question of the power of Congress to build a bridge, and whether that power is independent of the consent and concurrence of the State government; and, in our judgment, this question must be answered in the affirmative."

Judge Bradley discusses the subject at considerable length, placing the right upon the constitutional powers of the Government to provide for the common defense, to establish post-roads, and to regulate commerce among the several States, more especially the latter. He adds:

"We think the power of Congress is supreme over the whole subject, unimpeded and unembarrassed by State laws or State lines; that in this matter the country is one, and the work to be accomplished is national, and that State interests, State jealousies, and State prejudices are not required to be consulted. In matters of foreign and interstate commerce there are no States."

The whole of that case is so pertinent to the subject in hand that instead of extended extracts I do better to refer you to the original report.

In California vs. Pacific Railroad, 127 U. S., 3, it is held that "Congress has authority, in the exercise of its power to regulate commerce among the States, to construct or authorize individuals to construct railroads across the States and Territories of the United States."

Bradley, J., citing laws creating Pacific Railroad, says:

"It can not at the present day be doubted that Congress, under the power to regulate commerce among the several States, as well as to provide for postal accommodations and military exigencies, had authority to pass these laws. The power to construct or to authorize individuals or corporations to construct national highways and bridges from State to State is essential to the complete control and regulation of interstate commerce. Without authority in Congress to establish and maintain such highways and bridges it would be without authority to regulate one of the most important adjuncts of commerce. * * * A sounder consideration of the subject has prevailed and led to the conclusion that Congress has plenary power over the whole subject.

"Of course, the authority of Congress over the Territories of the United States and its power to grant franchises exercisable therein are and ever have been undoubted. But the wider power was very freely exercised, and much to the general satisfaction, in the creation of the vast system of railroads connecting the East with the Pacific, traversing States as well as Territories and employing the agency of State as well as Federal corporations."

II.

The right of expropriation of private property rests upon the principle of sovereignty; that is, the right to resort to the whole resources of the nation for the common benefit, and not upon the final right of property, which resides in the States themselves. The leading case is Kohl vs. United States, 91 U. S., 367, which arose from the proceedings for condemnation of a site for a court-house, etc., at Cincinnati, under Laws 1872, Stat. at Large, 34, 352, 523.

Strong, J.:

"It has not been seriously contended during the argument that the United States Government is without power to appropriate lands or other property within the States for its own uses and to enable it to perform its proper functions. Such an authority is essential to its independent existence and perpetuity. These can not be preserved if the obstinacy of a private person or if any other authority can prevent the acquisition of the means or instrument by which alone governmental functions can be performed. The powers vested by the Constitution in the General Government demand for their exercise the acquisition of lands in all the States.

"These are needed for forts, armories, and arsenals; for navy-yards and light-houses; for custom-houses, post-offices, and court-houses, and for other public uses. The right (of eminent domain) is the offspring of political necessity; it is inseparable from sovereignty unless denied to it by its fundamental law; but it is no more necessary for the exercise of the powers of a State government than it is for the exercise of the conceded powers of the Federal Government. That Government is as sovereign within its sphere as the States are within theirs.

"When the power to establish post-offices and to create courts within the States was conferred upon the Federal Government included in it was authority to obtain sites for such offices and for court-houses, and to obtain them by such means as were known or appropriate. The right of eminent domain was one of those means well known when the Constitution was adopted and employed to obtain lands for public uses. Its existence, therefore, in the grantor of that power ought not to be questioned."

In the case of Darlington vs. United States, in the supreme court of Pennsylvania, reported in 82 Pennsylvania State Reports, page 382, the pending case being one for the condemnation of property in the city of Pittsburgh, for the erection of a building to be used for a court-house, custom-house, post-office, United States marshal's office, and other Government offices, Mr. Justice Paxson, delivering the opinion of the court, October 23, 1876, says, *inter alia*, as follows:

"The right of the United States to take private property for public use is too well settled to be now disputed. Of the numerous cases upon this subject it is sufficient to refer to Kohl vs. United States, which is believed to be the last, and will be found reported in the American Law Register for September, 1876. The opinion of the court was delivered by Mr. Justice Strong, who said, 'The right of eminent domain is inherent in all governments by virtue of their sovereignty. For all purposes required by the Constitution this right exists in the United States independently of any consent of the State in which the property lies.' The right itself arises from necessity, of which necessity the sovereignty taking the property must be the judge, and is qualified only by the duty of making compensation to the owner."

The case of United States vs. Jones, 109 U. S., 513, arose upon the act of March 3, 1875, providing for taking lands, etc., for a canal, paying damages "which may have been ascertained in the mode provided by the laws of the State" where the land lay.

Field, J.:

"The power to take private property for public uses, generally termed the right of eminent domain, belongs to every independent government. * * * The provision found in the fifth amendment to the Federal Constitution and in the constitution of the several States for just compensation for the property taken, is merely a limitation on the use of that power."

In Van Brocklin vs. State of Tennessee (117 U. S., 151), Gray, J., said:

"So the United States, at the discretion of Congress, may acquire and hold real property in any State, whenever such property is needed for the use of the Government in the execution of any of its powers, whether for arsenals, fortifications, light-houses, custom-houses, court-houses, barracks, or hospitals or for any other of the many public purposes for which such property is used; and when the property can not be acquired by voluntary arrangement with the owners it may be taken against their will by the United States in the exercise of its power of eminent domain, upon making just compensation, with or without a concurrent act of the State in which the land is situated."

In Fort Leavenworth Railroad vs. Lowe, 114 U. S., 525, Field, J., said:

"But not only by direct purchase have the United States been able to acquire lands they needed without the consent of the States, but it has been held that they possess the right of eminent domain within the States, using those terms, not as expressing the ultimate dominion or title to property, but as indicating the right to take private property for public uses when needed to execute the powers conferred by the Constitution; and that the General Government is not dependent upon the caprice of individuals or the will of State Legislatures in the acquisition of such lands as may be required for the full and effective exercise of its powers. * * * The right to acquire property in this way by condemnation may be exerted either through tribunals expressly designated by Congress, or by resort to tribunals of the State in which the property is situated, with her consent for that purpose. Such consent will always be presumed in the absence of express prohibition."

This right of the General Government is fully recognized by the State of New York. The court of appeals of that State, *In re* United States, 96 N. Y., 227, sustains the right and holds that it may be exercised by the United States either in the Federal courts or in the State courts.

Congress has from time to time passed a number of acts for expropriating lands. Among them may be mentioned that of 1879 for the improvement of the Tennessee River and that of 1880 for reservoirs in Minnesota, which adopt the State practice by mere reference thereto.

III.

The power of the United States to create corporations to carry out the powers granted by the Constitution was settled by McCulloh vs. Maryland, 4 Wheat., 407.

In that case, which involved the constitutionality of the Bank of the United States, Chief-Justice Marshall examines the subject at considerable length and sustains the power as incidental to the powers specifically granted. The case has always been regarded as of the highest authority. In it he says:

"Throughout this vast Republic, from the St. Croix to the Gulf of Mexico, from the Atlantic to the Pacific, revenue is to be collected and expended, armies are to be marched and supported. The exigencies of the nation may require that the treasure raised in the North should be transferred to the South; that raised in the East conveyed to the West, or that this order should be reversed. Is that construction of the Constitution to be preferred which would render these operations difficult, hazardous, and expensive? * * * The Government which has a right to do an act and has imposed on it the duty of performing that act must, according to the dictates of reason, be allowed to select the means; and those who contend that it may not select any appropriate means that one particular mode of effecting the object is effected, take upon themselves the burden of establishing that exception.

* * * "The power of creating the corporation, though appertaining to sovereignty, is not, like the power of making war, or of levying taxes, or of regulating commerce, an independent power which can not be implied as incidental to other powers or used as a means of executing them. It is never the end for which other powers are exercised or a means by which other objects are accomplished. * * * The power of creating a corporation is never used for its own sake, but for the purpose of effecting something else. No sufficient reason is therefore perceived why it may not pass as incidental to those powers which are expressly given, if it be a direct mode of executing them."

The case of Railroad Company vs. Peniston, 18 Wall., 5, involved the corporate powers of the Pacific railroads.

Strong, J., referring to use of roads for postal and military purposes and other provisions of charter, says:

"They all look to a purpose of Congress to secure an agency competent and under obligation to perform certain offices for the General Government. Notwithstanding this, the railroad and telegraph lines are neither in whole nor in part the property of the Government. Admitting, then, as we fully do, that

the company is an agent of the General Government, designed to be employed, and actually employed, in the legitimate service of the Government, both military and postal, does it follow, etc."

Swayne, J., says that the road is a "national instrumentality."

Bradley, J., after quoting Chief-Justice Marshall, in the McCulloch case, says: "Now I think it can not be doubted at the present day, whatever may have been contended in former times, that the creation of national roads and other means of communication between the States is within the power of Congress in carrying out the powers of regulating commerce and in providing for the national defense, and for military operations in time of war. And no one will contend that, if the creation of a corporation is a suitable agency and means of carrying on the definite operations of the Government, the creation of a corporation is [not] equally apposite as an agency and means of carrying out the objects above mentioned."

Among other instances of the exercise of this power are to be mentioned the laws creating the Pacific railroad companies. Some of these acts adopted State corporations and extended their powers, but others created corporations which had not existed before. These acts have been sustained by the Supreme Court.

See cases already cited, and also Pacific Railway Removal Cases, 115 U. S., 18, 19.

I have forborne citing any of the minor cases. It is to be noted that these decisions, with a single exception, are recent, and represent the opinion of the Supreme Court at the present day, and were in most cases pronounced by judges who are still upon the bench.

Under the construction of the powers of Congress given by the Supreme Court of the United States, all the questions stated at the outset must be answered, in my opinion, in the affirmative.

I am, sir, your obedient servant,

CHARLES F. MACLEAN.

REMARKS BY M. H. HOUSEMAN.

The purpose of the bill before you is to authorize the construction of a bridge over the Hudson River at New York City, with proper approaches and appurtenances, and the formation of a company with its necessary power to build, operate, and use the same.

The unusual magnitude of the work will require a very large amount of money, and investors will have to wait perhaps some ten or twelve years before revenue can be derived from the operation of the bridge.

The risks and unavoidable delays by reason of the peculiar character and extent of this undertaking will undoubtedly be much greater than those met with in the construction of an ordinary bridge.

One of the most important requisites to be complied with to obtain the needed capital for such a work is that the company should possess clear legal rights to construct and operate the bridge, so that the risks of the undertaking should not be increased by any complications as to its charter powers. Past experience and serious losses have taught investors to avoid such investments where the rights and powers of the company are doubtful and uncertain, and which may serve only to incur upon them years of litigation to establish their validity and interpretation by the courts.

The structure is to extend over and across a navigable river, which is under the jurisdiction of Congress, and its termini will be in two separate States. The laws of one of the States, namely, New Jersey, expressly prohibit the bridging of the Hudson River from or into that State, except by the special consent of the State, to be expressed through its Legislature, which may or may not be given, or if so given it may be so qualified as to virtually prevent the building of that part of the structure so extending into that State.

It may be stated that bridges over navigable streams elsewhere forming the boundary between two States have been erected merely under license acts from Congress, but it will be found that in all such cases the formation of the company was made feasible under the general railroad laws of the States. But there is no law adequate in either the States of New York or New Jersey under which a bridge company can be formed with authority to build the proposed structure, and even if such a law could be enacted by these respective States the effect thereof would be limited within the State and by the State line, somewhere in the Hudson River, the exact location of which is itself said to be in dispute.

The charter and authority of a company thus made up would also be subject to modification or repeal from year to year by either State independently of the other. Thus, through the influence of rival interests, or, perhaps, by reason of conflict between political parties, the legal stability of the company's affairs might be constantly endangered.

We are not without good grounds for this apprehension, and can speak from experience that investors could not well be induced to trust their money in an undertaking which might be subjected to interference from two independent and rival sovereign powers.

The traffic over the proposed bridge will be wholly interstate; the administration of its affairs throughout from end to end should be uniform, and subject only to one controlling and regulating authority, which should be superior to that of either State and can only properly be lodged by the Congress of the United States in the National Government.

The ten [or] more railroads which may use the proposed avenue into New York City derive their rights, privileges, and powers from different States, and their common regulation and control in the use of the bridge can best be effected under the Government of the United States.

It is obvious that if a company were formed by the consolidation of State corporations, each subject to different and incongruous laws within the two separate and respective States, it would be further necessary to supplement this consolidation by a license act from Congress, with authority to construct the bridge.

The life and existence of a company thus formed would depend upon a patchwork legislation, with uncertain paternity, and would be lacking in merit and stability. With such an aggregation there would indeed be good reason for apprehension of conflict and disagreement between the States, arising out of the operation, regulation, and control of the legal affairs of the company. Such a company could not with confidence appeal to capital for the stupendous undertaking here proposed.

After several years of patient labor in connection with this project and after frequent consultations with financial interests, we deem it but proper here to say that we have found men with large capital, as well as representatives of financial institutions, to be unwilling to embark with their money into an enterprise of such magnitude unless full authority to construct and operate the same be obtained through a national charter from Congress.

The bill here submitted for your approval provides, however, that the company in the exercise of its necessary power to acquire property by lawful appropriation shall do so under the laws of the respective States, and shall make proper compensation therefor, and that the amount of such compensation is to be ascertained according to the laws and in conformity with the practice of the courts of the State within which the said property is located.

The property of the company is likewise made subject to local taxation for State, county, and municipal purposes.

In part return for the grant by Congress, the proposed act provides that the mails of the United States shall pay no toll over the said bridge, also that the United States shall have the right of way thereon free of charge for postal-telegraph purposes.

The bridge thus becomes a post-road in a much wider sense than any heretofore constructed. It becomes a post-road on which the United States Government has free right of way. The mails from and to New York City and the greater part of New England will pass over this mail route, which, without question, will become the most important in the world. The bridge will be for the greater safety and convenience of the United States mail as much as for anything else. This of itself should cause the structure to be wholly under Government control. In addition it will form a military road, the only one by which, without delay, rapid communication will be possible between New England, New York City, and the country along the Atlantic coast, and this is a further reason for governmental control and regulation of the structure.

That the Congress of the United States has full constitutional power for the creation of the proposed corporation, and for authorizing the work as proposed, has been well shown by my colleagues in the legal briefs submitted to you.

REMARKS OF JAMES ANDREWS TO COMMITTEE.

About a year and a half ago I was in England and took occasion to go up to the site of the Forth bridge, about 10 miles out of Edinburgh. The engineer of the bridge, Mr. (now Sir Benjamin) Baker, was with me. In going over the work, huge and overwhelming in appearance, he remarked to me: "You have some big things in the United States, but you have nothing as big as this bridge." I happened to have a lithograph of our proposed Hudson River bridge in my pocket, and handing it to him, I jokingly remarked, "We are just getting ready for a bigger bridge than yours, and when we are done with it we may warm up to something that will really astonish you."

The project now before your committee was enough to astonish the engineer of the Forth bridge. It is a clean jump from spans of 1,700 feet in his bridge to one of nearly 3,000 feet in our proposed bridge, flanked by spans of 1,500 feet each. The Forth bridge has only two tracks, ours will have ultimately ten tracks. The Forth bridge cost $14,000,000, is used only by three railroads, extending about 200 miles north into Scotland. It was built to save about 25 miles of distance. Our bridge, with approaches and terminals, may cost $40,000,000, but if it should cost more it will yet be cheap as compared with the Forth bridge. If the cost of our bridge were equally divided among the ten railroads that will cross it it would be about $4,000,000 per railroad. This is not enormous when you know that the Pennsylvania Railroad Company has spent about $5,000,000 on its Philadelphia station and upwards of $7,000,000 to get through Baltimore and like sums in other large cities. Every railroad company is obliged to continually expend large sums of money for improvements and terminals as the population of the country increases. Though the interest and returns on the capital so invested are sometimes slow and inadequate, yet these are risks connected with all such work. The country at large always profits from them.

I have been associated with Captain Eads in all his large engineering works, and if he were alive he would undoubtedly have been connected with this work before you. It appeals to the admiration of all enterprising men, to men who love grand subjects and can deal in grand affairs. If you will consider for a moment the dimensions of this work, it will show you the boldness and admirable conception of it. As a man of practical affairs and with my large and long experience of engineering subjects, I am glad to say that the project has been prepared with a thorough practical and theoretical knowledge of the problems to be met with.

I have every confidence in Mr. Lindenthal's ability to build and direct this work, and I have associated myself with him, together with his other friends, to aid him with all my power to carry out this undertaking. Money can not be obtained nowadays for mere speculative schemes. A project must be fully worked out and stand the test of criticisms from experts of technical, legal, and financial issues and subjects. I know of no other large project which was half so well prepared as this one is before legislation was obtained for it.

This bridge should not be a mere utility structure, with perhaps some limber trusses hung up to cables from skeleton towers, over which trains would be obliged to creep; it should be just what the plans before you show it to be, a grand, monumental work, correct in its architectural proportions, inspiring in its magnificent dimensions; it should be so strong that the heaviest express trains can run over it on all ten tracks at the same time at full speed; there should be no slacking up of trains; it should be built to endure for centuries, and of such architectural harmony that it will remain a model of what such a bridge should be for all time to come, as the Cathedral of Cologne is a model, and will remain one to the remotest times, of the inspiring and noble architecture which it represents.

This work is more than a mere bridge for running trains over; it is to represent the highest development of the art of bridge building of our time; it is to represent our enterprise, our civilization, our wealth; it will forever exact admiration and respect for this country from all the rest of the world.

REMARKS BY SAMUEL REA, ENGINEER.

I feel honored in having the privilege of making some suggestions to the committee on the subject of the North River bridge, and in which I am associated with Mr. Lindenthal. When he first showed me his plans in the summer of 1885, I was somewhat doubtful as to the feasibility of such a large bridge from a business point of view. The plans provided then for only four railroad tracks, but this, of itself, was such a daring innovation for a long span that it seemed as if it could not be realized for many years to come. Five years have elapsed, and the plans are now arranged for ten tracks.

I may say that I have been urging this increase of tracks on Mr. Lindenthal, in our discussion of the plans, since my return from England three years ago. I went there to study, among other things, the railway terminal facilities of London and of other English and continental cities. I hoped to be able to aid Mr. Lindenthal, who advised me to pay particular attention to this question of terminals abroad. I have recorded my views on the subject in a book, The Railways Terminating in London, and I may say that the statistics collected in the same have been instructive to many of our railroad managers.

This country has only made a beginning in the construction of large terminal railroad stations. We have none that will compare in size, in comfort, and in convenience with the largest railroad stations abroad. We have no adequate conception yet in this country of the possibilities of the suburban traffic, and have not given the same attention to its development as it has received in foreign countries. Thus, the Southeastern Railway in England is not a large railway in point of mileage, having in all only 369 miles of double track, yet it owns two of the largest passenger terminal stations in London, Charing Cross and Cannon street.

The road expended $15,000,000 through the city, or at the rate of $1,750,000 per mile of track; whereas the cost of our proposed North River bridge will hardly exceed $1,000,000 per mile of track, including bridge, terminal station, and right of way. The bridges over the Thames approaching Cannon street and Charing Cross stations have recently had their capacity doubled. The other London stations show similar great cost, and costly additions are constantly being made to accommodate the growing traffic. Liverpool street station, terminus of the Great Eastern Railway, is now being enlarged, and when completed will have six main tracks into it, and a I under ground.

From my experience and study I feel justified in expressing the opinion that the proposed North River bridge should not be for less than ten railroad tracks, although six may be enough to commence with. The ten tracks may be needed within three years after the structure would be opened for traffic. At the rate of one train every three minutes on each track, in and out, the number of trains would only be one hundred, in or out, per hour, or at the rate of about

twenty thousand passengers, in or out, per hour for ordinary occasions. This is not an extravagant estimate for the morning and evening hours, and yet it shows the necessity of providing for ten tracks if all the railroads are to be benefited by the proposed bridge. It is quite likely that the bridge will lead to the building of numerous suburban lines from the near settlements in New Jersey.

A bridge at New York City is such a great necessity that it would have been built long ago if the United States Government had not jealously watched over the sacredness of the Hudson River as a part of the harbor of New York and prevented its desecration with bridge piers. Submarine tunnels seemed to be the only solution, but they are not in favor either with the railroads or with railroad passengers. They are expensive to maintain and disagreeable to the passengers, who would probably prefer crossing on the ferries to trusting themselves on slow trains running through damp and chilly submarine tunnels.

Bridges with one or more piers have been proposed, but such schemes have met with popular disapproval and opposition from the navigation interests. Not until Mr. Lindenthal presented his plans for a single-span bridge was there a likelihood of obtaining governmental authority for building a bridge at all. But first of all, it was necessary to show that a single-span railroad bridge of nearly 3,000 feet was feasible. This Mr. Lindenthal has done. His professional practice, his experience, his attainments fitted him for it. No engineer doubted the feasibility of a long-span suspended bridge, but the question was, could it be made serviceable for the requirements of modern railroads, for the heavy concentrated loads of huge locomotives and cars at high speed on multiple tracks?

Unless the bridge were designed to fully satisfy these severe conditions it would be useless to the railroads and the money for it could not be obtained. Many were the rebuffs experienced by Mr. Lindenthal and his friends; many were the sneers at the so-called visionary idea of bridging the broad and deep North River without a pier. But now the project is on a sound and firm basis, has the indorsement of practical and experienced men of affairs and of great capitalists, and is merely waiting the authority from Congress to be built as speedily as the gigantic nature of the work will permit.

REMARKS BY ALEXANDER D. ANDERSON ON THE PUBLIC NECESSITY AND IMPORTANCE OF THE BRIDGE.

Mr. Chairman and gentlemen of the committee, after the able speeches by Representatives BAYNE, MCADOO, CUMMINGS, BELDEN, and other gentlemen, on the public importance of the proposed bridge, there is very little left for me to say on the subject. I will, however, invite your attention to a few facts which may be of interest.

The project is of national importance, for it is a grand interstate trunk line, which will supplement and prolong to New York City, near its hotel center, the ten great railway systems which, with their various tributary lines, first intersect the surrounding States, the South, the West, and great interior, and then converge at Jersey City with the Hudson River as a heretofore insuperable barrier in their pathway, unable to enter the great metropolis.

It is in national importance on a level with the Union and Central Pacific Railways, the Nicaragua Ship-Canal, the improvement of the Mississippi River, the improvement of New York Harbor, and other great public works.

It is, indeed, a remarkable fact and I may add a discredit to American enterprise that passengers who can come in comfort and luxury all the way across the continent from San Francisco, from New Orleans and the Gulf ports, and even from the city of Mexico, without change of cars to Jersey City, have there, within sight of the greatest American city, to halt and disembark and submit to the annoyances and dangers of fog, ice, and collisions in crossing the Hudson by ferry. How great these annoyances and dangers are can best be appreciated by referring to the files of the New York daily papers during the past two years. I find in the New York Herald of December 8, 1888, a graphic description of the dangers passengers from Philadelphia, Washington, and the South, on their way to New England, were subjected to in the middle of the night in being ferried from Jersey City around lower New York and then up the East River. I will quote briefly as follows:

"Upward of fifty lives were in jeopardy in the annexed district shortly before midnight last night, and in fact they only escaped by the barest miracle from a most direful fate.

"The steam-boat Maryland, the transfer boat of the New York, New Haven and Hartford Railroad, caught fire at ten minutes past 11 o'clock, just after she had made fast to her slip at the railroad wharf at Port Morris, in the Harlem River. On board of the boat was the Washington express, which is transferred every night from the Pennsylvania Railroad yards at Jersey City by the Maryland to the New Haven road, whence it proceeds to Boston.

"The train was made up of two sleepers, one of them named the Magenta, a passenger coach, and a baggage car. In the two sleepers, the porters say, there were about fifty passengers, both men and women, all of whom were sleeping entirely unconscious of the danger that was soon to encompass them. * * *

"The scene that ensued was a most thrilling one. Already the roofs of both cars were on fire. The men and women in the berths, realizing that they had no time to spare, were tumbled out, and, without waiting to dress or even pick up hastily any of their garments or valuables, fled pell mell for the platforms. They jostled and fought in the narrow aisles in their frenzy."

Last December, during the terrible fog which overspread New York City and Harbor, the traveling public were again subjected to a thrilling experience in crossing from Brooklyn to Jersey City on the Annex boat No. 1 of the Pennsylvania line. The New York World of December 21, 1889, thus describes the adventures of this transport:

"Annex boat No. 1 of the Pennsylvania Railroad line had an eventful experience while trying to make a trip from Brooklyn to Jersey City. She left her pier on the Brooklyn side about 4 o'clock with 150 passengers. About an hour after she had left her slip she met a canal-boat and there was a collision. The shock frightened the passengers and there was a wild rush for life-preservers. Every one who could do so wrapped himself in one of the cork bags.

"The collision did not have a serious effect on the trim little Annex, and she continued her wandering about the East River, while the passengers, attired in their life-preservers, were discussing the question of another collision. The second collision came, and again the passengers were thrown into a state of fear. The force of the second collision drove the Annex boat against a pier, and the deck-hands thought it best for the safety of the passenger to tie her up and keep her there until the fog raised. The pier was at the foot of Jackson street, on the East River. The frightened passengers left the boat and huddled together on the pier.

"It was the intention of the captain of the Annex to lay up at Jackson street pier, but another vessel wandered along in the direction of the pier and crashed into the Annex. The force was sufficient to break the ropes which had secured the Annex to the pier and again she was adrift. She was completely at sea, and a tug-boat attempted to tow her around the Battery. Again she came into collision with another vessel and the tug-boat was compelled to draw off. The Annex managed to guide her way around the Battery, but while she was heading for the Jersey shore she had the misfortune to meet another vessel in the North River, and she received another bump.

"The little Annex kept up her pluck, however, and, despite her adventures, paddled into her Jersey City slip at fifteen minutes to 9 o'clock, four hours and forty-five minutes after she had started from Brooklyn."

Only a few weeks later another fog over the North River jeopardized the lives of passengers seeking to cross by ferry. I quote as follows from the New York Tribune of February 27, 1890:

"In the closing hour of the fog of yesterday morning two ferry-boats in the North River narrowly escaped a disastrous collision. The Hoboken Ferry Company's boat Mont Clair runs between Barclay street and Hoboken, and the Pavonia Ferry Company's boat Erie travels between Chambers street and Jersey City. At 7.30 a. m. the Mont Clair, carrying only fifty people, was going to Hoboken, while the Erie, crowded with passengers, was on her trip to New York. At this time the fog was so dense that it was impossible to discern objects at a distance of more than 30 yards.

"The Mont Clair had nearly reached midstream when Captain St. John saw the head of a large craft start up with ghost-like suddenness on the Mont Clair's port side. The frightened passengers on the Mont Clair had barely time to scramble out of the cabins when the Erie crashed into the Mont Clair's paddle-wheel, smashing the box and breaking away a part of the railing. In the mean time the wildest panic prevailed among the Erie's 400 passengers. Women screamed and fainted, while men rushed wildly from end to end of the boat, as if temporarily deprived of reason. Some even made attempts to jump into the river, but they were held back by those around them."

These are but illustrations of the frequent discomforts and dangers passengers are subjected to at a place which, above all others in the United States, should be supplied with the most improved methods of railway transportation. I say "above all others," for about twenty million passengers are annually compelled to cross the Hudson at this point, and the number is rapidly increasing.

The whole country from East to West and North to South is, so to speak, bridged over with railways to the extent of over 160,000 miles, except one single span across the Hudson only half a mile in length. This serious defect leaves a dangerous gap between the national Capital and the great commercial metropolis, interfering at times with the business of the Government by delaying mails, and is liable also to check the speedy movement of troops in case of a riot or other great public emergencies. It leaves a river barrier to be surmounted by the vast throng of passengers who daily travel back and forth between Baltimore, Philadelphia, New York, and Boston, and enlarging the circle between the various sections of the whole country.

The bridge is, then, an interstate project in its broadest and fullest meaning, a national work in all except its financial features, which burden private capital is ready to assume. It is, in brief, in its public importance the bridge of the nation and of all the States, a project which it will be admitted ought to be under the supervision of the General Government. The reasoning which John C. Calhoun applied, in 1845, in a speech at Memphis, to the improvement of the Mississippi River, is equally applicable to the subject under consideration. He said:

"The invention of Fulton has, in reality, for all practicable purposes, converted the Mississippi with all its tributaries into an inland sea. Regarding it as such, I am prepared to place it on the same footing with the Gulf and Atlantic coasts, the Chesapeake and Delaware Bays, and the lakes, in reference to the superintendence of the General Government over its navigation. It is manifest that it is far beyond the power of individual or separate States to supervise it."

The proposed bridge, with its ten or more tributary railroads, is, in this respect, not unlike the great river system, and its supervision and control is equally beyond the power of individual States.

EXTRACTS FROM PRESS COMMENTS.

The following extracts from lengthy reviews and editorials on the bridge described above, and forming the subject of bill H. R. 3886, will be of general interest:

[New York Sun, January 18, 1888.]

Of all the plans to throw an iron highway across the Hudson River the most stupendous which has yet been suggested is by the men who have selected for their points of anchorage Hoboken and a spot on the New York side near Fourteenth street.

It is the greatest in engineering features, because it involves the solution of problems which no engineer has so far attempted to solve, and it is greatest in financial aspects, because the total cost is placed between $37,000,000 and $50,000,000. How vast this is one may appreciate upon reflecting that the great Brooklyn bridge cost only $15,000,000, including the purchase of property. * * * Should the plan ever be carried into effect the bridge would be the bridge of the world, for it would be longer, higher, and larger for traffic than any other bridge now existing or proposed.

This scheme was first formally presented to the public at a meeting of the American Society of Civil Engineers by Gustav Lindenthal, an engineer who has studied the North River bridge problem for a long time and has made surveys, soundings, and complete examinations. The Engineering News, commenting upon the paper which Mr. Lindenthal read before the society, thus refers to the thought of impossibility which is apt to rise in the mind of almost any layman:

"The grandeur of the project is almost appalling, creating at first sight a natural feeling that the chance for its construction must be small. But this is an age of great enterprises and of superabundant capital for anything which it can be shown will pay, either directly or indirectly. We think that there is abundant reason to believe that such a bridge as that proposed would pay even now, while the engineering difficulties are certainly less formidable for the resources of to-day than were those which confronted the St. Louis, East River, and many other bridges when their construction was begun."

As to the probability of this bridge being a safe investment for superabundant capital, the figures presented by Mr. Lindenthal afford an emphatic affirmative answer.

[New York Times, December 25, 1888.]

Two considerations make it more likely than ever that we shall have a bridge across the Hudson into this city before the century closes. One is the reduced cost of such undertakings resulting from inventions and improved methods of manufacture; the other is the economy it presents over a number of crossings above or below water. * * * An engineer of Pittsburgh who makes bridges a specialty has succeeded in gaining the ear of capitalists, and his calculations meet with respectful consideration from those who ought to know. * * *

The picture of this greatest of all wonders of bridge-making offers much the same beauty of curve in the main span as the East River bridge, and more grace of outline in the towers.

* * * For this tremendous undertaking capitalists have been found; the permission of the Government for its erection over our great water way has been asked; there seems no reason to doubt that it can and eventually will be built. Yet, if it were begun already, the growth of passenger and freight traffic east and west across the Hudson at New York is so rapid that the existing facilities will have to be doubled before the bridge could be prepared to receive trains.

[The Morning Post, London, England, August 25, 1888.]

It takes a good deal to startle the Americans, but New York does seem to have been fairly startled by a project which, to use a sporting phrase, beats all previous records of bridge construction. Mr. Gustav Lindenthal, bridge-builder, of Pittsburgh, Pa., proposes to construct an enormous suspension bridge, for railway traffic and other purposes, across the Hudson River between New York City and the north New Jersey shore. The bill has been introduced in both Houses of Congress.

[From the Brooklyn Eagle, January 21, 1890.]

Perhaps it was thought that the science of bridge-building had reached its highest development in the graceful structure which rose to view beneath the hand of Roebling, but, as a matter of fact, the Brooklyn highway was no more in advance of what had preceded it than the proposed North River bridge, if successfully completed, would be in advance of our own magnificent span. The need of closer communication between New York City and the Jersey shore is a subject which has long been agitated, and now there has arisen a company which talks of meeting the demand by constructing the greatest bridge in the world. What is equally to the point, the plan may be deemed to be practicable, inasmuch as it was designed by an engineer of international reputation, and meets with the indorsement of the foremost engineers. * * *

The dimensions of the proposed structure are so conspicuously in advance of those which mark the proportions of the Brooklyn highway that we can not fail to admire the daring of the genius which has planned the work any less than we can hope to see it brought to successful completion. From the business and commercial point of view, there is promise of even greater advantage than has attended the construction of the Brooklyn bridge, for the missing link in the transportation between the South and the Eastern States would be supplied, and this would mean the cheapening of freight rates and consequent decrease in the price of goods landed in the New York markets. * * * Congress might reasonably be asked to aid the enterprise under conditions which would guaranty adequate return on completion. The argument is not purely local; it embraces, in a more or less vital degree, the interests of the entire country.

[From the Washington Critic, July 21, 1888.]

That a railway bridge will eventually span the Hudson at New York, as proposed by the present projectors or upon other plans yet to be determined, is only a question of time. The designs of Mr. Lindenthal, the engineer of the company now seeking incorporation by Congress, are pronounced by other engineers to be both admirable and practicable, and the necessity of such a crossing for the accommodation of the nine hundred railway trains now arriving daily on the Jersey side of the river is of course admitted. The bridge will "come high" as to cost, but the investment can not fail to be a profitable one, and the whole country, especially outside of New England, will welcome the structure that gives it unimpeded access to the metropolis as the greatest benefaction of this commercial age.

[From the New York Times, January 26, 1889.]

What New York most needs for its future growth and prosperity is closer connection with the territory about it. The more tunnels and bridges there are connecting Manhattan Island with adjacent lands, provided there is no obstruction of navigation on its surrounding waters, the better for the city, and their construction should be encouraged and promoted in every legitimate way. The one great advantage of this city, which has made it so largely the emporium of the country's commerce, is its unsurpassed harbor and its unequaled water front. * * *

But New York's advantage from accessibility by water, and the facility of handling traffic that comes and goes upon that element, has been considerably offset by the break in communication with it by land, save in one direction. This adds largely to the inconvenience and expense of handling traffic by rail, and is a serious drawback for the city. The easier it is to get into the city and out of it and the less trouble and expense it involves, the better for its growth and prosperity. * * *

* * * Every effort of capital and enterprise to supply the bonds of union between sections of the metropolis, and to give it a more perfect connection with the channels of traffic in every direction, should be encouraged and promoted. All barriers should be removed, and our borders should lie open to the world.

[From the New York Tribune, December 1, 1889.]

At the foot of Cortlandt, Liberty, Chambers, and other streets, and along the water front of West street, are all the ferry-houses through which passage is taken to New Jersey. Not less than 120,000 people are compelled every day to make this perilous journey across West street, and the wonder is how they ever manage to do it without being drawn into a whirlpool of slime, muck, wheels, hoofs, and destruction. * * * Think of Macaulay's enlightened New Zealander standing on the top of the Pennsylvania ferry-house watching that fearful scene. Hear him gasp with amazement and vexation, "Why in thunder don't these people get up a revolution or build a bridge?" [Namely, over West street.]

[From the Saratogian, Saratoga Springs, N. Y., January 10, 1889.]

A bridge across the Hudson River at New York? If all this little sentence contains is not apparent to any individual, let him visit New York and look over the ground, or rather the water, for there is enough of water between New York and Jersey City to stagger any bridge builder who has lived up to the present time. Across the Hudson—not under it or on its bosom, but above—so far above that the great ships and steamers having their docks further up may go in and out without being hindered.

The problem of getting passengers and freight from New York to Jersey City and *vice versa*, by some better method than ferriage, has long stared the officers of railroads centering in Jersey City in the face. * * *

It will be well to crown the gigantic works of the nineteenth century with the building of this proposed bridge. It seems fitting that the century which produced the Atlantic cable should not go out without the completion of some great engineering feat, and a bridge at New York across the Hudson would be a fitting work with which to close the magificent list of triumphs. * * *

A bill is before Congress to permit the building of this bridge, and there is no reason to suppose the request will be refused.

[From the Commercial Gazette, Pittsburgh, Pa.]

The East River bridge, which unites New York and Brooklyn and the collection of towns upon Long Island, and which was opened for general traffic some six years ago, has proved how far behind the reality the boldest predictions respecting the growth of traffic between the two cities have turned out to be. When the project of an East River bridge was first mooted, some twenty years ago, it was held to be impracticable and extravagant; but as it approached completion the foreshadowings of its great utility called into life the project of a permanent way across the North River. The great width and depth of the Hudson, however, seemed to render the serious consideration of a bridge project useless. * * *

Gustav Lindenthal, the bridge engineer, has formed a project to cross the Hudson with a colossal suspension bridge, with a single span of 2,850 feet. This is the greatest length of span for a bridge that has ever been planned.

[From the New York Sun, July 6, 1888.]

The bill which has just been introduced into Congress authorizing the construction of a bridge across the Hudson between the city of New York and the New Jersey coast presents several features of importance. It is to be a railroad bridge as well as for other travel; in fact, from the points at which it would necessarily be constructed, its chief immediate importance would be for railways.

The great commercial convenience of opening an all-rail route from New York to the West and South, avoiding the present barge work for freight and ferrying for passengers, must be obvious. * * *

A noticeable feature is that it is to be constructed with a single span over the entire river; and this is not to be done by advancing the terminal piers beyond the present wharf line, since it is expressly provided that they must be kept within that line. This provision must disarm at the outset the main opposition hitherto encountered against a bridge. * * * Another provision is that the bridge shall have at least 140 feet in the clear above the level of ordinary high water.

[From the Statesman, Yonkers, N. Y., April 9, 1889.]

When the East River bridge was first broached, the idea was disparaged by all the old fossils who never fail to predict insuperable obstacles in the face of enterprise.

The same spirit will be sure to be opposed in certain quarters to the North River bridge, which, it is thought, will some day facilitate communication between New York and Jersey City. * * *

The contemplated completion of the bridge is ten years hence; but, if we allow only two years for incidental delays (and ten years are very little to allow), we presume the satisfaction will be all but universal if rapid transit is thus effected by the close of the first year of the twentieth century.

[From the Journal, Newark, N. J., January, 1890.]

This is truly a magnificent conception, and its realization would be the wonder of a world accustomed to stupendous undertakings. The engineering difficulties are not such that could not be overcome as readily as those involved in the construction of the Brooklyn bridge.

[Brooklyn Times, March 6, 1890.]

Engineer Lindenthal explained his great Hudson River bridge to a Congressional committee yesterday. It will be a fine thing for New York and New Jersey, and Congress need not hesitate to authorize it.

[Rochester Herald, March 10, 1890.]

New York's greatest need is for rapid transit between the business part of the city and the resident portion and the suburbs. In only one direction can the people get out by steam cars, and that is over the New York Central. A great many New York business men make their homes in New Jersey or on Long Island, either of which is reached by ferries always overcrowded at the busiest hours and often delayed by fog and ice. The exception is found in the Brooklyn bridge, which from the immense throngs that cross it night and morning is more uncomfortable even than the ferry-boats. Rapid transit over an immense bridge to New Jersey would afford relief and comfort.

[From Engineering News, January 7, 1888.]

A paper of remarkable and unusual interest was read at the Wednesday meeting of the American Society of Civil Engineers, by Mr. Gustav Lindenthal, of Pittsburgh, Pa., outlining in detail the great project of a six-track railroad suspension bridge over North River, which Mr. Lindenthal has been engaged in studying for some time, under auspices which, we are assured, give strong promise of an early beginning of the work. The necessity for some such costly and monumental structure is becoming so clear that only the enormous cost of it (some $15,000,000) for the bridge only, and perhaps doubt as to its unprecedented engineering problem, can delay it long. But the cost is certainly not so formidable an obstacle for to-day as was that of the Brooklyn bridge for 1868, when its construction was determined on, nor does vastness of itself imply corresponding technical difficulties, while there is probably no one on either side of the ocean who could be counted on more confidently to deal successfully with the intricate engineering problems involved than Mr. Lindenthal. Certainly no one of the eminent engineers who have already constructed great long-span bridges could have been justly regarded as better equipped for his work at its inception.

Pension to Ellen Shea.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 4, 1890.

The House having under consideration the bill (H. R. 2051) granting a pension to Ellen Shea—

Mr. LANE said:

Mr. SPEAKER: I am not prepared to address the House on the question of general pension legislation this morning, as I did not expect that the debate would cover that ground, but before the close of the session I hope I will have an opportunity to state to the House and to the country my views on this important matter.

I wish to say, however, before taking up the special case under consideration, that I do not agree with gentlemen who speak about contracts between the soldier and the Government at the time of enlistment as being the true basis for pension legislation. I think the element of contract was entirely wanting in that employment. The Government fixed the compensation of the soldier and he was not consulted about it, and he was compelled to accept that amount whether it pleased him or not. The Government demanded men at $16 per month, and men were compelled to go, whether the wages were satisfactory or not, so there is no use of talking about a contract or that the Government has paid the contract price. I think such discussion is all foreign to proper pension legislation. The element of mutuality, the essence of all contracts, is wanting.

The Republican party did not treat the soldier as they treated the bondholder. You promised to pay them $16 per month, and you paid them only $8, and have never righted the wrong. You paid the bondholder in gold; you paid him all he demanded; but when you come to the soldier you paid him in depreciated currency, worth 50 cents on the dollar. This House has never yet righted that wrong, and you will never stand justified before the soldiers until you make that right. You can not fix his services by dollars and cents.

I want to say to the House that the Democrats of Illinois do not in-

dorse the statement so eloquently made by the gentleman from Missouri [Mr. STONE]. He made an eloquent speech, but the Democrats of Illinois do not indorse that doctrine. Just how far they shall go and where they shall stop I am not prepared to say, but I am prepared to say now that the Government has not done justice to the men who defended it in its hour of peril and danger. We have not reached that mark yet.

As I said heretofore, I shall favor the House with my views on this question before this session shall close. You gentlemen on the other side were not responsible for pension legislation during the last session, but I was surprised this morning to hear coming from the Republican side of the House, when we had a meritorious case before the House for consideration, where it did not take a dollar out of the Treasury, a motion for an amendment proposed on the Republican side of the House to reduce that pension from $50 to $30, when the pension reserve fund of the Navy is large and ample to meet that demand without taxing the people one cent. As I said, I was surprised that that motion should come from the Republican side of the House, and it was generally supported on that side. Gentlemen, you have gone back on your records, and I did not expect to see you do it. You promised to defend and pension the soldiers, and then you gentlemen have deserted your colors. [Applause.]

A MEMBER. What about the case under discussion?

Mr. LANE. The case that I reported is that of a woman who is about eighty years of age and who lost two sons in the Army. I say that she lost two sons in the Army, and the proof shows it. One was shot in the ankle, and while coming down stairs his foot caught and he fell and broke his neck. The gentleman says he did not lose his life for his country. No, he was not shot in battle; but he lost his life as a result of his army service, just as much as if he had lost it in battle. The other son went insane. The testimony is here conclusive and clear, and there is no way of mystifying the record. The record says that this man after a heavy battle lost his mind, and from that day forth he was insane. His mother is a poor woman of eighty years of age. She had in Chicago a little home worth $1,200, and had to sell that home in order to take care of the soldier, who had lost his health in the Army of the country; and, sir, this Congress refuses to grant her a pension to remunerate her for loss of her property and compensate her for the care of her son, as well as his death. Gentlemen say the Government agreed to take care of the wounded and disabled soldiers. Why do you not do it? After the war was over the care of this son fell upon this widowed mother. For many years she cared for him, and somehow during one of his insane spells he wandered away and was killed.

The gentleman from Missouri [Mr. STONE] says the testimony shows that another man was killed in the same disaster. I say there is not a scintilla of testimony to show any such state of facts. No one testified to it. The only information upon that subject is the letter of this would-be pension attorney, who gives his case away, a man who does not know the legal obligation of an attorney. What would gentlemen think of an attorney who would commence a case in court for a client and then go before that court where the case was to be tried and say: "There is no merit in this case."

Mr. CLUNIE. He ought to be expelled from the bar.

Mr. LANE. Yes, sir; he ought to be expelled from the bar. Whatever this man learned in that case he learned as an attorney, and his lips were sealed; he had no right to disclose it. The law would not compel him to testify to it in court. He knew nothing about this case but what he learned as an attorney, and he acted like a soldier who deserts on the field of battle; he showed the white feather, he deserted; he was the worst deserter that could possibly exist. Now, the gentleman from Missouri wants to predicate the merits of this case entirely upon the letter of this Chicago attorney, who writes to the Department saying:

I thought there was merit in this case when I commenced it, but there is nothing in it.

Upon that single letter it is attempted to defeat this case before this House. I do not believe the attempt will succeed.

Let me read the testimony of this doctor:

I became acquainted with the said soldier in the year 1854; knew Mrs. Shea thirty-five years ago; was their family doctor; knew Michael Shea before he enlisted and knew he never had any trouble with his head before he enlisted. Treated Michael Shea when he was home on furlough for his hand and head. He had had a brain fever. He was in a heavy battle, and never fully recovered after the fever he had after the battle. Michael returned to his company, but the war was then over and Michael was discharged; came home to his mother to support him, as he could do no work, for he had not the proper use of his mind to support himself. When old age came upon her and she could work no longer to support him, and was too sick to look to him, he, Michael, wandered away and got killed while suffering from a disease of the mind caused from a fever he had contracted after one of the battles during the war. I think she is entitled to a pension.

There is not a single witness in this case who denies the doctor's statement which I have just read. The Pension Office has its agents in Chicago, and why did not they try to ascertain whether this doctor was a reputable man or not? There is no impeachment of his testimony in the record. He swears that this woman's son wandered away while he was insane and lost his life. Now, what is the presumption? When you find a sane man dead the presumption is that somebody has killed him, but there is no such presumption applying to an insane man. The testimony here shows that this man went off and lost his life as a result of the injury which he had incurred in the service, and that must be presumed until something to the contrary appears.

We have in this record the testimony of six or seven witnesses who swear to the good character of this claimant; who swear that they knew she was married to the father of the soldier. The father was dead when this boy enlisted. This woman had only two sons, and she gave all she had to the country. Both her sons enlisted. It is true that the record shows that this particular one was a little wayward. He is reported as having deserted, but the records show that at that very time he had simply been arrested in the city, perhaps for drunkenness, and put in the guard-house and detained there. Because he did not appear he was reported as a deserter, but he turned up in a few days, reported to his company, and went on performing his duty as a soldier. I do not say he was a man of the best moral character. He was not a preacher. They did not have any use for preachers there at that time. [Laughter.] But I do say that the record of the War Office shows that this man enlisted, that he served his country nearly three years, that he was an honorably discharged soldier, and I say that this Government is estopped from claiming that he was a deserter, because the record shows that the truth and the fact is that he was not a deserter.

The record shows that this soldier lost his mind in the service, that he was in a great battle, that he went home to his mother demented, that she in her poverty and helplessness was compelled to care for him for ten or twelve years, and that she had to sell her little home from over her head, until now she is a mere pauper, dependent upon public charity. And will this House refuse her relief? If I understand the temper of the House, the relief she seeks will not be refused.

Admission of Idaho.

SPEECH

OF

HON. JOHN T. CAINE,

OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 3, 1890,

On the bill (H. R. 4362) to provide for the admission of the State of Idaho into the Union.

Mr. CAINE said:

Mr. SPEAKER: I am in favor of the admission to statehood of all the Territories so soon as they have the requisite qualifications and adopt constitutions, as the fundamental law of the future States, which are at least republican in form. Although the Territory which I have the honor to represent has for many years possessed all the requisite qualifications for statehood, she has been denied that precious boon because the majority of her people were members of a numerically weak and unpopular church, not because of polygamy, for the great majority of them never practiced it, but because they were Mormons.

The same spirit which has denied statehood to Utah proposes now to disfranchise the members of the Mormon Church in the future State of Idaho. Because they are polygamists? Not at all; for it was shown in evidence before the Committees on the Territories, both of the Senate and the House, that not more than one hundred and twenty-five men out of the twenty or twenty-five thousand Mormons living in Idaho had ever been in any polygamous relation. At the present time those men, while supporting their families, are not living with them in violation of law. What, then, are the reasons for this wholesale disfranchisement? There are two: one religious—they are members of the Mormon Church; the other political—it is supposed that they will vote the Democratic ticket.

The Mormon citizens of Idaho are counted to obtain the necessary population for statehood and they will be heavily taxed to support the State government. Taxation without representation is just as odious now as it was in the days before the Revolution. Its enforcement by an alleged free and sovereign State will be no less detestable than it was by King George III. I fear we are gradually departing from those great principles of free government founded by the fathers, which gave birth to the Declaration of Independence.

The people which this constitution proposes to disfranchise live in the southern part of Idaho. In his report to the Secretary of the Interior for 1888 Governor Stevenson, speaking of the Mormons and their settlements in Bear Lake County, says:

This county was settled by Mormons in the year 1863, and for a number of years afterwards their residence continued under circumstances of the most forbidding and discouraging nature. The county is perhaps the highest altitude that is cultivated successfully in the world, the altitude being about 6,000 feet, and the early settlers, being unaccustomed to the frosts and storms of these high altitudes and the different methods of raising crops by irrigation, were for several years compelled to haul their flour and other necessaries over the rugged mountains from Cache Valley, Utah, a distance of 75 miles, the roads being mere trails, rocky, sidling, and without bridges over the wild, swift mountain streams.

To settle such a county none but the strongest and most determined could accomplish; so bleak and sterile was the county that the shade and fruit trees first planted out refused to grow. All this is changed by the labor and perseverance of this people and their learning how to cultivate by irrigation, and to secure those seeds, trees, and shrubs which are acclimated to these high altitudes. By this means the county is now abundantly fruitful in grain, hay, and vegetables of almost every kind. It appears to be the home of all kinds of small fruit and the large kinds are becoming plentiful.

Paris, the county seat, has a brick court-house which cost $10,000; a church edifice, nearly finished, called the Mormon Tabernacle, 65 feet wide, 110 feet long, and 40 feet between floor and ceiling, and 110 feet high. It is built of stone; the corners of doors, window buttresses, and towers are built of fine red hard sandstone, roughly hewn. It was hauled by teams from a quarry 20 miles distant. The body of the building is of granite of various colors, which gives the whole a singular but pleasing effect. It has already cost over $40,000, and is undoubtedly the finest church building in Idaho.

Paris has a population of about 1,500, all Mormons, and there is not a saloon or gambling-house or any other place where intoxicating liquor is sold, and this is, I am told, the case in all the towns in Idaho where these people have exclusive control.

In traveling through the Mormon settlements one is at once struck with their improvements and the certainty that they are persevering and industrious; their country towns and villages are thrifty and their farms well cultivated. Their buildings are generally substantial and many of them stylish, with all the modern improvements that make a country look progressive and prosperous, and I believe these people are, as a rule, frugal, industrious, and honest.

All the best citizens of Idaho have no wish or desire to persecute, wrong, or oppress the Mormon people, nor do they wish to deprive them of any of their rights as American citizens; but they do insist that they shall abandon the practice of polygamy, bigamy, and plural marriages, in conformity to the Constitution and laws of the United States, and also the laws of the Territory of Idaho.

I am informed by men high in authority in the Mormon Church, and in whose word I have the highest confidence, "that they are willing to live up to the laws (which they claim are now being fairly and more humanely administered), and that the doctrine of plural marriages is not now practiced as formerly or taught either publicly or privately, and that they do not teach, advise, counsel, or encourage the practice of polygamy or bigamy."

This testimony to the character of the Mormon people of Idaho and the work they have performed in redeeming that once bleak and sterile region speaks loudly in their praise.

Is it for these labors that they are to be disfranchised?

Is it because they have rendered their country "abundantly fruitful in grain, hay, and vegetables of almost every kind" that they are to be disfranchised?

Is it because they have erected substantial public buildings and the finest church edifice in Idaho that they are to be disfranchised?

Is it because in Paris, with "a population of about 1,500, all Mormons, there is not a saloon, or gambling house, or any other place where intoxicating liquor is sold, and this is the case in all towns in Idaho where these people have exclusive control" that they are to be disfranchised?

Is it because "their towns and villages are thrifty and their farms well cultivated, their buildings generally substantial and many of them stylish, with all the modern improvements that make a country look progressive and prosperous" that they are to be disfranchised?

Is it because "these people are, as a rule, frugal, industrious, and honest" that they are to be disfranchised.

If "all the best citizens of Idaho have no wish or desire to persecute, wrong, or oppress the Mormon people, nor do they wish to deprive them of any of their rights as American citizens," then I ask why are they to be disfranchised? I pause for a reply.

It will be said it is because they practice polygamy. But Governor Stevenson says that he was informed by men high in authority in the Mormon Church, and in whose word he had the highest confidence, "that they are willing to live up to the laws (which they claim are now being fairly and more humanely administered), and that the doctrine of plural marriages is not practiced as formerly or taught either publicly or privately, and that they do not teach, advise, counsel, or encourage the practice of polygamy or bigamy." Thus Governor Stevenson's statement, which agrees with the testimony given before the committees of Congress during the past two years, fully disposes of the charge of polygamy.

The gentleman from Idaho [Mr. DUBOIS] has with much seeming pathos told you of "the wretched, appalling misery and degradation of polygamist women and children" he had witnessed in Idaho. Why, gentlemen, there are thousands of cases of misery and degradation existing among women and children who are not polygamists in every State in this Union, but that is no reason why whole communities should be disfranchised. He has cited an incident which he sought to make very dramatic. He had seen "an alleged second wife on the witness-stand and heard her swear that she was not married to the defendant." Well, now, if she was "an alleged second wife," could she in law be married to the defendant? May not her lawyer have advised her to make such an answer, holding that in law she was not a wife?

But technicalities aside. If any such case existed, and I can not say it did not, the woman was doubtless a plural wife, and to save her husband, the father of her children, from merciless prosecution, to save him upon whom she and her unborn babe were dependent for support, she denied that she was married to him. While I do not justify any person in testifying falsely, I will say that it is not the first time in the world's history that women have sworn falsely to save their husbands from punishment. On the mimic stage such women are heroines and their acts are applauded to the echo.

The gentleman had no word of condemnation for the cruel law, the brutal prosecutor, and the inexorable judge who compelled the woman to testify under such circumstances. If he had told you how helpless, delicate women and innocent children were hunted down like wild beasts, dragged into court, badgered by lawyers, and who, failing to testify to suit the prosecution, were thrust into filthy prisons, among thieves and murderers, and kept there till forced to answer questions which would convict their husbands and fathers, he could have drawn a picture much more realistic than any afforded by the horrors of polygamy.

He failed to tell you how in Idaho and Utah juries were packed to convict Mormons of polygamous practices; how the Territories were ransacked to find material for juries that would bring in the right kind of verdicts. He forgot to recite how a high court official in his Territory, after an herculean effort to secure a jury "warranted to convict," sacrilegiously declared that he had secured a jury "who would convict Jesus Christ himself." The gentleman has not told you a fractional part of the appalling misery and degradation to which polygamist women and children have been subjected in the Territory of Idaho. Had I his learning and eloquence I could draw a picture that would make the angels weep; but I rather hang my head in shame and blush for humanity than speak of the outrages committed in the name of law in Utah and Idaho for the alleged suppression of polygamy.

The gentleman from Idaho and others on the Republican side of the House have, either by direct allegation or artful innuendo, charged the Mormon people with disloyalty to the Government. I deny the charge and I assert that few people of any age or country have been more patient, peaceable, and submissive than the Mormons—often under such circumstances of palpable wrong and oppression as have incited resistance and insurrection in other communities.

Reference has been made to certain expressions of individuals among the Mormons, under circumstances of excitement and exasperation, as evidence of disloyalty of the whole Mormon people. We are also arraigned for disloyalty because we have sometimes protested against laws and decisions which we deemed to be oppressive and unjustly discriminative against our people. Our belief in God as the supreme ruler of the universe and His overruling providence and authority has been distorted by our enemies into treason against the Government. How would gentlemen who are citizens of the States like to have their loyalty tried by such standards as these? The constituents of the gentleman from New York [Mr. BAKER] may freely denounce the governor and the Legislature, criticise the decisions of the judiciary, or denounce their sheriffs, and even send them to the penitentiary. The constituents of the gentleman from Iowa [Mr. STRUBLE] may meet in State convention and denounce the prohibition laws and demand their repeal. The farmers of Kansas, the constituents of the gentleman from that State [Mr. PERKINS], may meet in convention, arraign United States Senators, and protest against laws which they deem wrongful and oppressive. Again, good and loyal christians all over this country may demand such a change as would recognize "God in the Constitution as the supreme ruler of the universe." All these things may be done by non-Mormons with impunity; but if Mormons criticise and protest against cruel laws and wicked officials their acts are brought forward here and elsewhere as evidence of disloyalty and treason.

In this free country there can be no criterion of loyalty except obedience to the Constitution and laws. The Medes and Persians were the only people within my knowledge of history with whom the laws were thought to be so sacred, perfect, and infallible that they were held to be perpetual and irrepealable. To protest against these laws was treason punishable in the fiery furnace and the lion's den.

The right of the people of a republican government to protest against a law, or demand its repeal, or agitate for reform is not to be limited to cases where the people are clearly in the right; that is begging the question. But it is hard and cruel, as was the case with the Mormons in Utah, to be charged with disloyalty for denouncing and criticising acts and decisions of Federal officers that were clearly wrongful and oppressive. Recent instances of this kind were related by an ex-Utah commissioner, Hon. A. B. Carlton, before the Committee on Territories of this House. Though personally cognizant of the facts related by him, I prefer to give his statement, as he, being a non-Mormon, is not an interested party. I therefore condense from his testimony as follows:

The Federal judges in Utah, a few years ago, made an extraordinary decision in the application of what was called "segregation." The third section of the so-called Edmunds act of 1882 makes it an indictable offense for any male person to cohabit with more than one woman, and fixes the maximum punishment at a fine of $300 and imprisonment for six months. But the judges invented a new doctrine and called it "segregation," the gist of which was that if a man had been living with two or more wives for three years, the period of the statute of limitations, the grand jury might "segregate;" that is, divide up the three years into periods of a year, a month, a week, or a day each, and bring in a separate indictment for each one of the "segregated" periods; so that the three years being "segregated" into periods of one day each, the offenders for three years' continuous cohabitation might be indicted one thousand and ninety-five times with cumulative fines and imprisonments, amounting to $328,500 fines and five hundred and forty-seven years and six months' imprisonment.

This doctrine was applied in many cases. The Mormons criticised it as contrary to law and against the whole course of judicial decisions in similar cases both in England and America, and that by a sort of judicial legislation the judges sought to punish a man an indefinite number of times for one offense, in violation of the Constitution. But the judges gave no heed to these "disloyal" complaints, and went on "segregating" until the Supreme Court of the United States reversed the cases and decided that the Mormons were right and the

Utah judges were wrong. (*In re* Snow, 120 United States Supreme Court Reports, 374.)

Another case of Mormon "disloyalty" occurred in the autumn of 1882. A majority of the Utah Commission decided that a man was not entitled to be registered as a voter who had married a plural wife subsequent to July 1, 1862 (the date of the passage of the first act concerning polygamy), although all his wives, or all but one, had died from ten to twenty years before.

The Mormons were so disloyal that they criticised this ruling as absurd, unreasonable, and contrary to law. "How," they asked, "can a man be a polygamist who has no wife at all?" This decision, however, continued to be enforced by the Commission for over two years, and many of the leading citizens were denied the right to vote or hold office (among them William Jennings, the mayor of Salt Lake City), although they had had no more than one wife for many years. Finally, after the customary "law's delay," the Supreme Court of the United States decided that this ruling of the Commission was erroneous. (Murphy *vs.* Ramsey *et al.*, 115 Supreme Court Reports, page 15.)

The facts stated by Judge Carlton are undeniable, for they are matters of record in the Supreme Court of the United States.

That the position of the Mormon Church relative to laws and governments may be fully understood, I quote from the Book of Doctrine and Covenants, a standard book of the church in matters of faith and doctrine. My time will not permit me to read the whole article, but I will print it with my remarks. I will content myself by reading two or three extracts:

OF GOVERNMENTS AND LAWS IN GENERAL.

That our belief with regard to earthly governments and laws in general may not be misinterpreted nor misunderstood, we have thought proper to present near the close of this volume our opinion concerning the same.

1. We believe that governments were instituted of God for the benefit of man, and that he holds men accountable for their acts in relation to them, either in making laws or administering them, for the good and safety of society.

2. We believe that no government can exist in peace except such laws are framed and held inviolate as will secure to each individual the free exercise of conscience, the right and control of property, and the protection of life.

3. We believe that all governments necessarily require civil officers and magistrates to enforce the laws of the same, and that such as will administer the law in equity and justice should be sought for and upheld by the voice of the people (if a republic) or the will of the sovereign.

4. We believe that religion is instituted of God, and that men are amenable to Him and to Him only for the exercise of it, unless their religious opinions prompt them to infringe upon the rights and liberties of others; but we do not believe that human law has a right to interfere in prescribing rules of worship to bind the consciences of men, nor dictate forms for public or private devotion; that the civil magistrate should restrain crime, but never control conscience; should punish guilt, but never suppress the freedom of the soul.

5. We believe that all men are bound to sustain and uphold the respective governments in which they reside while protected in their inherent and inalienable rights by the laws of such governments, and that sedition and rebellion are unbecoming every citizen thus protected, and should be punished accordingly; and that all governments have a right to enact such laws as in their own judgment are best calculated to secure the public interest, at the same time, however, holding sacred the freedom of conscience.

6. We believe that every man should be honored in his station, rulers and magistrates as such being placed for the protection of the innocent and the punishment of the guilty; and that to the laws all men owe respect and deference, as without them peace and harmony would be supplanted by anarchy and terror, human laws being instituted for the express purpose of regulating our interests as individuals and nations between man and man, and divine laws given of Heaven, prescribing rules on spiritual concerns for faith and worship, both to be answered by man to his maker.

7. We believe that rulers, states, and governments have a right and are bound to enact laws for the protection of all citizens in the free exercise of their religious belief; but we do not believe that they have a right in justice to deprive citizens of this privilege or proscribe them in their opinions so long as a regard and reverence are shown to the laws and such religious opinions do not justify sedition nor conspiracy.

8. We believe that the commission of crime should be punished according to the nature of the offense; that murder, treason, robbery, and the breach of the general peace in all respects should be punished according to their criminality and their tendency to evil among men, by the laws of that government in which the offense is committed; and for the public peace and tranquillity all men should step forward and use their ability in bringing offenders against good laws to punishment.

9. We do not believe it just to mingle religious influence with civil government, whereby one religious society is fostered and another proscribed in its spiritual privileges, and the individual rights of its members as citizens denied.

10. We believe that all religious societies have a right to deal with their members for disorderly conduct according to the rules and regulations of such societies, provided that such dealings be for fellowship and good standing; but we do not believe that any religious society has authority to try men on the right of property or life, to take from them this world's goods, or to put them in jeopardy of either life or limb, neither to inflict any physical punishment upon them; they can only excommunicate them from their society and withdraw from them their fellowship.

11. We believe that men should appeal to the civil law for redress of all wrongs and grievances where personal abuse is inflicted or the right of property or character infringed, where such laws exist as will protect the same; but we believe that all men are justified in defending themselves, their friends, and property, and the Government from the unlawful assaults and encroachments of all persons in times of exigency where immediate appeal can not be made to the laws and relief afforded.

Now, Mr. Speaker, that is the accepted doctrine of the church, and the utterances of no man in the church, be he elder, apostle, or prophet, if in conflict with these precepts, can be set up as superior to this standard.

The advocates of this bill divert attention from the real issue by crying out "Polygamy!" "Polygamy!!" thus seeking to make it appear that those who are opposing the disfranchising clause in this constitution are opposed to the suppression of polygamy. I contend that it is not a question of polygamy at all. No one asks that polygamists shall vote, hold office, or serve on juries. The question is, shall Mormons who have never entered into any polygamous relations, who have never violated any law, either of Idaho or of the United States, many of whom probably do not believe in the doctrine of plurality of wives—shall these men, possessing every other qualification to entitle them to the franchise, be deprived of it because they belong to a church or organization which holds that under certain circumstances it is not sinful for a man to marry more than one wife? The clause reads:

No person is permitted to vote, serve as juror, or hold any civil office * * * who is a member of or contributes to the support, aid, or encouragement of any order, organization, association, corporation, or society which teaches, advises, counsels, encourages, or aids any person to enter into bigamy, polygamy, or such patriarchal or plural marriage.

Under this provision every member of the Mormon Church who in any manner, however remote, contributes to the support of that church will be disfranchised. If he donates to any charitable institution, any Sabbath school, college, academy, or hospital connected with that church he is to be disfranchised. Nay, more, any person though not a member of the Mormon Church who contributes to the support, aid, or encouragement, etc., is to be disfranchised.

The language is unmistakable, "who is a member of or contributes to the support," etc. This provision is doubtless intended to be made applicable to that class of independent gentiles in Idaho who, refusing to wear the anti-Mormon collar, are stigmatized by my gentlemanly friend from Idaho as "Jack-Mormons." The gentlemen who are supporting this infamous measure surely do not see to what lengths they are going to accomplish a political advantage.

Under a Territorial statute of Idaho an anti-Mormon test oath was prescribed for voters. This measure, though not nearly so far reaching in its disfranchising elements as the clause in the constitution, was generally so construed as to prohibit every Mormon from voting even though he was willing to take the prescribed oath. In some instances men, tired of political ostracism, weary of being deprived of every right as American citizens, sweltering under the iron heel of political despotism, withdrew from the church and while attempting to vote were arrested for conspiracy, quite a number of whom are now awaiting trial on that charge. Just think of it, American citizens every way qualified to vote, even taking the obnoxious test oath, while attempting to exercise the highest privilege of that citizenship are arrested for conspiracy, placed under exorbitant bonds or thrown into jail, to be indicted, tried, and convicted, not by juries of their peers, but by juries of their enemies. "Oh, Liberty, what crimes are committed in thy name!"

Now, while under the Territorial statute there was some opportunity for the accused voter to purge himself by taking the test oath, under this constitution the proscribed classes are forever barred from voting, holding office, or sitting on juries. There is no means provided by which the status of voters is to be determined. There is no expurgatory oath, as in the Idaho statute, nor is any provision made by which the disfranchised class can ever be re-enfranchised, because this provision is unchangeable. Some gentlemen who support this constitution insist upon calling this provision a test oath, and when told that there is no oath provided persist that there is an oath in the constitution, thus demonstrating that they do not understand the provisions of the measure they are advocating. If those gentlemen who so vehemently assert that there is an oath provided in the constitution will examine the document they will fail to find it. No, gentlemen, you can not find it; it is not there.

Nor is that all; if a citizen is once disfranchised there is no remedy for him, he must forever remain so, for the constitution, article 6, section 4, declares that:

The Legislature may prescribe qualifications, limitations, and conditions for the right of suffrage additional to those prescribed in this article, but shall never annul any of the provisions in this article contained.

Again, if a member of the Mormon Church, a citizen of any other State, enjoying there all the privileges of an American citizen, without let or hindrance, should change his residence and move into Idaho, he would immediately be disfranchised and not permitted to vote, serve as a juror, or hold any civil office. By crossing an imaginary line he would cease to be a free man and become a political slave.

Nay, more; if the distinguished Delegate from Idaho, who so obstinately champions this clause, should ever be converted to the faith of the Saints, as was Saul in ancient times; if he should be baptized and confirmed a member of the Church of Jesus Christ of Latter Day Saints, under this constitution he would immediately be disfranchised, notwithstanding his eminent services in bringing the State into the Union. Nor would he have any recourse except to apostatize from the faith and "return to the beggarly elements of the world." Could anything be more absurd and un-American?

While the advocates of this measure are clamoring for the political equality of the blacks in the South, they, by this constitution, doom white American citizens to perpetual political bondage. Just think of it; political white slaves in a free and independent State, one of the States of the American Union, "The home of the free, the asylum of the oppressed."

Tell it not in Gath, publish it not in the streets of Askelon; lest the daughters of the Philistines rejoice, lest the daughters of the uncircumcised triumph.

Mr. Speaker, I desire to call attention to another feature of this disfranchising clause of the constitution now under consideration. It is this:

No person is permitted to vote, serve as a juror, or hold any civil office * * * who is a member of or contributes to the support, aid, or encouragement of any order, organization, association, corporation, or society * * * which teaches

er advises that the laws of this State, prescribing rules of civil conduct, are not the supreme laws of the State.

While this provision, by any fair construction, would not disfranchise any member of the Mormon Church, for, notwithstanding assertions to the contrary, that church teaches, as I have already shown, implicit obedience to the laws of the State, it would disfranchise every man who believes that "Jehovah is the Supreme Ruler of the universe," "that Jesus Christ is King of Kings and Lord of Lords."

I have before me a copy of the Christian Statesman, a paper published in Philadelphia, which contains a call for a conference of the National Reform Association, which is now in session at Lincoln Music Hall in this city. I will read two brief extracts from said call. Referring to "Christian principles of civil government," it says:

Among the principles which this association holds to be fundamental in civil government are these: Nations and governments are accountable to Almighty God and are bound by the moral law; the Lord Jesus Christ is the actual governor of nations, and His will, revealed in the Holy Scriptures, is the supreme rule to decide moral questions in political life. These principles we hold to have been woven historically into the very fiber of American institutions. Our stability and our progress have been due to the power they have exerted in our national life. All the evils which have afflicted us have been traceable to our departure from them. All our hopes for the future depend upon them. Our gravest peril lies in the fact that these principles are ignored by large numbers of our citizens and denied by many others. The duty of the hour is to emphasize and uphold them and to inculcate them upon the fast-increasing millions of our population.

* * * * * * *

Underlying all these practical issues is a deeper and more radical controversy provoked by those who deny that civil government sustains any relation to God, or to Christ, or to the moral law, who deny that our laws and institutions should bear at any point the impress of the christian religion, and who are striving constantly and of deliberate purpose to obliterate every christian feature of American institutions and to divorce our Government from all connection with religion.

The document states that this call is concurred in by Hon. William Windom, Secretary of the Treasury; his honor William Strong, formerly justice of the Supreme Court of the United States; by the Protestant Episcopal bishops of the dioceses of Missouri, Central New York, Connecticut, and Delaware; by three bishops of the Methodist Episcopal Church, and several other eminent christian men and women.

Among the speakers at one of the meetings of the conference on Tuesday last was Rev. R. M. Somerville, of New York, who, in an address upon "The christian doctrine of civil sovereignty," as reported in the daily Washington Post, held that God was supreme in all affairs and must be recognized above the imperialism of any earthly monarch or chief executive in American governments. He was surprised that any one should attempt to deny the authority of Christ everywhere except in the church and the disposition to rule Him out of consideration in civil affairs, and insisted that any theory of civil government that denied His supreme authority was radically and wholly wrong.

Now, Mr. Speaker, I contend that if Hon. William Windom, his honor ex-Justice Strong, and the right reverend bishops and other distinguished divines who indorsed this call lived in Idaho while holding such views they could neither vote, hold office, nor serve as jurors. If Rev. Mr. Somerville was a citizen of that State under this constitution he would not only be disfranchised, but would be liable to prosecution for conspiracy, in that he teaches and advises that God must be recognized above the chief executive of American governments. His audacity in presuming to place the Supreme Being above his excellency the governor of Idaho should not only be condemned, but severely punished.

Under this clause of the constitution no Roman Catholic would be entitled to vote, serve as a juror, or hold any civil office, because he is a member of an order, organization, association, corporation, or society which teaches or advises that the laws of the "State prescribing rules of civil conduct are not the supreme laws of the State." Pope Leo XIII, in his encyclical of January 10 last, in treating of the civil duties of Catholics, makes the following declaration:

But if the laws of the state are in open contradiction with the divine law, if they command anything prejudicial to the church or are hostile to the duties imposed by religion or violate in the person of the supreme pontiff the authority of Jesus Christ, then indeed it is a duty to resist them and a crime to obey them, a crime fraught with injury to the state itself.

The same pontiff, in a papal decree issued in 1836, declares that—

The judicial functionaries must refuse obedience to the state and to the laws of the country which are in contradiction with Roman Catholic precepts.

It will be interesting to watch events in Idaho, and see if Roman Catholics holding to these teachings of the Pope, which must be accepted as the rule of faith of all good Catholics, will be permitted to exercise the elective franchise in the new State. If they are, it will be in direct violation of the constitution.

The gentleman from Idaho, however, has been candid enough to admit that the disfranchisement clause under consideration was intended only for the members of the Mormon Church. Why, then, was it not so stated in this constitution? Why was the word "church" carefully omitted? Why was there no mention of any "religious" society or organization? The answer is plain: The object was to deceive, to cover up and accomplish by circumlocution and indirection what they deemed it impolitic to declare bluntly and directly, namely: That "all members of the Church of Jesus Christ of Latter-Day Saints are hereby excluded from voting and holding office in the State of Idaho." This was avoided, however, evidently for the reason that it was thought that an euphemistic presentation of an odious principle would avoid sounding the alarm to the friends of religious liberty and toleration. But this scheme, like most contrivances for fraud and deceit, turns out, to the dismay of its projectors, to be a bungling invention, and may be used to harry, oppress, and disfranchise other religious denominations besides the Mormons, as has been plainly demonstrated in this discussion.

As to the gentlemen who composed the Idaho constitutional convention, it is probable that most of them will suffer no personal inconvenience by this or any other religious test, as it is likely they have no use for the name of God except to supply the expletives of profanity. But it may be that some of them in that far-off mountain region still have sweet memories of the angelus bells heard in childhood and some others may remember a few words of the Westminster confession and catechism, and the time may come when they and their friends will be "hoist with their own petar," and compelled to drink of the poisoned chalice which they have prepared for the Mormons.

Mr. Speaker, as the Church of Jesus Christ of Latter-Day Saints, commonly called the Mormon Church, has been spoken of during this discussion as a criminal organization and its members having been frequently accused here and elsewhere of entertaining and practicing the doctrine of blood atonement, of having taken disloyal oaths against the Government while passing through the ceremonies of the endowment, and that the church favored a union of church and state, to refute these and similar charges I present and place on record a statement recently issued by the leading authorities of that church. It reads:

OFFICIAL DECLARATION.

SALT LAKE CITY, *December* 12, 1889.

To whom it may concern:

In consequence of gross misrepresentations of the doctrines, aims, and practices of the Church of Jesus Christ of Latter-Day Saints, commonly called the "Mormon" Church, which have been promulgated for years, and have recently been revived for political purposes, and to prevent all aliens, otherwise qualified, who are members of the "Mormon" Church from acquiring citizenship, we deem it proper on behalf of said church to publicly deny these calumnies and enter our protest against them.

We solemnly make the following declarations, namely:

That this church views the shedding of human blood with the utmost abhorrence. That we regard the killing of a human being, except in conformity with the civil law, as a capital crime which should be punished by shedding the blood of the criminal, after a public trial before a legally constituted court of the land.

Notwithstanding all the stories told about the killing of apostates, no case of this kind has ever occurred, and of course has never been established against the church we represent. Hundreds of seceders from the church have continuously resided and now live in this Territory, many of whom have amassed considerable wealth, though bitterly hostile to the "Mormon" faith and people. Even those who have made it their business to fabricate the vilest falsehoods, and to render them plausible by culling isolated passages from old sermons without the explanatory context, and have suffered no opportunity to escape them of vilifying and blackening the characters of the people, have remained among those whom they have thus persistently calumniated until the present day without receiving the slightest personal injury.

We denounce as entirely untrue the allegation which has been made that our church favors or believes in the killing of persons who leave the church or apostatize from its doctrines. We would view a punishment of this character for such an act with the utmost horror; it is abhorrent to us and is in direct opposition to the fundamental principles of our creed.

The revelations of God to this church make death the penalty for capital crime and require that offenders against life and property shall be delivered up to and tried by the laws of the land.

We declare that no bishop's or other court in this church claims or exercises the right to supersede, annul, or modify a judgment of any civil court. Such courts, while established to regulate christian conduct, are purely ecclesiastical, and their punitive powers go no further than the suspension or excommunication of members from church fellowship.

That this church, while offering advice for the welfare of its members in all conditions of life, does not claim or exercise the right to interfere with citizens in the free exercise of social or political rights and privileges. The ballot in this Territory is absolutely untrammeled and secret. No man's business or other secular affairs are invaded by the church or any of its officers. Free agency and direct individual accountability to God are among the essentials of our church doctrine. All things in the church must be done by common consent, and no officer is appointed without the vote of the body.

We declare that there is nothing in the ceremony of the endowment, or in any doctrine, tenet, obligation, or injunction of this church, either private or public, which is hostile or intended to be hostile to the Government of the United States. On the contrary its members are under divine commandment to revere the Constitution as a Heaven-inspired instrument.

Utterances of prominent men in the church at a time of great excitement have been selected and grouped, to convey the impression that present members are seditious. Those expressions were made more than thirty years ago, when through the falsehoods of recreant officials, afterwards demonstrated to be baseless, troops were sent to this Territory and were viewed by the people, in their isolated condition, fifteen hundred miles from railroads, as an armed mob coming to renew the bloody persecutions of years before.

At that time excitement prevailed and strong language was used; but no words of disloyalty against the Government or its institutions were uttered. Public speakers confined their remarks to denouncing traitorous officials who were prostituting the powers of their positions to accomplish nefarious ends. Criticism of the acts of United States officials was not considered then, neither is it now, as treason against the nation nor as hostility to the Government. In this connection we may say that the members of our church have never offered or intended to offer any insult to the flag of our country, but have always honored it as the ensign of law and liberty.

We also declare that this church does not claim to be an independent, temporal kingdom of God, or to be an *imperium in imperio* aiming to overthrow the United States or any other civil government. It has been organized by divine revelation preparatory to the second advent of the Redeemer. It proclaims that "the kingdom of heaven is at hand." Its members are commanded of God to be subject unto the powers that be until Christ comes, whose right it is to reign.

Church government and civil government are distinct and separate in our theory and practice, and we regard it as part of our destiny to aid in the maintenance and perpetuity of the institutions of our country.

We claim no religious liberty that we are unwilling to accord to others.

We ask for no civil or political rights which are not granted and guarantied to citizens in general.

We desire to be in harmony with the Government and people of the United States as an integral part of the nation.

We regard all attempts to exclude aliens from naturalization and citizens from the exercise of the elective franchise solely because they are members of the "Mormon" Church as impolitic, unrepublican, and dangerous encroachments upon civil and religious liberty.

Notwithstanding the wrongs we consider we have suffered through the improper execution of national laws, we regard those wrongs as the acts of men and not of the Government; and we intend, by the help of Omnipotence, to remain firm in our fealty and steadfast in the maintenance of constitutional principles and the integrity of this Republic.

We earnestly appeal to the American press and people not to condemn the Latter-Day Saints unheard. Must we always be judged by the misrepresentations of our enemies and never be accorded a fair opportunity of representing ourselves?

In the name of justice, reason, and humanity, we ask for a suspension of national and popular judgment until a full investigation can be had and all the facts connected with what is called the "Mormon question" can be known. And we appeal to the Eternal Judge of all men and nations to aid us in the vindication of our righteous cause.

Wilford Woodruff, George Q. Cannon, Joseph F. Smith, Presidency of the Church of Jesus Christ of Latter-day Saints; Lorenzo Snow, Franklin D. Richards, Brigham Young, Moses Thatcher, Francis M. Lyman, John Henry Smith, George Teasdale, Heber J. Grant, John W. Taylor, M. W. Merrill, A. H. Lund, Abraham H. Cannon, members of the Council of the Apostles; John W. Young, Daniel H. Wells, counselors.

Mr. Speaker, it has been more than intimated by gentlemen on the other side that those members of this House who have sought to eliminate the un-American and monstrous disfranchisement clause from the constitution of Idaho will feel a little mean when they come to face their constituents at home. This insinuation is not only gratuitous and unjust, but also insulting and offensive, insulting to their peers on this floor and offensive to the good taste and good sense of all those who despise the pharisaical cant, the assumption of "I am purer and holier than thou." This is an old trick, exposed and laid bare long ago, of assuming all the virtue and all the intelligence, and, on proposing extreme, unreasonable, and unconstitutional measures for alleged evils, to denounce all those who oppose them as sympathizers with crime and immorality.

Religious bigotry, like a cold snake coiled on the human heart, poisoning every noble and generous emotion, is hardly more odious than that narrow partisanship which, with brazen cheek and unctious smile, with indecorous hilarity and heartless gusto, strikes a fallen foe, in violation of the laws of chivalry as well as the precepts of the Sermon on the Mount, and all this for a mean and temporary partisan advantage. On the other hand, the gentlemen on this side of the House can proudly say to their constituents: "We made a manly effort to save a proposed State of this Union from the reproach of religious persecution and intolerance; we were unwilling to punish by disfranchisement 25,000 free Americans on account of their religious belief and their membership in a christian church. We agree that polygamy and bigamy shall be punished with severe penalties, to the end that they may be prohibited and extirpated; but we are unwilling that 25,000 people shall be punished for offenses committed by only 125 men."

The judge who gives the prisoner the benefit of the law and the safeguards of the constitution is sometimes, in cases of popular excitement, traduced by the mean and vulgar, as if he was *particeps criminis*, shielding his partner in guilt from merited punishment. But what shall be said of enlightened gentlemen on this floor, kind, generous, and humane in their private relations, who at the behest of party exigency are not only willing to strike down the muniments of religious freedom as guarantied by the Constitution, but would if they could cover with obloquy all those who oppose their schemes?

To show how cruel, unjust, and unnecessary the proposed disfranchisement is, I will call to the attention of the House the progress already made in the discontinuance of the practice of polygamy among the Mormons. From official reports on file in the Department of the Interior and from the evidence before the Senate and House Committees on Territories it appears that from 75 to 90 per cent. of the adult Mormons are not and never have been in the polygamous relation, and of these the great mass have taken the test oath of registration required by the Edmunds-Tucker act of March 3, 1887, swearing (among other things) that they will obey the laws of the United States with reference to bigamy and polygamy and unlawful cohabitation, and that they will not aid, abet, counsel, or advise any person to commit any of the offenses named in those laws.

In June of that year the people formed a constitution prohibiting and punishing polygamy, which constitution was ratified at the next August election, at least 95 per cent. of the Mormon electors voting in its favor. Again, in 1888, the Legislative Assembly enacted a law declaring certain marriages to be unlawful, among them plural marriages, and providing severe penalties against any clerk of a probate court who shall issue a license in such cases, and also against any minister, preacher of the gospel, or other person who shall assist in the solemnization of such unlawful marriages. The same Legislature adopted a concurrent resolution in favor of the prosecution of polygamous offenses as other offenses are prosecuted in the Territory.

Such are some of the means which the Mormons of Utah have voluntarily adopted for the discontinuance of polygamy, and I do not hesitate to declare that polygamous or bigamous marriages among the Mormons in Utah and Idaho now are, and for more than two years past have been, more infrequent than bigamous offenses in many of the States.

Mr. Speaker, the brief time allotted will not permit me to pursue this subject further. In conclusion, therefore, permit me to place on record my solemn protest against the iniquity which this House is about to perpetrate. Pause, gentlemen, and consider that by this act you disfranchise without trial, without conviction, twenty-five thousand American citizens, among them the pioneers of Idaho, for the Mormons were the pioneers of that Territory. They are the men who have made it possible for those to live there who are now persecuting and oppressing them. Do not allow prejudice to sway you to do this monstrous wrong even to gain a political advantage. A State gained by such means will bring no glory to your party nor add any luster to our glorious constellation.

Pensions.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 7, 1890.

The House having under consideration a resolution to suspend the rules and substitute House bill 8297 for Senate bill 389, and consider the same—

Mr. LANE said:

Mr. SPEAKER: I do not think this bill the best that could be presented to the House. It does not embody the proper principle of pension legislation; yet I will favor its consideration, but not its passage. I am one member of the minority of the Committee on Invalid Pensions, and we have done our best in that committee to perfect legislation. And I am in no degree responsible because this bill is brought forward to-day. I had no knowledge before this morning that the bill would be called up; but I wish to say to gentlemen on the other side of the House who object to it, that there will remain four months of this Congress to perfect the bill. If it is not what the Republican party wants, you have the majority and you have the votes to make it perfect. You have four months to do it in.

I think, Mr. Speaker, the time has come in the history of this country when we should have proper legislation in regard to pensions.

But this bill entirely ignores the tax-payers of the country and places persons on the pension-roll as service pensioners who are worth in some cases thousands of dollars, and yet the poor of the country are taxed to pay such pensions. To this I object; yet think it our duty to do whatever we can to perfect legislation.

Mr. BIGGS. But the gentleman does not think that this is the best we can do for the soldiers? There is a great deal wanting in this bill.

Mr. LANE. But you on the Republican side have four or five months yet; you have the rest of the session; you have the whole Congress, and you gentlemen can go before the Committee on Pensions and aid in perfecting any legislation that is found defective in this bill. I think, as I before stated, that this bill is objectionable in one feature, that of taxing the poor to pension the rich, while the amount of the widows' pension is too small. I think it is wrong to offer to a soldier's dependent widow a pension of $8 a month. She ought to have $12 a month, and I favored that all the time. The sum fixed here is entirely inadequate.

I will never be satisfied as a member of this House or of this body or as a citizen of this great country until you put a tax upon the wealth of the country, put a tax upon the men who were behind the Army robbing the country and making colossal fortunes, while the men who saved the country went to the front, risked life and health and everything else to sustain the cause. I will not be satisfied until you tax that wealth to pay pensions to the men who made it possible to accumulate such fortunes. I do not say such a provision should go on a pension bill, but I want to see an income and a succession tax, and when that is done I will be satisfied, and not until then.

Congress should pass a law putting a tax on the wealth of the country. It ought, as I suggested some time ago, to issue more money to meet the demands of trade and commerce and thus put more money in circulation for the benefit of the country. The industries of the country are being depressed for want of adequate circulation. Is not this a good opportunity, then, for the issuance of more money? The country will never feel it and it will greatly benefit the people. It will raise the price of farms and farm products and labor, and spread general prosperity over the entire country.

The country understands the needs of the soldiers and the burdens of the tax-payer, and it also knows that the legislation now is in the hands of the Republican party. You have a large majority here, gen-

tlemen, and you are responsible before the country. Now, go on with the work and make your record. If this bill is not perfect, make it perfect during the next four months or hereafter during the session. Give us proper and just legislation for the country.

[Here the hammer fell.]

Naval Appropriation Bill.

SPEECH

OF

HON. AUGUSTUS N. MARTIN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 15, 1890,

On the bill (H. R. 8909) making appropriations for the naval service for the fiscal year ending June 30, 1891, and for other purposes.

Mr. MARTIN, of Indiana, said:

Mr. CHAIRMAN: I feel it my duty to protest against the proposed construction of the new battle-ships as being, in my judgment, wholly unnecessary in any point of view. Isolated as we are from all nations possessing either the power or desire to attack us, the United States will be simply wasting money to build these vessels.

The times and circumstances which made heroes of Decatur and Bainbridge are, I think, past forever. The war-ships and privateers of piratical Barbary are now only a part of history of by-gone days.

From what nation are we now in danger? Are we not on friendly terms with Great Britain, Germany, France, Russia, Austria, Italy, and Turkey? Are we not on terms of intimate friendship with Mexico and the different states of Central and South America?

Peace seems to have spread her white wings permanently over the civilized world, and not one respectable statesman of any land dares seriously breathe aught of war with any power, particularly with the United States.

For more than forty years our beloved land has lived at peace with other nations, avoiding trouble by arbitration and compromise honorable to all in beneficent results.

How much better it would be to expend the money this bill proposes to waste on new war vessels, if expended at all, in something that will benefit our whole country rather than the men who will furnish the material for these vessels.

On March 26, 1890, I introduced remonstrances against such expenditures as this bill proposes from the following societies of Friends of the State of Indiana within the Congressional district I have the honor to represent, namely:

Back Creek Monthly Meeting, numbering 135 adult persons; Deer Creek Monthly Meeting, numbering 225 adult persons; Fairmount Monthly Meeting, numbering 424 adult persons, and Marion Monthly Meeting, numbering 437 adult persons, or 1,221 adults in all. (See RECORD, page 2773, No. 83.)

On April 5, 1890, I introduced a remonstrance against such expenditures, by Portland Monthly Meeting of Friends, of Jay County, Indiana, numbering 600 adult persons residing within my district.

I now hold in my hand another remonstrance from citizens of my district similar to those I have mentioned, and which I now read and incorporate in my remarks:

To the Senate and House of Representatives of the United States in Congress assembled:

We, your petitioners of Amboy Monthly Meeting of Friends, Miami County, State of Indiana, numbering 250 adult persons, respectfully, but earnestly, entreat your honorable bodies to reject the recommendations of the Senate Naval Committee, and other measures which propose a large expenditure for the Navy and so-called coast defenses, and other warlike preparations, all of which we believe are a menace to the peace and security of the nation.

Signed by direction of Amboy Monthly Meeting of Friends, held at Pipe Creek, Miami County, Indiana, fourth month, 5th, 1890.

FRANK W. McCOY,
MAGGIE BUNDY,
Clerks.

WILLIAM SMALL,
Correspondent, Amboy, Ind.

Mr. Chairman, on behalf of these, more than 2,000 citizens of the district I represent, I protest against these warlike expenditures as extravagant, unnecessary, and uncalled for.

Mr. Chairman, I doubt if there is a single one of the more than 46,000 voters of the Eleventh Congressional district of Indiana but feels these proposed expenditures to be wholly unnecessary.

On behalf of the great farm and labor interests of that district, in behalf of her business men, in behalf of the old soldiers thereof, I protest that it would be far better for them if Congress would reduce expenditures, reduce taxation, and pay them what is now due them from the Government, rather than add this extravagance to the cruel burdens now resting upon business and labor everywhere in our beloved land.

I am heartily in favor of the amendment of the gentleman from Indiana [Mr. HOLMAN], to strike out the authority to build these battle-ships.

How much better it is for Ireland to follow the patriotic and peaceful guidance of Parnell and Gladstone than to hastily appeal to force. Reason, urged by men whose minds are not swayed by the passions of hate or the strut of the bully, is more powerful in permanently achieving great deeds and the acknowledgment of our dearest rights than a resort to menace or war.

We do not need these war vessels any more than the good citizen needs to carry a deadly weapon, a thing which has unnecessarily cost many a life.

Oklahoma.

SPEECH

OF

HON. ISAAC S. STRUBLE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 18, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 6786) to organize the Territory of Oklahoma, to establish courts in the Indian Territory, and for other purposes—

Mr. STRUBLE said:

Mr. CHAIRMAN: I desire as briefly as may be to call the attention of the committee to the main features, and perhaps to some of the special features, of these two measures now before the committee for consideration. First, as to the Senate bill; and as to that I will say that it proposes to organize a Territory out of what is known as Oklahoma, which, as gentlemen will see by reference to the maps in front of the Speaker's desk, is a little tract of country in the Indian Territory, comprising about 1,800,000 acres of land, and the Senate proposes also that the Public Land Strip, separated by more than a hundred miles distance from the Oklahoma Territory, shall be included within and be a part of this new proposed Territory.

The Senate bill also provides, in the usual form, for the establishment of district courts, and a supreme court, consisting of three judges, as is customary in the organization of Territories. It provides also for the appointment of a governor, a secretary of state, and other Territorial officers, for the election of a Territorial Legislature, directs a census, and, in brief, provides the usual machinery for the organization of a new Territory of the United States. It does not deal at all with any other part of the Indian Territory than the 1,800,000 acres composing Oklahoma. Everything else of that magnificent country, which is now rapidly approaching a time when it ought to become a State of the Union, is, by the Senate bill, left to the old conditions under which the Indians and white men have occupied and do occupy it, leaving, of course, to the future, such further legislation as may be deemed best by Congress in regard to this entire tract of country outside of that mentioned. On the contrary, Mr. Chairman, the substitute proposed by the House Committee on Territories——

Mr. HOOKER. Will the gentleman, before he departs from the Senate bill, state to the House exactly what region of country the Senate bill embraces and whether or not it embraces No Man's Land in connection with the land which we purchased from the Creeks and the Seminoles, and which constitutes Oklahoma proper?

Mr. STRUBLE. I am stating that. My understanding of the Senate bill, as I have said, is that it comprises what is known as the Oklahoma Territory, which has been known as such for some years past, and comprises about 1,800,000 acres of land.

Mr. HOOKER. That includes the purchase from the Creeks and the Seminoles?

Mr. STRUBLE. It does not include all of the purchase from the Creeks and Seminoles made last year under treaties negotiated by Mr. Cleveland's Administration.

Mr. HOOKER. Does the gentleman say that it does not include that purchase?

Mr. STRUBLE. I do say that it does not.

Mr. HOOKER. You are mistaken about that.

Mr. STRUBLE. It does not include half of it; it includes only 1,800,000 acres of it, and the Public Land Strip, which it attaches to Oklahoma for judicial purposes. In other words, Mr. Chairman, the Senate bill proposes to organize together these two separate sections, with alleged alien territory between them, and to set up and maintain there the forms of a Territorial government. Now, the House Committee on Territories do not regard that the wiser proposition to be adopted in relation to this portion of the Indian Territory. They do not regard it necessary; but on the contrary they regard it as impracticable, and as not the best thing to be done, from the standpoint of the United States as well as from the standpoint of all the interests in-

cluded in the limits, not only of the Indian Territory, but of the Public Land Strip.

As I was about to remark, the bill reported from the House Committee on Territories includes all of the Indian Territory lying west of the home country of the five civilized tribes and the Public Land Strip, embracing, in one unbroken scope, all of this Territory except that actually occupied by the five civilized tribes, namely, the Cherokees, the Creeks, the Choctaws, the Chickasaws, and the Seminoles.

Now, before I proceed further I wish to call the attention of the committee to a survey of this Territory.

Mr. HOOKER. Will the gentleman state whether the bill includes the Cherokee Outlet?

Mr. STRUBLE. It includes in a sense all the Cherokee Outlet and all the territory west of the actual home country of the five civilized tribes. That is, it includes it all for judicial purposes, while an actual and operating Territorial government for Oklahoma is provided.

Mr. HOOKER. Do I understand the gentleman now to say that within the limits of the Territory of Oklahoma as created by the House bill is included the Cherokee Outlet? I speak not merely of that portion of the bill which relates to judicial matters, but I ask the gentleman if that territory is included in the territory which constitutes "Oklahoma."

Mr. STRUBLE. Within the limits of the proposed Territory is all of the country west of the five civilized tribes, which includes the Cherokee Outlet and the Public Land Strip; but we do not expect nor do we propose that the active operations of the Territorial government shall immediately extend over the Cherokee Outlet, nor to the southwest of Oklahoma, nor to any other Territory except Oklahoma and the Public Land Strip west of the Cherokee Outlet. But, Mr. Chairman, we believe it is wise, and we have so framed the bill, to include all of the country which I have described in the nominal Territorial limits of Oklahoma.

I wish to call attention now very briefly to some of the interesting conditions existing within the limits which I have described. Here is a tract of country of an area comparing favorably with any of the States around it, situated in the very heart of the country, composed of excellent land, a country magnificently watered, with large and small streams running in almost every direction, as gentlemen can see from the map, and a soil having no superior in this country; a tract of country where there are already nine railroads operating thirteen hundred and odd miles of road, with other roads and extensions projected, which, in a short time, will give an additional distance of over 900 miles; with business enterprises carried on, towns springing up, and developing with astonishing rapidity, and on every hand the sure indications of a permanent settlement similar to that existing in all the States of the West.

And this condition is not confined to Oklahoma proper, but to a considerable extent exists among the five civilized tribes; these Indians—themselves or most of them as white as any gentleman who listens to me—these five civilized tribes, who ought not to be called the five civilized tribes of Indians, but the five civilized tribes of whites, with schools in one nation numbering 117, colleges 15 to 20, and in other nations 36 to 40 schools, that being the number, I believe, that the Creeks have, the Choctaws also having a large number of schools—with a state of development that will compare favorably with that of many portions of the country not known as the home of Indians.

The Oklahoma country, as gentlemen well know, was opened to settlement by the Presidential proclamation issued on the 23d of last March, that proclamation fixing April 22, 1889, at noon, as the time at which those desiring to enter this Territory and locate for themselves homestead claims under the laws passed by the last Congress might do so. On the last-named day thousands of people who had been waiting long and anxiously for this privilege rushed into this country and located upon homesteads and town sites; so that when the President framed his recent message to Congress he was under the impression that over 60,000 people were already within the Territory. The fact is, Mr. Chairman, that the number of people within the Oklahoma Territory at this time is estimated by gentlemen who have recently been before the Committee on Territories at 90,000, there being in addition about 10,000 Indians, I believe, within this tract of country.

Towns and cities have sprung up, so that the city of Guthrie has, it is estimated, about 10,000 inhabitants. The people rushed in, took advantage of the law, selected lots, built fine houses, and some of course not so fine, entered into business, and established themselves in the usual way known to our well settled cities in other Territories and in the States. Oklahoma City is one of these promising places, with a population of probably 8,000 people. Other towns and cities not so large have sprung into being as if by magic. Yet with all this congregation of people there is not a single word or line of law affording to these persons the usual facilities for carrying on forms of government and establishing their property rights, except as to the question of the location of homesteads.

Here are nearly 100,000 people who have been waiting for months—nearly one year—for Congress to pass legislation enabling them to settle, not only their property rights, but also to institute, in the usual way, under national authority, the form and the machinery of Territorial government.

Now, Mr. Chairman, this House bill which is before the committee proposes, as I have said, to organize that part of the Indian Territory lying west of the home country of the five civilized tribes into a Territory known as Oklahoma, active Territorial administration, however, to be restricted for the time being to Oklahoma proper. But gentlemen will observe that the first section of the bill and another one later on guard carefully the interests of all the Indians who are located within these limits or who make claim to any country included within them. I can not stop to notice (because time will not permit) the details of these other sections. Suffice it to say that in respect of all the usual Territorial officers—the governor, the secretary, the marshal, and the courts—the first part of this bill in relation to Oklahoma Territory is quite similar to the Senate measure in that it makes the usual provision for these officers and provides for the election of the Legislature, when it shall meet, the time it shall sit, and the other formal and customary details of Territorial administration.

The bill also proposes for the purpose of convenience to name six counties within this Territory, at which there shall be, temporarily, county seats. Of these counties, numbered from 1 to 6, five will be within Oklahoma and one will comprise the Public Land Strip to the west of the Indian Territory. Section 4 provides that county seats shall be established at Guthrie, in the first county; at Oklahoma City, in the second; at Norman, in the third; at a point near Fort Reno, in the fourth; at Lisbon or Kingfisher, as the governor of the Territory may decide, in the fifth. The sixth county embraces, as I have said, the Public Land Strip.

Then follow provisions in relation to the election of members of the Legislature and, in section 5, for the establishment of a supreme court and defining its jurisdiction.

The sixth section contemplates that criminal cases shall be instituted and tried in the district courts held in said Territory, in the county in which the offense is committed. A further part of the same section provides with relation to offenses or crimes and for the arrest of persons on warrants and for their appearance before a United States commissioner with a view to their being held to answer the charge against them.

I call attention now to section 7 of this bill. The committee propose to extend over this new Territory temporarily, and until the first Territorial Legislature shall meet and pass laws, the statutes of the State of Nebraska. I may say in explanation of this that a large number of people in Oklahoma preferred the statutes of another State and a large number of other inhabitants of Oklahoma preferred the statutes of still another State, neither of which was Nebraska. The committee, after deliberating carefully on the point, concluded to extend over the Territory temporarily the present code of laws of the State of Nebraska, That State has recently codified her laws and they are printed in a comparatively small and compact form. Upon examination we found them to embody valuable enactments generally approved by the people of the Western States, and for that matter many of the States of the Union, in respect of questions as to which statutes should be framed.

Section 8 of this bill provides—

That jurisdiction is hereby conferred upon the district courts in the Territory of Oklahoma over all controversies arising between members or citizens of one tribe or nation of Indians and the members or citizens of other tribes or nations in the Territory of Oklahoma, and any citizen or member of one tribe or nation who may commit any offense or crime in said Territory against the person or property of a citizen or member of another tribe or nation shall be subject to the same punishment in the Territory of Oklahoma as he would be if both parties were citizens of the United States. And any member of any Indian tribe or nation in said Territory shall have the right to invoke the aid of the courts therein for the protection of his person and property as though he were a citizen of the United States.

Section 9 extends over this country the provisions of our Federal statutes in relation to national banks. Section 10 directs in regard to the Public Land Strip, commonly known as No Man's Land. This is declared to be a part of the public domain and open to settlement on the passage of the bill under the provisions of the homestead laws of the United States, and also the act of the last Congress, approved, I believe, on March 1, 1889, the act entitled "An act making appropriation for the current and contingent expenses of the Indian Department," etc., and also another of the 2d of March. The section further provides in relation to actual and bona fide settlers on this Public Land Strip after the passage of the act, the intention being to give preference to actual bona fide settlers at the land office and to give them a certain credit for the time during which they may have been on the lands prior to their entry at the land office, the limit being two years. Other propositions will be found in the section relating to school lands and relinquishment of other lands by the Indians from time to time.

Section 11 directs a procedure in applications, entries, and contests, etc., in the Territory of Oklahoma, which I think gentlemen will find on examination to be proper and wise. By section 12 the Commissioner of the General Land Office is required to carefully examine, before patenting, into the right of an entryman to his patent, the provisions in the section, as I think, carefully guarding the rights of the Government while attempting to protect those of the settler. Sec-

tion 13 makes provision in relation to liens of judgment for indebtedness contracted or incurred prior to the issuance of patent, and exempting the lands from the operations of such judgments. Section 14 is in relation further to the right of parties to make homestead entries. Section 15 directs the Secretary of the Interior or authorizes him to reserve town sites for prospective towns and villages in this Territory; and let me here say that this provision is not intended to conflict in the least with the provisions of the act passed in this House for the settlement of town-site questions in the Oklahoma country. Other sections of the bill follow on questions of importance, in relation to the filing upon homesteads, etc., but I can not take time to notice them all.

Mr. PICKLER. Will the gentleman yield for a question?

Mr. STRUBLE. Certainly.

Mr. PICKLER. Suppose the Senate does not pass the town-site bill as it passed the House and that this bill shall pass; in what shape does that leave the town sites of Oklahoma proper?

Mr. STRUBLE. It would leave them without any specific statute, I suppose, authorizing proceedings to determine conflicting claims. But I will say to the gentleman that it is not expected that this bill will become a law prior to the town-site bill, the idea being that between the consideration of this bill in the House and its final passage, if it ever becomes a law, that question will have been properly taken care of and provided for by the bill which I have just referred; but, of course, I may be mistaken in my supposition. There is another answer that can be made to the question, and that is that upon the establishment of a Territorial government, and the machinery necessary thereunder, these parties claiming town sites and lots in town sites can, under the general laws of the United States, as I understand it, adjudicate their claims and establish their property rights.

I now call attention to section 21 of the bill. As gentlemen are aware, there has been for many years past a controversy existing between the State of Texas on the one side and the Federal Government upon the other as to what is known as Greer County, Texas. The United States Government has claimed that county as a part of the Indian Territory and the State of Texas makes the claim that it is a part of the territory of that State. The Forty-eighth Congress passed a law authorizing the appointment of a joint commission, composed, if my memory serves me, of six persons, three to be appointed by the President and three by the State of Texas——

Mr. LANHAM. Four by the State of Texas.

Mr. STRUBLE. I stand corrected. Four by the State of Texas and four by the United States. This commission was appointed, took testimony, deliberated, but failed to agree, and left the controversy pending in the same condition as it was prior to the law authorizing their appointment.

Now, the Committee on the Territories deem it wise to make another attempt to settle this dispute, so that this fine body of land known as Greer County may not longer be in controversy, but be known and recognized by the people of Texas and the United States as the property, so to speak, of one of these political sovereignties, and hence free from further contention. Inasmuch as under one act of Congress a commission failed to agree on the question of the right to this county, this bill proposes that the President shall select a person learned in the law, and the governor of the State of Texas another of like qualifications, and the the third, who shall be a chief-justice of one of the States other than Texas, is to be agreed upon and appointed by the President and governor of Texas, acting conjointly. Is is proposed in the pending House bill to appropriate a reasonable sum of money to pay the expenses attending the investigation of the rights of the State and the United States, one-half of which shall be paid by the United States and the other half by the State of Texas, and until this question is settled in this manner there is to be no prejudice whatever to the rights of either party, the State of Texas or the Federal Government.

Mr. Chairman, I pass over now to section 25 of the bill, and I wish to call the attention of the committee to a most important feature of this measure, which may be called a second division, the first division relating to the organization of the Oklahoma Territory, as already described, and the second division relating to the establishment of permanent courts in the country of the five civilized tribes, so called. Now, on this point I wish to say that the treaties of the United States Government with each one of these five civilized tribes give in plain language authority and the power to the Government to establish these and such other courts as in the judgment of the United States may seem wise. One year ago an act was passed establishing a court in the Indian Territory, of which Judge Shackelford, of Illinois, is the presiding judge.

That court meets twice a year at Muscogee, in the Creek Nation. It has held two sessions and was the first court under United States authority ever held, as I understand it, in any of these nations known as the five civilized tribes. It might be said to have been an experiment under the treaty stipulations. The testimony before the committee, and without contradiction, Mr. Chairman, was to the effect that the operation of this court has not only been salutary, but cordially approved by the Indians themselves.

One of the most intelligent men before this committee was General Pleasant Porter, one of the best informed men, perhaps, upon questions pertaining to the Indian Territory to be found in this country. His testimony was unqualifiedly in commendation of the court established at Muscogee, its effect upon the people, and the manifest improvement of law and order in the community as a result thereof. General Porter testified that it was apparent that the order of the community was far better than it had been before; that the people, although at first a little opposed to the courts and hardly prepared to appreciate the change in proceedings as compared with their tribal courts, very soon learned to respect and appreciate the new order of things, and are now favorable to the continuance of it in their midst, and not a dissenting voice was heard in disapproval or complaint of the results attending the two terms of court of which I have spoken. Over five hundred causes have been brought in the court at Muscogee, although but two sessions have been held, and, at these, juries were summoned, impaneled, and causes tried before them. They were instructed by Judge Shackelford, and the success of those jury trials is evidenced by the results in court, altogether satisfactory, considering the circumstances of the case.

Now, then, Mr. Chairman, I wish to have the attention of members present while I state this fact: That all the treaties of the United States, I think without any exception, with each of these five civilized tribes, authorize the establishment of courts in their limits. I think I am justified in saying that not only do the representatives from that country admit and acknowledge the treaty stipulations, but I understand they also invite favorable action on the part of Congress in the matter of establishing other courts in their midst. At all events, that is the construction I placed upon the case in favor of the courts, as made out by the many witnesses who appeared before the committee, who spoke upon this point and were interrogated by members of the committee in respect to it. So that I beg members to bear in mind there is practically no opposition on the part of the Indians to the establishment of courts; but, on the contrary, they substantially invite them.

There was some question here and there along the line of examination as to where the courts should be held; but I believe we have settled that point as fairly as can well be done. In the northeastern part there are to be two courts, one at Muscogee and another at Vinita, about 25 miles northeast. In the Choctaw Nation there is to be one at Atoka and another at McAlester, or South McAlester, northeast some 50 or 60 miles, in case the judges shall deem it wise to hold such term or terms. In the Chickasaw Nation two places are provided, one at Ardmore, about 45 miles from the Texas line, and the other at Purcell, on the northern line of the Territory and nearly central as between the northeast and northwest points of that division of the Indian Territory, and two terms are to be held in each of these places each year.

The Seminole people are attached to the Chickasaw courts to be held at Purcell for the reason that they are most convenient to them.

Mr. HARE. I would like to ask the gentleman from Iowa a question.

Mr. STRUBLE. Certainly.

Mr. HARE. Were there not protests filed by the Indians against the establishment of these courts?

Mr. STRUBLE. I do not remember that there were; certainly not when I have been present; but I do remember that we had petitions sent to us—numerous petitions—assenting to and requesting them, and I will repeat what I have said, that so far as I now remember there has not been a dissenting voice. It is proper to say, however, that I was for about two weeks detained from the committee sessions by illness, and so was not present at quite all the hearings.

Now, the position of the committee is, in view of the fact that there are thousands of white people in this Indian Territory (I mean within the five civilized tribes), the number being about 35,000 people, refugees from the States, as well as other and more reputable classes, in view of the fact that there are multiplying day by day controversies, not only between the whites themselves, but also between whites and the Indians so called, and from the further fact that the expenses attending the administration of the United States laws from the various courts, to wit, Fort Smith, Paris, and Wichita, are very great—the committee deemed it wise, while permitting nearly the same jurisdiction to remain with these several courts just named, that Congress should provide such laws and give such jurisdiction to courts as are necessary for the administration of justice between the whites and members of the Indian nations or any one of them.

There is another point in my mind respecting the establishment of these courts. I hold the view that it is very desirable to so shape the legislation of Congress as will not break down any treaties existing between the Government and the tribes. Events tend strongly in the direction of uniting these people in one State, to be admitted into the Union at an early day. I believe the establishment of these courts and their administration by able and considerate judges and officers will have the effect to increase the respect on the part of those people for the United States and their statutes, as well as their judicial officers; and I think that this will lead in the direction of the removal of whatever objection may still remain in the Indian mind to the idea of one State composed of all that Territory and to be admitted at no distant day into the Union.

In my judgment this should be the ultimate settlement of the Indian problem as now existing in this Territory; and, while we may not by acts of force or inconsiderate violations of treaties compel these Indians, nearly all of whom are white and of a high order of intelligence, to submit to such a policy, Congress is clearly justified in so shaping events there as that by natural and orderly movements all classes—Indians, freedmen, and whites—may soon see it to their best interests to have the Indian tribes as such dissolved and all inhabitants of the Territory merged in our common American citizenship.

Invalid and Service Pensions—Pensions are for the Disabled, the Infirm, and the Needy; not for the Strong, the Able-bodied, and the Independent.

REMARKS

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 18, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 7160) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1891, and for other purposes—

Mr. CUTCHEON said:

Mr. CHAIRMAN: We have under consideration a bill which carries in a single appropriation almost a hundred million of dollars, or, to be exact, $98,427,461. We devote to this measure but a few hours of the time of this House. In a little while we shall be called to vote upon it, and I suppose that to-day, as on former occasions when bills of this character have been considered, we shall all vote in favor of the measure.

The pensions of our disabled soldiers, their widows, orphans, and other dependents, are a sacred trust, and are so held in the minds and hearts of the American people. I do not fear to trust the members of this House, on the one side or on the other, when it comes to voting the annual appropriation to pay the pensions of those who are actually disabled. I believe that to-day the pension question is the largest question that engages our attention, a question which has involved in it more money and more of sentiment than any question upon which we are called to decide or to act.

In the brief space allowed me I wish to call the attention of the House, not so much to the bill before us, or to any of the questions which have been discussed here to-day, as to some aspects of the pension question which must come before us in the near future. There are before the Committee on Invalid Pensions various propositions under consideration. I am advised that there are before that committee more than two hundred general pension bills, looking to legislation for large classes of pensioners, propositions for universal service pensions, propositions for dependent pensions, propositions for per diem pensions, for pensions for prisoners of war, to increase the rates of dependent pensions, to repeal the arrears limitation, and many others too numerous to enumerate. In addition to these, there are also before that committee, as I understand, more than three thousand private pension bills, granting disability and other pensions to individuals who have been unable to procure them through the regular channel of the Pension Office. There is also pending in the Senate, at the other end of the Capitol, what is known as the dependent pension bill, which, as I learn from the RECORD, it is claimed will place one hundred thousand additional names upon the pension-roll, at an annual cost of about $36,000,000. A few days since we passed a pension deficiency bill, for the deficiencies of the current year, amounting to $21,500,000.

In addition to all these there are one or more propositions pending to fix

AN AGE DISABILITY LIMIT,

on arrival at which those who have rendered honorable service of not less than ninety days, and who have been honorably discharged and having no other means than their own labor are unable to support themselves, shall be placed upon the pension-roll at a uniform rate of $8 per month.

Mr. Chairman, at an early day of this session I had the honor to introduce a bill of this character in which, after providing for all actually disabled soldiers of the Republic who have no other means of support than their own labor, there was also a provision that when any such soldier should arrive at the age of sixty-two years it should be presumed that he was so far disabled for self-support that the Republic should come to his assistance and place him upon the pension-roll at a uniform rate of $8 per month. This, as to those soldiers sixty-two years of age and upward, would be a service pension. It also provides for all widows of such soldiers. I have seen some criticisms of this proposed measure in the public press and have received numerous letters in relation to the same, the burden of which is that but few of the old soldiers will live to enjoy the benefit of the measure; and it is to this question of an age limit, on arrival at which the honorably discharged soldiers shall be entitled to a pension without proof of disability incurred either in or out of the service, that I now desire to address myself.

This was with me

NOT A NEW MEASURE.

Four years ago, when the bill was pending to pension soldiers of the Mexican war, I introduced a measure of this kind, in which soldiers of the Mexican war and soldiers of the war for the preservation of the Union were placed upon the same footing, a bill in which, after providing for all who had actually become disabled in the service in the line of duty and after providing pensions for all who should be now disabled for self support, without inquiring whether the disability was contracted in the service and in line of duty or not, if they had no other means of subsistence than their own labor, it was provided that all soldiers, both of the Mexican war and of the war for the Union, on arriving at the age of sixty-two years should have the benefit of the presumption that they were so far disabled that the country would no longer call upon them to struggle along under such infirmities or go to the poor-house, but that this great nation would, to use a common expression, "chip in" and help the old boys along during the remainder of their lives to the amount of $8 a month.

This bill at the time of its introduction was considered extremely liberal. In fact, the chief objection to it was that it was too liberal, and

INTRODUCED THE PRINCIPLE OF A SERVICE PENSION.

I again introduced substantially this same bill two years ago in the Fiftieth Congress, but it was still regarded as too liberal a bill to be favorably considered. At that time the House was under the control of our Democratic friends, and they reported no bill containing any provision for a service pension, nor did they permit any bill having a provision for dependent pension to be considered by the House. The dependent pension bill passed the Senate and was sent to the House, but it was never permitted to be considered or passed here.

The Mexican pension bill containing this provision passed and became a law, and to-day every man who served in Mexico or on the coast or frontiers thereof or *en route* thereto for sixty days, although he may never have seen Mexico and although he may never have passed the frontiers, is placed upon the pension-roll, if sixty-two years of age, at the rate of $8 per month, while if under the age of sixty-two years he is required to prove his disability. But my bill containing the same provision for soldiers of the late war did not pass, and I have introduced it in each Congress since. The same age limit of sixty-two years has also been established in connection with the law providing for the retirement of officers of the regular Army. Whenever an officer of the military establishment arrives at the age of sixty-two years, whether disabled or not, whether in good health or not, whether having ample means or not, he is entitled to be retired upon three-quarters of his full pay for the remainder of his life. This age limit having been thus established, I have proposed to apply it to the veterans of the late war, and to provide that as fast as they should arrive at the age of sixty-two years they should, in succession, go upon the pension-roll until all the survivors in turn, as they arrive at the period of life when infirmities of age would prevent their gaining a livelihood, should receive and enjoy the bounty of the Government.

To test the truth of the objection that but comparatively few of the veterans would receive the benefit of this legislation and having a desire to know something definite of what would be the effect of this legislation should it become a law, I referred this bill to the War Department in order to secure

THE BEST OBTAINABLE ESTIMATES:

first, in regard to the number of survivors of the late war; secondly, the number that have already passed the age of sixty-two years and would now be entitled to go upon the pension-roll; and, thirdly, the number that would become sixty-two years of age in each year until they should all have arrived at that age.

Mr. Chairman, I have in my hand the tables prepared by the gentleman who is probably the best expert on the subject to-day connected with the Government. I refer to Dr. F. E. Ainsworth, who is at the head of the pension record division of the War Department and who has made a careful study of this subject and who has worked out more carefully these results than has ever been before attempted. I shall print Dr. Ainsworth's tables, together with his explanation of the manner of arriving at his conclusions, as a part of these remarks, not only for the information of the House, but for the information of the country as well, for I consider them the most reliable and the most valuable that have ever been published. They have been prepared with the greatest elaboration and scientific care, and, I believe, may be relied upon as correct as nearly as human skill and science can make them. The following are Dr. Ainsworth's memorandum and tables:

MEMORANDUM RELATIVE TO THE PROBABLE NUMBER AND AGES OF THE ARMY AND NAVY SURVIVORS OF THE WAR OF THE REBELLION.

It should be stated in advance that any estimate of the number and ages of the surviving veterans of the war can not be more than approximately correct, for the reason that the data on which to base such an estimate are deficient in two very important particulars, namely: First, the actual number of individuals in service has never been officially determined and, second, the numbers of men

of different ages upon entry into service or for any given period of the war have never been ascertained. Nor can the missing data be supplied without a laborious search of the many thousands of original rolls and other records filed in the War and Navy Departments, a work which would require years for its completion.

Moreover, if the exact number and ages of the survivors at the close of the war were known, the problem of determining the number now living and the probable duration of life for each group of ages would still be involved in difficulty, for no life table has ever been constructed which is applicable to such a class of lives as that furnished by the veterans of the late war. While it is the generally accepted opinion that the expectation of life of men of this class is less than that of men of the same ages who have never been exposed to the shock of battle and the hardships and privations of field, camp, and prison, on the other hand it has been very ingeniously urged that, by the operation of the law of the survival of the fittest, the reverse is actually the case, for the reason that the individuals of little endurance and tenacity of life, whose early death materially shortens the average of life among civilians, have long since been eliminated from the class to which the veterans belong, having succumbed either to the hardships and dangers of war or their subsequent results. Thus, it is claimed, the survivors have become a selected class whose average duration of life is likely to be greater than that of an equal number of non-veterans of the same ages who have not been subjected to this weeding-out process.

It will be readily seen, then, that the problem presented is incapable of anything like an exact solution and that the results obtained can be nothing more than approximations. But it is also evident that an approximation which is reached after a careful study of all the data available, meager though they are, is of much greater utility than the loose estimates and wild guesses which have heretofore passed current in discussions of this question. Moreover, it is believed that sufficient information is at hand to enable a calculation to be made which can not be very far from correct and which may be safely used for all practical purposes.

In all the calculations embodied in this memorandum, a recent life table (American male) has been used in determining the probable duration of life for each group of ages. The results obtained must be considered to be maximum figures, if it is believed that the expectation of life of the veterans of the war is less than that of non-veterans of the same ages. If the reverse is held to be true, as suggested above, then the figures given must be accepted as minimum in all cases. As between these two opposite opinions, in support of each of which there is much to be said, it is perhaps not unreasonable to assume that the mean is more nearly correct than either, and that the probable average duration of life is about the same for the veterans as for non-veterans. If this be held, then the figures given must be considered to be nearly correct.

Subject to the foregoing remarks and to be considered only in connection with them, the following is submitted:

ARMY.

As shown by the latest official statement, the number of men furnished by the different States and Territories during the war, under call from the President, was 2,778,304. Deducting from this the number of seamen and marines, 105,963, leaves a total of 2,672,341 credited to the Army.

No official compilation has ever been made of the total number of re-enlistments in the Army, but various estimates have been made by different authorities ranging from 370,000 to 716,787. The mean between these two numbers, 543,393, is believed to be a fair approximation of the actual number. Deducting this from the total credited to the Army leaves 2,128,948 as the number of individual soldiers serving in the war.

The number of deaths for the Army is 359,528, and the number of actual deserters at large at the close of the war (making due allowance for those incorrectly reported as deserters) has been estimated at 117,247. Deducting the deaths and deserters leaves 1,652,173 as the probable number of individual soldiers who were alive at termination of service and were not deserters.

NAVY.

The total number of men credited to the several States as having been furnished to the Navy and Marine Corps during the war was 105,963. This figure is taken as the basis of calculation, and not the number of enlistments as reported by the Navy Department, which is believed to include a large number of transfers from the Army, and these have already been counted in the Army estimates.

No data are at hand from which to estimate the number of re-enlistments, but, assuming that their proportion was the same as in the Army, the total number of individuals in service was 84,417. No information has been obtained as to the actual number of desertions, but again assuming that the Army proportion is applicable the number would be 4,649. The deaths, as reported by the Bureau of Medicine and Surgery, numbered 4,588. Deducting the deaths and desertions leaves 75,180 as the probable number of seamen and marines who were alive at the termination of service and were not deserters.

ARMY AND NAVY.

Combining the foregoing estimates, it appears that the total number of individuals in the military and naval service during the war was 2,213,365, and of these 1,727,353 were alive at the termination of service (deserters excluded).

As in the case of re-enlistments, no official compilation has been made of the ages of the men in service at any period of the war. From statistics of the ages at enlistment of about 1,000,000 soldiers, collected by the United States Sanitary Commission, Dr. B. A. Gould, actuary of the commission, formed estimates of the number of men in each year of age. In the absence of better information and assuming the ages of soldiers, seamen, and marines were relatively the same, the tables published by Dr. Gould have been taken as the basis for calculating the appended table (No. 1), which shows the probable number of men who will arrive at the age of sixty-two years, or over, on June 30, 1890, and of the probable number that will attain the age of sixty-two in each succeeding year, until practically all shall have passed that age.

Table No. 2 shows the probable total number of survivors (excluding deserters) on June 30 of each year from 1890 to 1909, inclusive, and at the close of each quinquennial period from 1910 until none shall remain.

The number of invalid pensioners reported on the rolls June 30, 1889 is 356,031; of these 150,826 are rated at less than $8 per month and 205,195 at $8 or more per month. Calculating, by the methods previously explained, the ages and duration of life of those on the pension-list in June, 1889, it is estimated that 23,444 of those on the rolls at the date stated, and rated at $8 per month, or over, will be of the age of sixty-two years, or over, in June, 1890. Deducting these from the total survivors at sixty-two years of age, or over, in 1890 (149,531), leaves 126,087 as the probable number of such survivors in 1890 who are either not on the pension-rolls or are pensioned at less than $8 per month.

Making similar deduction for each succeeding year for those pensioned at $8 or over, as they attain the age of sixty-two, the results given in the appended table (No. 3) are obtained.

Table No. 4 shows the probable total number of pensionable survivors at sixty-two years of age or over who are not now on the pension-rolls or are rated at less than $8 per month, on June 30 of each year from 1890 to 1909 inclusive, when practically all will have become sixty-two, and at the end of each quinquennial period thereafter until none shall remain.

F. C. AINSWORTH,
Captain and Assistant Surgeon United States Army.

WAR DEPARTMENT, *February 25, 1890.*

TABLE No. 1.—*Showing the probable number, on June 30, 1890, of the survivors of the war of the rebellion (excluding deserters), the number who will be sixty-two years of age or over on that date; also, the number who will attain sixty-two years after 1890, with the year in which they will reach that age.*

Probable number of survivors:

In 1890	1,285,471
In 1890, sixty-two years of age or over	149,531

WILL LIVE TO BE SIXTY-TWO YEARS OLD.

In year—	Number.	In year—	Number.

Total number of deaths	364,116
In Army	359,528
In Navy	4,588
Estimated total number of individuals in service	2,213,365
In Army	2,128,948
In Navy	84,417
Estimated total number of survivors at termination of service (deserters excluded)	1,727,353
In Army	1,652,173
In Navy	75,180
Estimated total number of pensionable survivors June 30, 1890	1,263,471
Less pensioners at $8 or over per month	1,063,934
Estimated total number of pensionable survivors sixty-two years of age or over June 30, 1890	149,531
Less pensioners at $8 or over per month	126,087

Mr. Chairman, it is impossible for me in the time allotted to me to analyze these various tables. Each one can examine and analyze them for himself. Nor can I in the time allowed state fully how these figures are arrived at; but, as stated by Dr. Ainsworth, they are based upon the actual statistics of a million soldiers of the war. They are as correct as mathematics can make them, and I venture to say that the conclusions will be a surprise to most, as they certainly were to me.

First, as to the

NUMBER OF SURVIVORS OF THE SOLDIERS OF THE WAR.

It appears according to this statement that on the 30th of June next there will be still surviving of the soldiers of the war of the rebellion, including in the statement the Navy and Marine Corps, 1,285,471. There will be still surviving on the 30th of June, 1900, 999,339, or, stated in other words, at the dawn of the twentieth century there will be more than a million soldiers of the war still surviving. In 1910 the number of survivors will be 626,231; in 1920, 251,727, or in thirty years from this time there will still be more than a quarter of a million survivors. In 1930 this number will be reduced to 37,000, and in 1945 there will probably be living less than a single hundred.

Mr. BRECKINRIDGE, of Kentucky. These are only the soldiers?

Mr. CUTCHEON. These are the survivors of the Army, Navy, and Marine Corps.

Mr. BRECKINRIDGE, of Kentucky. It does not include any estimate of the surviving widows?

Mr. CUTCHEON. No; simply the survivors of the Army, Navy, and Marine Corps.

Mr. BRECKINRIDGE, of Kentucky. That would carry it to a longer period.

Mr. CUTCHEON. Certainly. As to the number who will probably become sixty-two years of age from time to time the figures are given for each and every year, as will be seen by looking at the table. In 1905, fifteen years from now, the number will

REACH THE MAXIMUM AT 106,043

in that year, and from that time it will fall off rapidly. Those who will become sixty-two years of age in 1905 represent the men who enlisted at twenty years of age, and in 1910 the last one of the survivors will have passed sixty-two years of age.

A MEMBER. What is the number now?

Mr. CUTCHEON. The number on the 30th day of June next, 1890, will be 149,532. So that it seems, Mr. Chairman, that this sixty-two-year bill, as it is called, would place 149,532, less the number already on the rolls who have passed sixty-two years of age, or about 126,000 additional names, upon the pension-roll at once. The number for the year 1891 would be about 20,000, and would steadily increase each year until 1905, when, as before stated, it would reach the maximum at 106,043.

Mr. Chairman, we are seeking for some measure that would at once be just and generous and at the same time be within the financial possibilities of the Government. It has seemed to me that this proposed measure would meet all the requirements of the case. It is just because it treats all alike. It does not treat the young and able-bodied as liberally as it does the old and infirm, and it ought not to. It does not put the young men of forty or forty-five, in the comparative strength and vigor of manhood, upon the pension-roll at the same time that it does the old men of seventy, bowed with all the infirmities and weaknesses of age, and it ought not to. But it treats all with absolute equality and equity. It says to every soldier of the Union, "when you reach the same period of life, the same condition of infirmity and weakness, the same wants, incident to old age, then you shall become the wards of the Republic—each in his turn, each at the same age, each under the same conditions and the same disabilities."

About

149,000 WOULD START UPON THIS PROCESSION THE FIRST YEAR,

and from 20,000 to 100,000 would enter it each year for the next fifteen years. The average age of the soldiers of the late war is now between fifty-one and fifty-two years. In a little more than ten years the average age will be sixty-two, the limit fixed by the bill. How does this compare with the age at which service pensions have been granted to the soldiers of the Republic in other wars? The war of the Revolution closed in 1783, although the last serious fighting in that war occurred in 1781. The first general service-pension bill for soldiers of the Revolutionary war was passed in 1828, or forty-five years after the close of that war. The average age of the soldiers of the Revolutionary war at its close was about twenty-eight years, as that war continued seven years. In 1828, when their service pension was granted, the average age of the soldiers of that war was between seventy-three and seventy-four years.

The war of 1812 closed by the treaty of Ghent in 1814, although the battle of New Orleans was fought on January 8, 1815. The first service pension to the soldiers of the war of 1812 was granted in 1871, fifty-seven years after the close of that war. The average age of the soldiers of the war of 1812 at the close of that war was twenty-six years. The average age of the soldiers of that war when their first service pension was granted was eighty-three years.

The war with Mexico closed in 1848. The sixty-two-year service pension, the same as this act, was granted to the soldiers of that war in 1888, or forty years after the close of the war. The average age of the soldiers of the Mexican war at its close, as nearly as can be estimated, was twenty-six years. The average age of the soldiers of the Mexican war when their "sixty-two-year bill" was passed was sixty-six years. No general service pension has yet been granted to the soldiers of that war, forty-two years after the close of the war. Taking these three wars together, the Revolutionary war, the war of 1812, and the Mexican war, and the first service-pension bills for the soldiers of those wars were passed at an average period of forty-seven years after the close of those wars, respectively. Taking the average age of the soldiers of these three wars when their service pensions were granted, seventy-three, eighty-three, and sixty-six years, and

THE AVERAGE AGE OF THE SOLDIERS

of these three wars when their first service-pension bill was passed was seventy-five years. In contrast with this we are now but twenty-four years from the close of the war of the rebellion, and the average age of the soldiers of that war is only between fifty-one and fifty-two years, a difference of twenty-two years in the average length of time from the close of the war and a difference of twenty-two years in the average age of the men. I submit, therefore, to the candid and reasonable judgment of my comrades in arms that they should not yet be impatient for the passage of a general service bill.

But there is another consideration that should not be forgotten, and that is that there is less need of a general service pension now than after any of our former wars. There is more general comfort and competence than ever before. In my own Grand Army post, at home, are many of the leading business men of the community. There are among them lawyers, physicians, merchants, capitalists, lumbermen, machinists, farmers, real-estate owners and operators, municipal and and county officers.

In fact, I seriously doubt if an equal number of men can be found in the community, except by careful selection, that would embrace a better average of wealth and comfort in my city than the members of the Grand Army post. They are honored and respected by all men, and there is no finer body of men or more patriotic. They are men who went into the Army, not for money, but from patriotism. Many of them were disabled in the service by wounds or disease. Most of such have disability pensions, and many of them who have not have claims pending. I know of some of the most gallant of them, some as brave as any, some who have suffered as much as any, who have never even claimed the pensions undoubtedly due them. What is true of my own post I believe to be true of most of the posts of the district which I have the honor to represent. They, as a class, are

A BODY OF PATRIOTIC MEN

who do not intend to ask anything that is unreasonable, but some of whom—perhaps through the influence of the newspapers specially devoted to the urging of a general service pension and the constant reiteration of their claims by orators who have no responsibility for the appropriation of the money and who think more of the applause of the moment than of the wisdom of the policy they advocate, or of its effect upon the Government, or upon the men most concerned—have come to believe it not only feasible, but also their immediate due, that every man who served in the late war should be at once pensioned therefor.

Now, Mr. Chairman, I believe that there are no better friends of the soldiers than the men who served with them and are now members of this House, nor any who are more anxious to do the fullest and most complete justice to the men who took up arms for the preservation of national life. I am well aware of the temerity of my position when I say that I do not think that the time has yet come for

A GENERAL OR UNIVERSAL SERVICE PENSION

except on arrival at a fixed age, be it sixty-two years or a less age. My position has never been otherwise. Up to the time when I entered Congress and for years after it, no considerable body of the Grand Army, and more particularly no national encampment, had ever declared in favor of such a service pension. In fact, it had, on the contrary, again and again declared against it. Having myself given three years of my life to the service in every capacity from a lieutenant to the commander of a brigade; having myself suffered wounds, for which I have never asked pension or other consideration, but which I hold as badges of honor in the service of my country; having devoted a very large share of my life for the past seven years to the service of the soldiers of my district and of the country; having voted in this House for every pension measure, large or small, that has come before it for the benefit of the disabled and of the needy and of the dependent widows, orphans,

mothers, and sisters; having myself, together with others, introduced the bill for the increase of the pension of widows, and for the widows' arrears, for the increase of the pensions of those who had lost a limb in the service, and, in short, having supported every bill that has been before this House in the interest of our veterans, whether for pension, or pay, or bounty, I trust that I may speak with frankness and candor, without misconstruction or misunderstanding of my motive in regard to this measure, and without the charge that I am disloyal to the interests of my comrades.

The sixty-two-year bill introduced by me was, so far as I am aware, the first service-pension bill introduced in this House. As I have already said, it was then

THE MOST LIBERAL PENSION BILL

that had ever been considered by the House. I adhere to it and support it now for the reason that I believe it to be the most liberal bill that can possibly become law at this session of Congress and because I desire to see a more liberal measure than any that is now upon the statute-book reported and passed; and the fact that the Committee on Invalid Pensions has within a few days decided to report a bill which embodies this sixty-two-year service-pension feature, and which, as I understand, is to be made the leading feature of pension legislation in this Congress, assures me that the judgment of that committee, whose loyalty to the soldier can not possibly be questioned, agrees with my own views. This is not a new position with myself. In a speech which I had the honor to deliver in this House on the 12th day of July, 1888, on the pension question I took the same position that I do to-day, that a general service-pension bill ought to wait until we have taken care of the disabled and of the dependent and of those unfortunates upon whom the solemn shadow of the poor-house and the hospital has already fallen. The strong and the able-bodied and the well-to-do ought not to crowd to the front and push away from the doors of the Pension Office their weaker and less fortunate brethren. In that speech which was circulated by thousands throughout my own district and by hundreds of thousands throughout the country through the agency of the Congressional committee, I used the following language:

AGE DISABILITY.

And it may be well considered whether, as the weakness and infirmities of age come to these men, an age limit may not be established, upon arrival at which the proof of any other disability may be dispensed with. Let that age be, say, sixty-two years, as in the Mexican pension bill, and let the amount of the pension be made the same as the pension paid to soldiers of the Mexican war, $8 per month; then as they arrive at that age they would consecutively go upon the pension-roll. The youngest of the soldiers of the war are now about thirty-eight years of age; it will therefore be not less than twenty-four years before the last of them will reach the disability age. Meanwhile the older soldiers will be passing away and vacating their places on the pension-roll as rapidly as the younger ones come on, and the result will not be to largely increase the amount required for pensions, but, on the contrary, it will, after a few years, rapidly diminish. I have introduced such a bill at this session but it has not yet been reported. Having thus provided for the disabled and the aged and those unfitted for self-support, I would say to my comrades who are disabled neither by age nor disease, and who are fully capable of caring for themselves, let us not crowd to the front and get in the way of the crippled, the infirm, and the aged, and those upon whom the shadow of the poor-house has fallen; but let us stand back until our less fortunate comrades have been provided for, and when age or disease or infirmity overtakes us we shall receive the same benefits as they. I would advise my comrades to take as their motto, "One thing at a time, and that the most needed thing."

Therefore, when my constituents, and especially my comrades of the Grand Army, voted to return me to this Congress by far the largest majority they had ever given me, they did it

WITH THE FULL KNOWLEDGE AND UNDERSTANDING

of my views and sentiments in regard to this question. But, Mr. Chairman, I desire here and now to state some of the objections that appear to me to a universal or general service-pension bill.

First. It is essentially unjust and unequal. It puts the old and the young, the rich and the poor, the able-bodied and the wholly disabled on an absolute level.

Second. It will place upon the pension-roll more than 100,000 men who never saw a day's service in the field, never saw a rebel or heard a hostile shot. I refer to those who enlisted in the year 1865 and who never reached the front before the close of hostilities, and those who served as "home guards" in the several States. I have heard it estimated by very competent authority that this number who would be pensioned by a general service-pension bill would reach even 200,000.

Third. It is contrary to all precedent. It has not yet been as long within twenty-two years since the war of the rebellion as the average date when other service pensions have been granted, and there is the same difference in the average age of the surviving veterans. If pensioned at sixty-two they will still be twelve years inside the average.

Fourth. The majority of

THE VETERANS THEMSELVES HAVE NOT ASKED FOR IT.

Only about one-third of the survivors of the war belong to the Grand Army of the Republic, and not until the last three years could even a majority of that one-third be induced to indorse a general service pension. It was first done at the St. Louis encampment of 1887, and it was then a natural reaction from the feeling against the veto of the dependent pension bill in the Forty-ninth Congress. Again and again prior to that time the attempt had been made to procure the indorsement of that organization of the service pension, but never could a majority be secured in its favor. It is not believed that to-day the majority of veterans are in favor of pensioning men who saw no service at the front, who incurred no danger, but were merely upon the rolls for a period of ninety days.

Fifth. The proposed Grand Army service-pension bill, although called a "per diem bill" is not a per diem bill, as many suppose, except as to the excess of $8 per month. I have before me a copy of the Grand Army "per diem pension bill," so called, furnished by the pension committee of the Grand Army of the Republic.

Section 1 provides as follows:

That the Secretary of the Interior is hereby authorized and directed to place on the pension-roll of the United States the name of any officer or enlisted man who shall have served ninety days in the Army, Navy, or Marine Corps of the United States subsequent to the 4th day of March, 1861, and prior to the 4th day of March, 1866, and having been honorably discharged, said pension to commence from and after the passage of this act and to continue during the term of life of said officer or enlisted man.

Section 2 provides:

That the rate of pension for such service shall be at the rate per month of 1 cent for each day of service rendered in said Army, Navy, or Marine Corps of the United States: *Provided, however*, That in each and every case where the service so rendered was less than eight hundred days the pension shall be at the rate herein established for the service of eight hundred days. * * * *And provided further*, That all pensions granted under this bill shall be in addition to any pension granted for disability under any general or special act.

It will be seen, therefore, Mr. Chairman, from the foregoing that this bill gives a minimum pension of $8 per month during the continuance of his life to every officer and man who served at the rendezvous for ninety days, and who never did a day's service at the front in his life, and only the same $8 a month to the veterans who served at the front for eight hundred days, and who may have passed through a score of hard-fought battles and endured all the hardships and privations of the campaign. This is inequality, and

INEQUALITY IS INJUSTICE.

The gallant veterans of a score of battles and the drafted man of ninety days' service are placed upon the same footing. I appeal to the old veterans, whether disabled or not, to say whether this is justice.

Again, the millionaire and the poor man who has nothing but his hands with which to gain a livelihood are put upon an equality. The man who has ample means and has no need whatever for the bounty of the Government receives the same consideration as the man who has no resource but his daily labor. No difference is recognized between the young man of forty or forty-two and the decrepit old man of sixty-five or seventy who is feebly tottering "over the hills to the poor-house." I submit to my comrades that this is not equity and is not worthy of a just Government.

Sixth. Once more, this bill proposes pensions of at least $8 per month for all who served for ninety days at any time prior to March, 1866. The service may have been rendered after the war was closed, after Lee had surrendered, and after the rebel army had disbanded, and yet they get $8 a month, precisely the same as the man who served the full period of eight hundred days.

Seventh. The passage of the general service-pension bill does not dispense with any of the present work of the Pension Office, because it would not change in any regard the disability pensions now provided for, but expressly provides that the service pension shall be in addition thereto. This is undoubtedly correct and just.

Eighth. It would

INDEFINITELY POSTPONE THE ADJUDICATION

of the half million claims now pending in the Pension Office for invalids, widows, orphans, and their dependents. The Pension Office, with its vast force of examiners, surgeons, and others, including examining surgeons, amounting in all to more than 4,000 men, can not possibly keep up with its present work. On June 30, 1889, the number of original claims pending was 243,920. The number of claims for increase was 235,088, making a total of 479,008. At the present time this number has increased to an even half million claims, so that, instead of diminishing, the number of pending claims is constantly upon the increase. I insert here a statement taken from the report of the Committee on Invalid Pensions, showing the number of claims pending in the Pension Office, both original and for increase, and showing that the total of claims pending on June 30, 1887, was 374,354, and that the number pending on June 30, 1889, was 479,008, an increase of more than 100,000 in two years.

Original pension claims pending, filed, admitted, and rejected during the three years ending June 30, 1889.

	Year ending June 30—		
	1887.	1888.	1889.
Pending	265,259	233,768	243,920
On rejected files	144,477	191,442	210,589
Total pending and on rejected files	409,736	425,210	454,509
Filed	72,476	75,726	81,220
Admitted	56,194	60,252	51,221
Annual value admitted	$5,287,695	$5,777,741	$5,378,490
Rejected	11,892	46,965	19,147
Disposed of	67,086	107,227	71,068

Increase pension claims pending, filed, admitted, and rejected, and pensions restored during the three years ending June 30, 1889.

	Year ending June 30—		
	1887.	1888.	1889.
Pending	109,095	180,680	235,068
Filed	107,651	148,276	163,020
Admitted	32,107	45,716	71,080
Annual value admitted	$2,912,591	$2,271,445	$4,229,794
Rejected	32,342	31,115	37,532
Disposed of	64,449	76,831	108,612
Pensioners restored	2,707	2,028	1,754
Annual value of pensions restored	$209,042	$153,565	$154,087

The question now is

WHICH OUGHT TO RECEIVE THE FIRST CONSIDERATION?

the claims already pending, most of which are for disability pensions and for increase of disabilities from wounds, or a new general service-pension bill for the able-bodied, which comes under none of these heads. For my own part, my motto in this matter has always been "one thing at a time and the most needed thing first," and, when we have disposed of the thing that is most needed, then we will be ready to take up and consider the next most necessary.

Ninth. The last reason that I shall give why a general service-pension bill ought not to pass at the present time is that the income of the Government is not adequate to meet it, and the passage of such a bill would create an immediate deficiency and would compel either additional taxation or the contracting of a new national debt. Complaints come to us from all directions already of the burdens of taxation, and I fear that any increase in taxation at this time or an increase of the national debt for the purpose of paying universal service pensions would produce such a reaction against the whole system of pensions as might endanger pensions already granted.

If we accept the tables of Dr. Ainsworth, above given, as correct as to the number of surviving soldiers, there would be 1,285,000 to be pensioned at the minimum sum of $8 per month and upwards. Eight dollars a month would represent two years two months and ten days' service, on the per diem plan, and every man who served a less period down to ninety days would receive the same, while every one who served more than 800 days would receive the additional pension at the rate of a cent for each day's service. The man who served three years would receive $10.95 a month. The man who served four years would receive $14.60 a month. It is estimated by those well qualified to judge that the average service pension under this law would be about $10 a month, or $120 a year. If this be accepted as a correct estimate, the annual cost of the so-called per diem pension bill would be

$154,000,000 PER YEAR.

The annual pension appropriation bill amounts to $98,427,000, and this without reference to the new legislation passed at this session. If we call the present annual expenditure for pensions, including the natural increase of the roll, $100,000,000, and the new expenditure on account of the per diem pension bill $150,000,000, both of which are moderate, it will give the total cost at $250,000,000 a year, which is more than the annual cost of the war during any year up to 1863 and more than the cost of the greatest standing army in Europe by at least $65,000,000.

As a friend of the soldiers and as a friend of pensions I do not believe that it is practicable or that it is possible for this country to undertake so large an expenditure.

We have already provided by law for all who were disabled in the service, either by wounds or disease, and who still suffer from such disabilities. We have provided for all the widows and orphans of those who fell in the service or who have since died from disabilities contracted in the service. We have provided pensions for the mothers and fathers who were dependent upon the deceased soldiers. We shall, I think, without doubt provide for those who are now disabled from gaining a livehood, without requiring them to prove that the disability was contracted in the service, and for all who have reached or may hereafter reach the infirmities of age as fast as they arrive at the limit established in the Mexican pension law.

And now what will remain? Only those who were not disabled either in the service or out of the service, and those who are neither dependent nor aged—in short, only those neither disabled nor needy. Pensions to such would be contrary to every principle on which pensions are granted. The very

FOUNDATION PRINCIPLE OF THE PENSION SYSTEM

from the beginning of the Government until now has been a loss incurred in the service of the Government, a sacrifice made for the common good, a need which the ex-soldier is not able to supply by reason of infirmity, either from wounds, disease, or age. No general service pension has heretofore been granted to the soldiers of any war until the pensioners had reached an average age of at least sixty-six years.

There is one more consideration to which I desire to call the attention of my old comrades in arms, and that is that the service which we rendered to the country was the highest possible duty of patriotism. No greater obligation can rest upon any citizen than the duty of defending the Government of his country in the hour of its trial. This was a duty which we rendered gladly and patriotically. The Government promised us no pensions for this service unless we were disabled or suffered a loss in the service; but the Government did promise that if in its service we became disabled we should receive pensions in proportion to the disability. That promise the Government has upon its part fulfilled as sacredly as any government in the world ever fulfilled a promise; and if every man entitled thereto has not received his pension it has been because he has failed to furnish the evidence required by law or because of some infirmity in the administration of the law.

But let us not make the mistake of supposing that the Government is something distinct from the people. The Government is the people. The Congress which makes the law are the representatives which the people themselves send. They make such laws as the majority of the people demand. The pension laws as they exist to-day are the embodiment of the wishes of the people as made known through their Representatives. It is true that one part of the country is not interested in this question of pensions except as they pay their proportion of taxes to provide the revenue. The representatives of that section are allied almost solidly with the Democratic party. This fact has made it impossible to enact the dependent pension bill into law while that party was in power, which would have relieved most of the actual suffering and want among the veterans.

But what are the objections to the sixty-two-year pension bill? It is said, in the first place, that it will benefit but few, that the veterans would all be dead before they reach that age. How incorrect this idea is will be seen from table number 3, which shows that 894,917 of the survivors will live to reach that age, excluding all pensioners now receiving pensions of $8 per month or more, or, including those receiving pensions of $8 a month or more, 918,361 will reach the age of sixty-two. Certainly this is a very respectable number. There were already on the rolls January 1, 1890, 373,102 invalid pensioners.

Mr. Chairman, I am in favor of the sixty-two-year limit, first, because it is

A LIMIT ALREADY ESTABLISHED BY LAW

in the case of the Mexican war pension bill and in the case of the retired-list of the Army, and because it is the lowest age limit at which a service pension has ever been granted by this Government for any war.

Secondly, I am for it because it is strictly and absolutely just that the soldiers should be treated alike and equally, that they should receive the benefit of a pension when they arrive at the same age, at the same degree of infirmity, and the same condition of need, and because it is not just, as I have before stated, that some should receive a pension at forty, and others at fifty, and still others not until they arrive at sixty-five or seventy, or even a greater age, which they may have already reached.

Let us take the case of a boy who enlisted in the spring of 1865 at the age of 16. He is now about forty-two years of age, in the prime of manhood. He was borne upon the rolls for ninety days. He never left the recruiting rendezvous. He never encountered either danger or hardship. His present expectation of life is about twenty-eight years. Under a general service-pension bill it is proposed to give him a pension at $8 a month, or $96 a year, as long as he shall live, or $2,508 for services that he never rendered, for danger that he never encountered, and for disability that he never incurred.

In almost every State there were more or less regiments that never left the States in which they were organized. They were "home guards." There was at least one such regiment in my own State. They never went beyond the State line. They never encountered an enemy. They never saw a rebel. They never heard a hostile shot and they never encountered the hardships of the campaign; and now under the general service-pension bill these 1,000 men would be placed upon the pension-rolls for life, and their comrades, who saw three or four years of service in the field, with all the hardships of the campaign and the dangers of the battle, would be required to contribute to the taxation which pays them this "service" pension. Will any one contend that such a pension law would be just or an equitable one?

Thirdly, I am for the sixty-two-year bill because

IT IS WITHIN THE BOUNDS OF POSSIBILITY.

I believe that the man who advocates and undertakes for the old veterans that which is possible, that which is within the power of the Government to do, is a better friend of the soldier than those who clamor for the impossible, knowing it to be the impossible, knowing perfectly that there is no probability of success, simply to make capital, with the result of producing discontent, irritation, and disappointment at home.

Mr. Chairman, I have been an advocate of more liberal pensions ever since I entered this House. No bill granting increased pensions to the disabled, to widows, to orphans, fulfilling the sacred promise made by Abraham Lincoln "to care for him who has borne the battle, and for his widow and orphans," has ever come into this House that it has not had my voice and vote. Let us fulfill that promise first. Let us first care for those who bear the scars of battle or the marks of wasting disease, or the weight of the infirmities of age; and in due order the younger, the able-bodied, the well-to-do, shall in their turn receive

the like consideration. The world will not excuse us, the future will not hold us blameless, the men who are infirm and incapable of self-support and the soldiers' widows who toil for daily bread will not forgive us, if we permit them to be jostled from the doors of the Pension Office to make room for the strong, the young, and those of ample means. Pensions are for the disabled, the infirm, and the needy; not for the strong, the able-bodied, and the independent.

APPENDIX 1.—*The Grand Army per diem pension bill.*

[Proposed by the national pension committee of the Grand Army of the Republic.]

A bill granting per diem service pensions.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is hereby authorized and directed to place on the pension-roll of the United States the name of any officer or enlisted man who shall have served ninety days in the Army, Navy, or Marine Corps of the United States subsequent to the 4th day of March, 1861, and prior to the 1st day of March, 1866, and been honorably discharged; said pension to commence from and after the date of the passage of this act, and to continue during the term of life of the said officer or enlisted man.

SEC. 2. That the rate of pension for such service shall be at the rate per month of one cent for each day's service rendered in said Army, Navy, or Marine Corps of the United States: *Provided, however*, That in each and every case where the service so rendered was less than eight hundred days the pension shall be at the rate herein established for a service of eight hundred days: *And provided further*, That all persons whose claims are pending in the Pension Office or before Congress may, by application to the Commissioner of Pensions, in such form as he may prescribe, receive the benefits of this act; and nothing herein contained shall be so construed as to prevent any pensioner thereunder from prosecuting his claim and receiving his pension under any other general or special act: *And provided further*, That all pensions granted under this bill shall be in addition to any pension granted for disability under any general or special act: *And provided further*, That rank in the service shall not be considered in applications filed thereunder.

SEC. 3. That the period of service shall be computed from the date of enlistment in the United States service to the date of discharge therefrom: but no pension shall be granted under this act to or on account of any person who deserted prior to July 1, 1865, and who remained absent from his command thereafter and received no discharge, until he shall have obtained a certificate of honorable discharge from the service from which he deserted.

SEC. 4. That any agent, attorney, or other person instrumental in prosecuting any claim under this act, who shall, directly or indirectly, contract for, demand, receive, or retain for his services or instrumentality in presenting and prosecuting such claim a greater sum than $10 (payable only upon the order of Commissioner of Pensions by the pension agent making payment of the pension allowed), or who shall wrongfully withhold from a pensioner or claimant the whole or any part of the pension or claim allowed or due such pensioner or claimant, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall, for every such offense be fined not exceeding $500 or imprisonment at hard labor not exceeding two years, or both, in the discretion of the court: *Provide* , That no fee whatever shall be allowed to any person whomsoever in any case where an invalid pensioner is granted an increase under the provisions of this act.

SEC. 5. That section 4716 of the Revised Statutes is hereby modified so that the same shall not apply to this act: *Provided*, That this act shall not apply to those persons under political disabilities.

SEC. 6. That all laws or parts of laws which conflict with the provisions of this act be, and the same are hereby, repealed.

APPENDIX 2.—*The Cutcheon service and disability bill.*

A bill (H. R. 3869) granting pensions to certain soldiers and sailors of the United States in the late war who have attained the age of sixty two years, or who are disabled from gaining a livelihood, or who are dependent, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That every person specified in the several classes enumerated in section 4693 of the Revised Statutes of the United States, and the amendments thereto, who actually served in the military or naval service of the United States, as mentioned in said section, for the period of sixty days in the war of the rebellion, and was honorably discharged from said service, or was actually engaged in a battle in said war, in the service aforesaid, and was honorably discharged from said service, who at the date of application under this act shall have attained the age of sixty-two years, or who shall have become disabled, in whole or in part, physically or mentally, from gaining a support by any cause not the result of his own immoral conduct or vicious habits, and who shall also have no means of support except his own labor, and also the widow of every such soldier, sailor, officer, or enlisted man who shall not have remarried since his decease, shall be placed upon the pension-roll of the United States, and shall be entitled to receive a pension as herein provided, without being required to prove that such disability was incurred in the service and in the line of duty.

SEC. 2. That such pension, if based upon disability, shall commence from the date of filing the application therefor as hereinafter provided, and shall continue during the continuance of such disability, and shall be at the rate of $12 per month for a total disability to perform any manual labor, and pro rata for any less degree of disability. Such pension, if based upon age only, shall commence from the time when the claimant shall have attained the age of sixty-two years, and shall continue during the natural life of such pensioner, and shall be at the uniform rate of $8 per month. Such pension, if based upon widowhood, shall be at the rate of $12 per month, and shall commence from the passage of this act, and shall continue until the death or remarriage of such widow.

SEC. 3. That no person now a pensioner of the United States, or who at the passage of this act shall have a claim for pension pending under existing laws, shall be entitled to receive a pension under this act until such person shall have executed, acknowledged, and filed with the Commissioner of Pensions an election in writing to accept the provisions of this act, and forever renouncing any pension such person may be receiving or might receive under any other act or law; and no person shall receive more than one pension at the same time under any or all laws of the United States relating thereto.

SEC. 4. That before the name of any person shall be placed upon the pension-roll under the provisions of this act application shall be made therefor, in writing, by the claimant, setting forth under oath the grounds upon which such pension is claimed; and such application shall be supported by competent proof of the right of such applicant to such pension, under such rules and regulations as the Secretary of the Interior may prescribe; and any person who shall knowingly take any false oath in any material matter in any application or proceeding under this act shall be deemed guilty of perjury.

APPENDIX 3.—*The Morrill service and disability bill.*

A bill (H. R. 8297) providing for a service pension for the soldiers of the rebellion, and their widows, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension-roll of the United States the name of any officer or enlisted man of sixty-two years of age or over, or who shall hereafter reach that age, who shall have served ninety days or more in the Army, Navy, or Marine Corps of the United States during the war of the rebellion, and shall have received an honorable discharge therefrom, said pension to commence from the date of the application therefor and to continue during the term of the life of said officer or enlisted man, at the rate of $8 a month.

SEC. 2. That all persons who shall have served ninety days or more in the military or naval service of the United States during the late war of the rebellion, and who have been honorably discharged therefrom, and who are now, or may hereafter be, suffering from mental or physical disability equivalent to the grade now established in the Pension Office for the rating of $8 per month, upon due proof of the fact, according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States at the rate of $8 per month, and such pension shall commence from the date of the filing of the application in the Pension Office after the passage of this act upon proof that the disability then existed, and shall continue during the existence of the same: *Provided*, That those who are now receiving pensions under existing laws, or whose claims are pending in the Pension Office, may, by application to the Commissioner of Pensions, in such form as he may prescribe and approve, showing themselves entitled thereto, receive the benefit of this act, and nothing contained in this act shall be so construed as to prevent any pensioner thereunder from prosecuting his claim and receiving his pension under any other general or special act: *Provided, however*, That no person shall receive more than one pension for the same period.

SEC. 3. That if any officer or enlisted man who served three months or more in the Army or Navy of the United States during the late war of the rebellion, and who was honorably discharged, has died, or shall hereafter die, leaving a widow over the age of sixty-two years, such widow shall, upon due proof of her husband's death, be placed upon the pension-roll from date of her application, at the rate of $8 per month, to continue during her widowhood.

SEC. 4. That if any officer or enlisted man who served three months or more in the Army or Navy of the United States during the late war of the rebellion, and who was honorably discharged, has died, or shall hereafter die, leaving a widow without other means of support than her daily labor, or minor children under the age of sixteen years, such widow or minor children shall, upon due proof of her husband's death, without proving his death to be the result of his army service, be placed on the pension-roll from the date of the application therefor, at the rate of $8 per month during her widowhood, and in case of the death of the widow, leaving a child or children under the age of sixteen years, such pension shall be paid such child or children: *Provided*, That said widow shall have married said soldier prior to the passage of this act.

SEC. 5. That no agent, attorney, or other person engaged in preparing, presenting, or prosecuting pension claims under the provisions of this act shall, directly or indirectly, contract for, demand, receive, or retain for such services in preparing, presenting, or prosecuting such claims a sum greater than $5, which sum shall be payable only upon order of the Commissioner of Pensions by the pension agent making payment of the pension allowed, and any person who shall violate any of the provisions of this section, or who shall wrongfully withhold from the pensioner or claimant the whole or any part of the pension or claim allowed or due such pensioner or claimant under this act, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall, for each and every offense, be fined not less than $100 nor more than $500 or be imprisoned at hard labor not exceeding two years, or both, at the discretion of the court.

APPENDIX 4.—*Report of the Committee on Invalid Pensions on the Morrill service-pension bill.*

Mr. MORRILL, from the Committee on Invalid Pensions, submitted the following report (No. 1160), to accompany H. R. 8297:

The Committee on Invalid Pensions, to whom was referred the bill (H. R. 8297) providing for a service pension for the soldiers of the rebellion and for their widows, and for other purposes, submit the following report:

The first section of this bill proposes to place on the pension-rolls all of the surviving soldiers of the late war of the rebellion who are now sixty-two years of age and who served ninety days or more in the Army or Navy, and the remainder as fast as they arrive at that age. This proposition is strongly opposed on the ground that there is no precedent for granting a service pension so soon after the close of the war. While it is true that service pensions were not granted to the survivors of former wars until a longer period of time had elapsed, yet the fact remains that the very principle upon which a service pension at the age of sixty-two years is based is that at that age the soldier is presumed to be past the age of labor and unable longer to engage in the active duties of life, and on that account needs the aid of the Government that he fought to defend and maintain.

If this theory be accepted for the true basis of a service pension, then the question of the length of time which has elapsed after the close of the war does not materially enter into the consideration of the question. A law should be placed on the statute-books as soon after the close of the war as any of the soldiers have reached the required age. The veteran can never more be sixty-two years of age than on his sixty-second birthday, and if a pension is to be granted to him on the theory that at that age he needs the aid and assistance of his Government, the law ought to be enacted as soon as any considerable number of the soldiers of a war reach that age. If it is urged that a longer time should be permitted to pass, so that the number of the survivors may be the less and the cost to the Government thereby lessened, your committee would reply that such a proposition is utterly unworthy of consideration by the Representatives of a great Government.

The second section of the bill provides for those who, not having arrived at the age of sixty-two years, are suffering from disabilities which incapacitate them from pursuing the ordinary avocations of life, and thus render them equally disabled from earning a livelihood as those who have reached the age named in the first section of the bill, and are therefore equally needing and equally entitled to the aid of the Government. It does not require the applicant to show that he received the disabilities in the service, but it is a broad declaration on the part of the Government that it will generously care for its brave defenders in their hour of need.

The third section of the bill provides for the widows of the soldiers who have reached the age of sixty-two, and carries to the old veteran the assurance that whenever he is taken from his family the Government shall continue to care for her who shared his joys and his sorrows during the remainder of her life.

The fourth section of the bill provides a pension for all widows of soldiers in-

respective of the cause of death of the husband, provided it is shown that they are dependent upon their own labor for support.

The committee have exhausted every source of information at their command in their efforts to obtain reliable data on which to estimate the probable cost under the provisions of this bill. After a patient and thorough examination they are satisfied that the figures submitted by the Commissioner of Pensions, which are hereto attached, are approximately correct. The bill if enacted into a law will place upon the pension-rolls nearly 300,000 of the old and disabled veterans of the war, about 80,000 widows of their deceased comrades, and will increase the pensions of nearly 90,000 soldiers who are now receiving less than $8 per month. The estimated cost is $39,625,316 for the fiscal year ending 1891, and there would be a probable increase in the cost for five years of from $3,000,000 to $5,000,000 per year. Large as this sum may seem, your committee firmly believe, from the numerous and hearty indorsements which this bill has received from all sections of the country, that this additional burden will be cheerfully borne in caring for those brave defenders of the Union and their widows who now so greatly need the helping hand of the Government which they by their sacrifices and sufferings defended and preserved.

This bill does not propose to change in any way the existing pension laws, and those who received wounds or other disabilities in the service can, therefore, if they prefer to do so, make their applications and receive their pensions under the present law. Believing that it will bring relief to thousands of poor and disabled men and women who are entitled to their country's gratitude, and that it is a simple act of justice to those who so generously made sacrifices that their country might live, your committee recommend the passage of the bill with the following amendments:

Strike out in line 7, section 1, the words "shall have."

Strike out in line 1, section 2, the words "shall have." Insert the word "shall" after the word "provide" in line 9, section 2.

In line 2, section 3, strike out "three months" and insert "ninety days."

In line 11, section 4, after the word "death" insert "or remarriage."

In line 12, section 4, after the word "children," insert "of the soldier or sailor."

In line 13, section 4, after the word "children," insert "until the age of sixteen."

APPENDIX.

Memorandum giving the number of survivors of the war for the Union, as shown by the records of the War Department; also giving facts connected with the Pension Office service; also estimate of the probable cost of H. R. bill No. 8297, providing for a service pension and other purposes, for the fiscal year 1891:

Number of soldiers enlisted during the war for the Union, excluding re-enlistments		2,213,365
Number killed in battle and by other casualties and who died of disease to July 1, 1865	364,116	
Estimated number of deaths of soldiers discharged during the war to July 1, 1865	25,284	
Number of desertions	121,896	
		511,296
Number of survivors of the war July 1, 1865, less deaths and desertions		1,702,069
Number of survivors July 1, 1865, less deaths and desertions, who were subject to the usual laws of mortality	1,116,069	
Number of survivors July 1, 1865, who because of wounds and other disabilities were subject to a higher rate of mortality equal to twelve years' shortening of the expectation of life	586,000	
Number surviving July 1, 1890, who are probably subject to the ordinary life tables	831,069	
Number surviving July 1, 1890, who are subject to a greater death rate	415,000	
Total number of survivors July 1, 1890		1,246,069
Number of survivors on the pension-rolls January 1, 1890		873,102
Number of survivors not on the pension-rolls January 1, 1890		372,967
Number of survivors 62 years of age and upwards July 1, 1890		143,920
Number of survivors 62 years of age and upwards now on the pension-rolls		63,427
Number of survivors 62 years of age not drawing pensions		80,493
Number of pensioners on rolls drawing less than $8 per month July 1, 1890		150,836
Number of pensioners 62 years of age who will be entitled to an increase of $3.67 per month		25,642
Number of pensioners under 62 years of age drawing less than $8 per month who would probably be entitled to an average increase of $3.67 per month		62,579
Number of invalid claims pending January 1, 1890		182,955
Number of invalid claims on rejected files January 1, 1890		99,878
Number of widows' claims pending January 1, 1890		74,228
Number of widows' claims on rejected files January 1, 1890		38,660
Number of dependent mothers and others on rejected files January 1, 1890		9,414
Number of invalid claims pending which will probably be allowed under section 2		107,234
Number of invalid claims on rejected files January 1, 1890, which would probably be allowed under section 2		43,937
Number of widows' claims on rejected files January 1, 1890, which will probably be allowed		34,797
Number of survivors not included in above figures		641,223
Number of them who would probably apply for pension		64,122

Estimate of the appropriation required for fiscal year 1891 to meet the expenditures contemplated by H. R. bill 8297, providing for a service pension, etc.

90,493 survivors 62 years of age, at $96 per annum	$7,727,328
25,642 pensioners 62 years of age, who would be entitled to an increase of $3.67 per month	1,129,273
39,263 widows who will probably be entitled under the law, at $8 per month	3,769,248
Cost of proposed service pension for fiscal year 1891	12,625,849

Estimate of the appropriation required for fiscal year 1891, to meet the expenditures contemplated by H. R. bill 8297 providing for a service pension, etc.

90,493 survivors sixty-two years of age, at $96 per annum	$7,727,328
25,642 pensioners sixty-two years of age who would be entitled to an increase of $3.67 per month	1,129,273
39,263 widows who will probably be entitled under the law, at $8 per month	3,769,248
Cost of proposed service pension for fiscal year 1891	12,625,849

Recapitulation of claims which would probably be allowed under sections 2 and 4.

Pending invalid claims	107,234
Pending widows' claims	38,660
Rejected invalid claims	43,937
Probable number of new applications	64,122
Total	253,953
At $96 per annum	24,379,488
62,579 pensioners under sixty-two years of age now on rolls at less than $8 per month who will probably be increased $3.67 per month	2,755,779
Cost of proposed service pension as above	12,625,849
Total appropriation required	39,625,316

Number of survivors who will probably be placed on the rolls under this act in 1891	295,780
Number of widows who will probably be placed on rolls	64,302
Number whose pensions would be increased during the same period	88,221
Total	448,309

The number of survivors not included in above calculation and who will arrive at sixty-two years of age is as follows:

Years.	Number.	Yearly rate.	Amount.
1892	14,819	$96	$1,422,624
1893	16,255	96	1,560,480
1894	17,946	66	1,722,816
1895	19,938	96	1,914,048
1896	22,251	96	2,136,096
1897	24,949	96	2,395,104
1898	28,098	96	2,697,408
1899	31,746	96	3,047,616
1900	35,946	96	3,450,816
1901	40,760	96	3,912,960
1902	46,236	96	4,438,656
1903	52,397	96	5,030,112
1904	59,254	96	5,688,384
1905	69,252	96	6,648,192
1906	63,803	96	6,123,728
1907	29,223	96	2,805,312
1908	3,704	96	355,584
1909	535	96	51,360
Total	577,201		

Admission of Idaho.

SPEECH

OF

HON. ISAAC S. STRUBLE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 3, 1890.

The House having under consideration the bill (H. R. 4562) to provide for the admission of the State of Idaho into the Union—

Mr. STRUBLE said:

Mr. SPEAKER: Before proceeding to discuss some of the questions relating to the admission of Idaho, which have been raised in opposition to the constitution presented by that Territory, I wish to call attention briefly to a demonstration made on the floor of the House on yesterday by the handsome, able, and eloquent gentleman who represents the Territory of Arizona in this Congress. I noticed that some of the new members on the other side of the House, when my friend, Mr. SMITH, was talking, looked as if they were astonished and surprised beyond measure that it could be true, as alleged, that a Republican committee of this House, in a Republican Congress, with such glowing, glittering, convincing facts as were thrown out by the gentleman from Arizona in the course of his remarks at that time, could possibly have failed to bring in a bill for the admission of that Territory in advance of or together with the bills already considered and adopted and in advance of or together with the bill which we are now considering.

I do not wish to be guilty often, Mr. Speaker, of citing a Democratic precedent in justification for Republican action. Heaven forbid! But I have in my hand a report which was filed in the last Congress by the distinguished gentleman from Illinois—the industrious, capable, I must say, patriotic chairman of the Committee on the Territories at that time [Mr. SPRINGER]—proposing the admission of Arizona, Idaho, and Wyoming into the Union. Such a bill was actually presented, but how early, Mr. Speaker, do you suppose that that indefatigable, industrious, everywhere-present-and-always-here chairman of the committee [laughter] filed the report from the Committee on the Territories in that case? It is worthy of consideration. Let us see. This bill was presented early in the Fiftieth Congress, but it was not until the 13th day of February, 1889, just nineteen days before the adjourn-

ment of that Congress, that it was reported from the committee; and yet we have seen him throw up his hands to-day and have heard him exclaim in tragic manner that he would have desired, that he did desire to see Arizona and Idaho admitted into the Union during the last Congress!

This, Mr. Speaker, is but a sample, an illustration of some of the characteristics, possibly some of the weaknesses, of this experienced statesman, my friend from Illinois. Think of it, Mr. Speaker and gentlemen, only nineteen days before that session of Congress adjourned, when it was fast approaching dissolution, when it was in the grasp of pressing public business, demanded by the country, he filed his report on these Territories, which report could have been filed during the first session of the Congress, when the consideration of that bill could have been had early; and yet we find it put off and off and off, until about a half a month only remained of the session. This is a fair and uncontradictable illustration of the extent of interest felt by the gentleman in the admission of Arizona, Idaho, and Wyoming. If he desired enabling acts for any or all of them, then his manner of making the same apparent was, to say the least, peculiar.

Now, I wish to say in further reply to my friend from Arizona [Mr. SMITH] that the Committee on the Territories have been industriously at work; they have been hard at work. They have proposed to the House legislation in the shape of important bills reported from the committee; they have asked a great deal of the time of the House; in fact, we have asked more allowance of time of the House than we have felt like asking in justice to other committees. But we have continued at work; we have not sought to delay our work, and do not propose to disregard the proper claims or merits of any Territory having bills before the committee.

But, Mr. Speaker, when we come to consider the question of Arizona and look into the report of the Governor of the Territory to the Secretary of the Interior, we find that she is lessening in her vote and population; that she cast nearly one thousand votes less in the last election, in 1888, than in 1884; that she is in an unfortunate financial condition; so much so, in fact, that her bonded floating debt amounts to over $650,000, with outstanding warrants $100,000, and the county, Territorial, and city indebtedness exceeds $2,900,000. And yet here is a condition of things on which my friend from Arizona has urged that a bill proposing the admission of that Territory ought to be put on the Calendar in advance of or at same time as bills providing for the admission of Wyoming and Idaho. Here is a condition of things, I say, and of a serious nature, that confronts us at the very threshold, and one which, in my judgment, is worthy of serious and deliberate consideration.

But, sir, I contrast with this theatrical spectacle of yesterday the dignified, gentlemanly, statesmanlike position taken and maintained by the gentleman from New Mexico [Mr. JOSEPH] on the floor to-day in remarks concerning the Territory represented by him. I contrast that in favor of the latter, and with a degree of complimentary criticism in favor of the gentleman from New Mexico who addressed the House to-day, as compared with the performance on yesterday by the gentleman from Arizona.

Now I wish to call attention to the question presented for our deliberation. This discussion is fast drawing to a close; in a few moments the House will vote on an important proposition in relation to the enlargement of this great nation. We are to add to or reject another star from the great firmament of nationality; we are to pronounce in favor of the constitutional right of another hundred thousand people or we are to deny them that right in the face of facts entitling that people to our highest consideration.

I agree with my friend from Kansas [Mr. PERKINS] in his remarks in respect to the attitude of our colleague upon the committee Mr. MANSUR, of Missouri. I agree with him that this gentleman who framed these minority views, so ably presented from that standpoint, had a laborious time in his argument on yesterday. I sympathized with him then and do now. He is a man not only of large frame, but of large and generous heart; he is a man of keen and broad conscience; he is a man who does not wish to yield too much to partisanship, but to do the right thing at all times and under all circumstances. I believe, sir, that this excellent gentleman has been led away on this one point of the constitutionality and propriety of dealing with Mormon people in the manner provided in the constitution now before us.

Mr. Speaker, my friend and other gentlemen on that side have avowed their opposition to this institution of polygamy. They have asserted over and over again they abhor it; and I presume there is no doubt they so feel. But it seems to me if they had that intense conviction of conscience which this subject justifies and demands they would not hesitate so much as to the precise question of detail in the administration of the law. Recognizing, like others, the monstrous evil embodied in this bigamous system, it seems to me they would be willing to go to any reasonable length required in the direction of intensifying the legislation of this country with a view to the effectual suppression of this monstrous Mormon doctrine of polygamy.

Now, sir, what has been the policy of Congress toward this institution? It commenced away back in 1862, by what might be called mild legislation, defining bigamy in the Territories and providing punishment therefor; also limiting the power of religious institutions in the Territories to hold real estate. It sought to abate the practice of polygamy in the Territories. But all to no avail; it was found that that law was not sufficient, and more comprehensive measures were enacted. Finally the Edmunds bill, which was regarded a very stringent measure and sufficiently so to suppress this vice, was enacted into law in 1882.

This statute amended section 5352 of the Revised Statutes, defining and punishing bigamy, by declaring that certain acts in the former law which were held to constitute bigamy, together with certain other acts described, were in this law of 1882 held to constitute polygamy. Section 3 marked an advance on previous enactments by providing "that any male person, in a Territory or other place over which the United States have exclusive jurisdiction, who hereafter cohabits with more than one woman shall be deemed guilty of a misdemeanor, and on conviction" shall be punished by a fine or imprisonment, or both fine and imprisonment, in the discretion of the court. But a more important advance than any before is found in section 5 of this act, making any person in polygamy or theretofore guilty of this offense, and also any one who believes it right for a man to be in polygamy, incompetent to sit as a juror in any prosecution for bigamy, polygamy, or unlawful cohabitation.

By section 8 of the law a most radical step forward was taken by the denial of right of suffrage and office-holding, whether elective or appointive, or any place of public trust, honor, or emolument in, under, or for any Territory or place under the United States. Finally, and by the last section of this statute, a further sweeping change was made by the abolishment of all registration and election officers of every description in the Territory of Utah and providing for a registration, canvassing, and returning board to be appointed by the President with the advice and consent of the Senate, which board is still in existence.

Notwithstanding the comprehensive and penal character of this law, it required but a few years to demonstrate its insufficiency for the purpose intended, and the Forty-ninth Congress passed what is known as the Edmunds-Tucker act, a law, in numerous of its features, so far in advance of any other enacted prior thereto that it may well be denominated a new departure in the policy of national legislation on this subject.

It is too lengthy for review as to many of its details, but it will be remembered that among its prominent features are those annulling acts of the Utah Assembly incorporating the Mormon Church and other statutes passed by that body in the interest of the Mormon cause and directing the Attorney-General of the United States to institute proceedings to forfeit and escheat to the United States the property of corporations in Utah obtained or held in violation of the laws of Congress.

That part of this law of 1887, however, most pertinent to the question now before the House is found in section 24, requiring as a precedent to the right of every male person in Utah to register or vote at any election in said Territory, that he shall take and subscribe an oath or affirmation before the registration officer of his voting precinct to the effect—

That he is over twenty-one years of age, and has resided in the Territory of Utah for six months then last passed and in the precinct for one month immediately preceding the date thereof, and that he is a native-born or naturalized (as the case may be) citizen of the United States, and further state in such oath or affirmation his full name, with his age, the name of his lawful wife, and that he will support the Constitution of the United States, and will faithfully obey the laws thereof, and especially will obey the act of Congress approved March 22, 1882, entitled "An act to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes," and will also obey this act in respect of the crimes in said act defined and forbidden, and that he will not, directly or indirectly, aid or abet, counsel or advise, any other person to commit any of said crimes.

Mr. Speaker, it affords me pleasure in passing to say that I think the wise and excellent statesman from Virginia, Mr. Randolph Tucker, the chairman of the Judiciary Committee of the House, added much to his fame as a legislator by his able and successful leadership in that body in the contest for the enactment of the statute to which I have just adverted.

But, sir, if I am not in error this is the only instance in the history of the country in which a Democratic legislator achieved the least fame in leading an aggressive legislative campaign against Mormon polygamy and the iniquities of the Mormon Church; and it is plainly evident that no Democratic member of this House has determined to follow Mr. Tucker's example. On the contrary, it will be found that acquiescence is general over there in the leadership of another Democratic statesman [Mr. SPRINGER], which on this subject is in marked contrast with that of the distinguished chairman of the Judiciary Committee of the House in the Forty-ninth Congress.

Returning to the consideration of the Idaho constitution, I maintain that it merely follows the last United States statute on the point of polygamy, in requiring an oath in advance of voting, with the addition of a proposition which has since the enactment of the law of 1887 been sustained as proper on this subject by courts in Idaho and Utah, and which, as I contend, the Supreme Court of the United States has squarely sustained in the recently decided case of Davis *vs.* Beeson, appealed

from the Idaho supreme court. Here is the language on the point under debate:

In our judgment, section 509 of the revised statutes of Idaho Territory, which provides that "no person under guardianship, *non compos mentis*, or insane, nor any person convicted of treason, felony, or bribery in this Territory, or in any other State or Territory in the Union, unless restored to civil rights; nor any person who is a bigamist or polygamist, or who teaches, advises, counsels, or encourages any person or persons to become bigamists or polygamists, or to commit any other crime defined by law, or to enter into what is known as plural or celestial marriage, or who is a member of any order, organization, or association which teaches, advises, counsels, or encourages its members or devotees or any other persons to commit the crime of bigamy or polygamy, or any other crime defined by law, either as a rite or ceremony of such order, organization, association, or otherwise, is permitted to vote at any election, or to hold any position or office of honor, trust, or profit within this Territory," is not open to any constitutional or legal objection.

With the exception of persons under guardianship or of unsound mind, it simply excludes from the privilege of voting or of holding any office of honor, trust, or profit those who have been convicted of certain offenses, and those who advocate a practical resistance to the laws of the Territory and justify and approve the commission of crimes forbidden by it. The second subdivision of section 504 of the revised statutes of Idaho requiring every person desiring to have his name registered as a voter to take an oath that he does not belong to an order that advises a disregard of the criminal law of the Territory, is not open to any valid legal objection to which our attention has been called.

I now give in full the language of the Idaho constitution to which objection is made, from which it will appear that the framers of the constitution substantially copied the existing statute on the subject of the qualifications of voters. Section 3 of article 6 of the Idaho constitution is as follows:

SEC. 3. No person is permitted to vote, serve as a juror, or hold any civil office who is under guardianship, idiotic, or insane, or who has at any place been convicted of treason, felony, embezzlement of the public funds, bartering or selling or offering to barter or sell his vote, or purchasing or offering to purchase the vote of another, or other infamous crime, and who has not been restored to the rights of citizenship; or who, at the time of such election, is confined in prison on conviction of a criminal offense; or who is a bigamist or polygamist, or is living in what is known as patriarchal, plural, or celestial marriage, or in violation of any law of this State or of the United States forbidding any such crime; or who, in any manner, teaches, advises, counsels, aids, or encourages any person to enter into bigamy, polygamy, or such patriarchal, plural, or celestial marriage, or to live in violation of any such law, or to commit any such crime; or who is a member of or contributes to the support, aid, or encouragement of any order, organization, association, corporation, or society which teaches, advises, counsels, encourages, or aids any person to enter into bigamy, polygamy, or such patriarchal or plural marriage, or which teaches or advises that the laws of this State prescribing rules of civil conduct are not the supreme law of the State; nor shall Chinese or persons of Mongolian descent, not born in the United States, nor Indians, not taxed, who have not severed their tribal relations and adopted the habits of civilization, either vote, serve as jurors, or hold any civil office.

It is perfectly apparent to my mind that this constitutional condemnation not only of polygamists, but of the Mormon Church as an organization which teaches, advises, counsels, encourages, and aids persons to enter into polygamy has been upheld by the highest judicial tribunal of the land. The additional element of the prohibition of the constitution forbidding service on juries is already a part of the United States statutes, being found in section 5 of the Edmunds act, so called, as I have already shown; therefore this can not reasonably be urged as establishing a substantial difference between the Idaho statute and the constitution on which it is proposed to admit the State.

The decision by the Supreme Court in Davis *vs.* Beeson will no doubt be sufficient to convince any one not determined on entertaining a contrary view that it is competent for a Territory to deny suffrage to members of the Mormon Church, but I desire as matter of judicial history, as well as of interest, to remind the House that since 1887 two of the courts in our Territories, presided over by eminent men in their localities, have passed upon this question of the character of this Mormon Church. The question has been brought squarely before them whether this church in deed and in fact is a criminal organization, and in both of those cases it has so decided. One of them was decided in Utah by Judge Anderson, an eminent citizen of Iowa and a distinguished jurist, and he held after a careful review of the question that this church does teach men that crime is a religious duty and it is thereby a criminal organization.

Mr. SWENEY. And he a Democrat, too.

Mr. STRUBLE. Yes, and he a Democrat and an appointee of Mr. Cleveland, and here is his summing up of the case:

The Mormon Church teaches—

First. That it is the actual and veritable kingdom of God on earth, not in its fullness, because Christ has not yet come to rule in person, but for the present he rules through the priesthood of the church, who are his vicegerents on earth.

Second. That this kingdom is both a temporal and spiritual kingdom, and should rightfully control and is entitled to the highest allegiance of men in all their affairs.

Third. That this kingdom will otherthrow the United States and all other Governments, after which Christ will reign in person.

Fourth. That the doctrine of "blood atonement" is of God, and that under it certain sins which the blood of Christ can not atone for may be remitted by shedding the blood of the transgressor.

Fifth. That polygamy is a command of God, which, if a member obeys, he will be exalted in the future life above those who do not.

Sixth. That the Congress of the United States has no right under the Constitution to pass any law in any manner interfering with the practice of the Mormon religion, and that the acts of Congress against polygamy and disfranchising those who practice it are unwarrantable interferences with their religion.

NOT FIT CITIZENS.

Can men be made true and loyal citizens by such teachings, or are they likely to remain so, surrounded by such influences? Will men become attached to the principles of the Constitution of the United States when they hear the Government constantly denounced as tyrannical and oppressive? It would be as unreasonable to expect such a result as it would be to expect to gather grapes from thorns or figs from thistles.

It has always been and still is the policy of this Government to encourage aliens who in good faith come to reside in this country, to become citizens; but when a man of foreign birth comes here and joins an organization, although professedly religious, which requires of him an allegiance paramount to his allegiance to the Government, an organization that impiously and blasphemously claims to be the Kingdom of God, to control its members under His immediate direction, and yet teaches and practices a system of morals shocking to christian people everywhere, and under which the marriage of a man to two or more sisters, or to a mother and daughter is sanctioned, an organization that sanctions blood atonement as a means of grace and murder as a penalty for revealing the secrets of its ceremonies, and which for nearly half a century has refused to acknowledge the supremacy of the United States or render obedience to its laws, it is time for the courts to pause and inquire whether such an applicant should be admitted to citizenship.

The evidence in this case establishes unquestionably that the teachings, practices, and aims of the Mormon Church are antagonistic to the Government of the United States, utterly subversive of good morals and the well-being of society, and that its members are animated by a feeling of hostility towards the Government and its laws, and therefore an alien who is a member of said church is not a fit person to be made a citizen of the United States.

The application of Frederick W. Miller, Henry J. Owen, John Berg, Charles E. Clissold, Niels Anderson, Carl P. Larsen, Thomas M. Mumford, John Garbett, and Arthur Townsend to become citizens is therefore denied.

THOMAS J. ANDERSON,
Associate Justice Supreme Court and Acting Judge Third Judicial District.

The other decision was made by Judge Berry in Blackfoot, Idaho, in October, 1888, in the case of Wooley *vs.* Watkins, the only question being whether the Mormon Church is a criminal organization. It appears that in this case it was claimed that a reformation had taken place in the church. On a full hearing and argument Judge Berry, after summing up the facts, said:

I therefore conclude that the Church of Jesus Christ of Latter-Day Saints, commonly known as the Mormon Church, is an organization whose teachings and doctrines are within the inhibition of this law—

Speaking of the election law of Idaho—

that it is a criminal organization; that its doctrines and teachings have not been repealed, abrogated, or changed in this Territory, so as to in any way affect such organization in this Territory or elsewhere, and that membership in such organization is inconsistent with the right of such members to vote under the law.

The judgment in this case was affirmed on appeal to the supreme court of the Territory (22 Pacific Reporter, page 106). Following this, as I have shown, Judge Anderson in Utah met the same issue, and, as will be seen from his decision, in a direct and unmistakable manner entered judicial condemnation of the Mormon Church.

Now, the argument I wish to urge at this point is this: That whatever tenderness, whatever conservatism you gentlemen on that side of the House may have experienced, whatever may have been your reluctance to enact this rigid legislation in the endeavor to suppress the vile and iniquitous system of polygamy, the legislation in the Forty-ninth Congress has proved ineffectual, and since that time the courts in those Territories and lately the Supreme Court of the United States have sustained the rigorous propositions embodied in this Idaho constitution.

I appeal to gentlemen on that side of the Chamber, with these judicial adjudications made since the Forty-ninth Congress passed that law, with their professed abhorrence of the iniquitous system of polygamy, and their professed desire to legislate for the best and highest interests of the people of this Republic, I appeal to them whether they will hesitate to-day in going with us, supported as they are by these three decisions, each made by an eminent Democrat, holding this class of legislation to be constitutional and proper.

I do hope—though I think it may be hoping against the inevitable—that there will be few gentlemen on that side of the Chamber, in view of the necessity that exists for this legislation and in view of these adjudications and their reasonableness—I do hope, I say, that there will be but few, if any, gentlemen who will stand up here and say, "We are against polygamy always, but we can not vote for its suppression as proposed by this constitution." This constitution has been sustained in nearly its extremest provisions by respectable courts. Its constitutionality is no longer a question of speculation. It is no longer a question of conjecture. It is no longer a question of doubt. It is beyond all doubt. And now, for one, I feel like appealing to you gentlemen to go with us in support of this bill and aid in striking another blow at the vice of these people.

Gentlemen object to this constitution and say, in substance, they oppose it because it does not provide the machinery and details of legislation or the processes by which the guilty shall be deprived of the right to vote or how they shall be denied the suffrage.

Why, Mr. Speaker, these gentlemen know very well that in forming a constitution the framers can only deal in abstract principles. The constitution is not a thing of legislative detail. It is one of fundamental principles, and that is all that the framers of such an instrument should undertake to do, namely, to lay down general principles for the government of the people in the jurisdiction over which the constitution is to obtain.

This constitution, like all others, I may say, provides for the passage of laws to effectuate the principles it enunciates. By section 15 of article 21 it is provided that—

The Legislature shall pass all necessary laws to carry into effect the provisions of this constitution.

Now, sir, our Democratic friends, as I have said, complain that the

details of legislation are not embodied in this constitution in a way to enable them to see whether outrages are to be perpetrated by the people of this State in years to come in the administration of their laws. But they have upon the statute-books of Idaho a law, which has been referred to here, which does deal with the question of details. It provides in substance that a voter on complying with the law in respect to taking the oath and registering may vote, and his oath simply declares that he is not a polygamist or a member of a polygamous society advocating that or any other crime. On compliance with this law he may deposit his ballot, and the consequence of the violation rests in a criminal proceeding that may be instituted against him if he shall be guilty of perjury.

I say, Mr. Speaker, that upon no reasonable hypothesis, upon no common-sense view of the case, upon no view that appreciates the intelligence of the people occupying this Territory, will it be presumed that the Legislature of Idaho, even under this constitution, will enact anything but a reasonable statute of details to effectuate this fundamental principle of the organic law.

But, sir, I must pass on, for I find I shall not have time to develop some of the points upon which I would like to speak. To go again to the character of the Mormon Church, let me say that it is a criminal institution any one must admit, I think, who will read section 132 of the Mormon book, entitled "Doctrines and Covenants," being an alleged revelation to Joseph Smith on the subject of polygamy. It will be found on pages 423, *et seq.* of that book, and purports to have been made on July 12, 1843, and opens up in the following style:

1. Verily, thus saith the Lord unto you, my servant Joseph, that inasmuch as you have inquired of my hand, to know and understand wherein I, the Lord, justified my servants Abraham, Isaac, and Jacob, as also Moses, David, and Solomon, my servants, as touching the principle and doctrine of their having many wives and concubines:

2. Behold! and lo, I am the Lord thy God, and will answer thee touching this matter:

3. Therefore, prepare thy heart to receive and obey the instructions which I am about to give unto you: for all those who have this law revealed unto them must obey the same:

4. For behold! I reveal unto you a new and everlasting covenant: and if ye abide not that covenant, then are ye damned; for no one can reject this covenant and be permitted to enter into my glory.

5. For all who will have a blessing at my hands shall abide the law which was appointed for that blessing, and the conditions thereof, as were instituted from before the foundation of the world;

6. And as pertaining to the new and everlasting covenant, it was instituted for the fullness of my glory; and he that receiveth a fullness thereof must and shall abide the law or he shall be damned, saith the Lord God.

* * * * * * *

19. And again, verily I say unto you, if a man marry a wife by my word, which is my law, and by the new and everlasting covenant, and it is sealed unto them by the Holy Spirit of promise by him who is anointed, unto whom I have appointed this power and the keys of this priesthood, and it shall be said unto them, Ye shall come forth in the first resurrection; and if it be after the first resurrection, in the next resurrection, and shall inherit thrones, kingdoms, principalities, and powers, dominions, all heights and depths—then shall it be written in the Lamb's Book of Life that he shall commit no murder whereby to shed innocent blood, and if ye abide by my covenant and commit no murder whereby to shed innocent blood it shall be done unto them whatsoever my servant hath put upon them, in time and through all eternity, and shall be of full force when they are out of the world; and they shall pass by the angels and the gods which are set there, to their exaltation and glory in all things, as hath been sealed upon their heads, which glory shall be a fullness and a continuation of the seeds forever and ever.

20. Then shall they be gods, because they have no end; therefore shall they be from everlasting to everlasting, because they continue; then shall they be above all, because all things are subject unto them; then shall they be gods, because they have all power and the angels are subject unto them.

21. Verily, verily, I say unto you, except ye abide my law, ye can not attain to this glory.

* * * * * * *

26. Verily, verily, I say unto you, if a man marry a wife according to my word, and they are sealed by the Holy Spirit of promise, according to my appointment, and he or she shall commit any sin or transgression of the new and everlasting covenant whatever, and all manner of blasphemies, and if they commit no murder, wherein they shed innocent blood, yet they shall come forth in the first resurrection and enter into their exaltation, but they shall be destroyed in the flesh and shall be delivered unto the buffetings of Satan unto the day of redemption, saith the Lord God.

27. The blasphemy against the Holy Ghost which shall not be forgiven in the world, nor out of the world, is in that ye commit murder wherein ye shed innocent blood, and assent unto my death, after ye have received my new covenant, saith the Lord God; and he that abideth not this law can in no wise enter my glory, but shall be damned, saith the Lord.

The following clearly teaches and encourages crime:

61. And again as pertaining to the law of the priesthood: If any man espouse a virgin and desire to espouse another, and the first give her consent; and if he espouse the second, and they are virgins, and have vowed to no other man, then he is justified; he can not commit adultery, for they are given unto him; for he can not commit adultery with that that belongeth unto him and to no one else.

There are more paragraphs of this alleged revelation that might be of interest, but these suffice for the purpose in view. It will be seen that the men who will take plural wives and obey this so-called law are to be above the angels in heaven, are to be as gods. If they obey as is commanded in this revelation, they shall have this supreme position in the world to come, besides having all that earth can afford.

Mr. Speaker, it is to my mind horrible that a church should be tolerated that imposes upon the consciences of its men and women the doctrine that if they would have the best that God can give them, here and elsewhere, if they would be saved beyond any question, it they would rule as kings and priests they must commit the crime of polygamy. That doctrine has been preached day after day and year after year by the apostles, the head men of this church; and, as I have said, they have exemplified it by their practice. Still my friend from Missouri [Mr. MANSUR] says, "It does not make any difference about that, because only a few of those people practice polygamy."

Ah, Mr. Speaker and gentlemen of the House, the "few" are the highest, the most exalted in the church; the "few" are those of most power in business and in spiritual things; the "few" are the men who are to have the best on earth and the greatest promise of heaven. And shall we say that an institution of this kind, the head, the president, the apostles, the influential men of which have their wives to the number of anywhere from two to twenty or more, does not amount to much after all, and this, too in the face of a pretended declaration of God that their example must be followed if their membership would attain the great things in this life and the next? Do you wonder that the courts have held this institution to be criminal? Do you wonder that Judge Anderson so held, that Judge Berry so held? Do you wonder that Judge Field, speaking the unanimous voice of the Supreme Court of the United States, has practically said that this is a criminal institution?

Mr. Speaker, my time is about to expire. I should have been glad to be permitted to pursue in a more leisurely way the line of argument I have marked out. In conclusion I now appeal to this House—both sides of it—to do right upon the pending bill, and in so far as this body can go in that direction to admit Idaho into the Union, for her people have upon this important problem, the one uppermost in this debate, as well as every other essential qualification for statehood, shown themselves worthy to receive such judgment at our hands.

Samuel Sullivan Cox.

REMARKS
OF
HON. CHARLES S. BAKER,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1890,

On the resolutions of respect to the memory of Hon. Samuel Sullivan Cox, late a Representative from the State of New York.

Mr. BAKER said:

Mr. SPEAKER: Inspired by a sentiment which is world-wide, we have to-day laid aside the active duties of legislation to afford an opportunity to his former associates to testify to their esteem and appreciation of the man and distinguished legislator and to spread upon the record evidence of the exalted place held by Samuel S. Cox in the estimation of his countrymen.

It has been well said that sentiment underlies everything that is beautiful, grand, or true in life. It is the foundation and keystone of governments and is the inspiration of all poetry. It has driven nations to war and invited the white-winged dove of peace to restore goodwill among men. Sentiment has caused the overthrow of empires and given birth to republics. Inspired thereby, men and women have endured persecution with joy, the dungeon with gladness, and suffered martyrdom, gaining at once mortal fame and eternal bliss. Without sentiment there would be no sunshine in life, the home and the family circle would be stripped of that beautiful faith in the divine promise of a reunion in the better land.

Under the sweet and elevating influence of sentiment the promises of Holy Writ have been made to encircle, like a band of light, the whole world and led heathen nations to embrace christianity in lieu of barbarous practices. It gave us the story of the Prodigal Son and Calvary. It is the inspiration of divine law and the enacting clause of human decrees. Without it legislative enactments would be but dead letters. Its beautiful promptings constrain us, when one of our number has passed through the Dark Valley, to pause in our labors and pay tribute to his virtues and forget, if there be any, his errors. On this occasion not only we, his late colleagues, but our nation and other nations unite in tender and loving tribute to a pure and noble man. He possessed the rarest graces of mind and heart. He lived and labored so that all those graces will continue to bless the world through time.

Mr. Speaker, like all his associates in the Congresses in the past three decades, I feel constrained to spread upon the pages of history the highest tribute of man to man. It was my privilege to become an acquaintance in the Forty-ninth Congress. I had known and honored the man for many years. Then he made me feel that he was my friend, and by that warm and genial nature which made him loved of all his fellows won my friendship and esteem. I concur in every word that has been said in his honor on this occasion; and would that I possessed the ability to paint in more lasting colors the beautiful flowers that have been here laid upon his grave! What a rich legacy he leaves to the dear one who survives!

My desire is briefly to emphasize the value and helpful character of the services given by Mr. Cox in his capacity as a member of this House in the last Congress in securing statehood for the Dakotas, Montana, and Washington. In the Fiftieth Congress Mr. Cox was, with myself, assigned to serve on the Committee on Territories, but, owing in a large measure to his duties as chairman of the Committee on the Eleventh Census, he soon retired as a member of the important committee which was to deal with the new States, assuring me, however, of his hearty co-operation to the end that those States should be admitted at the earliest possible moment.

Faithfully and ably did he fulfill his promise, as the record shows, going even to the point of incurring the severe criticism of his political associates. He was greater than his party, and by his lofty and patriotic statesmanship insured victory and won a monument of fame and praises from all the people of the great Northwest. We were both invited to visit the Dakotas in the summer after the adjournment of the Fiftieth Congress. He was permitted to go, and the people at Huron had the privilege of hearing an oration from him July 4, copies whereof he sent me. In a letter to me, dated Washington, April 4, Mr. Cox made allusion to the proposed trip to Dakota, a letter characteristic of him, and so like himself that I am constrained to quote. He says:

I have been speaking around the country some since adjournment, but have gotten back to my home in Washington again. I sent you one or two copies of some remarks which I made, bound up in green with a golden harp. You can touch the harp at your leisure, and bring forth any harmonious sounds that you think suitable to the sentiment on page 30.

At the instance of Mr. Cox, I had moved in the closing hour of the Fiftieth Congress his resolution for a committee on the part of the House to represent Congress at the then approaching centennial to be celebrated in New York City April 30. On the 24th of March Mr. Cox wrote me as follows:

WASHINGTON, *March* 24, 1889.

MY DEAR MR. BAKER: You perhaps may have noticed that in the proceedings of the last day of the session just closed (see RECORD of March 5, page 2965) you were named for the committee on behalf of New York State to attend the centennial at New York City on the 30th of April next. I do not know what part I may take in it. I do not know that I shall take any part. But I would like you to be on hand to represent the State, and if I am not in the city of New York it will be because I will be off on some lecturing excursion to which I am invited out West. I am invited to go to Huron, Dak., to orate on the 4th day of July next. I have not accepted. I judge the invitation is getting a little old, but I will find out about it. What are your arrangements for the summer? It would be nice if you were out there.

Yours, with respect,

S. S. COX.

In his letter of April 4, he refers to the centennial, from which I quote, humor and all:

I saw Mr. John A. King to-day, who has charge of this end of the centennial matters which comes off at New York on the 30th instant. He said every arrangement would be made to make it pleasant for you and your confrères on the committee of Congress. There are 42 members and delegates to attend the dinner. But I do not believe more than half of them will be there, and some of them very likely will not have such appetites as to frighten the gentlemen regulating the festivity and the dancing on the occasion. I told Mr. King that you would be on hand, and I think you will have to take charge of it as there is no special chairman, unless it be the first named from Alabama, and Brother OATES will not be there, but General WHEELER may. Of course General WHEELER, so far as regards ponderosity, would out-rank you. So you must be prepared to defer to these small men on some occasions.

On the 10th of June my good friend remembered to write me, saying: "I am preparing to go west for the 4th of July in Dakota, and propose to advise you," concluding with the words, "I will be in Dakota (Huron) on the 4th of July sure." This was the last of a pleasant correspondence commencing February 8 preceding, when in a pleasant note he sent me for my wife, in fulfillment of a previous offer, a "bit of embroidery made by the hand of little Turkish refugees who are moving on Asia out of Europe," concluding, "if you will accept it I shall be very happy."

Mr. Speaker, when the wires flashed over the world the sad tidings of the death of him whose memory we honor, every person whose good fortune it was to know him personally lost a friend, the country a statesman and patriot, and the world one whose life and labors will prove a benediction to generations yet unborn.

Died in the vigor of manhood,
Gone in the strength of his years,
Ere the shadows had lengthened to twilight,
Or the pathway been blinded by tears.
Rich with the ripened affection,
Matured and perfected by time,
With hopes that had reached the fruition,
Life seemed a rhythm sublime.

Like a ship in the midst of the ocean,
With banners and streamers afloat,
With unseen islands beneath it,
And unseen shoals all about.
Not a ripple gave hint of the danger;
Not a cloud in the blue of the sky
Told the story of coming disaster
That lurked in the tempest hard by.

In the noontide of life he has left us;
The crown and the goal have been won,
And the hands that have wrought for the Master,
With toiling and labor are done.
Farewell to the friend brave and tender;
Farewell to the love tried and true;
Death may sever, but can not efface it;
In heaven it will blossom anew.

Pensions.

SPEECH
OF
HON. DAVID B. HENDERSON,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

On the bill (S. 389) granting pensions to soldiers and sailors who are incapacitated for the performance of labor, and providing for pensions to widows, minor children, and dependent parents.

Mr. HENDERSON, of Iowa, said:

Mr. SPEAKER: I will detain the House but a moment, as I am for legislation and not talk. During the Democratic Congresses the soldiers were given plenty of talk, some refreshing and much that was cruel, but they got no relief, excepting always the soldiers of the Mexican war. In this Congress we have been giving the soldiers bread, and we are doing it to-day and with liberal but a just hand.

He who will not support this bill to-day need never profess friendship for the Union soldier, his widow, and his orphans. He who attempts to antagonize it with other measures does so for personal or party ends (whether he knows it or not), and will strike at the hearts of the defenders of the Union.

This is a service and a disability bill. Its enactment into law will enable the country to say to its disabled defenders, "Not one of you is neglected." It goes further than any of us hoped for in the face of the cry for a reduction of the Federal income and in the presence of other just and absolutely needed demands upon the public purse.

If this bill passes, as it will, in spite of Democratic opposition, but with every Republican vote, the soldiers will have cause for rejoicing around the camp-fires throughout the land.

Pensions.

SPEECH
OF
HON. ORMSBY B. THOMAS,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

On the bill (S. 389) granting pensions to soldiers and sailors who are incapacitated for the performance of labor, and providing for pensions to widows, minor children, and dependent parents.

Mr. THOMAS said:

Mr. SPEAKER: This bill does not suit me in a great many particulars; I would have preferred a per diem rated service-pension bill; but, sir, I am satisfied this is the best possible bill that can now be passed. Especially do I think so in view of the action of the other House of this Congress in relation to general pension legislation.

I regret that we can not do as full justice to the men who saved the country in time of its dire peril as we, in my judgment, should do; but, sir, this is a bill far in advance of anything that has heretofore been presented to Congress. It has not the bad features of the dependent pension bill passed by a Democratic Congress and which was vetoed by a Democratic President, but vetoed because the Democracy refused to help the poor and dependent.

This bill now before us gives relief to all that would have been benefited by the dependent pension bill, doing this in a way not to humiliate the soldier; and it goes much further and pensions all honorably discharged soldiers who have arrived at the age of sixty years. It also pensions the widows of soldiers when they have arrived at the age of sixty years or when they are in dependent circumstances, without regard to the cause of death of the soldier. In fact, this is a most excellent bill, one that could not be bettered, in my judgment, except that I think we should have gone a little further. But no friend of the soldier is willing to throw away the chances and advantages offered by this bill because it is impossible to get all he wants.

If this House should pass the per diem rated pension bill it would beyond doubt defeat any pension legislation for this session. Those who now press that bill upon us do not, in my judgment, do so because they are friendly to the soldiers, but to defeat any general pension legislation whatever. I venture to predict that when the Democratic side come to offer the per diem pension bill as a substitute for the pending bill, they will do it as a trick, not in earnest, but will attempt to put us in the wrong by some sort of maneuvering. I predict that after that kind of a substitute is offered the yeas and nays will be called, and the Democratic side will remain silent, not voting. This will be a more transparent trick, which will deceive no one.

I regret that an important measure like this should be made the football of politicians. The Republican party has always been and is still willing and anxious to do justice to the soldier. To-day, if this bill shall pass, two-fifths about of the entire revenue of the Government will be devoted to the payment of pensions to the soldiers and their widows and orphans.

And, sir, the Republican party do not propose to stop there. How is it with the Democratic party? No one could have been a looker-on to-day in this House without a conviction that the Democratic party was opposed to all increase of pension, and only desired to present amendments to this bill to embarrass and if possible kill it. This illustrates a characteristic difference between the two parties: One, the Republican party, stands out honestly and fairly with its propositions, doing the best it can. The other party, not having the courage to carry out its convictions, does by indirection what it dares not do in an open manner. No one will be deceived, and the soldier the least deceived of all by such conduct.

Pensions.

SPEECH
OF
HON. AARON T. BLISS,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

On House bill 8279, known as the Morrill service-pension bill, as a substitute for Senate bill 389, known as the dependent pension bill.

Mr. BLISS said:

Mr. SPEAKER: As I sat here listening to the eloquent protests of my Democratic friends against the action of the Republican party in passing this Morrill bill instead of a larger measure I could not help wondering what had brought about this change of heart. Was it the result of the elections in 1888 or was it the fact that the House had passed out of the control of the Democratic party, and when there was no danger of their being held responsible for legislation they could indulge in the luxury of demagogism? While I myself personally am in favor of a service-pension bill and introduced such a bill in this Congress, I cheerfully vote for this measure in the belief that it is a step in the right direction, a step in the direction of substantial justice for the men who saved this Government.

But it comes with ill grace from gentlemen on the other side to criticise the gentlemen on this side for not passing a more radical measure when whatever has been done in the direction of pension legislation or whatever shall be done in the future has and will be done against the earnest and determined opposition of the majority of the Democratic party, excepting only the Mexican war service-pension bill, which was for the benefit largely of the men who, since their service in that war, had undertaken to destroy the Government. And during the long years of Democratic control of this House the only bill passed which approaches this one, the dependent bill, passed through the efforts and votes of the Republican party, with the help of a few loyal Democrats, was vetoed by a Democratic President. And yet the Democratic party will pose before the country to-day as the champions of the loyal soldiers of this country and shed crocodile tears because they are not given an opportunity to vote for a service or a per diem pension bill.

I venture to predict, Mr. Speaker, that when we come to vote on this measure the majority of the Democratic party will be found voting "no" or not voting at all, in the mad endeavor to defeat the bill by breaking a quorum, while the Republicans will be found to a man standing true to the pledges of the party. If the Democratic party is the true friend of the soldier they will be found voting for every measure that is in his interest, and if they can not get all they want now, take what they can and hope for more next time. That is my position. I do not consider that I compromise my position as an advocate for a service pension pure and simple because I vote for a measure that approaches it. I will continue to vote for every bill that goes to the relief of the veterans of the late war, and as each step is gained work for the next. I am satisfied that the end I seek can only be secured by gradual advance, and I do not propose to lose any advantage by sulking because I can not get all I want at first.

The gentleman from New York [Mr. TURNER] bases his opposition to this bill on the fact that he does not know where the money is coming from to meet its provisions. He figures with marvelous accuracy apparently, and tells us that the surplus will all be gone after we get through paying for public buildings and then there will be nothing left with which to pay the soldiers. I dispute that fact; but, admitting its truth, I do not agree that this Government is dependent upon its surplus. Did it have a surplus when it undertook to crush a gigantic rebellion? This Government has a credit equaled by none in the world, and if it is necessary we can draw upon that credit to redeem the promises solemnly made to these men when they were battling for the preservation of this grand nation. These men preserved the credit of this Government and made it what we find it to-day. Why then can we not stop paying the bondholders for awhile and issue more bonds, if necessary, to meet these just demands. Our bonds are selling to-day at an enormous premium. How would they be quoted to-day in the markets of the world if the beneficiaries of this bill had for a moment flagged in their loyalty and devotion to the nation.

If it is admitted, and it is admitted, that the soldiers of this country are the preferred creditors of this Government, then no question of the amount of money required to meet that obligation can be considered. This claim has remained too long unpaid, and it is time that Congress foreclosed this debt of honor, even if it takes the last cent in the Treasury. Who would attempt to quibble over the payment of any money obligation of this Government on the ground that it would require too many dollars? Who has ever had the temerity to offer a compromise with the bondholders? Are the men who loaned their money on the faith of the strongest Government of the world to be preferred to those who gave their hope of fortune, profession, health, and even life a willing sacrifice on the altar of country?

There is no method that could be devised to more quickly and surely relieve the present depressed condition of affairs than to pass this bill. The money appropriated would go to every town and hamlet throughout the United States and would quickly seek the natural channels of trade. The old soldiers are not hoarders of wealth, and the money paid to them would not be tied up in other enterprises, but would pass through the groceryman's till to swell the volume of circulating currency.

The old soldier did not learn to be penurious on $13 a month, paid in a depreciated currency. When battling for the life of our country they were not paid in gold; the credit of the Government was good enough for them. They accepted that credit once and by their deeds of valor raised the word of this great nation to a level with gold, and redeemed the Government's pledge to foreign and domestic banks, and now they ask, when they are no longer able to take care of themselves, that the people of this country shall redeem their pledges made to their defenders that as long as the Government endured they should never want.

The soldiers of this country miss the voice and influence of the greatest champion they have ever had either in or out of Congress. I refer to that matchless leader on the field and in the Senate, the late General John A. Logan. His voice was ever raised in their behalf. He knew by experience what they had suffered. None knew better than he how the experience of four years in the field sapped the vitality of men and shortened their lives; and he never faltered in his advocacy of what he considered simple justice to them. He was the typical volunteer and had stood side by side with his men, shared their sufferings, and led them in danger. In my humble way I prefer to follow his lead in pension legislation, and he found no bill too radical for him to support.

Pensions.

SPEECH
OF
HON. EDWARD H. FUNSTON,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

On the bill (S. 389) granting pensions to soldiers and sailors who are incapacitated for the performance of labor, and providing for pensions to widows, minor children, and dependent parents.

Mr. FUNSTON said:

Mr. SPEAKER: I desire a few moments only for the purpose of explaining my vote more than for the discussion of the merits of this bill.

It is doubtless well known to the members on this side of the House that I have favored and worked most earnestly for a per diem service-pension bill. And now that I am about to support a measure having none of the per diem features in it I think it is due myself that I should give some reasons for supporting this measure.

Mr. Speaker, if I had my way in this matter there would be before the House at this moment a per diem service-pension bill, having none of the restrictions as to age and granting to each man a pension in accordance with the length of time of his service. I can see no other principle on which justice can be meted out to all and every man satisfied. The man who served his country four years certainly ought to have a larger pension than the man who served it only ninety days. This proposition seems so reasonable to me that I can not see how any man on this floor can dispute it. It is certainly self-evident and therefore needs no argument.

Now, as to restricting the beneficiaries to those who have reached or

shall reach the age of sixty-two, I can see no reason for this, unless it be that the committee hope that before many of the old soldiers have reached the age of sixty-two most will have gone where they need no pensions.

I am aware it is urged that a healthy man does not need help until he has reached the age of sixty-two. This is possibly true of those who are engaged in business other than manual labor. The lawyer or the doctor is doubtless at his best at or near sixty-two, and so also with the banker or teacher and those who hold clerkships. But it should be borne in mind that there are comparatively few old soldiers who are lawyers or bankers or teachers. They had no time to study law or banking or to make teachers of themselves. The days they might have spent in qualifying themselves for such places were spent on the march and on the tented field, so that to-day the great body of old soldiers are laborers on farms, in workshops, and engaged in various other vocations which require hard manual labor.

Will any man upon this floor assert that the common laborer who has toiled all his life with pick-ax and shovel and plow is at his best at sixty-two? Certainly no one cares so little for his reputation for good sense as to make any such assertion. Physiologists tell us that the human muscles begin to shrink and lose their elasticity at the age of forty. At the age of forty-five so little account is the man for the performance of hard labor in the way of long marches and the fatigue of the camp that the Government exempts him from draft. And yet this bill virtually says he is able to toil and sweat and earn his bread by the hardest knocks until he has reached the age of sixty-two. So much, Mr. Speaker, against the bill.

I have only said this much to justify myself in the efforts I have made for a bill which I believed was better than this one. Upon the whole, however, this is not a bad bill. The most we can say against it is that it is defective, because it does not go far enough in the right direction. The committee has already admitted this much by their consent to reduce the age to sixty instead of sixty-two. If it were safe to offer other amendments, which would improve the bill, I feel quite sure that the majority on this side of the House would be in favor of so doing.

There are two good reasons, however, why further amendments than the one reducing the age to sixty can not be made: First, because the Republicans of this House from all parts of the country have harmonized, or rather, I should say, compromised, on this bill; second, because any amendment of a material character, save the one agreed upon, would be changing the character of the bill, and, like changing front in the presence of the enemy, would be almost certain defeat.

Gentlemen on the other side have offered amendments which seem harmless in themselves, and doubtless when the previous question is ordered they will move to recommit, with instructions to the committee to bring in a per diem service-pension bill. We all understand what such movements mean. They mean delay and confusion and perhaps absolute defeat of all general pension legislation.

Why these amendments now to Republican measures if it is not to deceive the country and make believe that the Democrats of this House are in favor of a per-diem service-pension bill and the Republicans opposed to it or to load down the bill and defeat it? If that is the real sentiment of that side of the House why did they not pass or offer to pass a per diem pension bill in the Fiftieth Congress when they had not only a large majority in the House, but had the President also?

Mr. Speaker, we have the opportunity of placing at least 350,000 old soldiers on the pension-roll, and 80,000 widows, besides increasing the pension of about 90,000 soldiers who are now drawing less than $8 per month, and of providing for all of any age who are disabled from any cause.

Let us not be deceived by the "Greeks bearing gifts." Let us vote down every amendment from the other side and save what we have, though it be not all we desire.

Pensions.

SPEECH
OF
HON. WILLIAM J. CONNELL,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

On the bill (S. 389) granting pensions to soldiers and sailors who are incapacitated for the performance of labor, and providing for pensions to widows, minor children, and dependent parents.

Mr. CONNELL said:

Mr. SPEAKER: This bill does not meet my entire approval, but I propose to support it. I for one am willing in this fight to stand by the side of such veterans as the gentleman from Iowa [Mr. HENDERSON] and the gentleman from Ohio [Mr. BOOTHMAN] and vote for this bill as the best possible legislation that can now be secured. I wish it were possible to obtain for the brave boys in blue who served their country in the dark days of our nation's peril the full measure of recognition which their valiant deeds and heroic services merit. I would gladly grant them a more liberal allowance than is now proposed.

I strongly favor the passage of a general service bill in addition to a liberal disability-pension bill. I do not propose, however, to join the ranks of the other side when I know that the opposition to this bill is insincere, and that the real purpose of the gentlemen on the other side is to delay and finally defeat all pension legislation. With but few exceptions those on the other side of this House who oppose the passage of this bill belong to one or the other of two classes. First, those who give honest expression to their sentiments by boldly declaring against any and all pension legislation which will increase the amount now being paid to the veterans of the late war of the rebellion. Second, those who dishonestly pretend as the reason for opposing this bill that they are in favor of a general-service pension bill without any limitation or restriction whatever.

Now, Mr. Speaker, if the gentlemen of the latter class were sincere, I with others on this side of the House would gladly join them. But we know that they are insincere, we know that the real purpose of their opposition is to defeat any pension legislation by the present Congress, and knowing this we do not purpose to aid or assist them in their unworthy purpose.

Pensions—"The Morrill Pension Bill."

"We go to the seat of government and we tell the men there to bring from its temple the scales of justice and put into one side the absolute need of the men who are in want to-day, and put into the other the promises of the men who are in office of all parties, so that the scales balance, and we will be content."—*General Alger, Commander-in-Chief of the Grand Army of the Republic.*

SPEECHES
OF
HON. ELIJAH A. MORSE,
OF MASSACHUSETTS,
AND
OF KANSAS,
IN THE NATIONAL HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890.

On the bill (S. 389) granting pensions to soldiers and sailors who are incapacitated for the performance of labor, and providing for pensions to widows, minor children, and dependent parents.

Mr. MORSE said:

Mr. SPEAKER: At the beginning of the present session of the Fifty-first Congress, under the call of States, I introduced a pension bill very similar in its provisions to the bill now under consideration.

I think the country owes a debt of gratitude to the Committee on Invalid Pensions for the exhaustive consideration which they have given this subject. They have given days, weeks, and months of time to listening to the testimony and to the consideration of petitions from soldiers and soldiers' organizations from every section of our great country, and as the result of this exhaustive and patient labor the Committee on Invalid Pensions have reported this bill. While it does not go as far as some desire and while it goes much further than others desire, on the whole it is a conservative, just, and liberal pension bill and will receive my most hearty and cordial support.

This bill redeems the promises made to the defenders of the flag in the hour of the nation's deadly peril, and will undoubtedly meet the approval and receive the indorsement of General Benjamin Harrison, President of the United States. It will bring immediate relief to 149,000 soldiers who are over sixty years of age, many of whom, not already pensioned, are suffering from their army service and increasing disability of years. This bill will bring immediate relief to a large number, thousands of soldiers' widows, who, under the provisions of this bill, will be entitled to a pension without being required to prove, and without being required to furnish impossible evidence, twenty-five years old, that their husbands died from disability contracted in the Army. It will bring joy and gladness to thousands of the classes I have mentioned. It will help to brighten the declining years of many a war-worn veteran who laid his all upon the altar of his country when traitors sought the life of the nation.

It is estimated by the chairman of the Committee on Invalid Pensions that it will require an expenditure of $40,000,000 per annum to meet the provisions of this bill. This money is by no means wasted. It is taken from the rich in the shape of duties and taxation on luxuries and given to the poor and needy. The money goes immediately into circulation, promotes trade, and enhances the prosperity of the whole country.

There are two objections to this bill: First, the charge that the bill is

extravagant and makes too large a demand upon the revenues of the country. To such I say that we live under the best Government on the face of God's green earth; we live in the most favored land that the sun shines upon. Other forms of government expend millions annually to maintain a standing army, to support men in idleness, to support men who produce nothing, except to live on the substance of the people. Shall this great nation begrudge a much smaller sum to pension her citizen soldiery, who with their sons would spring to arms at a moment's notice were the country or the Government in danger from foes without or foes within? No, Mr. Speaker, the money is large, but it is not extravagant, and it discharges an honest debt and obligation of the Government to the men who preserved it. The second objection comes from some of my comrades who favor a universal service-pension bill. A universal service-pension bill may come a few years later. This bill is a service-pension bill for men over sixty years of age, and I believe is all that the revenues of the country can stand at present; and I submit that we do not desire to go so far with pension legislation as to endanger the whole pension system of the country.

The Committee on Invalid Pensions produced this bill, as I have said, after the most exhaustive consideration, and I repeat that it is a just, wise, and conservative compromise of the conflicting views upon this subject.

In answer to the gentleman from New York [Mr. SPINOLA] and in answer to the distinguished gentleman from Illinois [Mr. SPRINGER], who are demanding the most extreme legislation in the interest of the soldiers I ask those gentlemen who profess such great love for the soldiers now, why they did not propose a service-pension bill when they had control of his House for years. And why did Grover Cleveland veto the soldiers' dependent pension bill of the last session? Thank God, we have a President now that does not go fishing on Decoration Day and will sign this bill. No, Mr. Speaker, our Democratic brethren, who have suddenly become the champions of extreme pension legislation, will not deceive the soldiers or the country. Their object in desiring to load this bill with extreme amendments, such as service pensions and reducing the age limit, is transparent. They desire to imperil the entire pension system of the country by these amendments. They desire to make the bill so obnoxious that the country will not sustain us on this side of the House in voting for it or the President in signing it. But they will fail of their purpose.

The soldiers of the country and the loyal and patriotic men of the country understand this question and will be satisfied with this measure. It will meet a large number of cases in my district of soldiers' widows, of disabled soldiers of all ages, and it will add cheer and comfort and sunlight to many of my comrades in the Second district of Massachusetts who have reached the age of sixty. In their name I desire to thank the Committee on Invalid Pensions who have given us this just bill, and I say the Republican party of the nation will score a great victory to-day, because it here and now redeems its promise made to the boys when the life of the nation hung trembling in the balance.

Pensions.

SPEECH

OF

HON. BINGER HERMANN.

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890.

On House bill 8279, known as the Morrill service-pension bill, as a substitute for Senate bill 389, known as the dependent-pension bill.

Mr. HERMANN said:

Mr. SPEAKER: No question before this Congress is to-day so anxiously watched and so patiently waited for as this which proposes a further recognition of the rights, the demands, and the necessities of the patriotic survivors of the war for the preservation of the Republic.

We are confronted at the very threshold of the subject with a diversity of measures, each aiming, but only differing in extent, to accomplish a substantial benefit to the old veterans of the war.

What shall this be? How shall it be distributed?

We have, first, what is known as "the Grand Army per diem pension bill." This includes as beneficiaries all those who have served ninety days in the military or naval service of the United States and have been honorably discharged. It is not the same for all. It is, however, the most just and equitable, as it gives to each pensioner a pension proportionate with the actual services rendered by him to the country. The basis is one cent for each day's service rendered. This is the rate per month. There is, however, this liberal proviso: That as to all those serving for less than eight hundred days there shall be a perfect equality. The soldier serving ninety days shall receive as much as he who served eight hundred days. This far all are equal. This generous exception was evidently with a view of placing all the survivors of the war on the same plane with service pensioners of the Revolutionary war, the war with Great Britain in 1812, and the war with Mexico. Those having served a longer period than eight hundred days would receive a sum exceeding $8 per month in exact proportion as they rendered more days' service.

The per diem pension bill makes no provision for the widows of soldiers dying from disabilities not proved to have been incurred in the service; nor does it provide for the soldiers' minor children left under the same circumstances.

The Morrill service and disability bill as amended gives a service pension to all survivors of the war who have been honorably discharged and who served ninety days in the military or naval service of the Government, provided they shall have reached the age of sixty years. This pension is not contingent upon any disability. The mere proof of service and of honorable discharge is sufficient. It gives a further pension to those soldiers of any age who may be disabled from mental or physical ailment equivalent to the grade established for disability ratings of $8 per month. This disability need not have been incurred in the service. No proof will be required as to the origin of the disability; and all the trouble, time, and expense now unavailingly expended in the effort to supply testimony as to this requirement is avoided.

Thousands and thousands of the most deserving of our country's defenders, and those in most necessitous circumstances, are deprived of the pension provided by law simply because some hospital record has been destroyed, or some comrade has died, or another can not be found who can bear testimony to the incurrence of the injury or disease. All this the bill does away with. There are but two questions asked: Did you serve 90 days in the Army or Navy of the United States during the late war of the rebellion and have you been honorably discharged therefrom? Are you suffering from mental or physical disability equivalent to the grade now established for the rating of $8 per month? To the sick or disabled soldier of any age under sixty years now not pensionable this Morrill bill will give either $8 per month or nothing.

The same bill also advances another class of persons who are prevented under existing laws from the benefit of a pension. These are, first, the widows of soldiers dying from disabilities not incurred in the service The question now substantially asked of the soldier's widow is: Were you the lawfully married wife of the soldier at the time of his death? Did he die from any cause resulting from disability or disease incurred in his military or naval service? A failure to prove either of these conditions is a defeat to the applicant. It matters not how poverty-stricken, or how utterly aged, infirm, or how suffering or needy for medicine or food may be the faithful woman who watched and waited months and often years by the bedside of the sick and helpless soldier husband, or how in the sad and lonely days of the war she toiled in her scantily furnished home to sustain the little ones while the patriotic husband and father was absent on the far distant march or on the battle-field defending the integrity of his country's flag. The existing laws left these deserving women of the Republic to their own resources, the charity of their neighbors, or the alternative of the poor-house. The Morrill bill will remedy this great wrong. The widow of every soldier of the late war for the Union, dependent upon her own labor for support will become the guardian care of the nation. When she reaches sixty years of age the pension is hers whether she is dependent or not. And, secondly, in the event of her death the pension allowed her shall inure to the minor children under sixteen years of age.

These, then, are the two principal measures before Congress for consideration. The first-named is the more radical and far-reaching. The second is in the nature of a compromise and has the merit of providing for the soldiers' widows and orphans not now cared for by any provision of law.

As to the first, it is objected that it unjustly discriminates. The man who performed service in actual hostilities and who was on the march and suffered the privations and hardships of the campaign may receive less than the one who never even left the State in which he was recruited or never experienced any of the dangers of a campaign; that the one who may be a millionaire shall be placed on the same equality with the one who may be the beggar; that the one who may be the sick and disabled shall receive no more than the one who is robust and healthy; that the one who may be the younger shall receive the same as the aged and infirm; that the one who served one hundred days shall receive the same as the one who suffered the exposures of seven hundred days; that the thousands who enlisted in 1865, and after the war was practically closed, should obtain the same life pension as the one who fought in the thickest of the fray.

It is again objected that upon estimates made the per diem bill will create an expenditure of $154,000,000 as against $98,427,000 provided in the present appropriation bill. Another objection is that a general discrimination is made against the policy adopted in reference to the pensioning of soldiers in all other wars of the Republic. The old Revolutionary soldiers those of the war of 1812, and of the Mexican war were all denied a pension until years had elapsed, and then most had reached a certain period in age when the law assumed they were no

longer able to provide for themselves or to engage in the busy competitions in life. The Mexican pension act fixed a limit of sixty-two years. In favor of the Morrill bill it is claimed that it pensions all after sixty years of age, and when they will begin to need assistance, if at all, and that it relieves the soldiers' widows and orphans.

These, then, are the leading propositions, and these are the respective arguments for and against each.

Mr. Speaker, for myself I desire to express a partiality for the most liberal pension legislation which it is possible for this Congress to agree upon. I am one of those who hold to the belief that there is one debt this nation, however rich it may be, can never pay. This is the obligation we owe the patriotic soldiery of the war of the rebellion. As that was the greatest war of ancient or modern times, so was the prize contended for the greatest. In other wars of greatest magnitude, personal ambition, territorial aggrandizement, or political sovereignty was the subject of contest. In our struggle we fought for the life of the Republic, for freedom. What can be greater?

It counts little with me whether a man was old or young, rich or poor, robust or infirm, when he offered himself to the imperiled nation and placed his life at its disposal that free government might survive. I have no qualification and no condition to impose upon him now, after a quarter of a century since the war closed. He may not have served quite as long as his comrade, or he may not be quite as poor, or quite as necessitious, or quite as decrepit. It is enough for me, sir, after these many years, as I look upon his frosted head, and then behold the wondrous nation, with its overflowing Treasury of gold and silver, and its cities of fabulous wealth, and its proud flag with its forty-two stars emblazoned upon its folds, and then upon our 65,000,000 of prosperous and free and liberty-loving people—I say, sir, it is enough for me, when I look upon this marvelous scene, to reflect that none of this were possible had it not been for the brave men who rushed to arms when their imperiled country called.

And when I wander through the nation's beautiful and quiet cemeteries and sadly gaze upon the innumerable graves of those who died that their posterity might inherit the priceless legacy they won, I feel, sir, that it is not for me to distinguish as to those who survive, whether one is more deserving than another of the nation's gratitude. The obligation is to all. Let us pay to all. Let us cancel such of the debt as we can while they survive. They can exist but a few years longer, and soon the last one will be gone. The nation they preserved will go on forever.

Let it not be read in history that we hesitated in the days of our affluence to shower upon these men our richest offerings.

Many who are really antagonistic to this bill decline to support it because of the extra millions required to meet the proposed liberality of Congress. This may be a fitting reply from sordid money-changers, speculative importers of foreign wares, or from the haters of those who wore the blue, but the objection in its full extent is unworthy a grateful and patriotic people.

The Republican party has ever been the devoted and consistent champion of the soldier's interests. It promised its continued fidelity. A party pledge so sacred appeals to me for redemption as strongly as though it were the most honorable individual pledge, and as one member of that party which made its pledge to the old soldiers of the country, I desire to contribute my part toward its fulfillment to the fullest measure. So far it has done its part. The survivors of no other war were more liberally remembered by the nation.

The Revolutionary war closed in 1783. It was not until forty-five years after that a service pension was granted its survivors. The war of 1812 terminated in 1814. It was fifty years after when a service-pension law passed. The Mexican war closed in 1848. In 1887 a service pension was granted those who arrived at sixty-two years of age. This was thirty-nine years after the war. We now propose to pass a service-pension bill granting pensions to survivors of the late war who are or may become sixty years of age. This is twenty-five years after the war. It is true that we are far better able to do this act of justice within this shorter period than as to the previous wars. After the Revolutionary war we were poor. The war debts had to be paid, and following it came the war of 1812, which made us still poorer, and then, when we had paid off the old war debts, came the war with Mexico, followed by the greater war than all, the late war. Now, however, the nation more quickly repaired its misfortunes, and to-day we stand as the chief among the mighty and the rich powers on the globe. We can afford to enter upon a liberal pension legislation in less time than as to previous legislation.

We are also able to pay more liberal pensions. The entire amount of money paid in one hundred years on pensions to survivors of the old Revolutionary war was $38,500,000. This is less by $7,000,000 than one year's payment of pensions will be under the Morrill bill. The whole cost for pensions to survivors of the war of 1812 was $36,310,000. This was less than will be the expenditures under the present bill for one year. The pension cost of the Mexican war so far is $13,000,000. For all these wars we have a total pension payment of $87,810,000, not quite double what the Morrill bill provides for a single year to the survivors of the late civil war.

With the history of these three wars before us we are reminded, however, that they are nothing in comparison with the late war, either as to numbers employed, loss of life, number of battles, severity of conflicts, cost in money, or as to the number, discipline, bravery, and tenacity of the enemy engaged. Numerous battles were fought in our late war in which more men were killed in one engagement than were killed in all the battles of the Revolution or in any other wars of the nation.

It is said that 364,116 died prior to July 1, 1865. There still survive 1,246,089, and of these nearly one-third are on the pension-rolls. Exposures, wounds, and fatigues inflicted upon them more permanent injuries than were suffered by the soldiery of any other wars of the nation. This is especially confirmed by the rapid diminution of their ranks. Commissioner Raum estimates that during the next six years 200,000 of them will be gone! That in eighteen years 720,000 will pass away! Thus it can be realized how soon it will come when not one of the grand old army will remain on earth to remind us of the terrible days when the Union was convulsed in the throes of apprehended dissolution and liberty itself trembled in the balance.

In the face of such estimates it can be seen how soon it must be when the nation will no longer be burdened with pension appropriations for these patriotic men. Then let us be liberal while they do survive among us.

As, however, the great army of which these pensioners formed a part won its victories by reason of its unity, its organization, and its singleness of purpose, so we as a party have likewise achieved in legislation whatever has been gained for the soldier by a united effort and single purpose.

Neither the per diem nor the Morrill pension bill can pass unless struggled for by the united action of the Republican party. Those who in platform and in speech delight in characterizing the old soldiers as "coffee coolers," "bounty jumpers," and "bummers," when pensions are discussed, are not those upon whom the soldier can rely for generous legislation.

The numerous vetoes of the first Democratic President after the war, with their unfeeling allusions to the suffering old veterans, are still remembered. Even the general legislation for a dependent pension was treated with equal hostility. President Cleveland in expressing his objections to it, said:

> It is time to call a halt. We should go back to the original principle established by the fathers of the Republic, that of granting pensions only for wounds, disease, or death contracted while in the line of duty in the military service.

Contrast this sentiment with the broad, patriotic, and just words of the first Republican President, Abraham Lincoln:

> Let us strive on to finish the work we are in, to bind up the nation's wounds, to care for him who shall have borne the battle, and for his widow and orphans; to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations.

"To care for him who shall have borne the battle, and for his widow and orphans" is the text of the Republican party as to the old soldiers. Is has done much for them and it will continue to do much more.

The forty millions which we shall provide to-day could not have been secured without the aid of the Republican party. When the Democratic party were in the majority in the House no such liberal measure as the Morrill bill could for one moment be entertained. Even the dependent pension bill which passed with a united Republican vote was vetoed by a Democratic President and could not be passed over his veto in the face of his Democratic supporters. It will thus be understood that if substantial recognition comes to the old defenders of the Union it must come with the solid backing of the Republican party. Promises can be and are liberally made by the opposition at convention time and in campaigns, but "the proof of the pudding is in the eating." It is the quiet, significant vote which does the work. It is action, not speech, that is wanted. It is results, not promises, which count.

The position of the opposition on pension legislation is like their attitude on the war issues in the North during the great struggle. As Nasby said, "They were for the law, but agin its execution."

Now, then, in conclusion, what course is open to us? Shall we divide upon the two bills before us, some vote for a per diem pension and some for the Morrill bill, with Democratic filibusters and opponents to each, and thus defeat both? Is this what is desired? Or should we not rather unite and rally in solid file for that measure which we know we can unite upon and which is at present practicable?

The old soldiers around me on this floor, from those who were gallant commanders of armies to those who patriotically served in the ranks, all agree that at present, and in view of the exhaustion of the surplus in the Treasury, we had better accept the Morrill bill, and take forty millions, since we can not unite on sixty millions. They say we had better, by this bill, open the doors of the poor-houses of the nation and provide for the old soldier inmates. This we do. They say that we had better, by this bill, provide for those of the old soldiers who are not disabled, when they reach the age of sixty years, as then they will commence, if not before, to feel the infirmities which age brings on, and will be indisposed to wrestle with the more active duties of life. They say we had better announce as the principle and policy of the country, that hereafter no one who served his country in the late war and who

is mentally or physically disabled, from whatever cause or of whatever age or condition, shall be without a monthly allowance from the United States Treasury for the remainder of his days. This the Morrill bill provides. They say that we had better remove all obstacles, all technicalities and limitations to pensions to all soldiers' widows who are now compelled to earn their own livelihood. This the Morrill bill does. They say it is wrong that any soldier's orphan under sixteen years of age should beg when the old defender has gone, and so the Government becomes the parent. This the Morrill bill does. It provides for about four hundred thousand of the old Army who are now unprovided for, disabled, needy, and aged. Is not such a work fit to come from the gods? Is it not a magnificent vindication of the pledges of the Republican party?

What the Republican party promises that it performs. It has never made a pledge that it has not kept. At this session of Congress other legislation involving millions has passed as to those who have lost their limbs in the service, and before we adjourn we shall pass another measure which appeals in loud voice for the pensioning of the survivors of rebel prisons. The inmates of Andersonville, of Danville, of Libby, and Belle Isle will not be forgotten.

I hope ere long we shall see our way to remove the injustice of the repeal of the arrearage act, and thus place all on an equal footing.

And now, Mr. Speaker, since the Morrill bill brings such rich blessings to the most deserving and needy and is a measure upon which the entire party can and will unite and thus accomplish at one session what we have contended for in years, I feel it my duty, in obedience to the numerous requests I am receiving from my constituents for practical relief, to support this bill, and I do so heartily, cheerfully, and gratefully, looking to the future and hoping for such further legislation as it is possible to obtain.

I am proud to have an opportunity of thus recording myself in favor of such meritorious legislation. It is one step more in the redemption of a solemn pledge. It is one installment more paid upon the great debt which the nation can only try to liquidate, but never succeed.

Other nations have had their unselfish defenders and their brave soldiery, but in all history, for patriotic devotion, disinterested sacrifices, and sublime heroism, no age has recorded the superiors of our country's heroes in the late war. In the centuries of remote time the blessings they bequeathed to mankind will still be remembered in thanksgiving and in song.

And as we gaze upon their grassy mounds at Arlington, at Gettysburgh, at Antietam, and other places of last repose, we can well exclaim in the pathetic lines of the poet:

> Seek not for these a separate doom,
> Whom fate made brothers in the tomb;
> But search the land of living men,
> Where shall we find their like again?

Pensions.

SPEECH

OF

HON. JOSEPH E. WASHINGTON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

On House bill 8279, known as the Morrill service-pension bill, as a substitute for Senate bill 389, known as the dependent pension bill.

Mr. WASHINGTON said:

Mr. SPEAKER: I know full well that by many it is considered outrageous and even disloyal to speak in opposition to any sort of pension legislation. Especially is this so when the speaker comes from one of what are called the Southern States. In justice to myself, in justice to the tax-payers whom I represent, I can not suffer this bill to pass without entering my most solemn protest.

Sir, the advocates of this bill confess that it will entail an annual expenditure of between forty-five and fifty millions of dollars. They justify themselves in voting for it on the ground that it will place about five hundred thousand additional pensioners on the rolls. It includes all ex-Federal soldiers who served ninety days and are over sixty years of age, all widows who are dependent upon their daily labor for support or who may be over sixty, and all men who are now or may hereafter be suffering from any mental or physical disability, regardless of its cause. This, sir, I predict, will in less than two years place on the pension-roll all the surviving soldiers, all soldiers' widows, and all minor children under sixteen years of age. All who are not past sixty will, with few exceptions, find themselves disabled. Instead of fifty millions this bill will call for one hundred and fifty millions of dollars per annum before the close of the year 1892.

The last pension appropriation bill passed by this House to provide for the 489,725 persons who were on the pension-roll June 30, 1889, appropriated $100,000,000. This list is daily increasing, and should this bill not pass the amount necessary to meet the demands under the present law, by the 1st of January, 1891, will equal $125,000,000 per annum: Compute those now on the rolls and those to be placed on the rolls by this bill, and we will find that by 1892 there will be fully 1,000,000 pensioners, receiving the enormous sum of $275,000,000 per annum from the national Treasury. This is no fanciful flight of my imagination. The facts and figures will sustain my assertion. Let us add to this the retired-list of the Army, the Navy, and the judiciary, embracing those who without rendering any service are drawing princely fixed incomes from the people, and we will get some adequate idea of the burden the tax-payers, the farmers, and laborers are bearing on their shoulders.

Since 1861 up to December, 1889, there have been retired:

818 army officers who have received	$16,680,830
847 naval officers who have received	16,114,019
38 officers of Marine Corps who have received	465,317
22 judges who have received	385,299
1,735 officers retired, who have received	33,645,465

During the same time there has been paid $1,052,218,413.17 in pensions, making a grand total in twenty-eight years of $1,085,863,878.17. Picture it, think of it, realize it if you can, you farmers, mechanics, and laborers! This vast sum has been taken from you by taxation and given to a privileged class who labor not, neither do they spin; who produce nothing, who make absolutely no return for the princely income which they draw from the people.

It is now just twenty-five years since the close of the war of the rebellion. The average age of the surviving soldiers of that war is said to be fifty-one years. How does this compare with the age at which service pensions have been granted to the soldiers of the Republic in other wars?

The Revolutionary war closed in 1783. The first general service-pension bill for the soldiers of that war was passed in 1828, forty-five years after its close. The average age of the soldiers was between seventy-three and seventy-four years when the act passed. The war of 1812 ended with the treaty of Ghent, in 1814, although the battle of New Orleans was fought on the 8th day of January, 1815. No service-pension was granted to the soldiers of this war until 1871, fifty-seven years after its close. At that time the average age of the surviving veterans of the war of 1812 was eighty-three years. The Mexican war ended in 1848. A sixty-two-year service pension was grudgingly granted to the Mexican veterans in 1888, forty years after the close of hostilities, when the average age of the survivors was sixty-six. Forty-two years have now elapsed, and yet no general service-pension bill has been passed for the benefit of the soldiers of the Mexican war. Nothing has ever been done for the brave and hardy volunteers who fought in the Florida and Indian wars. Their rights and their appeals alike go unheeded.

Taking together the war of the Revolution, the war of 1812, and the war with Mexico, we find that the first service-pension bills for the soldiers of those wars were passed at an average period of forty-seven years after the close of those wars, and that the average age of the soldiers was seventy-five years when their service pensions were granted. In contrast with this, we are now only twenty-five years from the close of the late war and the average age of the soldier is only fifty-one. In other words, Mr. Speaker, this service-pension bill is forced to a passage twenty-two years sooner after the close of the war and the soldiers are twenty-four years younger on the average than at the passage of any similar bill in our history. This is not only liberality. Sir, this is prodigality. There is no reason for it; there is no excuse for it; the necessities of the old soldier do not require it.

Sir, as God is my judge, I bear no unkind feeling towards the defenders of the Union. I honor the patriotism and devotion of those who went forth at the call of duty and dared to die for what they believed to be right. Speaking for myself and for the young men of the South, those who, like me, have attained their majority and become citizens long years after the war closed—I say that we are willing to pay our part in order that every honorably discharged Union soldier disabled in the line of his duty may receive a fair pension. But twenty-five years after the close of hostilities is too soon to grant a service pension, as this bill practically does. When I hear gentlemen grow eloquent in picturing the poverty, the want, the suffering, and the disability of the ex-Union soldier, I can not refrain from drawing a mental comparison between him and the ex-Confederate. No such tales of woe and distress come to our ears down South about the ex-rebel or his widow and orphans.

Sir, the results of the war enriched the Northern States. The millions spent for supplies, the vast contracts of every kind, the enormous premiums realized in the purchase of Government bonds, all went to stimulate the trade and industries and fill the coffers of the people of that section. At the close of hostilities what a famous Union general said of the condition of the valley of Virginia was true of nearly every section of the South, but especially of those regions where the troops had passed, "that a crow flying over the country must carry his own rations or starve." The Confederate soldiers, with inferior arms and clothing, were subject to greater hardships and suffered as

much by wounds and exposure as their foes, yet there are no ex-Confederates in the poor-houses. There are no paupers or beggars among them. They are not clamoring for aid, and no one will ever ask it for them. With the exception of a very few, who are either totally blind or have lost both arms or both legs, they draw no pensions and receive no pecuniary assistance, either public or private.

Sir, in view of these facts I do not believe in the truth of the perennial wail of distress which blows over this House in the name of the old soldier! In my judgment the politicians who are playing the demagogue to be retained in office and the pension attorneys who are hungry for fees are responsible for most of this legislation. If it is to go on at this rate it will soon be a question between the old soldiers and the tax-payers and laborers, out of whose meager earnings come the public moneys.

This army of drones, of non-producers, will become a greater burden than the people can bear; then take care lest the people turn and wipe out all this legislation.

To talk of reducing taxation, whether by tariff or otherwise, in the face of such legislation as this is the wildest nonsense. Sir, we must begin to look about for other and new sources of taxation out of which to raise revenue. It can not be had under the tariff, because, as I understand it, the McKinley bill, upon which we are soon to be called to act, confessedly raises the tariff so high on all articles now being imported which can be produced in this country as to effectually and entirely exclude them, and thereby cuts off the revenue. Sir, we must resort to a tax on the incomes of the rich.

Had the soldiers not saved the Union the plutocrats of to-day would have been wiped out of existence. It is peculiarly proper, therefore, that they, out of their fixed incomes, derived largely from United States bonds, which are non-taxable, should be called upon to contribute to the support of the veteran in his declining years, rather than that the farmer and laborer, who, in the majority of instances, is as poor as the old soldier himself, should be compelled to contribute further from his scanty store. With their farms mortgaged for more than their present selling value; with the interest at a high rate to be paid, or a foreclosure of the mortgage to follow as inevitable as fate, and a consequent loss of home and shelter and the labor of years spent in improvements; with his crops all selling in the nearest market for less than the cost of production, how in the name of high Heaven is the farmer of the West and of the South to get the money to meet all these increased expenses and get clothes and educate his family?

If he is an old soldier he will take $8 a month out of one pocket, put it into the national Treasury, and then, minus the cost of collection and disbursement, receive it back in the shape of a pension into the other pocket. If he is not an old soldier he must pay his part of this enormous pension tax year after year, no matter if his wife and daughters go naked, no matter if his little ones never go to school, no matter if in his poverty he can never hear the word of God. By death alone can he escape the remorseless tax-gatherer.

In the name of that same humanity and justice which you so loudly invoke in behalf of the "old soldier" I beseech you to pause and consider the poor and oppressed farmer and laborer before you increase still further his burdens in the interest of a "privileged class."

Pensions.

SPEECH

OF

HON. G. W. ATKINSON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

Upon the Morrill service-pension bill.

Mr. ATKINSON, of West Virginia, said:

Mr. SPEAKER: I can see no proper reason why any Representative upon this floor, indeed any man who loves his country's flag, should not heartily support this bill. No patriot can oppose it except for one particular reason, and that is that it does not go far enough, that it is not as far-reaching in its scope as it should be, and therefore does not give to the citizen-soldiers of the late war that degree of protection which they deserve at the hands of a government they saved.

I confess, Mr. Speaker, I am one of those that believe in a general service-pension bill and am prepared to vote for it and defend it if such a bill were presented, or even if it were at all possible to secure its presentation with a reasonable hope of its passage during the present session of Congress; but every one knows that such a bill can not be presented and passed at this time; consequently to favor such a measure under the circumstances could only result in defeating the bill we are now considering, and thus prevent any pension legislation by the Fifty-first Congress.

The Morrill bill is meritorious as far as it goes and will bring immediate relief to thousands and tens of thousands of soldiers and soldiers' widows and orphans. It places upon the pension-roll, whether sick or well, every soldier and sailor who has reached the age of sixty years; also every soldier's widow of the same age; also all soldiers' widows and orphans who can establish their dependence upon their deceased husbands or fathers; and, lastly, it will enable all soldiers who are afflicted with disease of any kind to go upon the pension roll according to the degree of their disability, whether such disease can be traced to their army service or not.

Under this bill about 100,000 soldiers, who have reached the age of sixty, will go upon the pension-roll; also a large number of soldiers' widows who have likewise passed their sixtieth mile-stone will go upon the roll, and probably 200,000 rejected and pending claims will be allowed under this measure. The object, therefore, is to render relief to all soldiers sixty years of age, to all soldiers who are now diseased or disabled, without regard to their ages, and to all widows of deceased soldiers who were dependent upon their husbands for support.

The passage of this kind of a service-pension bill for our soldiers and sailors means more, Mr. Speaker, than the simple act of voting money for their support out of the national Treasury. Like the strewing of flowers every 30th of May upon the dead patriots' graves, it means a world of memories, a world of deeds, a world of tears, a world of sorrows, and a world of glories as unfading as the sun.

When the strong arm of rebellion attempted to pull down our flag, the Government at Washington said, "We must have a half million men who are willing to die to save the flag." The tens of thousands for whose benefit this service bill was introduced went out under that call. They went from nearly five hundred thousand homes—these citizen-soldiers.

How they went forth to die!
Pale, earnest thousands from the dizzy mills,
And sun-burnt thousands from the harvest hills,
Quick, eager thousands from the city streets,
And storm-tried thousands from the fishers' fleets.

How they went forth to die!
Heeding, yet shrinking not from the hot breath
Of the fire-angel in the front of death,
Seeing afar, yet meeting without fear,
The fever-angel lurking in the rear.

How they went forth to die!
Counting their lives as the unvalued dust
Trod by a nation, bearing on its trust,
Content if but their sunken graves should be
The foot-prints of the progress of the free.

Through five thousand five hundred and seventy-four battles they went, and through four weary years they bore aloft our flag at a cost of 44,000 killed in battle, 49,000 dead of wounds, 186,000 dead from disease and exposure, and 160,000 captured and made prisoners of war, of which number 61,000 gave up their lives in prison pens rather than desert the flag, which all prisoners had an offer to do. And in this great conflict 340,000 of "our boys" went down, but they went down to honored graves.

Such patriotism, such bravery, such endurance, such obedience, such self-sacrifice, such adherence to principle, such love of country, and such devotion to the unseen are unparalleled in the history of the world. These soldiers followed Grant and Sherman and Sheridan and Hancock from Forts Donelson and Henry to Vicksburgh, and from Vicksburgh to Atlanta, and from Atlanta toward the North again, and finally to Richmond and Appomattox. They cut in two the greatest rebellion in modern times, if not of all ages, and gave us one flag instead of two and gave us also a united country from ocean to ocean. This is why I say the passage of this bill means a million times more than the mere act of voting $60,000,000 a year out of the Treasury for their present relief.

I hold, Mr. Speaker, that we can not too highly value the services our soldiers rendered to the Government from 1861 to 1865. Indeed, sir, we owe them a debt that can not be paid in silver or gold or in brass medals or lofty eulogies. In their declining years we owe them a living, a competency large enough to make them comfortable and independent.

While on a brief visit to the great city of Boston a year or so ago I observed in the park called The Common a costly granite monument, upon which was the following inscription:

To the men of Boston who died for their country upon land and sea in the war which kept the Union whole, destroyed slavery, and maintained the Constitution, the grateful city has built this monument, that their example may speak to coming generations.

Mr. Speaker, that monument and inscription are expressions of true patriotism. That is how all true Americans should act and feel, not only toward the dead, but the surviving soldiers of the late civil war; and that is the feeling that will be cherished and expressed toward them after a few generations shall have come and gone.

The immortal Lincoln, in his great speech at Gettysburgh, expressed, in language that seemed to be on fire and is blazing yet, that sympathy and love which should be cherished within every American's breast when he said:

It is for us, the living, to dedicate ourselves to the great work which our soldiers, living and dead, have so far so nobly advanced. It is for us, the living,

to consecrate ourselves to the work remaining to be done, that from the graves of these heroes we take increased devotion to the cause for which the dead soldiers of the Republic gave the last full measure of devotion: that we here highly resolve that these dead shall not have died in vain, that this Union, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth.

Mr. Speaker, more than any other one thing, patriotism constitutes the State. From 1861 to 1865 our citizen soldiers, for whose benefit we are to-day enacting this service-pension law, were the Government. It was not the powers at Washington during that dark period that were the Government. It was the soldiers in the field. They were the State. High-raised battlements, or thick, massive walls, or proud cities, or starred and spangled courts do not constitute a State; but high-minded men who know their duties and their rights, and knowing dare maintain them; men who back the sovereign law and are loyal to its teachings; men who will crush the tyrant while they rend his chain, and, if need be, offer themselves as a sacrifice for their Nation's good and glory.

These, Mr. Speaker, constitute a State; and such were our soldiers in the late fratricidal war. They are our Nation's wards to-day, and a grateful people will see that they are cared for. I esteem it the greatest privilege of my life to be permitted to vote in the American Congress for a bill like this one, which will bring comfort to so many homes of the soldiers of the greatest war of history.

International Copyright.

SPEECH

OF

HON. AMOS J. CUMMINGS,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 2, 1890,

On the bill (H. R. 6941) to amend Title LX, chapter 3, of the Revised Statutes of the United States, relating to copyrights.

Mr. CUMMINGS said:

Mr. SPEAKER: Section 8 of the Constitution of the United States prescribes, among other things, that "Congress shall have power to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries."

Note here, sir, that the Constitution places the authors before inventors, and writings before discoveries. It at least puts both upon the same level.

Now, let us see what Congress has done under this authority of the Constitution. It has reversed the situation. It has placed the inventors ahead of the authors. It has not maintained them upon the same level. Favoritism is shown. The level is destroyed. Discoveries are preferred to writings. Letters patent under act of Congress are granted alike to American and foreign inventors.

But how about authors? Copyrights are granted to American authors, but denied to foreign authors. The patent business is reciprocal. Why should not the copyright system be the same? Why the distinction between the inventors and the authors? If it is right for American publishers to steal the work of foreign authors, why is it not right for American manufacturers to steal the discoveries of foreign inventors? Where is the distinction? Are the brains of a foreign inventor any better than the brains of a foreign author? If you recognize the mental productions of the inventors as private property, why not recognize those of foreign authors as the same by similar reciprocal legislation?

"Authors and inventors are among the greatest benefactors of mankind," said Henry Clay. He made no distinction between them, and he placed authors first. The Constitution makes no distinction. Why should the Fifty-first Congress make a distinction? Does this House fancy itself wiser than the great Kentuckian and the immortal framers of the charter of our liberties? You protect American inventors in foreign countries by recognizing foreign inventors in America. Why not protect American authors in the same way? The argument in favor of the inventors is certainly as effective if applied to the authors.

If authors and inventors are great benefactors to mankind, mankind ought to make returns to both for benefits received. This bill simply rubs out a distinction that is manifestly unjust. It is argued that it will raise the price of books. This is not strictly true. It may increase, in a small way, the price of books copyrighted hereafter, but it does not increase the price of the thousands of volumes of the standard literature of the day. But assume that it is true. I answer, so do the patent laws raise the price of inventions. If this argument prevails, then to be consistent you must do away with the patent laws. In that dilemma are those placed who oppose the passage of this bill.

Philosophers, authors, and inventors are of the same mental type. A philosopher or a scientist is almost necessarily an author. An inventor may be both or all three in one; yet you must class invention as inferior to philosophy or authorship. Bacon was a writer of philosophy. His fame is based upon such writings. He placed it there himself and his judgment stands confirmed. He died of a cold caught while stuffing a chicken with snow to see whether it would preserve it. The experiment was both new and successful. Under our laws as they now stand he might have been granted a patent for a refrigerator. The securing of such a patent would not have placed his achievement above his writings in fame and usefulness. Having protected him by a patent for his invention, would it have been just to confiscate his greater and more useful work as an author?

In every department of literature illustrations as forcible crowd for recognition. Everybody depends upon books for instruction and enjoyment. Even this House could not get on without them. Mark the gentleman from Georgia [Mr. CRISP] piling books of reference upon his desk as he prepares for a forensic contest over a contested election case. Thus forewarned his adversaries prepare for a flank movement. They know that with his books he will shake their citadel if he does not make it untenable. We all enjoy the display. It improves us all and the nation, too. Would the triumph be as great if he should throw the books aside and drive his way over the House with some battering ram or newly invented explosive?

Through their wonderful genius and excessive labor we associate, day and night, with the men and women of Shakespeare, Scott, Dickens, and Thackeray.

An author certainly ought to have his chance in every market. He has none at all where the moment his product is exposed it is seized and confiscated. The point for which I am contending is won in all fairness when you grant copyrights to our own authors. Nowhere is it written that we may steal from our neighbors or rob the stranger that is within our gates.

Even from a selfish point of view we should pass the bill. It is good American policy. It may not raise wages. It may not materially affect the price of books. But it gives employment and that should be the grand economic design. It would light anew thousands of composing rooms. It would cause hundreds of printers' devils to dance with joy. It would delight the hearts of thousands of pressmen, stereotypers, stitchers, and binders.

The union printers throughout the country are practically unanimous in urging it upon Congress. The International Typographical Union and its three hundred subordinate unions ask its passage. They comprise over forty thousand printers alone. Scores of pressmen's and stereotypers' unions favor it. They all say that its effect as a law will be to greatly stimulate book-printing in the United States. A vast amount of printing that naturally belongs here is now done on the other side of the water. It is done there for the American market. Shell-plates are sent over to this country at a low rate of duty and are scattered among the publishers here. Enact this law and all that book-making would come home to us.

The book-making center of the English world, it has well been said, would then move westward from London and take up its abode in our American cities. The reason is obvious. The market here is far more extensive than in England. We have a population of 65,000,000 people, a majority of whom are readers. The United Kingdom has a population of a little more than half this number. Not more than a quarter of them are readers. The market there for literature is limited. If this bill is passed the English author will soon learn that here is by far the richest market. Louis Stevenson has already learned it. He will readily comply with the provisions of the law in view of the benefits he receives. The printers simply ask him to leave enough of his profits here to pay for his printing. The result will be that the printing establishments in America will be enlarged and increased in number, and that work will be provided for thousands who are now idle. The American author who goes abroad for a cheaper publishing market will be compelled to patronize home industry. He can no longer scatter his cheap shell-plates over this continent at the expense of American printers.

There is nothing in the idea that the passage of this law will throw out of employment a large number of printers now engaged in reprinting the works of English authors. Nor will the law increase the price of standard literature. American publishers have already reprinted thousands upon thousands of volumes of the best English books without paying one cent to the authors. They will be printed here hereafter as cheap, if not cheaper, than heretofore. None of such works can have its price increased by this bill. It only affects works yet to be produced. Macaulay's History of England, Rider Haggard's and Hugh Conway's novels, Burnaby's Ride to Khiva, The Russians at the Gates of Herat, and thousands of similar works will be bought just as cheap hereafter as they are bought to-day.

When the reprinting of these works began there was great competition among American publishers. Each tried to overgrab and undersell the other. Each book was put in type a dozen or more times at different places. Of course this gave increased work to type-setters, stereotypers, electrotypers, pressmen, stitchers, and binders. But a change has taken place. The officers of New York Typographical Union, No. 6, say that the mine has petered out. To-day only scores of print-

ers are employed upon such work where formerly hundreds were at work. The books are now put in type by stereotype establishments known to the craft as "saw-mills." A book is really put into type only once. Then the stereotype plates are sold to different publishing houses, who issue separate editions and put different imprints upon them. Instead of the type being set in a dozen establishments as formerly, it is now really set in only one establishment and the plates are distributed to the others. They can be sold for far less than what it would cost to set the type once.

It is doubtful whether the passage of the bill would really increase the cost of new literature to the people. The increase in work for the publishers would create a healthy competition; that competition would be so great that books would probably be sold at nearly as low a rate as they are sold to-day.

Even if the price were somewhat increased there would be a compensating advantage. Heretofore many of the books have been printed in Europe. The paper, the presses, the ink, and the type have been made by foreign artisans. The work has been done by foreign typos, printers, and book-binders. By the provisions of this bill all will be changed. An immense amount of work that has been going to foreign artisans will be given to the trades of our own land.

The typesetters, the stereotypers, the electrotypers, the lithographers, printers, book-binders, and finishers will be benefited directly and enormously. To some this fact of itself would be a strong argument for the passage of the bill. Few realize what an army is engaged in these trades in this country. By the census of 1880 there were more than 86,000 persons engaged in printing, stereotyping, lithographing, and book-binding in the United States. The industry has increased with wonderful rapidity. It is estimated that there are now nearly 150,000 persons following these callings in this country. All will be greatly benefited by the passage of this measure.

There are no men whose interests have a higher claim to your fostering care and attention, no trade that deserves better of the public, none that performs greater service for smaller compensation, none that represents more progress, intelligence, and character. Its workmen are equally distributed throughout the country. It is a mighty small place even in the most remote Territory that has not at least one printing establishment.

You can buy American books enjoying American copyrights to-day almost as cheap as these English reprints. Edward Bellamy's Looking Backward can be had of any newsdealer for 50 cents, and Nationalist clubs are printing it for 28 cents per copy. The same may be said of Archibald C. Gunther's great novel, Mr. Barnes of New York. Competition for public favor and patronage ought to check exorbitant prices. It will be to the interest of the publishers to keep the prices as low as possible and thus increase the circulation of their publications. More money is made by large sales at small profits than by small sales at large profits. As for book trusts, the newspaper and the magazine would quickly ruin anything of that kind.

In time to come the tables may be turned. Americans may manufacture plates and books in this country and ship them to England.

So much for the selfish argument in behalf of the bill. To recur again to the moral argument:

The stealing of the works of either English or American authors is a national disgrace. It is more than unjust to the authors who produce the books. The theft itself is not always a clean theft. The authors are not only injured in pocket, but in reputation. For instance, John Habberton's Other People's Children was issued serially in New York before the publication of the whole work in London. Brander Matthews tells us that the earlier chapters were reprinted in London under the proper title, the remaining chapters being condensed into three or four pages at the end. This mutilated and incomplete edition was pushed into a ruinous competition with the authorized edition by Routledge & Co. Habberton had no redress.

Dr. J. G. Holland's Arthur Bonnicastle, printed in Scribner's Magazine, was similarly mutilated. His Miss Gilbert's Career was shamefully maltreated in England. Its title was altered and an attempt made to anglicize the story by substituting London for New York and changing a Fourth-of-July celebration into a commemoration of the Queen's birthday.

Another case is quoted by Mr. Matthews thus:

> Mr. Charles Dudley Warner tells me that he had arranged with an English house to issue Back-Log Studies, but about a week before the publication another English house issued a shilling edition under the same title, made up from papers that had appeared in Scribner's. About half of the work had not been published serially, and this half was of course omitted from the piratical edition. The matter reprinted from Scribner's was, to use Mr. Warner's own words, "padded out with other stuff of mine found in the magazine which had nothing to do with the book."

Another case cited is that of Professor William Matthews. He found in the "Friendly Counsel Series" of an English publisher an edition of his Getting on in the World, containing less than half the work, without a hint to the public of the mutilation to which it had been subjected. "Of the two offenses," said he, "theft is, I think, less vexatious than mutilation of the children of one's brain." Mr. Brander Matthews well adds, "The American pirate, as a rule, kills his man by a shot through the heart; but the British pirate often uses an explosive bullet and lets his victim linger in agony."

Dozens of similar cases are cited. Col. T. W. Higginson found a work of his that had been issued by a London publishing house under a new name. One-third of his chapters had been omitted. The book contained his name as the author, and he was severely criticised in the English newspapers for having omitted certain important considerations which had been carefully included in the authorized edition. The Westminster Review's criticism was founded on this garbled copy.

This shows what an American author may expect in England when he writes a serial story for Harper's, Scribner's, The Century, or any leading magazine or newspaper. This bill provides the only sure remedy. It is just both to the English and to the American author. This is a nation of readers and a great nation. It stands upon principle. It fought the greatest war of modern times for a principle. It has joined other nations in suppressing piracy and the slave trade. Now let it join other nations in suppressing the literary piracy that has so long been a reproach to it.

The Tariff.

SPEECH

OF

HON. JOHN SANFORD,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 9, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. SANFORD said:

Mr. CHAIRMAN: I regard the provisions of this bill as of grave importance to the agricultural and business interests of the whole country, and I would feel myself derelict in duty were I not to lend my voice to its support.

Free, open, and public discussion of questions of public concern has always been the true American policy, and in pursuance of this policy parties from different sections of the country, representing the nation's industries, were allowed to appear before the Ways and Means Committee, the better to enable it, if possible, to report a bill that would embrace a fair and equitable adjustment of the various schedules.

And when we consider the great number of apparently conflicting interests necessarily involved in any revenue measure of this character, it is not surprising that widely divergent opinions and at least a few extravagant statements should find expression. This seeming conflict of interests is more apparent, however, than real, and generally upon careful examination entirely disappears, and in this regard the committee is to be congratulated upon having secured a clearer and more rightful understanding among all these great interests involved and upon having been able to report a bill which should meet the approval of all.

In my consideration of this measure the first statement which I desire to premise is that the governmental policy of the United States should be to encourage the production, when practicable, of all raw materials used by our manufactories, and wool should be no exception to such general policy.

Dodge says that there are imports valued at $240,000,000 per annum of agricultural products which should be produced here, *i. e.*, sugar, animals and their products, fibers, fruits and nuts, barley, leaf-tobacco, and wines.

The people of all nations are to-day living, toiling, and endeavoring to achieve plain business success as well as individual and national greatness under some distinctive industrial policy. And the condition, happiness, and prosperity of every member of the human family largely depend upon the character of the financial and industrial policy of the government under which he lives.

Nations, like individuals, differ widely in capabilities, resources, and physical environments. What would be a wise and efficient policy for the people of one country might be ill adapted to the citizens of another. How important it is, therefore, that in determining upon a proper economic policy the people of the United States should neither be influenced by foreign example nor dictated to by foreign powers.

The character and extent of our landed territory, the nature and fertility of our soil, the effects and possibilities of our varied climate, the wants, circumstances, and aspirations of our people—these and other like patriotic considerations should alone aid and govern us in determining whether the protective policy of this country shall now be continued, perfected, and maintained, or whether, on the other hand, it shall be crippled, ruined, and abandoned.

The experience of the past demonstrates the necessities and possibilities of the future in national as well as private life. And our national experience in the present regard abundantly teaches us that whenever the farming interests of the country are depressed, that whenever the producers of our so-called "raw materials" are denied the home market for the products of their toil, just that moment the sale of manufactured products is correspondingly curtailed, labor is thrown out of employment, and the general business interests of the country suffer.

And in the light of the foregoing considerations it is just as essential to the highest national development and growth of the United States that varied and diversified industries should be built up and carefully maintained as it is that the manufacturing industry should predominate in England. In other words, the products of the farm, the mine, and the stock ranch in this country should be made to supply the mill, the factory, and the shop, and the finished products of these establishments will then in turn find a ready and increased market among the masses of the people.

These great industrial interests of our people are so closely intermingled and united that no one of them can be materially injured without the balance being thereby caused to suffer. Our National Government should be founded not merely upon a union of States, but upon what will become a stronger and more enduring basis as the years go by, namely, a union of the great industrial interests of our people. This is a common basis upon which every citizen of this Republic, North and South, East and West, should be willing to stand. When our national character is once thoroughly established upon such a basis, every American industry of consequence will prosper, the equilibrium of our industrial life through future years will be preserved, and the boundless capabilities of American soil, brain, and sinew will be developed. And with this development of the country's resources will come a continued growth and expansion of our home markets, to the magnitude of which the wonderfully alluring "markets of the world" will be as mere pigmies.

AN INSUFFICIENT SUPPLY OF WOOL IN THIS COUNTRY.

In pursuance of the policy I have just mentioned, then, why should not the wools, which are consumed and used by the mills of this country, be supplied to their fullest possible extent, at least, by the wool-growers and stock-raisers of the United States? Yea, more, why should not substantially all the wool which enters into the large quantities of woolen goods now imported, and which thereby displaces domestic wools to that extent, be produced in the United States? Allowing the same percentage of increase during the last ten years that was maintained during the ten years immediately preceding 1880, there are today 6,037,422 farms in the United States. And on the same basis of calculation these farms embrace a territory of 704,947,613 acres, and are owned, controlled, and cultivated by an agricultural population of nearly 9,000,000 people, or 20,000,000, counting men, women, and children.

In other words, more than two-fifths of the entire industrial population of the United States are engaged in agricultural pursuits, being nearly double the total number employed in manufacturing and mining combined. Of this great number of agriculturists, 1,020,728 are actual flock-owners, the majority of whom have families dependent upon them for support, which, together with the laborers by them employed, aggregate a population of nearly 4,000,000 who are directly interested in the wool industry. And, as the average acreage of each farm in 1880 was 134 acres, we may safely say that portions at least of 134,000,000 acres of farm lands in this country are now devoted to wool-growing and sheep husbandry.

To this should also be added a vast acreage of the public domain which is used for ranching purposes. The present value of the wool-growing and sheep-raising plant now owned by the farmers of the United States, consisting of lands devoted exclusively to this industry, barns, sheds, and other equipments employed in the management and care of sheep, is somewhat difficult of computation, but it has been approximately estimated to reach the immense sum of $408,291,200. In the light of these statistics is it the part of wisdom to longer continue to import large quantities of foreign wools, either in the raw or manufactured state, and thereby turn the producers of domestic wool from our mill and factory doors? Do not these figures show that the farmers of the United States are fully equipped, as far as numbers and resources are concerned, to produce substantially all the wools consumed by our own people; and, if so, why should we longer allow the wool industry to decline?

The fact is we have every material force, the farms and farmers, soil and climate, together with the energy and skill, necessary to produce approximately all the raw materials, and especially an increased proportion of the wools, now consumed in this country. Moreover, these statistics, showing the present magnitude and capacity of the wool industry, when considered in connection with our great agricultural resources in reserve, from which the present dimensions and capacity of the wool industry could and would be increased when the conditions are such as to warrant it, are sufficient to successfully refute the recent statements made by some of our tariff reformers to the effect that the United States can not grow wool enough to supply the wants of our people, no matter what duty is placed thereon. And in this connection I desire to call attention to the

PRESENT CONDITION OF THE SHEEP AND WOOL INDUSTRY IN THE UNITED STATES

in relation to its past development. This industry has been built up and developed under a protective policy. There has not been a pound of wool produced in the United States for the last twenty-three years, there has not been a pound sold by our farmers within such time, that has not been protected against foreign production and foreign competition from 2½ to 12 cents per pound. And what has been the effect of this policy? The result has been that this industry has increased, developed, and enriched our farming interests, until to-day wool-growing is one of the leading industries of the United States.

Let us look at the figures: In 1860, before the Morrill tariff was levied, the total amount of wool produced in this country was only 60,000,000 pounds. In 1-84 (when the highest production was reached, the effect of the act of 1883 not yet having been felt) the domestic clip amounted to 308,000,000 pounds. Thus the progress of this industry under proper protection was such that in 1884 we produced over five times the amount of wool grown in 1860 under little or no protection.

Again, in 1860 the amount of wool produced per sheep only averaged 2¼ pounds, while the present average weight of fleece reaches 6 pounds. Under the tariff of 1867 farmers were enabled to direct their attention to the careful breeding of sheep and the development of the finer grades, by crossing the various bloods, until not only have the most favorable results been obtained as to quality, but also the average weight of fleece has been more than doubled.

During this same period, from 1860 to 1884, the number of worsted and woolen manufacturing establishments in the United States increased from 1,263 to 2,689; the number of hands employed therein was augmented nearly fivefold, increasing from 43,738 to 210,024; while the amount paid out in wages was raised from $10,153,938 to $56,866,904. And at the close of the period named the average cost of woolen goods had not only been cheapened to the consumers from 25 to 30 per cent., but a producing industry had been developed that was paying into the pockets of our farmers the handsome sum of $91,168,000 every year.

EFFECT OF ACT OF MARCH 3, 1883, UPON WOOL-GROWING IN THE UNITED STATES.

Such were the growing condition and healthful influences of the wool industry in 1884. But as soon as the practical workings and effect of the act of March 3, 1883, were felt throughout the country there was a marked and harmful change. Under the general tariff revision of 1883 there was a reduction which amounted to about 3 cents per pound on the finer grades of wool and a reduction of one-half and 1 cent per pound, respectively, on low and high duty wools of the third class. And under this slight reduction the importations of foreign wool leaped at once from 52,049,467 pounds in 1883 to 84,703,931 pounds in 1884, being an increase of 65 per cent. within a single year. These importations of the foreign product have increased each succeeding year since 1883 until last year (1889) the enormous quantity of 126,487,729 pounds were imported.

In addition to this there was an unprecedented quantity of scoured wool imported last year under the name or guise of the various kinds of waste, the importations under this class and that of mungo, flocks, etc., amounting to 8,662,209 pounds and being more than double that of any previous year. There were also imported last year 3,616,326 pounds of woolen and worsted yarns, which swell the total importations of foreign wools into the United States for the year 1889 to 138,766,264 pounds. This is an increase in favor of the foreign producer of over 165 per cent. in the importations of raw wools alone within the short space of six years. During the same period the value of the importations of worsted and woolen goods has increased $10,129,027, which increase is equivalent to about 30,000,000 pounds of domestic wool in the grease.

But this is not the only unfortunate result of the reduction of the wool tariff in 1883. Not only have the importations of foreign wools increased to the extent named, but the amount of the home clip has correspondingly decreased, owing to the resulting lower prices and being displaced by the cheaper foreign product. In 1884 the flocks of the United States numbered 50,626,626 sheep, while in 1888 the total number of sheep in the country was only 42,599,079, showing a reduction of 8,027,547 head. The clip for the same year (1888) was 265,000,000 pounds, being 43,000,000 pounds less than the clip of 1884; that is to say, under the tariff reduction of 1883 the grower of domestic wools has been compelled to drive his own sheep to the slaughter-house, and in the face of an increased home consumption has been forced to witness the foreign acquisition and occupation of the home market and the sad and rapid decline of his own industry.

In contrast with this result, if no change had been made in the wool tariff in 1883 and the same rate of development which was then being made had been maintained until the present time—and there is every reason to believe that it would—we would now have in the United States 61,332,438 sheep, producing an annual clip of 366,994,628 pounds,

or nearly one-third more than the present production. This being so, should we longer silently witness this great decline in one of the most valued industries of the country, an industry to which, owing to the varied character of climate and soil, our country is especially adapted? Certainly not. The experience of the last six years has conclusively proven the necessity and demonstrated the wisdom of the provisions of this bill.

EVASIONS OF THE PRESENT LAW—NOILS, TOPS, ECT.

By the terms of article 4 of the schedule on wools in the bill now under consideration, all wools which have been improved by the admixture of merino or English blood are to be excluded from wools of class 3. And under article 6, which is an entirely new provision, such improved wools are to be classified for duty either as class 1 (clothing wools) or class 2 (combing wools), as the case may be. This provision is a fair one and ought not to be and, so far as I am informed, is not objectionable to manufacturers. It was inserted in the bill at the instance of the wool-growers for the purpose of preventing wools from being imported under the name and guise of third-class wools which are in fact intended for clothing purposes.

There have been a few attempts under our present law to import as third-class wools higher grades containing traces of blood and intended for other purposes. There is a wool denominated Adrianople, which is really a clothing wool, that is sometimes imported in this manner. But while I am referring to this feature I want to say that the great weakness of the present tariff act, whereby the grossest injustice results to the wool-growers of the United States, is found in the clauses relating to noils, tops, and the various kinds of waste. Since the act of 1883 became a law and under the rulings of the Treasury Department during the last Administration, not only have large quantities of scoured wool thus been imported under a low rate of duty, but also considerable quantities of third-class wools have been imported in a partially manufactured state in the form of noils and tops, which went directly into clothing and other articles, though only paying a duty of 2½ or 5 cents per pound.

In 1888 there were 6,552,473 pounds of wool in this condition (noils) imported into the United States from England alone, and 2,983 716 pounds from France, while it is estimated that 5,000,000 pounds of third-class wools were made into noils after being imported into this country, one-half of which was used for clothing purposes. So that it is safe to say that nearly 12,000,000 pounds of wools which paid third-class duties were used in 1888 for clothing purposes. These noils are not a raw material either, having gone through many different processes before reaching the condition of noils. And yet large quantities of pure scoured wool (tops) were imported last year under the head of waste and paid a duty of only 10 cents per pound.

Quite a number of English firms within the last year adopted the practice of breaking up these wool tops by process of machinery and mixing them with from 10 to 15 per cent. of genuine waste for purposes of shipment to the United States. According to the report of the United States consul at Bradford, made to the Department of State March 19, 1889, the total amount of waste from Botany (Australian) wool produced by the English mills last year which was available for shipment to the United States was 1,225,366 pounds. It is almost exclusively the product of this kind of wool that is shipped to the United States as wool waste, and yet the importations under the head of "wool waste" from England for the year 1889 amounted to 5,847,712 pounds. That, in substance, means that about 4,622,346 pounds of pure wool tops were fraudulently imported last year under the name and guise of waste and paid a duty of only 10 cents per pound, whereas they should have paid a duty of three times that amount.

The value of noils made from third-class wools, which now pay a duty of 5 cents per pound, will average from 20 to 30 cents per pound. It will thus be seen that these wools not only compete with and displace our finer grades of wool, but that by the factor of labor which they contain they have been advanced far beyond the natural state.

England and France did not grow a pound of the wool from which the noils were made that they sent into the United States in 1888, but these countries were thus enabled to get the product of their labor into the American market to the prejudice both of the grower of domestic wools and the labor which he employs. Under the provisions of this bill all noils will be required to pay a duty of 30 cents per pound, while tops will be held to have been advanced by process of manufacture and will be subjected to same duties as are imposed upon manufactures of wool.

Enact the provisions of this bill into law and you will no longer hear the wool-growers of the United States complain that wools imported under the third class are being used for clothing and other similar purposes; and such provisions will be of equal if not greater advantage to the producer of domestic wool than any direct increase in the rate of duty which it is proposed to give him by the terms of this bill.

TOTAL IMPORTATIONS OF WOOL, WORSTED, AND WOOLENS—PROPORTION OF THE HOME WOOL MARKET NOW ENJOYED BY FOREIGNERS.

In order that we may fully comprehend what is to be gained by further protecting and developing the wool-growing industry in the United States, let us for a moment look at the home field now occupied and supplied by foreign wools. The importations of wools and manufactures of wool for the year ending June 30, 1889, were as follows:

	Pounds.	Foreign value.
Wools of first class	29,224,522	$5,971,631
Wools of second class	6,871,606	1,586,294
Wools of third class	90,391,541	10,417,199
Clothing	903,662	1,974,977
Dress goods	22,821,047	19,466,474
Woolen cloth	8,852,542	9,475,678
Worsted and other manufactures of wool	17,651,328	16,136,901
Waste, mungo, flocks, etc	8,662,209	3,447,201
Yarns (woolen and worsted)	3,616,326	2,065,511
	188,994,843	70,538,557

The above total constitutes the largest importation of foreign wools and manufactures of wool ever made in the history of the United States! It has never been equaled in any one year since the Government was founded! Furthermore, on account of the partial or total manufactured state and highly cleansed condition in which the bulk of the foreign wools are thus imported, a much larger amount of domestic wool is thereby displaced than is disclosed by the foregoing figures. Nearly all wools of the second class (combing wools) being imported washed, the average shrinkage thereof would not be more than 20 per cent., whereas the average shrinkage of such wools unwashed is 40 per cent. Again, 20,756,141 pounds of third-class wools, consisting chiefly of Donskoi, paid the high duty last year. These wools are all washed off the sheep's back. The average shrinkage of such wools is only 13½ per cent., while the shrinkage of unwashed wools of the third class is 52 per cent.

I desire here to call attention to the heavy importation of woolen and worsted yarns last year, also to the large and unusual amount of wool imported under the head of waste. The importations of foreign yarns have increased 816 per cent. since the reduction of the tariff in 1883, while the importations under the head of waste during the same time have increased 772 per cent! These importations of waste have, in many instances, contained a large percentage of pure wool top, and will, together with the yarns imported, average the equivalent of three times their weight in uncleansed wool. Each pound of the manufactures of wool will average 3½ pounds of raw wool. Based upon the respective comparisons I have just made, therefore, the total importations of foreign wools for 1889 represent the following equivalent of unwashed domestic wool:

Importations.	Equivalent in domestic wools.
	Pounds.
Wools of first class	29,224,522
Wools of second class	8,168,889
Wools of third class	107,39,696
Yarns and waste, etc	36,835,605
All other manufactures of wool	175,800,026
Total foreign wools imported	*357,068,738
Domestic clip	250,000,000
Total home market	†607,068,738

* Value, $62,000,000.

† Of the estimated 2,000,000,000 pounds grown in the world, this would be 30 per cent., or nearly one-third.

These figures, then, plainly demonstrate what it is possible to gain by proper protection, namely: More than one-half of the wool market of this country, which is now being supplied by foreign wools, would thereby be denied to the wool-growers and herders of Australia, Uruguay, and New Zealand, and instead would be secured to the farmers and the ranchmen of the United States.

REMEDIES FOR OUR DECLINING WOOL INDUSTRY.

This brings us to consider how the present unfortunate condition of our wool-growing industry may be practically remedied. Not only should the further decline of this industry in the United States be stopped, and what has been lost during the last six years be regained, but the opportunity which it now presents to extend and enlarge an industry in which a great class of our citizens are already engaged, should not be allowed to go by default. Why longer pursue a policy that is virtually driving the farmers of this country out of the wool-growing business into other lines of agriculture which are already overcrowded and at the same time denying to the manufacturers and laboring men of the United States the privilege of making $52,000,000 worth of the goods which are now consumed by our own people? It is certainly inconsistent to longer insist upon reaching out after the markets of the world with the products of an industry in which we have not yet filled our markets at home.

By the terms of this bill the duty upon wools of the first class (clothing wools) will be 11 cents per pound, whereas the present duty upon all such wool, the value of which is 30 cents or less per pound (excluding charges), is 10 cents, and upon all costing more than 30 cents the

rate of duty is 12 cents per pound, but as nearly all this class of wool is imported at the low duty the increase in duty now proposed practically amounts to 1 cent per pound. This is a restoration of a little over one-third only of the reduction made by the act of 1883, and embraces a class of wools which come into direct competition with our American wools, as the great bulk of all the wools grown in the United States can be used for clothing purposes.

I am aware it is contended by certain manufacturers that it is absolutely essential to have certain grades and quantities of foreign clothing wools to mix with our domestic wools in order to produce a certain class of fabrics which the American market at present demands and which, it is claimed, can not be produced by the domestic wools alone. The soundness of this proposition, as a basis upon which to found a permanent national policy, in my opinion, may well be questioned by the wool-growers of the United States. True, in order to obtain the best results in certain fabrics and to meet the demands of so-called "fashion" it may often be necessary for the manufacturer to mix, in certain proportions, different kinds of wool, dependent upon the strength of fiber, degree of luster, and felting qualities possessed by each.

But in securing these various selections of wool for the purposes of such fabrics, the American wools present sufficient variety to substantially meet all practical requirements. In grades we produce every degree of fiber, from that of the very finest full-blood merino down to the low medium and common quarter bloods, while in length and strength of fiber, elasticity, luster and felting properties the character of our domestic clothing wools presents a wide and varied field indeed. These last-mentioned characteristics of wool depend almost wholly upon conditions of soil, climate, and the care and management of the sheep from which the wool is produced. And this, in a large measure, accounts for the great variety in the present character of our domestic wools, and argues well for further capabilities and accomplishments in the same direction, for no other country of the globe possesses such varied qualities of climate and soil as are found in the United States.

There is now a vast acreage of lands in the older States, extending from the Atlantic Ocean to the Missisippi River, which produce fine, bright clothing wools. The States of Ohio, Pennsylvania, Wisconsin, and Michigan, New York, West Virginia, New Hampshire, and Vermont, with their cultivated pastures and adaptability of climate and soil, produce wools of specially fine character, while many of the other States and Territories farther west, where the wild and native grasses have been superseded by agricultural grasses or where there are abundant natural pasturages, also produce good clothing wools. Of these last-mentioned States, portions of Missouri, Kansas, and Nebraska, California, Oregon, and Montana perhaps rank the highest in the production of fine, bright wools.

With this extensive home field from which to select clothing wools, it would seem that all reasonable demands of the market (however capricious) could certainly be supplied. And even granting that we do not now produce certain lustrous wools which are required in the manufacture of particular fabrics, such fact would by no means prove that wools of the character named could not be in a few years, with proper attention and encouragement, successfully produced in this country. On the contrary, the physical features of the United States and its varied qualities of climate and soil clearly demonstrate its capacity to grow all kinds of clothing wools.

In further proof of this statement let us look to the countries where these imported clothing wools are grown. There were imported last year directly from Australasia 10,137,788 pounds of first-class wools and 9,943,697 pounds were also imported from England which were chiefly grown in British possessions in Australasia, which importations together amount to two-thirds of the total importations of such wools from all other countries combined. In this connection I notice that some have recently claimed that the present tariff rates wholly shut out the wools of South America from the markets of this country, but as a matter of fact 5,666,328 pounds of clothing wool were imported from Uruguay during the year ending June 30, 1889.

Of all these importations, however, it is chiefly the Australian wools which are claimed to be of superior luster, and which, it is alleged, can not be produced in this country. These wools are grown principally in what is known as the "Hill district" of South Australia, in Victoria, and in New South Wales. Now, all these districts, and also Uruguay, are located between the thirtieth and fortieth parallels of south latitude, while the great body of the United States is located between the same parallels of north latitude, all of these districts, as well as the United States, being in the temperate zone. The pastures of Uruguay consist of the southern extension of the Brazilian table-lands—being high rolling plains—which abound in natural vegetation, but similar in character of soil to many portions of the southern and western parts of the United States.

Probably the most lustrous wools of Australia are produced in the district of New South Wales, upon the western slopes of the Australian Alps and Blue Mountains. The northwestern district of Victoria and portions of Queensland also produce wools suitable for the American market. These districts are of moderate elevation, fairly well watered and timbered, possess a warm, light, sandy soil, and the average rainfall is about 24 inches; but occasional droughts prevail which materially injure the quality and staple of the Australian wools. On account of the sandy nature of the soil, the absence of general cultivation, and the warm climate a very slight diminution in the ordinary rainfall causes much more disastrous results to pastures and to the character of the wool-clip in the districts named than the same loss of rainfall would entail upon the fields and flocks of the United States.

In fact, it is evident that there are no peculiarities of climate or soil possessed by Australia which are really essential to the production of fine, elastic, and lustrous clothing wools, that are not also found to prevail in many portions of this country. Moreover, the value for clothing purposes of all wools depends largely upon the felting properties which they possess. And these felting properties are almost wholly dependent upon two qualities, the fineness and softness of the fiber. As to the first of these qualities (fineness), we have the testimony of perhaps the highest scientific authority which this country affords to the effect that the American wools will favorably compare with any of the fine wools of foreign growth, except it be possibly a few of the Negretti wools of Germany.

I refer to a report made in 1886 under the direction of the Commissioner of Agriculture, by Professor William McMurtrie, of the Illinois University, a gentleman who has given this subject special attention and systematic study. Under the careful and skillful test made by the gentleman named, it was shown that the finest American merino wools reached the unusual limit of 2,539 fibers to the square inch, being equal to the maximum limit of the finest Saxony wools. While an examination of merino wools produced in various States from California to Vermont showed the general average to be much below the figure named, yet the above is sufficient to demonstrate what great degree of perfection it is possible to attain in the United States under existing conditions of climate and soil by proper and careful management. As against this showing a special report on wool and manufactures of wool issued by the Treasury Department in 1888 places the number of fibers to the square inch in the Australian merino wools from 1,920 to 2,400, being ranked a little below the ordinary merino, which in the same report is estimated at just 2,400.

Again, as to the second quality upon which felting proprieties depend (softness of fiber), an equally favorable showing is made by the United States when the character of its soil is compared with that of Australia and other foreign countries. The softness of the fiber is a quality of the highest importance in clothing wools and is not dependent upon the fineness of the wool, but the character of the soil and pasture upon which the sheep is allowed to graze has great influence upon the fleece in this respect. Light, calcareous soil has a tendency to produce harsh wools, and an extremely hot climate has the same effect, while a rich, loamy soil and moderate climate are conducive to a soft and silky fleece. For these reasons the fertile soil of the Mississippi Valley and the mild climate of the South and Pacific slope are especially adapted to produce good results, and many of the other and colder sections of the county with the facilities of feed and housing with which they are now equipped, yield even softer wools than the sections named.

Therefore, the only conclusion which can reasonably and logically follow is that the conditions of climate and capacity of soil are not wanting in the United States, whereby all kinds of clothing wools may be successfully grown. The fact is that within the parallels of latitude heretofore mentioned the degree of fineness of the fiber does not depend so much upon the section of the country in which such wools are grown as it does upon the condition of the animal producing the same, as to health, nutrition, and care which it receives at the hands of the owner. This is proven by the history of fine-wool sheep husbandry both in this country and in Europe.

The correctness of such statement readily appears when we consider that recent measurements of the fibers of wool produced in the famous flocks of Wells and Dickinson in 1815 show that such wools were even coarser than that of the long-wooled merinos of the present time. And to-day the fine merino wools of the same blood and from the same section of the country differ in fineness from 5 to 15 per cent., dependent upon difference in feed, protection from storms, and general care and management.

The existing rates of duty upon combing wools are 10 and 12 cents per pound, the dividing limit being fixed at wools valued at 30 cents. By the terms of this bill the duty on all wools of this class will be 12 cents per pound, which is practically an increase of 2 cents, as substantially all wools of this class have heretofore been imported at the low duty. The importations of this class of wools are not generally large, although the shipments have increased some since 1883, there being 6,871,666 pounds imported last year. The States of Ohio, Kentucky, Indiana, and Michigan, also many other sections of the country, are growing excellent combing wools, and not a pound of this class of wools should be imported.

So that, in view of the skill and reputation which our American flockmasters have attained in the management of sheep, together with the facilities of soil and climate possessed by the United States, the production of wool should certainly be encouraged by further protection in accordance with the provisions of this bill, and the heavy and increasing importations thereby be correspondingly curtailed.

The Silcott Defalcation.

SPEECH
OF
HON. CHARLES H. GROSVENOR,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 16, 1890.

The House having under consideration the bill (H. R. 4539) to provide for the speedy settlement of questions arising out of the defalcation of the late Sergeant-at-Arms, and making an appropriation to meet the deficit—

Mr. GROSVENOR said:

Mr. SPEAKER: When this question first arose I had the honor to make the first public declaration that, in my judgment, the late Sergeant-at-Arms was, to all intents and purposes, in law and equity, a disbursing officer of the Government, and that no defalcation of his created a barrier to the right of a member of Congress to be paid the lawful salary which the Government owed him.

In an interview which I gave to the Washington Post I used the following language:

I differ with the opinions expressed in the afternoon papers and with the current opinion on the street that the members of Congress will lose the money due to them as salary and which was stolen by Silcott. The ground upon which this claim is asserted is that the Sergeant-at-Arms is the agent of Congressmen and presents a receipted voucher at the Treasury Department upon which he draws the money, and that the Government, therefore, holds the receipt of the member for his salary.

This ground is not tenable. In the first place, the receipt is only *prima facie* evidence of payment and may be explained or contradicted. In the next place, the Sergeant-at-Arms is the constituted officer to make payment for the Government to the members of Congress. He is in no sense the agent of the Congressmen. No man can be held responsible for the acts of an agent that he is powerless to remove and whom he never originated.

Now, to illustrate: A member of Congress takes his voucher, approved by the Speaker and receipted by himself, on the 4th of the month and presents it at the Treasury Department. The Department officials will not pay him a cent. They say to him, "We don't deal with you. For twenty-five years our course of business has been to take vouchers and aggregate the amount represented, hand over the money to the Sergeant-at-Arms, and he disburses it."

The rules of the House provide that the Sergeant-at-Arms shall keep the accounts, pay mileage and salaries to members according to law. The custom and practice that the Treasury Department has established, which is equivalent to a statutory provision, provides that the members shall receive their pay through the Sergeant-at-Arms. There is nothing in the whole course of procedure that is equivalent to the appointment of the Sergeant-at-Arms as the agent of the members for this purpose. Not only so, but the bond of the Sergeant-at-Arms is given to the United States to indemnify it to the extent of $50,000 for the money which it hands over to him to be disbursed according to law.

I have no doubt that the Government, by its long course of procedure, has made a rule that will operate and will hold the Treasury liable for the repayment of this money. Nor is this all. Every dollar of this money was paid by the Treasury before the 30th of November, in violation of the established custom of that Department. Had it not been paid until the 30th of November the probability is that the defalcation would not have taken place.

But I take my position upon the other ground, that the member never appointed the agent and is nowise bound by his act; that the Government has established through the operations of the Treasury Department a system through which this payment was attempted. It handed over the money to its agent, who had given bond for the faithful performance of his duty, and the agent never has paid the obligation of the Government and that obligation never has been canceled.

This was the first outspoken declaration by any member of Congress in favor of the claim of Congressmen to be paid. Subsequently opinion among the lawyers of the House and of the country has become substantially unanimous that my position was the true one, and I regret that we can not have at once and without delay the sober judgment of a lawful tribunal of great lawyers, with life tenure of office, to say whether or not this Government can play the part of a three-card-monte dealer to cheat members of Congress out of their salary.

The action of the Treasury officials in putting in motion the clamor that members of Congress were to lose their money was a shocking innovation upon the preconceived ideas that I have of what is right and proper for a Government official in that capacity.

Were it necessary to do so, sharp criticism might be indulged in with justice against the payment of these vouchers to Silcott by the Treasurer on the day he did and in the manner he did, and I trust that a full and thorough investigation of the whole matter will be made and that we may fully understand and appreciate at whose door lies the actual fault and whose legal act it was by which this payment was made.

How did it come about that Silcott, on the 27th, 29th and 30th of November, was enabled to draw the large sums of money which he did upon illegal vouchers and before any such money was due to anybody? This may be simply a matter for the accounting officers of the Treasury, but it seems to me that it would be a proper subject of investigation by this committee. But my purpose at this time is simply to set myself right before my constituents in the attitude which I have assumed, and which is that I am entitled to be paid this money.

In the first place, there was due to me prior to the 4th day of December, 1889, $191.64. There was found in the safe of the Sergeant-at-Arms, independent of the proceeds of the November vouchers, $72,626.70 less $14,560, improperly and unlawfully paid to the National Metropolitan Bank. This money belonged to and was applicable to the payment of the balance due to members, and I was entitled to draw on that day out of the money in the hands of the Sergeant-at-Arms the whole amount, $191.64. Now, then, what else? On the 29th day of November Silcott drew upon a voucher signed by me, $416. The vouchers paid on this day began with DEHAVEN and ended with MASON.

The amount of money drawn on these vouchers was deposited in a bundle in the safe of the Sergeant-at-Arms and was found there untouched by the committee of investigation. There was the money, the exact $416 drawn upon my voucher. If Silcott was my agent to draw that money then he deposited it in the safe as my money and it belonged to me and nobody else, and I am entitled to draw it and apply it to my own use. What have I done to forfeit my right to it? If Leedom was a disbursing officer, as I say he was, then he has drawn money to pay my salary and has not handed it to me, and therefore the Government can not hold me responsible.

If he is a disbursing officer, as I say he is, then he has failed to pay me my salary and the Government is responsible for it over again. There is nothing complicated in all this; it is one of the simplest matters of business that could be conceived of. I want nothing in this matter but what is justly due me. I do not want a cent by any technical or sharp construction of the law, but I will not be driven by demagogues nor the utterance of demagogues to forfeit $607.64, when I know it is my money and justly belongs to me. What act of mine has forfeited it? When, where, and under what circumstances did I lose my right to be paid? I have done exactly what the Government insisted I should do. I have taken only steps that would be recognized by the Government as pertinent and proper. I have done that which the Government demanded as a condition precedent to my receiving my pay, and I am entitled to it, and, with all due respect to gentlemen who hold a different opinion, I am willing to submit my claim to any intelligent court in christendom.

Pensions.

SPEECH
OF
HON. JAMES KERR,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1890,

On the bill (S. 389) granting pensions to soldiers and sailors who are incapacitated for the performance of labor, and providing for pensions to widows, minor children, and dependent parents.

Mr. KERR said:

Mr. SPEAKER: It is with some diffidence I present my views on the question we have under consideration to-day. I recognize the fact that my term of service in the House has been of short duration, consequently I feel my inexperience and embarrassment, but nevertheless a full sense of my responsibility to the district I have the honor to represent, responsibility to my country, and justice to those men who bore the Stars and Stripes to final triumph at Appomattox and Jonesborough compels me to protest against the action of the Committee on Rules which by the resolution just reported and adopted has forced upon the House the immediate consideration of legislation involving the expenditure of about forty millions in money without time for deliberate consideration and debate, with only a limited opportunity for amendment.

It is not right. It is not fair to the people. It is not fair to the soldier. For weeks the mails to members have been loaded with petitions and letters protesting against the Senate bill and the bill reported by the House Committee on Invalid Pensions, known as H. R. 8297, miscalled a service-pension bill, which is now offered as a substitute. An attempt was made on Monday, April 7, to force this Morrill measure through the House under a suspension of the rules. Fortunately, the scheme did not succeed. The veterans and their friends throughout the country understand the motive which prompted that attempt to use the gag rule.

The majority party in the House sought to prevent the passage of a service-pension measure by not allowing discussion or amendment of the bill they reported. They are endeavoring to accomplish the same thing now. The Republican party in control of every branch of the Federal Government is forgetful of the promises made by its candidates and leaders at every cross-road, at every political meeting for the last five years, in which they promised liberal pensions to the boys in blue. Now they have the opportunity we find them dodging the issue.

When the Democratic party, through its leader, said to the veterans, "We are in favor of liberal legislation in your behalf; we favor a just and equitable pension law as a recognition and a reward for honorable service," the gentlemen on the other side of this House were zealous in

denouncing the Democratic party as inimical to the soldiers' interests. They said we were not honest; that we did not intend to carry out the promises we made.

Our answer was, you have promised more than you intend to carry out; you are attempting to use the Grand Army of the Republic and the veterans as a cat's-paw to regain power and secure control of the Government; once you have done this, the veterans may wait.

Now what is the situation? By a scratch we have the Republican party in power. In control of every branch of the Federal Government, with a complete working majority in the Fifty-first Congress, although some of this majority had been secured through the most outrageous abuse of political power, ignoring all rights, all justice, and the express will of the people, with rules to govern this body, adopted through brute force and enforced in partisan malice, there is nothing to prevent the majority party from carrying out every promise made to the soldiers of the country, but you are not doing it. Six months of the Fifty-first Congress have come and gone and nothing is done until to-day we have brought in here a measure that is not in line with the demands and wishes of the old soldiers and their friends, a measure from its title intended to deceive the veterans. They are asking for a service pension: you give them a fraud.

I have never heard of a soldier asking for the passage of this bill. Everywhere among the veterans is the injustice of this measure fully recognized. Nearly seven hundred thousand men enlisted in the Army under twenty years of age; none of these unless disabled can receive the benefits of this proposed law for fifteen years yet. Only a few of these bright, able, active young men fresh from the school, the farm, the workshop, many of them boys of tender age, unused to the hardships of life, whose sufferings and privations can never be told—only a few of these can ever hope to receive this pension; most of them will be in their graves long before the time when this proposed law can apply to them.

Statistics show that of one hundred men who start out in life with equal advantages in way of health only ten ever reach the age of sixty years. It is safe to say not more than one-twentieth of the boys in blue who enlisted under twenty years of age will be benefited by this bill. Some, it is true, may have been able to prove a disability and are pensioned already, but it seems to me the object of this bill is to deceive the soldier, to make him believe that an attempt has been made on the part of the Republicans to carry out at least some of the promises made when they were seeking the soldier's vote.

Mr. Speaker, the disguise is too thin to the majority party of this House. I wish to say your object is apparent. The soldiers of this country can not be fooled with chaff. This bill is a subterfuge and a cheat. It is the child of the pension agent, many of whom through the party in power have become leeches upon the soldiers of this country, sucking their life-blood, preventing the soldier from getting the proper legislation, for when simple justice is done, when the pension measures which the soldiers everywhere are demanding become laws, the occupation of the pension agent will soon be gone; hence his opposition. I have heard it said frequently that the party in power in this House are completely in the grasp of the Dudley pension combination element of their party, who will prevent the soldier from getting his just dues.

Now, Mr. Speaker, if this is true, the action of those in charge of the soldiers' interests will be the test. If, in obedience to the demands of those who have become rich at the expense of the veterans of this country, you do not full justice to those who left home, friends, and business in the flower of youth to defend this Union from disintegration, to preserve the unity of States, who fought the battles of the war and won its victories; if you do not full justice to these, you must take the responsibility.

When you get the answer, as you surely will in the next election, you can not complain that you were not admonished.

You have been voting liberal pensions to the brigadiers and the majors. It is time you were doing something for the rank and file. Call up the Pennsylvania service-pension bill, make it a law, and you will do justice to the soldier, which has already been too long deferred. Give the honest, faithful soldiers of the country a service-pension law, and you will soon scatter the horde of pension sharks that have been getting rich at the expense of the poor veteran, the soldier will be taken out of politics, and all classes will be satisfied.

Mr. Speaker, I hope we will not forget our obligation to the men who risked all for their country and, to-day enfeebled, are aged before their time. You have promised them a service pension; let us fulfill the promise. Take off the age limit; it is outrageous and is calculated to deceive. Careful statistics show the average life of a soldier to be fifty-six years; to pass a law pensioning him when he reaches sixty-two years of age is a fraud upon its face. It is a political measure, never intended to benefit the soldier. Away with it; give us an honest pension law. It has been argued that a general service-pension law will cost the Government too much money.

I have no doubt if all the schemes which are in this Congress to take the people's money, such as erection of Federal buildings, rivers and harbors, and hundreds of smaller appropriations looking to the benefit of certain members of Congress in their immediate locality—if all these become laws, if all these demands are satisfied, there will be nothing left for the soldier but some measure of this kind which can do him no good, a measure which is not equitable, just, or fair; a measure which seems to say to the soldiers of the country "The Government will give you a pension if you live until sixty-two and we feel safe in promising this because statistics show you can not live that long."

What a travesty of justice! To you who seem determined to put the soldier off with this delusion, all I have to say is the time will surely come when the soldier will sit in the committee of the whole on the question of who shall fill your places. When the votes are counted you will find it decided by the ballot you have been weighed in the balance and found wanting.

I regret very much the mad haste of the majority of the House, which gives no time for amendment and little for debate. I regret very much the rule of this House which prevents my voice from being heard fully on this subject and against this injustice to the honest soldiers of the country. But I rejoice, Mr. Speaker, that it is not yet in the power of Congress to prevent our appeal to the people.

Samuel Sullivan Cox.

REMARKS
OF
HON. JOSEPH WHEELER,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1890.

The House having under consideration resolutions of respect to the memory of Hon. Samuel Sullivan Cox, late a Representative from the State of New York—

Mr. WHEELER, of Alabama, said:

Mr. SPEAKER: When the shadow of death passed over the form of Samuel Sullivan Cox the world lost a profound thinker and a ripe scholar, our country a devoted patriot, Congress its brightest and most accomplished member, the people of the South a man ever ready to defend them against wrong and oppression, and the poor and lowly a champion who delighted to use all his great talents in their behalf. Genuine sorrow filled millions of hearts. A great, a good, a gifted man was no more. He whose life had been devoted to his country and to his fellow-men had left us forever. A volume of devotion and good deeds was finished, an effort in the cause of humanity had been accomplished.

He was an intellectual giant, an encyclopedia of information, and a monarch of words. In the forum and in debate he was imperial. In the thousand or more conflicts with the ablest men during the long period of his public life he was always victor. In the halls of Congress, like the most famous Roman gladiator, he was ever triumphant.

When in the history of our country have we seen so many virtues, such great and varied talents, such bountiful culture, and such lovable qualities all blended together? When has a man lived so universally loved, so devoted to friends, and so entirely without enemies as Mr. Cox? For more than forty years he stood amidst the storm of political strife under the calcium light of the severest criticism, and even his most scrutinizing opponents could never find a single act upon which they could lay the slightest foundation for censure.

Mr. Cox's ancestry were people of distinction and very high standing. His father, the Hon. Ezekiel Taylor Cox (born May 25, 1795, died May 18, 1873), moved from New Jersey to Zanesville, Ohio, early in the century, was State senator, clerk of the supreme court of Ohio, United States marshal, etc.

His grandfather was General James Cox (born October 16, 1753, died September 12, 1810); officer in the Revolution; speaker of the New Jersey Assembly; member of Congress at the time of his death.

His great-grandfather was Judge Joseph Cox (born August 18, 1713, died April 17, 1801), known as a man of strong mind and unblemished character.

His great-great-grandfather was James Cox (born August 18, 1672, died April 17, 1750), a large landholder and a man highly respected in the community.

His great-great-great-grandfather was Thomas Cox, who settled in Upper Freehold Township, Monmouth County, New Jersey, in 1670. He was one of the twenty-four original proprietors of the province of East New Jersey.

Mr. Cox, the sixth in descent of the persons enumerated, was born at Zanesville, Ohio, September 30, 1824. His quick, bright mind enabled him to acquire information very rapidly, and before he was eighteen he had so far completed his classical course that he was enabled to commence the study of law. At twenty-five he was the owner and editor of the Columbus Statesman, and from that early date he took a prominent stand among the men who shape and control the affairs of our Government. At twenty-nine he was the chairman of the execu-

tive committee of the Democratic party of Ohio, and won great distinction in the campaign of 1853, during which Mr. Medill, the Democratic candidate, was elected governor.

When scarcely more than thirty years of age the appointment as secretary of legation to Great Britain was tendered him, but he declined the honor. He afterwards accepted a similar position to represent the United States with the Peruvian Government.

At thirty-two he was elected to Congress, where he at once took a remarkable position for a new member and so young a man. He continued as a member of this body with but little interruption from that time to the day of his death, comprising a period of nearly a third of a century. He was a member of the national convention at Chicago in 1864 which nominated McClellan and Pendleton, the convention which nominated Horatio Seymour and Frank P. Blair in New York in 1868, and the convention which nominated Tilden and Hendricks at St. Louis in 1876. He was elected Speaker *pro tempore* of the House in 1876, and was minister to Turkey during the greater part of the first half of Mr. Cleveland's Administration.

When minister at Constantinople a severe hemorrhage brought the longing wish to place his family in the shelter of home. Accordingly he left the East at the end of an eighteen months' sojourn, after having, through great urgency and perseverance, consummated the treaty stipulations initiated years before by our Government. But, owing to the fact that treaties with Germany and other countries were under consideration, and complications might arise by a ratification at this time, this treaty was never acted upon by the United States Senate.

Shortly after Mr. Cox's resignation and return he received the decoration of the Order of the Mejidieh from his Imperial Majesty, Sultan Abdul Hamid, the decoration of the Order of the Shefakat having already been bestowed on the minister's wife in Turkey.

For nearly a third of a century Mr. Cox was a bright and shining figure in the affairs of the Government.

God places men in the various spheres of life to carry out His purposes; and the entire life of this statesman shows how essential his presence was to the great cause he served so well. His voice, his magic powers, his sympathy were always on the side of humanity. This was characteristic of the man. Whether Jew or Gentile, Moslem or Christian, foreign or to the manner born, black or white, slave or free, any man, if oppressed, found in Samuel Sullivan Cox a champion and defender. We remember his successful labors for the overworked of all occupations, for craftsmen of all trades and professions, and for the downtrodden of all climes and nations.

When the Irish were oppressed by the British Government, the heart and eloquence of Mr. Cox were enlisted in their defense. When passion and hatred pursued the people of the South, Mr. Cox, at the risk of political popularity, sometimes even of political existence, placed all his influence between them and threatening danger.

Who has not read and felt the pathos of these lines?

> Never, sister, never, was told by human breath,
> What they behold,
> O'er whom has rolled
> The one dark wave of death.

In the whirl and turmoil of busy life and the constant carnival of earthly ambition, these words rise up in our thoughts: "If a man die shall he live again?"

All hearts ask the same great question, some in fear and doubt, but all in hope; and there are few in which this hope does not crystallize into conviction. Not only will all men live again in another world, but great and gifted minds like Mr. Cox, who have impressed themselves upon the affairs of men, will live in their works, and the influence for good which they exerted during life will continue during years and centuries to come.

The effects of some of the labors of Mr. Cox will be felt during all time. Not while the sun shines above the mortals of this earth; not while flowers bloom and give forth their fragrance; not while the noisy torrents rush down the mountain side; not while the sluggish, sinuous stream winds its way from plain to sea will the efforts of Mr. Cox in behalf of the Life-Saving Service of the United States be unfelt or forgotten.

In a speech upon this subject, June 4, 1878, which has been regarded as one of the most effective ever delivered in Congress, he showed clearly his intense gratification at seeing the important work about to be established. Towards the close of his speech, Mr. Cox spoke of his long service and how in some respects it had not been satisfactory to him, stating how gladly he would at any time have laid down his commission and returned to other duties which so earnestly demanded his attention. He then closed his speech in these words, which I read from page 4094 of the RECORD, second session, Forty-fifth Congress.

But what little I have accomplished in connection with this Life-Saving Service is compensation "sweeter than the honey in the honey-comb." It is its own exceeding great reward. It speaks to me in the voices of the rescued; ay, in tears of speechless feeling; speaks of resurrection from death—

> In spite of wreck and tempest's roar,
> In spite of false lights on the shore;

speaks of a faith triumphant over all fears in the better elements of our human nature. It sounds like the undulations of the Sabbath bell, ringing in peace and felicity. It comes to me in the words of Him who, regardless of His own life, gave it freely that other lives might be saved.

Humanity and civilization should walk white-handed along with government. They strengthen and save society. In the perils which environ our country, from passion and prejudice, from old animosities and new irritations, let us do good deeds—pray hopefully that our vessel of state be free from leakage, collision, wreck, and loss. Send out the life-boat; fire the line over the imperiled vessel; free the hawser for the life-car, and then with stout hearts and thankful souls lift up our prayer to Him who holds the sea in the hollow of His hand.

Immediately after the close of this speech the bill was passed without, as far as the RECORD shows, one dissenting vote.

I remember years ago reading a sermon from an eminent divine of Boston, Mr. Cook, discountenancing a religion of sorrow and moaning. He said "Let it be a thing of sunshine, mirth, and happiness. Let religion and all connected with it be joyous. Let the walks which lead in the paths of God be the happiest which can be pursued." Mr. Cox's religious life reminded me of this sermon of years ago. He did not regard sadness and repining and making others sad as an acceptable demonstration of religious convictions. He was a christian who believed that being happy and making others happy and doing good to mankind was the part of a true christian, and during all his long life he was guided by these principles.

When quite young, Mr. Cox, in his open, frank manner, espoused the cause of Christ.

He was a devoted student of the Bible and knew much of it by heart. In his early boyhood he accomplished the memorable task of learning and reciting, almost without a mistake, the entire epistle of St. Paul to the Romans. In 1848, through the influence of Rev. T. J. Stockton, who, although himself a Methodist, counseled this step, Mr. Cox united with the Presbyterian Church at Cincinnati, under the pastorate of Rev. Dr. Fisher. On his return to his home in Zanesville, in 1850, his connection was transferred to the Putnam Church in that place, under the Rev. Dr. Addison Kingsbury, the venerable pioneer pastor of that church.

I have not, indeed few men, if any, possess the power of description to do even meager justice to the great ability and scholarly eloquence so often displayed by Mr. Cox. His oratory was calm and generally dispassionate, but at the same time forcible and convincing, and his advocacy of the cause he espoused was always fearless and determined. His methods were open and chivalrous, his generosity broad and deep and strong, his friendship true and enduring.

In all his debates he sought to conduct his arguments and controversies with the utmost consideration for the feelings of others; and although he finally became victor and brought all opponents to the ground, it was not done roughly, for like a skillful wrestler he preferred to see his foe fall lightly and by his gentle manner seemed to prepare a bed of roses for the reception of his vanquished rival.

Those who ventured to assail him were, however, never allowed to escape. His repartee, though devoid of bitterness, was nevertheless crushing in the extreme; yet there was none of that harshness which leaves a lasting sting. It is true that sometimes the attack on him was of a character to require and call for a severe retort, and all who ventured upon such a line of debate soon learned the temper and form of his trenchant blade. There were few who had the temerity to hazard such a conflict; but we all remember his discomfiture of the distinguished General Butler in the Forty-third Congress, and his crushing repartee to the humorous Mr. Horr, eight years later in the Forty-seventh.

A characteristic of Mr. Cox was his charming humor and brilliant wit, and many who expressed surprise that a man so able, cultured, pure, and gifted was not called to the highest office which it was possible for his admiring countrymen to bestow, believed that this remarkable wit was the only cause which retarded his advancement; but in this I think they were mistaken. His humor always did good and never harm. He seldom used this faculty merely for the purpose of amusing his audience, but put it into play when it was evident that by so doing a desired and frequently a very important object could be attained.

We all remember how often he quelled a storm in the House of Representatives by some pleasant witticism, almost instantly changing the scene from one of angry dispute to one of most pleasant hilarity.

It is a mistake to say that this detracted in any way from Mr. Cox's dignity or the great esteem which was universally felt for him.

I think the real reason why Mr. Cox did not receive the honors of office which would naturally have fallen to the lot of such a man was owing to his never seeking any such advancement.

That he would have honored the Presidency no one who knew him would for a moment doubt. No one of his time was better equipped than he with regard to all matters of government, and in general information and knowledge of politics and history the superiority of his attainments was remarkable.

I doubt if any member of either House of Congress ever equaled Mr. Cox as a worker. He delivered lectures, wrote and published most interesting books, including such valuable and popular works as Three Decades of Federal Legislation, Why we Laugh, The Pleasures of Prinkipo, and The Diversions of a Diplomat.

His whole public life showed that he was always guided by a conscientious conviction of duty. He was one of the few members who opposed the bill to increase and at the same time to give back salaries

to Congressmen; but his crowning effort was the establishment of the Life-Saving Service, which has already rescued some twelve or fifteen thousand lives and some tens if not hundreds of millions of do lars.

He also attended most scrupulously to every detail which devolved upon him as a Congressman, and with all this he found time to join with and assist Mrs. Cox in the social duties which pertained to the family of so eminent and widely known a statesman, as well as to obey frequent demands to attend dinners and banquets to which his presence seemed almost essential. This involved much intellectual effort, as a good and new speech was expected of Mr. Cox on all occasions of this character.

His wonderful ability to accomplish so much was due to unusual brain power, vivid imagination, perfect command of language, and remarkable memory, all supported by an energy and force which seemed irresistible. His rapidity of thought is illustrated by the article which gave him the sobriquet of "Sunset." It was written in less than twenty minutes, when he was still very young. I will give it as it appeared in the Ohio Statesman thirty-seven years ago:

A GREAT OLD SUNSET.

What a peculiar sunset was that of last night! How glorious the storm and how splendid the setting of the sun! We do not remember ever to have seen the like on our round globe. The scene opened in the west, with a whole horizon full of a golden interpenetrating luster, which colored the foliage and brightened every object into its own rich dyes. The colors grew deeper and richer, until the golden luster was transfused into a storm-cloud, full of finest lightning, which leaped in dazzling zig-zags all round and over the city. The wind arose with fury, the slender shrubs and giant trees made obeisance to its majesty. Some even snapped before its force. The strawberry beds and grass plots "turned up their whites" to see Zephyrus march by. As the rain came, and the pools formed, and the gutters hurried away, thunders roared grandly, and the fire-bells caught the excitement and rung with hearty chorus. The south and east received copious showers, and the west all at once brightened up in a long, polished belt of azure, worthy of a Sicilian sky. Presently a cloud appeared in the azure belt, in the form of a castellated city. It became more vivid, revealing strange forms of peerless fanes and alabaster temples, and glories rare and grand in this mundane sphere. It reminds us of Wordsworth's splendid verse in his Excursion:

> The appearance instantaneously disclosed
> Was of a mighty city, boldly say
> A wilderness of buildings, sinking far
> And self withdrawn into a boundless depth,
> Far sinking into splendor without end!

But the city vanished only to give place to another isle, where the most beautiful forms of foliage appeared, imaging a paradise in the distant and purified air. The sun, wearied of the elemental commotion, sank behind the green plains of the west. The "great eye in the heavens," however, went not down without a dark brow hanging over its departing light. The rich flush of the unearthly light had passed and the rain had ceased; when the solemn church bells pealed, the laughter of children rang out, and joyous after the storm is heard the carol of birds; while the forked and purple weapon of the skies still darted illumination around the Starling College, trying to rival its angles and leap into its dark windows. Candles are lighted. The piano strikes up. We feel it is good to have a home—good to be on the earth where such revelations of beauty and power may be made. And as we can not refrain from reminding our readers of everything wonderful in our city, we have begun and ended our feeble etching of a sunset which comes so rarely that its glory should be committed to immortal type.

While Mr. Cox was himself a statesman, while his real life-work led and held him among other statesmen whose duty it was to guide the public counsels of our country, he was yet no stranger to the calm pursuits of science, and, had not his career been determined by early association with the life of both father and grandfather, he would have devoted himself to those scientific or those literary pursuits to which his early inclination led him.

Knowing this, we can better understand the pleasure he derived from his duties connected with the Smithsonian, and can appreciate his sincerity in alluding, as he frequently did, to his association with the regents and learned scientists of the institution as a source of keen enjoyment to him.

It was upon the motion of Mr. Cox that the Board of Regents of the Smithsonian Institution elected as their chancellors Chief-Justice Chase in 1865 and Chief-Justice Fuller in 1889.

Mr. Cox was a firm supporter of the broad policy proposed by Professor Henry, which has been so long and successfully carried out by the Board of Regents of the Smithsonian Institution.

Undoubtedly the influence of his friend, Stephen A. Douglas, one of the regents when Mr. Cox entered Congress, had much to do in forming his mind and in shaping his course in regard to the institution.

His conception of the policy best adapted to carry out the object of the founder is strikingly shown in his eulogy of Mr. Douglas, in which he speaks as follows:

In February, 1854, Stephen A. Douglas, of Illinois, while a Senator from the State, was appointed one of the regents of the Smithsonian Institution, and continued a member of the board until the time of his death, on the morning of the 3d of June, 1861. From the pursuits of his life and the peculiarities of his course it might be thought that he was not well qualified to discharge properly the duty of a trustee of a fund intended for the increase and diffusion of knowledge among men. But this would be a mistake, for although he had given no special attention to any branch of science, yet his mind was of that comprehensive cast which enabled him duly to appreciate the nature of the bequest and the general principles of the different plans which had been proposed for carrying it into execution. It is true, as I am informed, that before he was elected a regent he had adopted the popular idea that the bequest was intended merely to diffuse useful knowledge among the people of the United States, yet when he came to study the precise words of the will of the founder and caught, as he immediately did, the peculiar idea of the object intended, namely, the extension of the bounds of science, and not merely the teaching of what is already known, he fully adopted the views on which the present organization of the institution is based, and ever after continued a warm advocate and an able supporter of the measures now in successful operation for the realization of the liberal and enlightened intention of James Smithson.

It is but natural that the shock of Mr. Cox's death was severely felt by this scientific Institution. Having served with him on the board, I can well testify to the high regard in which he was held by this body, which included men of the greatest distinction. Mr. William Walter Phelps, now our minister to Germany, was the colleague of Mr. Cox and myself during the preceding Congress.

At a meeting last January it became my painful duty to propose that a committee be appointed to prepare suitable resolutions upon the death of our associate. The record of the Smithsonian, made pursuant thereto, is in these words:

At a meeting of the Board of Regents held January 8, 1890, Mr. WHEELER called the attention of the board to the death of their late colleague, Hon. S. S. Cox, and on his motion it was—

Resolved, That a committee be appointed, of which the Secretary shall be chairman, which shall be authorized to prepare resolutions on the services and character of the late S. S. Cox, and to make the same of record.

The chairman announced as the committee the secretary, General WHEELER, Dr. Welling, Mr. LODGE; who reported as follows:

To the Board of Regents:

Your committee report that the Hon. S. S. Cox was first appointed a Regent of the Smithsonian Institution December 19, 1861, and that he filled that office, except for intervals caused by public duties, to the time of his death.

While he was a regular attendant at all the meetings of the board, he was ever ready to advance the interests of the Institution and of science, either as a regent or as a member of Congress, and although such men as Hamlin, Fessenden, Colfax, Chase, Garfield, SHERMAN, Gray, and Waite, in a list comprising Presidents, Vice-Presidents, Chief-Justices, and Senators of the United States, were his associates, there were none whose service was longer or more gratefully to be remembered, nor perhaps any to whom the Institution owes more than to Mr. Cox.

The regard in which his brother regents held Mr. Cox's accuracy of characterization, and his instinctive recognition of all that is worthiest of honor in other men, may be inferred from the eulogies which he was requested by them to deliver, among which may be particularly mentioned the one at the commemoration in honor of Professor Henry in the House of Representatives; but though these only illustrate a very small part of his services as a regent, your committee are led by their consideration to recall that his first act upon your board was the preparation and delivery of an address at the request of the regents on their late colleague, Stephen A. Douglas, and that on this occasion he used words which your committee permit themselves to adopt, as being in their view singularly characteristic of Mr. Cox himself:

"It was not merely as one of its regents that he showed himself the true and enlightened friend of objects kindred to those of this establishment. He ever advocated measures which served to advance knowledge and promote the progress of humanity. The encouragement of the fine arts, the rewarding of discoverers and inventors, the organization of exploring expeditions, as well as the general diffusion of education, were all objects of his special regard."

In view of these facts it is—

Resolved, That in the death of Hon. Samuel Sullivan Cox the Smithsonian Institution has suffered the irreparable loss of a long-tried friend, the Board of Regents of a most valued associate and active member during fifteen years of service, and the country of one of its most distinguished citizens.

Resolved, That the Board of Regents desire to express their deep sympathy with the bereaved family of the deceased, and that a copy of these resolutions be transmitted to the widow of their late associate.

It is hard to realize that the three strong men, Cox, Randall, and Kelley, who consecrated their lives to duty in this Hall and who at the close of the last session were firm and healthy and determined, should have gone from us forever. We look at the seats they occupied so long, and they are no longer there. A few weeks ago we met here to pronounce our eulogies upon Mr. Kelley; in a few weeks we shall quietly enter the Hall to do honor to Mr. Randall; and to-day the House holds a special session that its members may utter their heartfelt expressions commemorative of the virtues of Mr. Cox. He has crossed the river, the dark, placid, unfathomable River of Death. He has entered the Elysian Fields; he is resting under the shade of the trees. Peaceful be that rest. In life he was invincible; in death he is immortal.

Mr. Speaker, the obsequies of Mr. Cox have been touchingly described by other gentlemen during these services, but only passing allusion has been made to the beautiful addresses of Dr. Milburn, Dr. Talmage, and Dr. Deems. These exercises would not be complete without these tributes. I will therefore incorporate them as a part of my remarks.

At the church the procession was headed by the clergy, led by Charles E. Deems, D. D., LL.D., pastor of the Church of the Strangers, a church Mr. Cox frequently attended. He was followed by Rev. Dr. Milburn, Chaplain of the House of Representatives, accompanied by Rev. Dr. Talmage, of Brooklyn. Then followed the pall-bearers with the remains, and then the family and friends.

Dr. Deems read the sentences out of the Church Service:

I am the resurrection and the life, saith the Lord; he that believeth in Me, though he were dead, yet shall he live; and whosoever liveth and believeth in Me shall never die.

I know that my Redeemer liveth, and that He shall stand at the latter day upon the earth. And though after my skin worms destroy this body, yet in my flesh shall I see God, whom I shall see for myself and mine eyes shall behold, and not another.

We brought nothing into this world, and it is certain we can carry nothing out. The Lord gave, and the Lord hath taken away; blessed be the name of the Lord.

After the congregation were seated, Rev. Dr. Milburn read in a most impressive manner the fifteenth chapter of the First Epistle of St. Paul to the Corinthians, and after an anthem proceeded to deliver the following eulogium.

Rev. Dr. Milburn said:

Samuel Sullivan Cox, the humorist, the writer, the speaker, a servant of the people, an officer of the state, a most human-hearted man, has left us, and we, the city, the nation, are the poorer for his going. There was in him a vein of admirable wit united to an excellent understanding and a rare power of sympathetic speech, and these, with an indefatigable industry and dauntless energy and courage, early in life brought him to the front, and throughout his days kept him there, in a position of influence and power to which he was fully entitled. The country can ill afford to spare, in what should have been the maturity of his manhood, one so richly endowed by nature, labor, large and varied experience, whose soul was wedded to its honor and to the happiness, interest, and welfare of his fellow-men. As his friends, we mourn our irreparable loss, while the whole land sorrows for the departure of one of its most faithful, valiant, and devoted sons.

Sprung from a brave old Revolutionary stock, born in Ohio, one of a family of fourteen children, taught from his earliest days to work with persistence and energy, he gained a university education as the fruit of his own toil, and then enlarged his mind and quickened his sympathies by wide travel, making acquaintance with many climates, cities, of men, and governments, and thus prepared himself for the work he was to do. He first tried his hand as a writer for the newspaper press and also as the author of a book of travels, but soon entered the Capitol of the nation as a member of the House of Representatives, where his brilliant parts at once gained him distinction.

Throughout his Congressional career of nearly thirty years, he secured and maintained to the last the kindly regard, the warm admiration, and personal friendship not only of his political associates, but of the members on the other side of the floor, and in the bead-roll of his friends and admirers there will be found as many opponents as members of his own party. Trenchant and powerful in debate, he used the weapons of research, clear statement, argument, keen wit, and an ever-present humor, and wherever he inflicted wounds they were always salved by kindliness and mirth, and all canker was removed.

Earnest in his political convictions and ardent in their advocacy, he was yet more earnest and ardent in matters outside of politics that concerned the happiness of his fellow-men. Notable illustrations of this are found in our Life-Saving Service, of which he may be said to be the father, and in his championship of the cause of the hard-worked and underpaid clerks and carriers of the postal service. His best and highest public utterances, which had the whole force of his character in them, were in behalf of a larger toleration, a sweeter and more practical humanity.

When one reviews his work in Congress and knows the immense labors he performed there, in the profound study of all questions vital to the nation's welfare, in committees, on the floor, and at the Departments, it would seem enough to tax any man's utmost strength and fill his whole time; yet such was his unwearied industry and elastic energy that he managed to write book after book which have instructed and delighted great bodies of readers by their intelligence, vivacity, their wisdom, humor, and wit.

I must leave it to others, to his colleagues in Congress, to speak of his political services and the debt of gratitude the country owes his memory. This place is sacred to the consideration of character. How did he use those extraordinary talents which he possessed? Were they for himself supremely? A less selfish man than Samuel Sullivan Cox has never appeared in the political life of his country. He had a large heart, tender sympathies, a kind appreciation, and a power to interpret the character of all with whom he came in contact. Noble as was his head his heart was still nobler; and throughout his career he strove to help, to cheer, to befriend those who were in need of friendship. There was a light in his eye, a music in his voice, a grasp in the hand, a cheerfulness of speech, a heartiness of manner, which lifted burdens from the shoulders of those who came near him. His honor was unstained. Although he was connected with the politics of this city and of the country in their darkest hours, when corruption ran riot and the infamous scramble for place and pelf was common, the pitch never defiled him, his good name was never assailed even by the tongue of scandal. He bore himself with a lofty rectitude; his integrity was incorruptible.

Amid the dance of society, the roar of business, the greed for office and money, we pause beside this coffin in the stillness of this sacred place to recall the form and features of one whose nature was large enough to offer the generous hospitality of recognition and sympathy to all sorts and conditions of men, whether they were Roman Catholic or Protestant, Jew or Mohammedan, and who in the battle of life ever struck with all his might for the cause of the true, the right, the good. One who knew him best has assured me that his piety towards God was as genuine, deep, and reverent as his charity towards his fellow-men was large, unaffected, and fervent. He drew the inspiration of his conduct and character from the truths and faith of our holy religion.

We speak of our friend as dead. This casket contains his outer covering; the man himself lives. He looked with those eyes, spoke with that tongue, those lips, used those hands, for there was that within the body which employed these organs as instruments. The man himself has passed through the door, invisible to us, into a world not of ghosts, but a world of substance—of human forms. He has gone forth clothed with immortality, and stands to-day in the presence of his Father and his God, of his Savior and ours. He has carried with him all the fruits of his true and kindly words, brave and generous deeds, noble conduct and endurance; for in that sphere character alone survives, and every man shall find the place for which he has fitted himself on earth. We can not tell what things may be given him to do, but we are sure that his higher life in that glorious world unseen by us will be one of activity, of ministry to others, perhaps to us, in ways we can not understand. Shall not the blessed revelation of this truth, of the life and immortality brought to light in the gospel, bring comfort to our hearts, consolation to our sense of bereavement?

"Brief life is here our portion,
Brief sorrow, short-lived care;
The life that knows no ending,
The tearless life, is there.
Oh, happy retribution,
Short toil, eternal rest;
For mortals and for sinners
A mansion with the blest."

Shall not these truths irradiate our own lives, inspire our characters, helping us as they do to take the measure of life's values, to place in right proportion the world on this side the grave and on the other.

Will not the beautiful example of this man who the other day walked at our side, talked, worked, laughed, and wept with us, but is now beyond the stars, bring to our toil-worn brains and hea-ts peace this day? There will be little profit to us in gathering about this coffined form to pay this last office of love to the memory of our friend unless we go hence more reverent towards God and more kindly to our neighbor, reading the minds and conduct of others with a more charitable eye, and carrying ourselves with a more tolerant and affectionate bearing towards them.

This man bore himself to the age of three-score years and five, not only untainted by the world, but unworried with it. No frown of discontent, no scowl of misanthropy, was ever seen upon his brow, no complaint of the emptiness of the world or of its vanity was prompted by that cheery heart. He wrought for the welfare of others, and in so doing found his own, for love is its own exceeding great reward. Let us take this spirit with us from this hallowed place, and we shall depart truer and braver citizens, purer men, worthy to live, and not afraid to die.

Rev. T. De Witt Talmage, D. D., then delivered the following address:

The nation weeps. What a wide, deep, awful vacuum the departure of such a man as Samuel S. Cox leaves in the world! We shall not see his like again. It will be useless to try to describe to another generation who or what he was like. He was the first and the last of that kind of man. He was without predecessor and will be without successor. What a genial, gracious, magnificent soul he was! And every year he lived made to the world a new revelation of his admirable qualities. Within the past few weeks I traveled in his wake across the American continent, and I heard everywhere of the ovations he had received and the superb impressions he had made, cities and Territories and States casting their crowns at his feet.

And while these tempests are raging on land and on sea and the life-saving stations have rescued, within a few hours, the crews of thirty ships, we are called upon to perform the last office over the body of him who was the chief champion of that national benevolence for which every sailor on the seas feels thankful.

And was there ever a truer friend? Tell me, ye who live in the high places of the earth, and the poor who last night, while his body lay in state, wept over this casket! There is hardly any one here to whom he has not done a kindness.

Did he not speak for you a good word or write a generous commendation or give you the smile of encouragement in some exigency? How many people he helped; how many perplexities he disentangled; how many bright utterances he strewed in the pathway of others, no one can remember save the God who remembers all.

Firm as a rock, brilliant as a star, artless as a child, pure as a woman. God endowed him for a good purpose with a resiliency of wit, a faculty of impersonation and an irresistible mimicry and a dramatic power that were inexhaustible. How much the world owes to such a nature we can not tell. It is often a greater good to cause a laugh than to start a tear. We all cry enough, God knows, and have enough to cry about, and we need no impulse in that direction. But he who can scatter our gloom by innocent merriment has been to us an emancipator. Solomon was right when he said, "A merry heart doeth good like a medicine." Wit is of two kinds, that which stings and galls and angers and makes the eye flash and the heart burn; the other is that which illumines, sets free, strengthens for another contest, puts us in good humor with the world and makes us renounce our follies. The one kind of wit is the lightning that rives, but the other is the dew that refreshes. Of that last kind was the wit of our departed friend.

He never laughed at anything except that which ought to be laughed at. There were in it no innuendoes that tipped both ways; nothing viperine; nothing that would have been discordant to recall if he had died the next hour. Prince of innocent pleasantry, sanctified repartecist, our friend shall live in our memories like a sweet song too soon closed, like a banquet too soon ended, like a picture over which too soon the veil has dropped.

Good-by, old friend of years! Together we rejoiced in this world. Together we shall rejoice in a brighter world. You have gone because your work was ended. We toil on because there is yet something for us here to do. Come down to the gate and meet us when it is our turn to enter. Then on the emerald banks of the crystal sea we will walk arm in arm and talk over the scenes of earth by which we were disciplined for the raptures that never die. Spirit blest! I hail thee from this dark, autumnal hour on earth, thou of the June morning celestial!

My sister, bereft! God will help you in this sad hour. Lean hard on the everlasting Arm. Thank God that this genial soul was permitted to walk by your side so long, your pride and your joy, and be comforted that you did just as well by him as he did by you. Witness the long watchings of his two great sicknesses. Witness your lifetime devotion. Where he went you went all these years, and none of the enchanting places of foreign travel which he described by his graceful and potent pen were as bright or beautiful as the place where you shall meet him soon. He will not forget you any more than you will forget him.

"In this dark world of sin and pain
We only meet to part again;
But when we reach the heavenly shore
We there shall meet to part no more.
The hope that we shall see that day
Should chase our present griefs away."

Dr. Deems read the commitment service from the Book of Common Prayer, and closed the service with an extemporaneous prayer nearly as follows:

Almighty and most merciful God, our heavenly Father, who in Thy wise providence hast taken from our midst the spirit of our departed brother, we do most humbly bow to the holy will which has brought this great bereavement. We do most humbly and heartily thank Thee for the existence and career of our brother. We thank Thee for every good thing that came into his life. For his radiant childhood, his bright boyhood, and his energetic manhood, receive our humble thanks, good Lord. For all his intellectual and moral endowments, for his industry, patience, perseverance, and genial temper, for his success in striving to turn aside from evil ways, for his unselfishness, his genuine devotion to humanity, his love of his fellow-men, his patriotic devotion to his country, his ability to serve his fellow-citizens in so many and so important directions, for his example in leading a clean life in an environment in which so many have been corrupted, for the thousands of tears he has wiped from the eyes of widows and orphans and strangers and the oppressed and perplexed and poor, and for the thousands of smiles he has kindled on so many sad faces, we render Thee most humble and hearty thanksgiving, good Lord. For his home of unsullied purity and sunny love, for his position of conspicuous honor and usefulness, for the great hosts of friends by which he was able to surround himself from his boyhood to his death, for his reverence for the christian faith and the pleasure he had in its strengthening, comforting, and uplifting influence, we render most humble and hearty thanksgiving, good Lord.

And now, most holy Father, we beseech Thee to sanctify the sorrow which hath come with his death. Into the arms of immortal love take our dear sister, his bereaved wife. In the lonely hours when she listens and waits in vain for the familiar foot-fall and the sunny smile of his presence, and he does not come, and her heart grows lonely, speak to her in the accents of divine affection and say to her, "Thy Maker is thy husband." Let his departure be by Thy grace turned into a blessing to all his kindred, so that his memory may not be only a precious and fragrant treasure, but also a high and sustaining incentive to lives of goodness and purity. May all his friends and associates, in private and public life, feel that this fountain of beneficence being sealed, they must open their own lives for ampler usefulness.

And now, Lord, amid these surroundings, we pray that the silent beneficent influence of Thy Holy Spirit may be exerted upon the people in the Congressional district which Thy departed servant represented. Incline them to choose for his successor a man whose hands and whose heart are clean of falsehood, bribery, and corruption. Pour Thy Spirit upon our whole land and nation. Grant Thy grace to all our public men. Let there come from the grave of Thy

servant a call to them all to turn from every evil way to perfect holiness in the fear of the Lord. May all who make and expound and execute the laws of this land be inwardly devout servants of the living God and outwardly examples of justice, mercy, and truth. O Thou, who hast permitted this people to govern themselves, grant unto them the spirit of wisdom and of a sound mind. May they all learn that no man who is bad in private can be trusted to be good in public. May they never elevate to places of power and trust men who are false, cowardly, licentious, or profane. May the people have grace to select for their public servants men who fear God and fear nothing else in heaven or earth or hell; and so may we come to be that people of whom the nations of the earth shall say, "Blessed is the people whose God is the Lord." And so may the land which our brother loved, and for which he lived and in whose service he died, grow in all true greatness and be an example to the nations of all the earth. Hear us, Holy Father, we do most humbly beseech Thee, and answer the prayers of us, Thy servants, as may be best for us, granting us in this present world a knowledge of Thy truth and in the world to come life everlasting.

Glory be to the Father, and to the Son, and to the Holy Ghost, as it was in the beginning, is now, and ever shall be.

Our Father which art in heaven, hallowed be Thy name. Thy kingdom come. Thy will be done in earth as it is in heaven. Give us this day our daily bread; and forgive us our trespasses as we forgive those who trespass against us. And lead us not into temptation; but deliver us from evil. Amen.

And now may the peace of God, which passeth all understanding, keep your hearts and minds in the knowledge and love of God, and of his Son, Jesus Christ, our Lord. And the blessing of God Almighty, the Father, the Son, and the Holy Ghost, be amongst you, and remain with you always. Amen.

Civil Service.

SPEECH
OF
HON. THOMAS R. STOCKDALE,
OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 24, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9966) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1891, and for other purposes—

Mr. STOCKDALE said:

Mr. CHAIRMAN: I propose in what little I have to say on this question to indulge in no harsh criticisms. I have no animosity or feeling against the *personnel* of the Civil Service Commission. I do not propose to pronounce any strictures upon them. I am in favor of striking out this item in the appropriation bill, not with the view of emphasizing criticism, but because, in my opinion, it is simply a waste of money. And so far as the working of that commission is concerned, as it has developed itself before the country, it is powerless to do any good. But it is, as I believe, productive of injury to the public service and injustice to the people.

I have no interest in striking it down and have no disposition to do so if it can be shown to have done any good. But, believing, as I do, that it is a useless appendage to the administration of this Government, is undemocratic, in that it tends to build up a class of officers who are not directly accountable to the people, and agreeing with my friend from New York, General SPINOLA, that it is as now administered un-American, I do not believe in voting money to support it. The President of the United States is limited to a tenure of office of four years, Senators to six years, and members of this House to two, but you propose to make a perpetual tenure for the employés of the Government, over whom neither the Executive of the nation nor the people themselves shall have control.

The gentleman from Maryland bases the gravamen of his remarks upon the reason that there is a large number of people now upon the eligible list, and it is wrong not to "let them in." He arraigns the friends of this motion in the severest terms, because it would lessen the prospects of some of the great army of applicants "to get in." I admit that may be; but to whom does this Government belong? And that is a pertinent question at this hour Does it belong to the employés and office-seekers? Is it the legitimate prey of place-hunters? Has this civil-service reform arrived at that point where it dare not alter its methods for fear the applicants will be displeased or until they all get places, or does this Government belong to the people to manage as their own sovereign will may determine?

There are now, I am informed by the gentleman from Maryland, 100,000 people who have been examined by this commission. They are eligible for twelve months, dating from their examination. Not 2,000 will get places before the twelve months expire, and none of the Democrats; and then the commission will proceed to examine them again and give them certificates, to be again disappointed; and thus we keep these people, many of them worthy people, in a state of constant anxiety and unrest, and disqualify them for other business.

I say here is the mean act of this play, and we are playing the most contemptible part by keeping this commission before the people, making these examinations, and holding out false hopes to these people when we ought to have the courage and honesty to tell them that there are not places for them, or at least we can avoid deluding and decoying from their homes, under false pretenses, other citizens, by giving the commission a rest for twelve months. In answer to this, it will be said that people who want to apply for examination have the right to do so and may get places, and that is perhaps true under the administration of the law, but if the law was carried out, not only in its spirit, but in its plain provisions, it would not be true. The law provides:

Third. Appointments to the public service aforesaid in the Departments at Washington shall be apportioned among the several States and Territories and the District of Columbia upon the basis of population as ascertained at the last preceding census.

Mr. Chairman, is there anybody that does not know that this provision of the law is utterly disregarded in practice and that the far-off States have very few people in the Departments?

I presume it is safe to say that the territory within easy reach of Washington, with less than one-fourth the population of the United States, has half the Government employés in this city, and that such inequality is increasing under the administration of the commission.

If I am correctly informed as to the number of Government employés in the Departments from the gentleman's State, it amounts to about 1 for every 423, whereas it ought not to be more than 1 in 3,400 of the population. Just what proportion of the population of this District is in Government places is not known. I am told that the easiest mode of ascertaining is by counting what are out. To give the other States and Territories their quota on that basis would require the commission to increase the number of Government employés in Washington to 117,000.

If they would, on the other hand, undertake, as they are in honor and in obedience to their oaths bound to do, to require these near States to give way until the far-off States are made equal with them what a revolution there would be in this great area between the mountains and the sea. Gentlemen from surrounding States would weaken in their zeal and be less eloquent in their advocacy of the law and in encomiums upon the commissioners, and the applause in the galleries would be milder. Yet it might impress gentlemen west of the mountains and south of the Potomac with more respect for both.

Ingenious excuses for violating this law are but arguments for its repeal, for a law that may be properly violated ought not to exist.

It would seem that the chief end of this commission, according to its adherents, is to get people into Government places. Its greatest champion on this floor, the distinguished and eloquent gentleman from Maryland [Mr. MCCOMAS], made an earnest appeal for it a while ago, as follows:

What is the result of this proposition? For seven years under the existing law and by its invitation you have sent a hundred thousand men and women and young girls from the farms and villages up to the cities of the country where you have held your examinations; and they have been placed on the eligible list—one hundred thousand of them last year—many of them poor. They are hoping that you meant what you said when they went to be examined. They found that 22 per cent. of those examined had been placed on the rolls of Government employment last year, and they thought that they had one chance out of four this year of appointment if you should keep your pledge. They are relying on your honor, your party's honor, to give them the opportunity which was promised them under the law. Now you propose to say, "We will starve out the commission." These people have spent their money, their toil; they have stood their examinations in vain, because the Government is going to repudiate its pledge. If you now strike out this appropriation you practically abolish the law; and none of these people can get in. You do not leave one opening by which a single person not now in the service, although eligible, can enter it under this law.

I do not criticise the gentleman. If he has the ability to sway Congress to assent that he and a few others shall furnish the employés for the Departments here and they furnish capable people, we can hardly expect him to desist. The responsibility is with us, and our constituents should hold us responsible for making this large appropriation to carry on this institution when we know the result will be to add another 100,000 to the eligible list, and who we know can not get places unless places be created for them. The people of the country ought to ask us, and probably will, is it honest to deceive these people in that way and is it honest to appropriate the money of the Government to perpetuate the deception?

You say this commission is intended to remove the service from partisan influence. That is, you expect a commission of the strongest partisans, appointed by a partisan President in the interests of his party, to be strictly non-partisan.

It is said also that the fact that no more than two commissioners shall be adherents of the same political party is a safeguard, but two is a good working majority in a body composed of three.

It has been several times announced in this discussion, with a good deal of muscular effort at sincerity, that this commission is the means of maintaining a merit system. I am heartily in favor of having meritorious people in office and I am as heartily in favor of the people having something to say as to the merits of their employés. In all conscience, they should at least choose those who are to sit in judgment on the qualifications of their employés.

The commissioners are appointed by the President. The President and all his advisers are always partisans of the strongest type. The President can remove any commissioner at will, and this is the tribunal to which the people are referred as the source from which to expect the limpid stream of pure and unbiased non-partisan patriotism. Why, Mr. Speaker, it is only necessary to read the law to ascertain that its

framers had no confidence that it would be efficient. It provides as follows:

Fourth. That there shall be a period of probation before any absolute appointment or employment aforesaid.

And this is perhaps the wisest provision of the law.

I never saw the original draught of the bill. It may be that this provision was inserted as an amendment by some good Methodist to exercise the wisdom of that church on this institution; knowing the uncertain and often deceptive character of examinations, they put the applicant on probation, so as to ascertain through the evidence of his works whether he is equipped for the high duties of a member of that great organization.

So here dependence was not put in the examinations, but the applicant must be put on probation, that he may show forth by his works whether he is capable, and by his walk and conversation whether he is honest, so that it is the head of Department who determines the fitness after all, and the only effect and real office of the commission is to confine him in his selections to a favored few whom they have provided by necessarily imperfect and often farcical examinations. No matter that they may know people outside far superior to any of those on the eligible list—men and women eminently fitted for positions and worthy withal, pursuing their avocations on the Western Slope, in the great surging Northwest, and in the glorious South, who have not the time nor money to get on the eligible list and come to Washington and sit in these galleries and wait for employment.

It is said they may be examined at home, and then await there a summons to appear in Washington and take possession of an office. Yes, and they might just as well wait for Gabriel unless some Senator or Congressman interceded—the very thing the commission assumes to avoid.

It is asserted that the Government can not make a single appointment without the commission, and hence this appropriation should be mode. In the first place, I do not assent to that proposition. I believe appointments could be made out of the 100,000 on the list, and I think the Government could pinch along on that for a year; and, if it is true, the Government will not suffer, as the Departments are all full to overflowing; and if the Government has placed itself in so ridiculous an attitude as that Congress could and should amend the law in that regard.

Gentlemen will be surprised when they find the minority will not be insignificant on this vote, and they will be more surprised when a vote shall be taken on a bill to remodel the law, for then we will be in a greater majority than they are now; not because the country is opposed to reform in the civil service or has abandoned the hope of accomplishing it.

In voting against this appropriation I do not desire to be understood as pronouncing against civil-service reform. I am as heartily in favor of reform and improvement in the civil service of the United States as any gentleman on this floor, and God knows it needs both, and for that reason I am in favor of pausing here and remodeling the plans of this commission, which, after seven years' trial and the expenditure of large sums of money, has failed to do either.

I simply say that the Civil Service Commission, giving them credit if you desire for an honest effort, have proved unable to accomplish the end in view; that the plan upon which they proceed and will proceed is itself a failure; that when we appropriate this money we give it to perpetuate a failure; and, believing that, as I do, I have no right to vote away the money of the people for such a purpose.

Had I ever believed in the plan pursued by this commission I would regard it far more consistent to abandon it after seven years' failure than to pursue the same course for fear of acknowledging a mistake. We will never convince the people that we are infallible by canonizing a palpable blunder. I am asked what I would do; return to the old system? I can say that I would not fear the old system. I would not object to an opportunity to put a lot of good and capable Mississippians in good places in the Government service, and thus increase its efficiency and raise the standard, even at the inconvenience of some incumbents who are said to be credited to Mississippi and who could not find the State if they were turned loose to-morrow.

But there is one thing we could do; we can amend this law so as to make the way unmistakably plain, if it is not already so, and leave no excuse for violations of it. If we are to have a commission, let them be admonished that they are to obey and not defy the law nor evade it. For it seems that this law, when it says "Appointments to the public service aforesaid in the Departments at Washington shall be apportioned among the several States and Territories and the District of Columbia upon the basis of population as ascertained at the last preceding census," is not plain enough for the commission to understand or they have not respect enough for the law or the people to obey it.

Let us amend the law so that each State shall have its own board of examiners, appointed by the President if you will, but from the citizens of that State. And I would go further and have the quota of the State apportioned among the Congressional districts, or judicial districts if that is preferred, with an examining board in each, and that when a vacancy occurred in the future from that State it should be filled from that State or district, and that the proposed incumbent be taken from the head of the list as to grade in his State and district. If it be thought necessary to examine him again here, and he fail, let the next highest be taken from that district.

Let the examinations be reasonable in view of the service the applicant wishes to enter, as the law now requires, and not ask an applicant for letter-carrier what is the oldest republic in the world, and test the capacity of a copyist by asking how many bones there are in the human body, and of a book-keeper by his knowledge of the arterial circulation. I would provide also that no appointments shall be made from States nor the District having now an excess over their proportion until the States having less than their share shall be equalized. I would make the appointments for a term, and not perpetual.

I would then provide a penalty for violation of any of the provisions to be enforced by the courts, and I am in favor of withholding this appropriation until that is done; for by making the appropriation now to last a year from next July we sanction the former course of this institution when we know that it is inefficient and in disregard of the law. To withhold this appropriation will not affect the law in its provisions against political assessments and undue influence of officers over employés and corruption in office.

It is said, and this is the argument most strongly urged by gentlemen who have many friends in office and are about to get in more, and doubtless it has influenced many good people, that the employés must have a life tenure because the management of the Government should be free from party influences. Then why not make the higher as well as the lower offices of the same character? Surely heads of Departments need to be free from bias as well as their subordinates. And if they, why not the President? That, Mr. Chairman, is the inevitable tendency of this scheme, and it already develops the usual symptoms of such doctrine, to wit, supercilious disregard for the wishes of the people. I prefer to obey them.

This law was doubtless enacted with good intentions and for a wise purpose, but it is plain that it has failed to accomplish that purpose; whether it is the fault of the law or the machinery provided to execute it, the result is the same. It does not follow that people who have lost confidence in this plan of accomplishing reform, and therefore decline to consent to waste money on it further, thereby abandon the hope of accomplishing reform by some other and better means. On the contrary, we want to reform the reformers until they recognize that they are the servants, not the masters, of the people, and that this Government belongs to the country, and not to a locality.

The States limit their officers to terms. They sometimes elect the same men many times over, but they remind their officers periodically that they must come back to the people and account as to their conduct, and that a further lease of power depends on efficient service; that it is not a continuance, but by a new commission granted by their sovereign will. Ever since Washington, with a crown glittering before his face, within his easy reach, surrendered back his sword, taught the people that they were greater than even he, and that the sovereign power was safe only in their keeping, the American people have regarded with suspicion any scheme looking towards removing public officers or officers beyond their reach, thereby destroying the representative capacity and accountability to their masters.

The people of the United States as well as the States have thus far seen to it, by means of the rigid rules of the Constitution, that all their rulers shall at fixed periods come down from their exalted places and disrobe themselves, and if they desire to return they must have not extension, but a new expression of the sovereign will. It is an innovation on this cherished American doctrine to inaugurate life tenures for fifty thousand people.

I recognize the fact that it would be disastrous to the service to change the whole force at once, but we need not be alarmed lest the people have lost their common sense. No such foolish thing was attempted in the whole life of the Government before the passage of this law. What I say is that there should be no vested right in their offices or places, no life tenure; let them be appointed for a term, according to the American doctrine, and reappointed, if their services are required, but no doctrine of perpetual tenure. It is undemocratic and un-American and useless.

We need no royal commission to control the entrance to the Government Departments, with power to determine whether American citizens are capable to attend to their own business; no lord chamberlain to carry the keys of the castle.

If the Civil Service Commission and the life tenure are such blessings to the subordinate service, why not apply it to heads of those subordinate departments, who ought to know more and who are responsible for their proper management, and to the Commissioner of Pensions, of the Land Office, Assistant Postmasters-General, Auditors of the Treasury, chiefs of bureaus, etc. No one would consent to that move; yet there is more reason for it, and this doctrine tends to that and beyond it later on.

Why do we not apply it to ourselves in the House and Senate? We elect a Doorkeeper, Sergeant-at-Arms, Clerk, and Postmaster, and they appoint their respective corps of assistants, and generally upon the recommendation of Congressmen. Why not make requisitions on the commission for all these? Would we have better service? I pre-

same most of these bright little gentlemen who wait upon us so politely and pleasantly and intelligently were appointed upon the recommendation of Congressmen. Could the commission have furnished a better corps of pages or better staffs for the officers of the House?

Mr. Chairman, this system, if continued, will increase to alarming proportions an evil already upon us and make it permanent. To illustrate this I will quote from the RECORD a part of the statement of the gentleman from Ohio in charge of this bill [Mr. BUTTERWORTH], made before the House on Tuesday.

He spoke as follows:

Hence, they go on what might be properly termed a civil pension-list, in which capacity they retain their employment and draw their pay. But that is not all. We have in other Departments old soldiers who have borne themselves conspicuously and well, and who bear on their bodies the evidence of good service to the country, often utterly unfitted, by reason of age or other incapacity, from discharging the duties of the positions they hold. They may be pensioned and at the same time are drawing a very large salary; but to disturb one of these is to unsettle the very foundations on which the Government seems, at least, to rest. [Laughter.] So here again we have an explanation of why it is that a great increase of force is necessary, where the numbers employed would indicate abundant ability to take care of the work.

So long as that condition of affairs exists the Government officials find it impossible to deal with the vexatious questions that arise. It occurs also that some man who is utterly worthless, but has influence enough behind him to secure any position on earth, and towering close to the better land [laughter], is often kept, for there does not seem to be power enough in the Government to supplant him with a man equal to the emergency. Hence I believe that the Government is to-day paying, here in Washington, from one-half million to one million of dollars to civil pensioners.

It seems that this is the first committee, so far as I know, who had the enterprise and courage to discover and expose these abuses in the Departments, to say nothing of the civil-service-reforming commission.

Scientists may discover the ethics that will justify it to the conscience of high Government officials to certify under sanction of their high positions to Congress that they must have more force or the public business must suffer, and never mention the fact that they have force enough if it were efficient, but to plain men not schooled in that sort of lore it would indicate symptoms that with some encouragement might develop into a case of fraud.

Government officers have no right to dispense public money except for services rendered nor to give bounty. It is the province of Congress and the Executive to squander the public money. What a high state of cultivation the sentiment of civil-service reform has arrived at, when troops of Congressmen go to Government officers to deter them from discharging men who are utterly worthless and insist that they draw salaries, and multitudes of church members and ministers flock to the Departments to deter officers from discharging their duties and induce them to pay out money not earned and which they know can not be earned.

There are strong reasons why some more efficient means than this commission should be employed and that the people should take this matter in hand and make such practices impossible. I do not demand that the aged people be dealt with otherwise than kindly, but I do say that the worthless incumbents ought to be discharged before their worthlessness develops into gout and they become pensioners on the Government on account of long services. These worthless people are not only drawing salaries not earned, but they are encumbering desks and occupying rooms that worthy people and efficient servants ought to occupy, thus causing double loss to the Government. And I say further that, whatever money is expended for the support of worthy people who have spent their lives in the service of the Government, the people who furnish that money have a right to know it, and to a voice as to how it shall be done. Better pension them at once, but for the dangerous precedent, than to give $1,800 salaries and furnish them desks in Department buildings that are needed for active men in buildings already crowded. It will soon be so that we will have to enlarge these expensive buildings.

I desire to call the attention of the House and the country to this condition of the public service. If this feature has come insidiously into the service while employés could be changed at will, what will the present system do where all are expected to remain for life, and must be pensioned in the end? A civil-service pension-list never ought to be adopted in this Government. Pensions to soldiers will expire by limitation of life in seventy-five years, but a civil-service pension-list will forever increase.

All this can be avoided by the plan I suggest, by making the civil service conform to the general plan of this Government and appoint the various staffs of the Departments for a term of years as officers are elected for a term, and then whoever make themselves valuable may be reappointed as officers are re-elected. Then there would be an incentive to render efficient service. The competition then would be in the rendering of valuable service to the Government instead of competitive examinations that have already become the laughing-stock of the country, and a life tenure which always tends to inefficiency in service and to inaugurate civil pensions and a unanimous desire and effort for higher salaries.

I have no reason to doubt the correctness of the information furnished the House that 22 per cent. of those on the eligible list last year got places, and there are 100,000 applicants on the eligible list now, 25 per cent. of whom have a reasonable chance to get in this year. This law, with the commission in full control, has been in operation about seven years. Presuming that the Administration whose accession to power, its friends boldly assert, was caused by its promises scrupulously to observe the civil-service law would not turn out faithful or competent employés, the conclusion is that a number equal to 22 per cent. of the applicants were discharged last year for incompetency; surely not for political reasons. Twenty-five thousand more are to be discharged and their places filled this year. Now, I say if so large a number of incompetent employés were in Government places this system of reform has degraded the service to an alarming extent.

On the other hand, if the Administration has turned out, say, 22,000 competent employés, and is about to turn out 25,000 more to fill their places with fresh appointees, not likely to be its enemies, then we have an illustration of "non-partisan civil service," labeled "reform." This comports with the definition given by the distinguished gentleman from Ohio, that civil-service reform means "to turn Democrats out and put Republicans in." There will probably be a transposition of terms when the Administration changes.

I do not assume the rôle of censor, nor to advise the Administration, nor to penetrate the depths of the philosophy of the commission; but I have the right to say and vote in the name of the people I represent that they shall not be made to furnish the money to continue the performance of this roaring farce. It is not worth the tickets.

I do not oppose proper appropriations when there is some substantial benefit to be secured, but I do insist that the House ought not, by making this appropriation, to give its sanction to a defective system and a worthless plan of administration that lead straight to usurpation and concentration of power and to the upbuilding of a colossal scheme of civil pensions, to the demands of which there will be no bounds and to its existence no end.

I do not complain of the people who are in the Government service and who got there without deception or fraud, nor those who seek places in the same manner. There is enough of human nature in us all to restrain harsh criticism of people who seek lucrative and easy places with a good prospect of life tenure and comfortable retirement when age comes to them, particularly when we ourselves have invited them.

I simply desire to test our own conduct by a fair and just criticism. Not they but we are intrusted with the keys to the national Treasury and the right to open and close the vaults. The embassadors of a sovereignty that is without peers in the world, intrusted for a time with the business as well as the rights and honor of the nation, must answer back to the people whether we have been faithful or recreant to that exalted trust. And it seems to me that if we want to make a record that will bear the scrutiny of the increasing intelligence of this great country we should avoid the appearance of evil and scrupulously avoid and refuse to foster any system that is likely to be an incubus upon posterity.

I have the utmost regard for the intellect and patriotism of the great leaders here. Confident in their strength, they doubtless feel that they can safely allow this plan to be operated further and change it at will; but whoever has read carefully the history of legislation will concede the dangerous power of precedent. Even now this measure is not argued on its merits; but platforms are held up *in terrorem* before legislators, and the motion will likely fail when, as I believe, the real sentiment of a majority of the House is that this law should be remodeled and the Civil Service Commission abolished in the interest of reform.

I do not fail to remember that gentlemen from great wealth centers proclaim with confidence that out of such abundant wealth we can afford to be lavish. On the great Southern plantations there used to be one very rich man and five hundred or a thousand people who owned nothing, but produced all the wealth of the one. That same thing exists now in a far more absolute sense throughout the manufacturing and mining regions of the North. The English Government exists on that plan, and this Government will soon be there.

We are daily more rigidly barring out English products because they are made by England's laboring poor, whom we style paupers, yet England has more wealth than any nation in the world and sends her money here by ship-loads to invest in our best property. Many of the manufactories and mines that we protect with so much affection are owned by Englishmen. They bring their pauper labor here and we protect that, and the English owners look on well pleased with their own colossal fortunes and our colossal folly.

Our railroad lines are bonded to English capital. They are buying up the industries that we have fostered at the cost of the people. Ask one of these great owners and he will tell you England is the best government in the world. For him it is. For those who have life positions in the government service it is. They sneer at America. You ask the laboring poor, who with stiffened fingers eat their frugal meal and shiver with cold, die without pensions, and they express a different opinion.

That this Government is tending swiftly in that direction no intelligent observer can doubt. Scout it as you will, and it will stand up before you and grow larger and uglier to the tax-payers and handsomer to the tax-consumers. I do not apprehend any change in the form of the Government. The wealth-owners do not desire that. Why should they? They have possession now, and the people obey them. They

can sound a tom-tom, as they are doing now in the tariff bill, and the people will run to them and do their bidding.

The English Government has less power and her legislation is less arbitrary than ours. The wealthy class enjoy the fruition of life with fuller freedom than any other people. Another class, while unrestrained by law, are ground beneath an oppression as relentless as fate, not by the power of royalty, but by the resistless power of omnipotent gold. For that power civil-service pension-rolls, however long, would have no terrors. Its friends do not pay them, and they know that the more money the Government spends the less trouble will the surplus give and the higher the tariff will go.

I represent a portion of that class of people who get but few Government places under the present system and derive no benefits from the panacea protection. The agriculturists and the log and timber men have no part or lot in it. They are not forgotten, however; they have the privilege of furnishing the money to carry on the Government and there their part ceases. They are in the condition of the man who was being tried in Amite County in my State on a charge of gaming. A droll fellow was on the stand as a witness and testified that a game of cards was played upon a deer-skin by some gentlemen of a fishing-party on the Hamochilto River. The district attorney sternly asked:

Q. Was this prisoner present?
A. Yes.
Q. Did he sit by the deer-skin?
A. Yes.
Q. Was he handling the cards?
A. Yes.
Q. Was there any money on that deer-skin?
A. Yes.
Q. Now, answer me truthfully. Had the prisoner any interest in or anything to do with that money?
A. Not after it was put up.

The farmers, and planters, and timber-men, and stock-men are compelled by the power of the Government to put up money by the millions, but there is so much jugglery around this Washington deer-skin that is to them the last of it. Other men fatten and riot on what is wrongly taken from them.

There are no eight-hour days for the farmer or the planter. He can not go at 9 in the morning to his work in a magnificent building and return at 4 p. m. to rest from the fatigue of seven hours of vigorous sitting down on cushioned chairs. But his voice is heard in the gray of the morning. The earliest rays that dart athwart the earth find him already in motion driving the plow; the heat of the rising day beats on his bronzed cheek, the vertical rays beat severely down upon him, but he does not falter. The red glare looks back upon him as the sun goes down, still toiling with undaunted courage.

With what glee do the Shylocks watch him for the profit that is in him. Foreigners and foreign capital come to this country and build great factories and work large mines with foreign pauper labor to run them, and the farmers are taxed to protect them. Yet when they ask some relief in the shape of a system of cheap money every moneyed influence in the land is shaking the Constitution in their faces. Enormous taxation, tariffs always on a rising scale, high transportation, and expensive boards of trade, all heaped upon them, which they are expected to bear cheerfully, but as soon as they dare to promulgate a scheme by which they may be enabled to control their own products, the result of the labor of their hands, the balance of the country is against them.

Strange to say that, in face of the fact more than half of the brain power of this county is produced by the farming classes, they have endured so much. But I have noticed that within the last few years the supercilious laugh at the pretensions of the farmers is getting off the faces of monopolists to same extent, and a shade of anxiety is creeping on. There is a voice heard in the land; it is not the voice of the turtle, but comes from the throat and lungs of a giant. At last these greatest of all people have concluded to utilize their strength in their own defense and are perfecting their organization and enlarging their knowledge; and their voices are being heard in these Halls.

The agriculturists have been trodden down in all countries and become the tenants of the lordly, but the American farmer is exhibiting symptoms that indicate that those who have grasped and held him so long have not in their clutches the amiable lamb to be shorn, but are about to arouse a lion to be feared.

I say the "greatest of all people;" why? Let us read the facts.

Every other class of people acknowledge that they are incompetent to make a living by their own prowess and beg the fostering care of the Government. They acknowledge that they have not the capacity to succeed on equal terms with other countries, and the Government is called upon to interpose its strong arm to save them from competition. Then look what the farmers do. They stand out against the world. They compete with the world. They not only compete with the pauper laborer of Europe, which other men confess themselves unequal to do, but they are compelled to contribute to the support of these imbecile industries and save them from bankruptcy, and yet they live with no protection and no one helps them. At least the cotton-planter has not one cent of benefit of any tariff. On the contrary, everything he touches is taxed for the benefit of others. Now, then, do they simply live under all this unjust burden or do they cut a figure in not only the prosperity, but the very existence of the commerce of the country and the wealth of the nation?

Every man will admit that if the balance of trade were against us permanently the country would soon be bankrupt and the people impoverished and discontent and misery follow. Who keeps the balance of trade in our favor? Not the protected industries that we have fostered and pampered for one hundred years, but the unprotected farmers. Our imports vary from $600,000,000 to $700,000,000 annually and our exports generally exceed that amount.

Of the $700,000,000 in round numbers of exports, over $500,000,000 are agricultural products, nearly one-half of which is cotton products. Take away from our exports the products of agriculture, with the imports the same, and the balance of trade would be against this country by $500,000,000 annually, and would swallow up all the coin in the country in two years. These are the people who battle against adversity, against the competition of all the labor, pauper or otherwise, and against the unfriendly legislation of Congress, and with half the country picking at their pockets, without protection, save the country from bankruptcy all the time, and but 7,000,000 of them all told. If they but knew their power and could organize so as to exert it, they would be oppressed less.

If Congress is determined to have a surplus and let it lie idle, why not let the people use it at a low interest? It is said it will injure the farmer. I do not believe any perfect scheme has been evoked yet, but a practical one may be framed. How anxious gentlemen are to be guardians for farmers. Yes, withhold a good dinner from the hungry for fear they will eat too much, and give it to gourmands. I desire to say, in my judgment, the farmers are able to take care of themselves; at least they can not make it much worse. Other people have been attending to their business for them until they are driven to the wall; they believe it is time to fight, and are going to fight, and will strike straight out from the shoulder, to our surprise, one of these days, unless we cease to pile these burdens upon them.

Their tone is different now; they do not beg for recognition; they do not even complain, but demand. They are grasping at the reins; they will plow through these halls one of these days and weed out the concern if we do not heed them. I want to say a word here for the colored cotton-planter. After all he has endured—cotton tax of $13.50 a bale extorted from him the first year he sets up for himself as an American citizen; $11.50 the next year, all he buys enormously taxed—now it is proposed to destroy the sale of his cotton-seed oil by a prohibitory direct tax—not for revenue, we do not want that, but are trying to reduce it—but this is purely to destroy one of the industries of the colored people to give a better sale to white men of the North for their products—I say colored people especially, because they are more apt to sell cotton seed than white men.

Who will pension the old, old man when age, strange freak, brings out upon his deep-black head and face the snow-white hair? When with stiffened limbs and back and bowed head he sits in his humble cabin door and cons over the last quarter of a century? On his five bales in 1866 he paid the Government $67.50; $57.50 in 1867, and at least $100 a year in unjust taxes upon his purchases all those years of toil, $2,625 in all. He will soliloquize "That is a heap of money for one old darky to pay. I might have a good home now. I am about to lay down the shovel and the hoe. I would like to rest. Seems to me I have done enough for Uncle Sam. My little pile of cotton seed would buy a barrel of flour and some pounds of coffee, but Congress has taxed it more than it can stand, and the old man must get up and work some more; but I think those rich gentlemen might let up on the old darky this once."

The Tariff.

SPEECH
OF
HON. DAVID B. CULBERSON,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 10, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. CULBERSON said:

Mr. CHAIRMAN: The consideration of the tariff bill furnishes a proper opportunity to discuss the relation of the Republican tariff system, as exemplified under the operation of the existing tariff, to agriculture, and to investigate the causes of the financial depression which exists among the farmers of the United States, and to suggest such remedies for the removal of the causes of the depression as may seem proper. I do not suppose that any one will question the statement that the farming interest of the United States is greatly depressed and that the farmers in some sections of the country are no longer able to earn profit

upon their labor or even to realize an adequate and comfortable support.

The evidence before this Congress is abundant to show that no other great industry presents such evidence of depression and decay. The remarkable decline in the prosperity of all those engaged in agricultural pursuits is peculiar, significant, and distressing.

In view of the fact that more than one-half of the people of the United States are engaged in agricultural pursuits, that this great industry produces more than ten billion dollars' worth of products annually, and furnishes over 80 per cent. of the entire exports to foreign countries, and especially in view of the fact that agriculture is the basis of all national and individual wealth, it is the highest duty of all legislators to explore all the fields of inquiry and ascertain, if possible, the causes which have produced the decline in the prosperity of this great industry and apply such remedies as may be found within the legislative authority of Congress.

I do not believe, Mr. Chairman, that the distressed condition of agriculture is attributable to chance or accident or to any want of proper management, industry, or intelligence on the part of the farmers; for, despite the most abundant crops and the most careful economy and frugality, year by year a deeper gloom and decay are spreading over the farms of the country and farmers grow poorer as the years go by. I shall endeavor to give my convictions of the causes of this deplorable condition and point out what remedies, in my judgment, should be applied.

Agriculture, for more than a quarter of a century, has been made the victim of legislation designed to favor and to enrich favored classes and corporate interests. During all that time there have been constant and cruel exactions under the forms of law upon the earnings of those engaged in agricultural pursuits, to build up special classes and favored industries. A fair field and an equal opportunity to reap the rewards of industry have been denied to agriculture, while other industries and other classes of our population have secured the encouragement and aid of legislation in the advancement of their interest at the expense of those employed in agriculture.

EFFECT OF THE TARIFF ON AGRICULTURE.

Mr. Chairman, the Republican theory of tariff taxation, as shown by existing law and emphasized by the bill under consideration, is to adjust the rates of import duties without regard to the amount of money necessary to be raised to meet the actual, necessary expenses of the Government, economically administered, but solely with regard to the protection of certain favored industries against reasonable competition from abroad. In other words, the Republican policy demands a tariff for protection with incidental or accidental revenue.

The effect of the existing tariff is, and the result of the proposed revision must be, to enrich those who are engaged in manufacture in this country by compelling the people of the United States to pay a price for their products enormously enhanced by the amount of the tariff tax upon similar products manufactured abroad; that is to say, because foreign products are excluded from American markets by a prohibitory tariff duty or permitted to be imported into this country upon only paying a high rate of duty, American manufacturers may in the first instance charge such price as they please for their products and in the other instance may add the import duty on an article similar to their own products on the price of their products.

In the debate upon the tariff, in 1884, I showed from a table, carefully prepared, that the "protected manufacturing industries" in the United States during the year 1882 received from the people $556,938,637 in excess of what the products would have sold for had there been no import duties upon similar articles manufactured in foreign countries. During that year the people of the United States paid $700,000,000 on account of import duties on foreign products. Less than $200,000,000 of that amount really found their way into the Treasury, and the balance, $556,938,637, went into the pockets of the American "protected industries" as enhanced profits, by reason of the tariff, on the sale of their products.

What was true then is approximately true to-day. It appears, therefore, that the Republican theory of tariff taxation not only gathers from the people from sixty to one hundred millions of dollars in excess of the actual and necessary requirements of the Government, but in addition thereto remorselessly takes from the people three times the amount actually paid into the Treasury as import duty by reason of the enhanced value of domestic products. I will not stop to show how the spirit of the Constitution is violated by such a system, and how, under a legal fiction, it escapes the denunciation of the courts, but I shall content myself with showing how the system affects agriculture.

The pretense for this remarkable system of spoliation and oppression is that by excluding foreign manufactured products by a prohibitory import duty or tax or by restricting the importation of such products by a high rate of duty the domestic manufacturers will be encouraged to supply the people of the United States with all the manufactured products required, and thus the United States will become a great manufacturing nation and independent of all the world for its supply of manufactured products.

The employés of these protected industries, who, like other people, are required to pay the enhanced prices for clothes and other necessaries of life, do not revolt against the injustice done them because they labor under the delusion, industriously encouraged by the barons, that their wages are higher by reason of the tariff.

Those engaged in agricultural pursuits are told that this system withdraws from the fields a vast amount of labor and provides work for millions of people who otherwise would have to till the soil for sustenance, and that in consequence of the enlargement of the manufacturing industries an enlarged and liberal home market for agricultural products would be provided. The tariff taxation is so adjusted that those least able to bear its burdens are the most oppressed by it. The absolute necessaries of life carry higher rates of taxation than its luxuries.

Those engaged in agriculture, comprising more than half the people of the United States, therefore, contribute more to pour into the coffers of the "protected industries" the $500,000,000 gathered from enhanced prices than all the balance of our population, which includes the millionaires and lesser capitalists. And all for what? A home market for the products of domestic manufacturers and a home market for agricultural products, regulated by the price for which our surplus agricultural products are sold in foreign markets, depressed by competition from all countries and depreciated by the unfriendly and restrictive tariff rates of our Government.

No more striking illustration of the disastrous effects of a high protective tariff upon agriculture can be presented than a comparison of the results of agriculture under a Democratic or revenue tariff with those under a high protective tariff or Republican tariff. It will be remembered that from 1850 to 1860 a Democratic tariff approaching very near a revenue tariff was in operation, and from about 1860 to 1880 we had a high protective or Republican tariff, with rates far less in some respects than those fixed by existing tariff laws or such as are recommended by the bill before the House.

I take the following figures from the compendium of the census of 1880:

The value of all the farms in the United States, as shown by the census of 1850, was $2,271,575,426, in 1860 the value was $6,645,045,107, in 1870 the value was returned at $9,268,803,861, and in 1880 the value was estimated at $10,127,096,776.

It follows from these figures that during the decade from 1850 to 1860 the rate of increase in the value of farms was more than 100 per cent., from 1860 to 1870 the rate of increase was less than 40 per cent., and from 1870 to 1880 the rate of increase in value was less than 9 per cent.

It further appears from the tables to which I have referred that the value of all the live-stock in the United States in 1850 was $544,180,586, in 1860 the value was $1,089,329,915, in 1870 the value was $1,525,276,547, and in 1880 the value was returned at $1,500,464,609.

The rate of increase from 1850 to 1860 was over 100 per cent., from 1860 to 1870 less than 40 per cent., and from 1870 to 1880, instead of an increase in the rate, the total value declined more than $25,000,000.

It will be observed that there was a very rapid increase of the wealth of the country generally from 1850 to 1860, and in that prosperity the great farming interest largely participated. This era of general prosperity was during the existence of a Democratic tariff. Imports were large and exports correspondingly so. But mark the result and effect of the Republican tariff upon agriculture. From 1860 to 1880, with more than twice the amount of capital invested and many thousands more people employed, the farmers were not able to add to their wealth as much in twenty years as they did in ten years under a Democratic tariff. In 1860, as the census shows, the farmers owned more than half the wealth of the country. In 1880 they owned only a quarter of the wealth.

I beg to call special attention to the fact that the one-half of the population not engaged in agriculture increased their wealth by more than $23,000,000,000 from 1860 to 1880, while the agriculturists increased their wealth by a little less than $4,000,000,000. Again, from 1860 to 1870, under the Republican tariff, the nine leading manufacturing States increased their wealth 173 per cent.; from 1870 to 1880, over 200 per cent., while for the same time nine of the leading agricultural States showed an increase of 66 per cent.

If these figures prove anything, they show that every great industry in the United States, except agriculture, grows prosperous under the operation of a high protective tariff, while under a Democratic revenue tariff general prosperity abounds and blesses all industries.

They show that agriculture, the greatest of all industries, employing more than half of all our population, the very foundation rock of all our wealth, the great reservoir of patriotism in this country, the mainstay of freedom and free institutions, furnishing $10,000,000,000 worth of products with which to feed and clothe the people of all lands, is always blighted, depressed, and robbed of its earnings by the operation of a high protective tariff.

How are such results accomplished?

The answer is not difficult. Under the Republican tariff those employed in agriculture are compelled to pay on an average 47 per cent. more than the actual value of every manufactured article used by them. This per cent. over the actual value of the product represents the enhanced price of the product by reason of the tariff and is a bounty paid by the consumer to the domestic manufacturer. This may be illustrated by the following figures, which are authentic:

Under the existing tariff the American farmer pays the domestic manufacturer $7.76 per dozen for axes, while the same American manufacturer ships the same axes abroad and sells them for $6.75 per dozen.

A plow for which the American farmer is charged by the American manufacturer $11 is sold by the same manufacturer to foreigners for $8.40. For a gang-plow the American manufacturer charges the American farmer $58.80, while he sells the same plow abroad for $52.92. For a dozen shovels the American manufacturer charges his neighbor $9.20 and sells the same to foreigners at $7.86.

I might consume an hour in itemizing outrages of a similar character perpetrated upon our farmers under the operation of the Republican tariff.

The effect, Mr. Chairman, of a protective tariff also is to limit and restrict the farmers to the markets in the United States. It is true that there is no law that forbids the exportation of farm products, but when they are exported they can not be exchanged on fair terms for manufactured products needed by farmers, because the high rate of duty imposed upon the products makes it unprofitable or undesirable to import them. The result is that our surplus agricultural products are sold in the unfriendly markets of the world, against the competition of all countries, for cash, and if the farmer, as he must, uses manufactured products, they must be bought abroad, and when imported pay the high duty demanded, or he must buy them in the home market with the price enhanced by the amount of such duty.

The Republican party contends that the building up of home manufactures gives the farmers a home market for their products, and therefore they ought not to complain at the restrictions on foreign trade or at the increased price they are compelled to pay for home manufactures. It is true that the home market for agricultural products is enlarged by the increase of manufacturing industries, but under the policy inaugurated by the Republican party in respect of immigration and grants of land to railroads, vast areas of land have been devoted to agriculture within the last twenty-five years, and the result has been that the capacity of the home market for agricultural products is wholly insufficient.

The supply of products exceeds the demand of the home market and the foreign markets being practically closed against them, agricultural products have fallen below the cost of production. The home market being insufficient to consume the agricultural products, the surplus must go abroad for a market or perish in the barns and warehouses. The price or value of agricultural products in the home market is fixed by the price paid for the surplus products in foreign markets, and thus the farmer is deprived of a free and honest market for his products at home or abroad.

The Republican party, as if to mock the distress of the farmers and if possible deceive them, propose by the bill under consideration to increase the duties upon imported agricultural products. The farmers of the United States have been deceived so long by the cry of a home market for their products, it is expected that the delusion will be continued by the hypocritical solicitude for their welfare which is found in this bill. What protection can be given American farmers against foreign competition when in fact, practically, they have no competition.

During the last fiscal year our farmers exported 69,592,929 bushels of corn and only 2,388 bushels were imported into the United States. Three hundred and twelve thousand one hundred and eighty-six bushels of corn meal were exported and only 396 bushels were imported. The exports of wheat amounted to 46,414,129 bushels and the imports to 1,946 bushels, and our exports and imports of other articles mentioned were as follows: Oats, exports, 624,226 bushels; imports, 22,324 bushels. Rye, exports, 287,252 bushels; imports, 16 bushels. Flour, exports, 9,374,803 barrels; imports, 1,155 barrels. Apples, exports, 942,406 barrels; imports, none. Apples, dried, exports, 22,101,579 pounds; imports, none. Bacon and hams, exports, 400,224,646 pounds; imports, 272,130 pounds. Beef, mutton, and pork, exports, 286,991,121 pounds; imports, 215,575 pounds. Lard, exports, 318,242,990 pounds; imports, only 1,073 pounds. Tallow, exports, 77,844,555 pounds; imports, 34,931 pounds.

These figures, which can not be questioned, show the utter impossibility of relieving the condition of American farmers by imposing higher duties upon the importation of farm products. I do not know, of course, how the provisions of this bill providing for an increase of the rates of import duty upon farm products will strike the Southern and Western farmers, but they should be regarded by them as a device, a sham, and a cheat. The fact that the Republican party stoops to a device of this sort to mislead the farmers is conclusive proof of their guilty knowledge of the wrong and outrage inflicted upon that class by a protective tariff.

Do not all men know, Mr. Chairman, that nations deal with each other upon the basis of mutual exchange of products? The imports of merchandise into the United States during the last fiscal year amounted to $745,131,652, and they were paid for mainly by surplus agricultural products exported to other countries. The records of the Treasury Department show that for the same year we exported $503,049,648 worth of agricultural products, as follows: Breadstuffs, $123,876,061; provisions, $104,122,444; raw cotton, $237,775,270; tobacco, $18,901,068; and live animals, $18,374,805.

When our Government erects a wall around itself and forbids the importation of the products of foreign countries except upon the payment of enormous duties, can it be expected that foreign countries, which are denied the privilege of our markets under reasonable duties, will open their markets to the surplus products of our farmers upon a free or liberal basis?

If the Republican party really desires to help the farmers—and I believe they would if they could do so consistently with their political obligations to the protected industries—why not give them free salt, free lumber, free sugar, and reduce the cost of their clothing, their agricultural implements, their household and kitchen furniture, and other necessaries?

If the tariff system was reduced to a revenue basis, exportations of all kinds of products would increase as importations increased, trade and commerce would be emancipated from the thralldom of high protective rates of duty, and general prosperity would return and bless our people as in the days of a Democratic revenue tariff.

There are some other causes, Mr. Chairman, which, in my judgment, have contributed to the prevailing financial depression among the farmers.

No country can prosper without a free, full, sound volume of circulation. It is conceded by all (except those interested in the results of an insufficient volume of money) that the volume of money in circulation is absolutely inadequate to conduct the vast business of the country. The authorized money of the country, consisting of gold and silver or their representatives, gold and silver certificates, legal-tender notes, and bank notes, does not amount to more than $1,426,000,000. Of this amount about $500,000,000 are absolutely withdrawn from the channels of circulation and are held in reserve or hoarded, either in the Treasury of the United States or in the banks and depositories of the country. Our population is reasonably estimated at 65,000,000.

To meet the requirements of the trade and business of this great population less than $1,000,000,000 is relied upon. Why should this condition exist?

The Congress of the United States has full power and dominion over the currency of the country, and no one questions the duty of Congress to provide and maintain a volume of circulation adequate to the requirements of business. Congress possesses the power not only to coin money (gold and silver), but it also has the power to invest the Government's promises to pay money—Treasury notes—with the legal-tender capacity of gold and silver, and force their circulation as money.

There is, therefore, no excuse for an inadequate volume of a circulating medium which can be based upon a want of authority to provide it. The Democratic party has not been able to control all the law-making power of the Government at any one time since the war; but for the greater part of that time the Republican party have had undisputed control of them. I repeat the question, Why is it that the volume of circulation is dwarfed and stinted?

The correct answer to this inquiry involves another question, What interests are promoted and advanced by an inadequate volume of currency? The banks, moneyed corporations, dealers of all kinds in money, and the rich are always most prosperous when money is dear, when it commands high interest, and when property is cheap. The effect of a stinted volume of currency is to make money dear and property cheap. It would seem, therefore, that the moneyed interests of the country are always benefited by a limited and impoverished volume of currency and as a rule always oppose a liberal volume of circulation.

The farmers of the United States, generally, are comparatively poor. Their earnings for the most part are made up from the proceeds of their annual crops. They are interested in remunerative prices for their products. They do not deal in money. They are not buyers of property, and consequently they are the chief sufferers from the effects of an inadequate volume of money.

For the purpose of promoting the interests of the favored classes, without regard to the claims of agriculture, the volume of money is reduced and maintained at the point most favorable to the aggrandizement of capital and the increase of its profits.

Why is it that the niggardly sum of two millions of silver dollars only are coined each month, when under the same authority four millions per month might be coined? Why is it that banks are required to hold money in reserve when bonds might be made to serve the same purpose? Why is it that $100,000,000 in bonds were sold ten years ago to raise $100,000,000 in gold, to be stored away in a corner of a vault in the Treasury Department upon the absurd pretense that such a sum would be needed to redeem greenbacks, when the law requires them to be reissued as money? Why are $40,000,000 of public money belonging to the surplus fund, so called, loaned to the banks without interest or other consideration?

The answer to these questions is plain. If $4,000,000 in silver was coined per month; if the one hundred millions of gold held for the redemption of greenbacks were applied to the interest-bearing debt of the United States; if the forty millions now in the vaults of favored banks without authority of law were withdrawn and applied to the payment of the public debt; if all the surplus money unnecessarily gathered from the people and hoarded in the Treasury were applied, as it should be and as the law contemplates and authorizes, to the payment of the public debt, the Treasury Department would be correspondingly relieved of the despotic supervision and control of Wall street and the volume of money in circulation would be correspondingly increased.

Farm products, indeed all property, would advance in value and the unreasonable interest for money demanded in the districts outside of the money centers would be reduced.

Truly, the condition of the farmers is startling and anomalous. They are surrounded by a tariff wall and cut off from foreign markets. Within this wall they are robbed of their earnings by the protected industries, and for the want of a market at home and a liberal volume of circulation they are forced to sell their products below the cost of production or permit them to perish on their hands.

Next to the iniquitous and oppressive system of tariff taxation, I do not know of any other cause which has contributed to the depression of the American farmers in so large a degree as the financial policy of the Republican party. It is susceptible of the clearest demonstration that the financial policy of the Republican party, like its tariff policy, has been designed in the interest of favored classes and corporations. No party ever organized in this country was ever under more binding obligations to corporate influences and the power of associated wealth, and no party ever kept its faith or performed its obligations to them with more fidelity than the Republican party.

But for the power of money, contributed, for the most part, by protected industries, by corporations and syndicates, that party would long since have been driven from office in all the departments of the Government. The act of 1869 was a grave and an unforgivable outrage upon the people. In the interest of capital and the wealth of the country it converted a currency contract into a coin contract, and thus poured into the pockets of the bondholders $500,000,000 profit, the difference between the value of the bonds in currency and coin.

I have no time to review in detail this policy, but I desire especially to call attention to what I regard as the grossest outrage ever perpetrated upon a free people by any legislative body. I allude, of course, to the clandestine demonetization of silver. It was, indeed, a great financial crime against the interests of those engaged in agricultural pursuits. Not satisfied with the immense powers, privileges, and immunities bestowed upon them by law, the banks deliberately and secretly conspired with other capitalists to break the financial peace of the country by demonetizing silver and to gather a golden harvest from the fruits of the crime. Silver was cheaper than gold, and besides it interfered with bank notes in the channels of circulation. It was the money of the poor.

The farmers esteemed it, the laborers loved it, and it helped to swell and liberalize the volume of circulation. For these offenses it was doomed to die. The Republican party, if it did not play the rôle of executioner, afterwards recognized the crime and refused to avenge it by remonetizing it with free coinage. The holders of Government bonds reaped an immense harvest by the conversion of the bonds from coin to gold bonds, and the banks pushed their notes into the vacancy in the circulation caused by the withdrawal of silver.

One-half of the metal money of the country was thus stricken down and retired from circulation and gold enthroned as the only standard of value in the country. The effect of this legislation upon the agricultural interest of the country was most appalling and still lingers among the farmers as a continual blight. The values of agricultural lands and all agricultural products declined. The effect of the blow still remains, and although silver has been remonetized under the auspices of the Democratic party, its limited coinage is a menace to agricultural prosperity and a crime against labor.

In 1875 the Republican party, intent upon accomplishing its avowed policy to make gold the only metal money and bank-notes the only paper currency, as it was preparing to vacate the seats of a majority in the House of Representatives, cast a Parthian arrow at the outstanding legal-tenders. By a provision in the resumption act, the Secretary of the Treasury was authorized and directed to destroy legal-tenders as they found their way into the Treasury. Thus the scheme of contraction in the interest of favored classes had been accomplished so far as law could provide for it.

The Democratic party, always true to the interest of the people and hostile to all class legislation, although in a hopeless minority in both Houses of Congress, stood like a wall of adamant against the legislative spoliation and wrong of the memorable decade from 1865 to 1875.

The Democratic party controlled the House of Representatives from December, 1875, until December, 1889, except one term, the Forty-seventh Congress. Although the Republican party controlled either the Senate or the Executive Department during all that time and made it impossible for the Democracy to accomplish the legislation desired, yet by persistent effort we repealed some laws enacted in the interest of favored classes and modified others of the same character.

The Democratic party reduced the expenses of the Government more than $30,000,000 during the Forty-fourth Congress and improved the administration of the affairs of the Government in all its branches. After a desperate struggle, continued from 1876 to 1878, we forced the remonetization of silver and compelled its coinage in not less than two nor more than four millions each month. The Republican party refused to remonetize silver unless the Democratic party would accept the proviso providing for limited coinage. The beneficent effects of this partial recognition of the rights of the people, and especially of those engaged in agriculture, can not be estimated.

The Democratic party is in favor of the free coinage of silver and will do all that can be done to accomplish that result in behalf of the people.

The Democratic party secured the repeal of the law providing for the destruction of legal tenders and secured for the people $346,000,000 of them as a perpetual auxiliary to the volume of currency. The unjust Republican tariff system was strongly intrenched and fortified in the Senate, but the Democratic party in the House and Senate have never ceased struggling to modify and change it, in order, as far as possible, to relieve those engaged in agriculture of its unjust burdens and cruel exactions. While the volume of circulation is, in my opinion, wholly inadequate, the country is indebted to the Democratic party for whatever addition there may have been made to it by the limited coinage of silver.

If the farmers of the United States, as they have the power to do, would drive the Republican party from power and place the Democratic party in possession of the law-making department of the Government, they would soon be relieved of the burdens unjustly and wrongfully imposed upon them in the interest of favored classes and protected industries by the Republican system of tariff taxation, class legislation would be swept from the statute-books, the financial policy of the Republican party would be overthrown, and that prosperity which follows exact and equal justice in legislation would be enthroned throughout the country.

I firmly believe, Mr. Chairman, that all the ills, all the injustice, and all the financial depression which afflict the agricultural interests in the United States may be traced to class legislation enacted under the auspices of the Republican party.

I am not surprised at the murmurs of discontent which come to Congress from those who are engaged in agricultural pursuits. Their condition is peculiarly distressing, and since the class legislation of Congress has, in a large degree, brought this condition to them, it would seem proper to refer their complaints to Congress and ask for relief.

There are several bills pending before Congress which have for their object the relief of agriculture. I had the honor, with others, to introduce two of them, one providing for the recoinage of silver and one to apply to the payment of the public debt $75,000,000 of the $100,000,000 held as a redemption fund with which to redeem legal tenders. If these measures can become laws more than $100,000,000 will be added to the volume of circulation at once. A bill has passed both Houses of Congress at this session designed to crush out trusts so far as Congress can safely deal with the subject. This will result to the advantage of agriculture. Another bill, known as the compound-lard bill, is supported generally by the Representatives of Northern and Western agricultural constituencies and opposed by the Representatives from the cotton States. It ought not to become a law.

It is based upon the principle that Congress may aid by means of the taxing power one industry at the expense of another industry. Farmers who produce hog lard have found out that Southern farmers make an excellent quality of lard by compounding hog fat with cotton-seed oil. Under the pretense that compound lard is deleterious to health they ask Congress to place an internal-revenue tax upon it for the purpose, really, of increasing the profits upon hog lard. Ordinarily Congress is besieged in the interest of powerful syndicates, corporations, and manufacturers for legislation that will enable them to advance the profits of their business at the expense of those engaged in agriculture.

But this bill is an exception to the general rule. It seems that Western and Northern farmers would destroy compound lard by a tax in order to increase the value of hog lard. Thus one class of farmers war upon another.

Another bill in the interest of farmers is now pending in Congress. It is proposed by it to tax the business of dealing in futures in agricultural products. How far, if at all, this business depresses the price of the product dealt in does not seem to be settled. But as there can be no constitutional objection to it, it will likely be passed as an experiment, with the hope that its results will be beneficial.

Mr. Chairman, there is another bill pending in Congress commonly called the "agricultural subtreasury bill." This measure, it seems, is attracting the attention of the Farmers' Alliances very generally, and in many instances these organizations have approved it. It is no pleasure to a representative from an agricultural district to oppose a measure designed to relieve agriculture from financial depression. On the contrary, every doubt is resolved in favor of such measures, and it is only upon the clearest conviction of duty that opposition is made.

After some consideration of this bill it seems to me that if those who are engaged in agricultural pursuits would carefully consider its provisions they could not fail to arrive at the conclusion that it is unconstitutional in principle, unwise in policy, and violative of the fundamental principle upon which the National Farmers' Alliance and Industrial Union was formed.

The principle upon which this measure is based may be stated substantially as follows: That it is the duty of Congress to provide for the warehouses contemplated, for the managers, officers, and employés necessary to conduct them, and to supply the manager of each warehouse with a sufficient quantity of legal-tender Treasury notes with which to advance to the owners of cotton, wheat, corn, oats, and tobacco, who

may desire to store such products or either of them, 80 per cent. of the value of the product deposited, a warehouse receipt made negotiable to be given to the depositor, the deposit may continue for twelve months; if not sooner redeemed to be sold for cash at auction and when money is realized, either by redemption or sale, the expenses, etc., are to be paid and the money remitted to the Secretary of the Treasury, who shall destroy the same.

THE PRINCIPLE OF THE BILL IS INDEFENSIBLE.

The Government of the United States is one of limited powers, specifically defined, and the Congress has no authority to legislate unless authorized by some one or more of the enumerated powers.

The power to borrow money is expressly conferred upon Congress, but the power to loan money, either with or without interest, or to advance public money, upon or without security, is not conferred.

The framers of the Constitution wisely provided the power to borrow money, as emergencies for the use of large sums of money might arise, when it would be impossible or impracticable to provide it by taxation; but they never contemplated the necessity of providing a power to authorize Congress to loan the public money.

Such power would be inconsistent with the theory of the Government. The money necessary to carry on the Government is raised under the taxing power conferred upon Congress. Congress has no authority to raise money by taxation for any other purposes than those specified in the Constitution.

To take by taxation from one citizen more money than his proportionate share of taxes necessary to defray the actual expenses of Government for the purpose of loaning it to another, or for building warehouses in order to make the business of another citizen or class of citizens more profitable, is as repugnant to the Constitution and the theory of the Government as it is abhorrent to justice and good morals.

The Democratic party was organized upon the fundamental principle that the General Government was one of limited powers only, and should exercise no power except such as was conferred upon it by the Constitution or necessarily implied from a granted power. It has always denied the authority of Congress to take the property of one citizen for the purpose of bestowing it upon another, or to promote by legislation the business of any individual or class of persons at the expense of the public. The depressed condition of agriculture now is the result of class legislation, and it would be strange indeed if there could be found any considerable number of farmers who would advocate the adoption of the principle of this measure, which involves a tax upon the people for the purpose of bettering the condition of persons who may chance to own either of the products named.

This measure violates the fundamental principle upon which the National Farmers' Alliance and Industrial Union co-operate with the Knights of Labor. I take from the St. Louis Republic the platform of principles agreed upon by the committees representing the National Farmers' Alliance and Industrial Union and the Knights of Labor.

It reads as follows:

UNION OF FARMERS AND KNIGHTS AT ST. LOUIS.

Agreement made between the undersigned committee, representing the National Farmers' Alliance and Industrial Union on the one part, and the undersigned committee, representing the Knights of Labor on the other part, witnesseth:

The undersigned committee representing the Knights of Labor, having read the demands of the Farmers' Alliance and Industrial Union which are embodied in this agreement, hereby indorses the same on behalf of the Knights of Labor, and, for the purpose of giving practical effect to the demands herein set forth, the legislative committee of both organizations will act in concert before Congress for the purpose of securing the enactment of laws in harmony with the demands mutually agreed. And it is further agreed, in order to carry out these objects, that we will support for office only such men as can be depended upon to enact these principles into statute law uninfluenced by party caucus.

The demands hereinbefore referred to are as follows:

1. That we demand the abolition of national banks and the substitution of legal-tender Treasury notes issued in sufficient volume to do the business of the country on a cash system; regulating the amount needed on a per capita basis as the business interests of the country demand; and that all money issued by the Government shall be legal tender in payment of all debts both public and private.

2. That we demand that Congress shall pass such laws as shall effectually prevent the dealing in futures of all agricultural and mechanical productions, pursuing a stringent system of procedure in trials as shall secure the prompt conviction and imposing such penalties as shall secure the most perfect compliance with law.

3. That we demand the free and unlimited coinage of silver.

4. That we demand the passage of laws prohibiting the alien ownership of land, and that Congress take early action to devise some plan to obtain all lands now owned by aliens and foreign syndicates; and that all land now held by railroads and other corporations in excess of such as is actually used and needed by them be reclaimed by the Government and held for actual settlers only.

5. Believing in the doctrine of equal rights to all and special favors to none, we demand that taxation, national or State, shall not be used to build up one interest or class at the expense of another. We believe that the money of the country should be kept as much as possible in the hands of the people, and hence we demand that all revenues, national, State, or county, shall be limited to the necessary expenses of the Government economically and honestly administered.

6. That Congress issue a sufficient amount of fractional paper currency to facilitate exchange through the medium of the United States mail.

7. That the means of communication and transportation shall be controlled by and operated in the interest of the people, as is the United States postal system.

For the better protection of the interests of the two organizations it is hereby agreed that such seals or emblems as the National Farmers' Alliance and Industrial Union may adopt will be recognized and protected in transit or otherwise by the Knights of Labor, and that all seals and labels of the Knights of Labor will in like manner be recognized by the Farmers' Alliance and Industrial Union.

Signed: S. B. Erwin, chairman; U. S. Hall, secretary; J. D. Hammond, B. H. Clover, J. R. Miles, N. A. Dunning, J. D. Hatfield, D. K. Norris, R. F. Peck, W. S. Morgan, P. M. Blunt, M. Page, W. H. Barton, S. M. Adams, J. B. Alexander, Stump Ashby, R. C. Betty, J. H. Turner, A. S. Mann, committee on demands of the National Farmers' Alliance and Industrial Union. T. V. Powderly, A. W. Wright, Ralph Beaumont, committee representing the Knights of Labor. St. Louis, December 6, 1889.

I beg to call the attention of the House to the fifth section of this declaration of principles.

It is pure democratic doctrine and is worthy of the great organizations which represent agriculture and labor.

If we test the subtreasury bill by the great principle embodied in the fifth section of the platform it will be seen that the principle of this measure violates that declaration of principle. I have said, therefore, that when the alliances come to consider this bill by the side of the constitution and the principles of their organization it will be repudiated by them.

The principle declared in the fifth section of the platform "demands equal rights to all and special favors to none." Under the provisions of the bill any person (he may not be a farmer) who may chance to own cotton, corn, wheat, oats, or tobacco may secure the aid of the Government in the manner prescribed. A special favor is conferred upon those only who may own the products named. The Government is obliged by the bill to help that class only. The persons who may chance to own any other product are denied the aid of the Government. Can this be fair and exact justice to all farmers—to all classes? Surely not.

If one citizen or class of citizens may obtain aid from the Government to increase the profits of business why may not any other citizen or class of citizens obtain like aid? And, if so, why may not the Government be converted into a general tax-gatherer for the purpose of promoting the private business of the people?

The platform further declares:

We demand that taxation, national and State, shall not be used to build up one industry or one class at the expense of another.

The money necessary to construct the buildings which (because no plans are given and no limit fixed to their cost) may require anywhere from fifty to five hundred millions of dollars and the money necessary to pay the army of partisan Federal office-holders under the bill and to make good the loss the Government may sustain by the failure of depositors to redeem, certainly will have to be raised by taxation upon all the people. This measure, therefore, would oblige the Government to tax the people to raise money for the benefit of a certain class, namely, those who may own any one or all of the five products named in the bill. They may be farmers, or they may be speculators who have cheated the farmer out of the products, or it may be the members of a trust who may have obtained the products by oppressive means. The bill is therefore clearly obnoxious to the demand of the Alliances in respect of taxation.

The measure, if it should become a law, will establish a most unwise policy, unjust to the people and to the Government. If the Government receives the products, the bill requires it to hold them twelve months, unless sooner redeemed. If speculators, as they may do, should buy up the negotiable receipts issued by any of the warehouses, why may not the people who do not own any of these products, and who buy them as they are needed, be forced to pay exorbitant prices for even the necessaries of life? In such case (and it is reasonable to suppose that such cases will constantly occur) the Government would be made the instrument of the grossest extortion.

It is provided by the bill that the Secretary of the Treasury shall furnish each manager with a sufficient amount of legal tenders to furnish the owners of the products who may desire to store them 80 per cent. of their value. The very lowest estimate I have heard made as to the amount that would be required under the bill is a billion of dollars. It is contemplated that this amount of Treasury notes will be needed for six months in each year, when, as supposed, they will be returned to the Treasury, or their equivalent, in lawful money, and whatever money is returned, whether it be the new issue of Treasury notes or Treasury notes now outstanding or gold or silver, must be destroyed.

What effect will be produced upon the business of the country by casting into the channels of trade annually a billion or more dollars of legal-tender Treasury notes with a broader legal-tender function than possessed by existing legal-tenders, for the purpose of supplying the necessities of those who own the products mentioned in the bill, while the products are locked up in a Government warehouse awaiting higher prices than an unfettered market would justify? No one can undertake to answer the question. Evidently conservative trade and commerce would be paralyzed, an era of the wildest speculation would be inaugurated, and the country strewn with the wrecks of fortunes.

With a billion or more dollars' worth of agricultural products—breadstuffs, if you please—stored away in the warehouses of the Government, with no authority reserved to the Government within twelve months to place the product on the market, what will become of the poor farmers who may not own such products or those who live on the proceeds of their daily toil, and how may the absolute wants of the millions of people who are unable to buy the necessaries of life, except from day to day or from month to month, be supplied? The Government,

with all its great power, stands guard over the necessaries of life and is powerless to prevent suffering or extortion without breaking its contract with its depositors.

Some of the zealous and ablest advocates of this system assume that there is no difference in principle between a loan of the credit of the Government to national banks upon the deposit of United States bonds and the loan upon agricultural products contemplated by this bill. And since the Supreme Court of the United States has decided that the laws authorizing the establishment of national banks were constitutional, no constitutional objection can be consistently urged against this scheme. And it is also insisted, with apparent plausibility, that the plan of relief proposed by this measure is not inconsistent with the principle involved in the law that authorizes the owners of distilled liquors to deposit them in warehouses under the supervision of the Government for a period of not exceeding three years, for the purpose of enabling the owner to postpone the payment of the taxes until his products becomes salable.

These laws are presented as precedents to justify the favorable action of Congress on the subtreasury bill.

The Democratic party opposed the passage of the laws authorizing the national-banking system and also opposed the law authorizing the extension of the system passed by a Republican Congress in 1882, not upon the ground that Congress had no authority to authorize the establishment of a bank, for that had been settled by the Supreme Court in 1819, but upon the ground that the benefits, advantages, immunities, and powers conferred upon these associations in respect of issuing bank-notes, control of the volume of circulation and the like, and the guaranty of the payment of their notes by the Government were in the nature of class legislation, in that peculiar and valuable advantages which could not be enjoyed by all and might be employed by the beneficiaries to oppress the public were conferred upon a class of the population.

For such and like reasons the Democratic party arrayed itself against the system. But the Supreme Court in 1875 decided the laws to be constitutional upon the ground that the Congress had authority to authorize the establishment of national banks as instruments to be used to aid the Government in the administration of an important branch of the public service.

The court held that they are "appropriate means" to that end, and that Congress was the sole judge of the necessity of employing such instruments to aid in the administration of the public service.

The aid that national banks are claimed to render the Government in the administration of public affairs is not confined to the execution or to the carrying into effect any one power conferred upon Congress, but to several. For the purpose of these remarks, however, it is sufficient to say that the banks, as is claimed, furnish employment and demand for the bonds of the Government, and therefore aid in maintaining its credit; they furnish solvent depositories for public money to be applied and used for the public service throughout the country, and they aid the Government in maintaining a safe and solvent medium of exchange.

These are some of the offices performed by the banks to the Government, and they are stated not for the purpose of approval, for I have always opposed the system and voted against its extension. I believe that the Government alone should issue and control the volume of circulation, and that no corporation should be permitted to dictate or regulate the volume of circulation, but I have enumerated these instrumentalities for the purpose of showing that there is no analogy between the system and the one proposed by the subtreasury bill.

What important branch of the public service could the proposed system aid the Government in administering? Would the partisan warehouse managers furnish safe and solvent depositories of public moneys to be applied and used in all the branches of the public service throughout the country? What aid could this system render in upholding the public credit? Absolutely none. But the advocates of the system may insist that it would aid the Government in getting into circulation a billion or more dollars once in each year with which to handle the crops. That is not the object of the system. The purpose is to house the crops, to suspend the markets for crops, and to place them (so far as the products named are concerned) out of the reach of the poor or the necessities of the people until the price is enhanced by necessity. It will hardly be assumed that the Government will need in the administration of any branch of the public service the aid of an instrumentality or system that will paralyze all industries, starve the poor, and promote merciless extortion. The laws providing for bonded warehouses present no analogy to the proposed system; substantially they provide that distillers (not the Government) may furnish warehouses for the storage of distilled liquors; they may be deposited for any period not exceeding three years upon the owner giving bond to pay the taxes when the product is withdrawn. The Government pays the gauger or storekeeper his salary to prevent fraud, but no money is advanced to the owner of the product by the Government.

Whenever a gallon of distilled spirits is produced it is at once liable to a tax of 90 cents a gallon; but because it is unsalable and unfit for use when new the Government does not enforce the collection of the tax if the product is placed in a bonded warehouse until the product is withdrawn for sale and consumption. No product is withdrawn until the tax is paid and interest thereon for the time it was stored at the rate of 5 per cent. per annum.

It would seem upon the face of the transaction that it was obnoxious to objection as class legislation, but when it is remembered that distilled spirits constitute the highest taxed product in the world, the tax being six times greater than the cost of the product; that the Government derives from it many millions of dollars revenue each year; that it is unsalable when new; that the product is not one of the necessaries of life, but a luxury, so to speak; that the interests of all the people are promoted by conserving this fruitful source of revenue, the advantages of the system, it will be seen, are not confined to a class, but the Government and the people share them. There is therefore no analogy between the system proposed and the bonded-warehouse system.

Mr. Chairman, the evils which have resulted, the oppression and wrong which have been inflicted, the distress and poverty that have been brought upon one class of our population, embracing more than one-half of all the people, while other classes have prospered and become enriched from unequal and unjust legislation, can not be removed, redressed, or modified by enlarging the scope of such legislation or by increasing the number of individuals or classes who are to become the beneficiaries of such iniquitous policy. The lawful method, the true, honest, and patriotic mode of redressing the wrongs and removing the evils which have resulted to agriculture from class legislation is to restore the Democratic policy of equality and justice in legislation.

Favoritism in legislation, policies, and systems that promote the success and gain of one individual or class of persons at the expense of another, ought to be made odious and impossible. The right to what an individual earns in the sweat of his face or by the labor of his brains, subject only to the just demands of Government for his proportionate share of the burdens of good government, should be held inviolable and sacred. The power to enforce this principle rests with the people.

For more than one hundred years the Democratic party has struggled to maintain this great fundamental principle of free institutions. While other parties have come and gone, it numbers in its ranks more than half the voters of the United States. Founded upon the eternal principles of equal and exact justice to all, it is imperishable. If the farmers of the United States will resist the schemes and policies which seek to commit them to the pernicious doctrine that Government may rob one citizen under the forms of law to enrich another, and stand by the great party of the people in its grand struggles to secure equal laws, equal burdens, and equal justice for all men, the despotism of class legislation will soon be broken and overthrown and its beneficiaries and promoters driven from power and place. When that time comes, and not until then, prosperity for all will abide in this country and those engaged in agriculture will enjoy the fruits and earnings of their labor, freed from taxation imposed to enrich other classes and from policies that despoil the value of their products to promote and increase the gain of others.

The Tariff.

SPEECH

OF

HON. CHARLES T. O'FERRALL.

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 13, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenues and equalize duties on imports—

Mr. O'FERRALL said:

Mr. CHAIRMAN: In the last Congress I gave at length my views in regard to the tariff, and drew the line as sharp as I could between a tariff for the purpose of maintaining the vast monopolies of this country, as advocated by the Republican party, and a tariff to meet the expenses of Government economically administered, as advocated by the Democratic party.

Even if my time was not limited I would not undertake now to go into extended observations on this question.

I feel, however, that it is my duty, representing as I do in part a people so greatly affected by this bill, to direct my attention to a few features of it.

In the Forty-ninth Congress, sir, there were four bills introduced by distinguished gentlemen on the Republican side of the House in favor of the repeal of the internal-revenue tax on tobacco and fruit distillations. In the Fiftieth Congress there were not less than twelve similar bills introduced by nine different Republican members of that House,

favoring the repeal of the internal-revenue tax on fruit distillations and tobacco.

Several of these bills were introduced by gentlemen not unknown to fame: one of them by the distinguished gentleman from West Virginia, who was recently the Republican candidate for governor [Mr. Goff]; another by the distinguished gentleman from the State of New York, who has since been elected to the Senate [Mr. HISCOCK]; another by the distinguished gentleman from Tennessee [Mr. HOUK], still a member of Congress, and another by the distinguished gentleman from Pennsylvania [Mr. BAYNE], now a member of the Committee on Ways and Means.

In the canvass of last fall in Virginia, and in every canvass for years, gentlemen from abroad as well as local speakers belonging to the Republican party promised the people that if the Republican party came into power the tax would be taken off of tobacco and fruit distillations and that the distiller of fruit and grower of tobacco would be relieved from the annoyance of the hated form of the internal-revenue spy around their tobacco barns and distilleries. But, sir, does this bill take the tax off tobacco and fruit distillations?

An examination of it will show that it retains the tax on fruit distillations just as it has been for years; that it reduces the tax on tobacco to 4 cents a pound. All these professions and promises and pledges by the Republican party have shrunk to this little measure. It has been said, sir, "He's mad who trusts in the tameness of a wolf, a horse's heels, or a boy's love;" and I would add he is mad who trusts in the professions, promises, or pledges of the Republican party. I am glad to say, however, that, notwithstanding these professions, promises, and pledges, the great mass of the distillers and tobacco-growers of the State of Virginia were not lured into the ranks of the Republican party. [Applause on the Democratic side.]

If they could have relied even upon the professions, promises, and pledges of this party, they were too true to the principles of Democracy to barter them for any price. [Applause.]

But to show further the insincerity of the Republican leaders I refer to the fact that in the last two Congresses the present Speaker of this House, who then occupied a seat on the floor, in season and out of season, was earnest in insisting that the taxes to which I am referring should be repealed and that their repeal should be separated from the tariff and acted upon as an independent proposition. Now, the reduction of the tax on tobacco comes along in the body of the tariff bill, and the Speaker declines to recognize any member to move, under a suspension of the rules, the passage of a bill to accomplish that which he so earnestly and persistently favored in the Forty-ninth and Fiftieth Congresses.

Yes, the reduction of the tobacco tax is put in the middle of the tariff bill and we find a complete somersault upon the part of the distinguished Speaker and his Republican followers.

I hear it whispered, however, that the reduction of the tax on tobacco is made part of the tariff bill to catch the votes of Democratic members representing tobacco-growing sections. Well, sir, speaking for myself I will say that I will never be caught by that gudgeon. In fact, speaking candidly—for in my representative capacity I never have withheld and never shall conceal my opinions—if this bill destroyed every vestige of the internal-revenue system I would spurn it as an unclean thing and condemn it as a wrong upon the toiling millions of this land. I would not swallow a cupful of poison to get a lump of sugar at the bottom.

I would not vote for all the iniquities in this bill if by my refusal the internal-revenue system would be made an hundred times more odious than it is. I would not vote to perpetuate the present high tariff, much less vote for the proposed higher tariff, upon the farmers of this country, now so ground down and oppressed, laden, and burdened that each one of them in the anguish of his soul is exclaiming—

I was not made a horse,
And yet I bear a burden like an ass—

if by my vote the whole internal-revenue system would be torn up by the roots. [Applause.]

The constituency which I have the honor to represent are too intelligent to be gulled and bamboozled by the reduction of the tobacco tax and the increased tariff on farm products.

They will understand that even under the present tariff the importations of all farm products in 1889 amounted to only about $12,000,000 and that the tariff on them did not reach $2,000,000.

This bill increases the tariff on horses, cattle, sheep, and hogs.

It will be interesting and instructive to inquire here what relief this will give to the farming interests.

We have had no census since 1880; so we must necessarily resort to it for information as to the number of horses and mules, cattle, sheep, and hogs in the United States for that year.

I here give a table compiled from the census reports:

Horses and mules	12,170,296
Beef cattle and cows	35,925,511
Sheep	35,192,074
Hogs	47,631,700

By reference to the tables presented by the Committee on Ways and Means with the bill under discussion it will be found that the importations for the fiscal year 1889 are stated as follows:

Horses and mules	50,141
Beef cattle and cows	56,031
Sheep	398,906
Hogs	1,453

Now I have given the number of these farm animals in the United States in 1880 and the importations in 1889. Of course the number of animals had greatly increased in the nine years; our population had grown and our farms had multiplied. Between 1870 and 1880 horses increased about 30 per cent., cattle over 50 per cent., sheep about 30 per cent., and hogs nearly 50 per cent.; so at this rate of increase we must have had last year in round numbers at least 15,000,000 horses, 55,000,000 cattle, 45,000,000 sheep, and 70,000,000 hogs.

Taking now the importations in 1889, we will find that our Republican friends propose to relieve our farmers from the immense competition resulting from these importations of three horses in the thousand, one steer or milch cow in the thousand, eight sheep in the thousand, and two hogs in one hundred thousand.

Oh, what competition that is and how important it is to protect our farmers from it! The gentlemen who talk thus to the farmers of this country must do it without reflection or else they are endeavoring to toy with a great and vital question and laughing in their sleeves at their imagined success in duping and deceiving the men whose time they suppose is so occupied in keeping the sheriff from their doors that they can not study matters of national legislation.

But, Mr. Chairman, I want to proceed further in this line, for I intend so far as I can to strip this bill of its miserable gauze and expose it to the light of day.

Here is another table compiled from statistics:

Products.	1889.	
	Bushels raised.	Bushels imported.
Wheat	490,560,000	1,946
Corn	2,112,892,000	2,388
Oats	751,575,000	22,324

I have not at hand statistics as to the rye, buckwheat, and potato crops, except for the year 1884, and I will give them and the importations for the year 1889:

Products.	1884.	1889.
	Bushels raised.	Bushels imported.
Rye	26,637,594	16
Buckwheat	7,668,954	55,160
Potatoes	208,164,425	883,385

Now come our protection friends and with all the unction of their souls declare that the burdened and oppressed farmers must be saved from the ruinous competition of the poorly clad and ill fed pauper labor of Europe. It will never do, say they, to allow 4 bushels of wheat in the million, 1½ bushels of corn in the million, 3 bushels of oats in one hundred thousand, two-thirds of 1 bushel of rye in the million, 8 bushels of buckwheat in the thousand, and 4½ bushels of potatoes in the thousand to come from foreign countries to compete in our home markets with the products of our oppressed agriculturists. This outrage which Europe is perpetrating upon the agricultural interests of this country, where protection to home industries has been the creed of the Republican party, calls for prompt and vigorous action upon our part, is the hypocritical cry of the Republican party.

But we can not stop yet, Mr. Chairman. The American smoke-house, poultry-house, hennery, dairy, and bee-hive must be saved from the ravages of the foreigner, say our Republican friends. We must protect our bacon, beef, mutton, and pork, our poultry, eggs, butter, cheese, and honey; we must increase the tariff on them.

Well, now, let us consider this, though really it is hard to pursue this line with patience.

By a calculation it will be found from the figures given by the Committee on Ways and Means that in 1889 every one thousand American mouths masticated 4 pounds of foreign bacon, every one thousand American mouths ate 3½ pounds of foreign beef, mutton, and pork, every one thousand American mouths worried down 2½ pounds of foreign poultry, each American mouth enjoyed the luxury of three foreign eggs; every five thousand American mouths got away with 7 pounds of foreign butter; each American mouth ate 2 ounces of foreign cheese, and

every 1,250 American mouths sweetened their palates with 1 gallon of foreign honey. [Laughter and applause.]

Was it ever imagined that the Republican leaders would resort to such flimsy means to sustain the outrageous fraud which their party has been practicing for years upon the farming and laboring interests of this country? They seem to realize the fact that unless they can continue to deceive they are forever doomed, and with a recklessness that knows no bounds they are pursuing a course which will only hasten the day of the inglorious destruction of their party.

Sir, I read from the report of the Committee on Ways and Means these words:

> The committee have given months of investigation to the existing conditions of agriculture and matters connected therewith. This great industry is foremost in magnitude and importance in our country. Its success and prosperity are vital to the nation. No prosperity is possible to other industries if agriculture languish. In so far as the fostering care of Government can be helpful it must be faithfully and forcefully exerted to build up and strengthen agriculture.
>
> That there is widespread depression in this industry to-day can not be doubted. Every remedy within the scope of practical legislation known to your committee has been recommended in the proposed measure to meet the urgent requirements of the situation.

The Republican party herein declares through its leaders that it has exhausted itself in its efforts to give relief to the widespread depression of agriculture.

Then, sir, may heaven save the farmers, for as long as Republican rule continues they will be but "hewers of wood and drawers of water." They will read this bill for themselves; they will closely study its provisions in every line. They will see that so far as they are concerned it is a sham and an attempt to juggle with their rights. They will see that it proposes to protect them against nothing, while it draws from their pockets their hard earnings to enrich the favored few, the monopolists who responded so freely to the calls for funds in 1888 and submitted so gracefully to the "frying" process of the Republican managers.

They will read for themselves that while the bill, under the pretense of protecting them, increases the tariff on farm products, protecting them against a phantom, a shadow, a will-o'-the-wisp, nothing that has soul or body or existence—I mean foreign competition—if they desire to import stock for breeding purposes, unless it is registered, or any of the cereals for experimental purposes, they must pay an increased rate of duty.

They will read that while muriatic acid and sulphuric acid, which enter so largely into the fertilizers which they are compelled to use, have been heretofore on the free-list, this bill fixes a duty upon them and imposes a tax of more than $2,500,000 a year.

They will understand for themselves that the bill seeks to quiet their clamors and hoodwink them by increasing the tariff on foreign farm products, which, as I have shown, do not cause any more ripple in the waters of trade than a pebble cast into the ocean, and which do not affect them any more than a fly on an ox's horn disturbs his comfort.

They will see for themselves that under this bill the tariff is increased on their clothing, their furniture, and upon many articles of prime necessity, and additional burdens laid upon them for the benefit of their task-masters.

Is this statement too strong? Let us see. In the time allotted me I can only refer to a few of the many items upon which the rate of duty is increased:

Articles.	Ad valorem.	
	Present rate.	Increased rate.
	Per cent.	*Per cent.*
Anvils	33.50	41.87
Furniture	30.00	35.00
Unbleached cottons, general increase of	.....	5.00
Cotton thread	47.22	49.60
Cotton stockings and hose, general increase.		
Ready-made cotton clothing	35.00 / 40.00	50.00
Oil-cloth	40.00	66.50
Woolen yarns:		
One grade	70.32	112.70
Another grade	67.71	123.81
Another grade, average	69.38	103.93
Woolen cloths:		
One grade	74.06	130.45
Another grade	67.07	146.99
Blankets:		
One grade	66.97	93.62
Another grade	69.70	110.84
Women's and children's cotton dress goods:		
One grade	68.00	88.37
Another grade	60.03	88.37
Women's and children's wool dress goods:		
One grade	85.25	110.33
Another grade	71.36	92.76
Ready-made woolen clothing	54.98	84.72

Just here I can not resist the temptation which this item, as well as the former item of ready-made cotton clothing presents, to make the inquiry whether the finger-marks of John Wanamaker, manufacturer, wholesale and retail dealer in ready-made clothing, Philadelphia, Pa., and Postmaster-General of the United States of America can be discerned in this bill.

What increased profits over the present enormous profits these provisions will bring to the manufacturer of ready-made clothing; how plethoric will become his pockets. What matters it to him when contributions are levied by the Republican party for campaign purposes. "You tickle me and I will tickle you." You legislate in my interests and I will put up the money to perpetuate the power of my party—benefactor. What is the sum of $400,000 for campaign purposes to the house of John Wanamaker, when there can be such a return as this bill makes to his coffers? There are millions in it.

The farmer may sweat the more and the laborer may toil the more; the poor sewing woman may continue to make pantaloons at 20 cents a pair for the house of Wanamaker, and furnish her own needles and thread, in her dingy city garret; the poor may suffer and the hungry beg bread from door to door, but what of that? Monopolies flourish, the rebels of the South and "Southern brigadiers" are kept under subjection, Democrats are not permitted to destroy "home industries," campaign funds are abundant, and the Republican party is happy.

But let us go on:

Articles.	Ad valorem.	
	Present rate.	Increased rate.
	Per cent.	*Per cent.*
Cloaks, jackets, etc.	60.00	82.10
Carpets:		
One grade	48.92	65.23
Another grade	53.94	71.92
Do	58.88	82.36
Do	56.41	82.25
Do	59.54	81.42
Do	45.65	64.55
Do	44.39	65.01
Do	58.61	61.83
Do	40.00	50.00
Hats for men, women, and children, made of fur	30.00	55.00
Umbrellas	40.00 / 50.00	45.00 / 55.00
Granite used for monuments	20.00	50.00

And here I want to read a letter which may throw some light upon this increase:

CHARLOTTESVILLE, VA., *April* 3, 1890.

DEAR SIR: We understand an effort is being made to advance the duty on foreign granite importations which will exclude their use for monumental purposes, and in connection with others interested in these products I beg to enter a protest, and ask for your earnest assistance in keeping the present rate of duty on monumental work as it is now provided for, namely, 20 per cent. ad valorem.

The bulk of red granite produced in this country for cemetery purposes is quarried in Maine. It is used principally for building purposes, as the color fades and the lettering does not show well, which renders it undesirable for cemetery purposes. An advance of duty on monumental work would to a certain extent affect my interest and confine my sales to the gray granites exclusively, shutting off sales that could be made by the use of imported granites.

There would also be a sameness in the appearance of the cemeteries, caused by the exclusive use of gray granites, which are only beautified by a variety of colors, of which our domestic quarries do not yield the supply. I am in no way partial to selling foreign granites in preference to the American, but would like to give my customers a variety to select from.

You can readily see from the above that my business would be seriously impaired if any increase of duty is brought about. I shall be pleased to give you further information should you desire it, and to hear from you that you will present my protest.

Yours, very truly,

L. M. BOWMAN.

HON. CHARLES T. O'FERRALL.

Now, this gentleman states a fact which I did not know: that the bulk of red granite comes from Maine. I shall make no comment on this fact. It is sufficient for me to say that it comes from Maine; that may account for the increase. It comes from Maine. Maine quarrymen must have increased profits, though they be drawn by levying an additional tribute upon the headstones and monuments erected by the hand of affection in our cities of the dead.

But I can not dwell longer. Suffice it to say that all through this bill these increased rates appear, when the people in 1888 by a majority of 100,000 of the popular vote declared for a reduction of duties.

I have stated plain facts, so that they may be understood and considered. I have made no attempt at rhetoric, for it appears to me that in the discussion of practical questions too frequently substance is sacrificed for beauty of expression, the fruit is covered up by the foliage.

This bill will no doubt pass, Mr. Chairman, as it came from the hands of its framers. It will soon be before the country for its judgment. What that judgment will be I entertain no doubt.

Agriculture stands here demanding relief from legislative oppression.

From every direction the cry is heard that the tiller of the soil, the producer of this land, is struggling to maintain his very existence. He comes here and asks this Congress to relieve him of the weight of tariff taxes and to take from his shoulders the burdens imposed that he may be a free man, and not a slave; that he may possess that which his own bone and sinew and muscle work out of the ground; that the fruits of his own labor may go into his own pocket, and not into the till of the monopolist, and that he may come out from the darkness of despair and bask in the sunshine of prosperity.

How is his cry met? It is met by giving him a stone when he is asking for bread; it is met by mocking him in his calamity by telling him, "We will give you more protection," when protection never can reach him; it is met by increasing his burdens and tightening the grip of the Federal tax-collector on his throat; it is met by our Republican brethren on this floor with an air of indifference that seems to say, "We can get along without you. In 1888 we tried the experiment of rallying the protected classes around our colors and victory perched upon our banner, and henceforth you may burn your corn for fuel for want of a market; you may hoard your wheat for want of a demand, or sell it for what it may bring; you may shift for yourself, for we have enlisted the grand army of protectionists and favored classes, monopolists and cormorants, and have at our backs a manufacturing oligarchy with its millions and billions to draw upon and to furnish the sinews of war. Why need we care for you? You are poor, our backers are rich. You must work every day to keep the wolf from the door and you have no time to organize and fight us; our supporters have plenty of time to organize and fight our battles. Go your way, for we must be off to eat, drink, and be merry with those we have made happy by our bill with its high-sounding title, 'to reduce the revenue and equalize duties on imports, and for other purposes'"—principally "for other purposes." [Applause.]

Ah! Mr. Chairman, kings have thought they had the world in a sling, and feasted and reveled in their supposed power, but they fell at the hands of those they had oppressed and their crowns were trampled under the feet of those they had wronged.

Sir, I make this reference to show that arrogant and cruel power, however great, will sooner or later come to grief; that oppression, however well guarded, will sooner or later meet its bitter reward; that wrongs inflicted, however mighty the hand that inflicts, will sooner or later be avenged.

Peace has her avenging angel as well as war; the ballot in peace is as mighty as the sword in war. The farmer will be the avenging angel of his own wrongs and the ballot will be his sword.

He has sought at the hands of this Congress relief from tariff burdens. Instead of relief, weight has been added to weight.

He has asked for an increase of the circulating medium and an enlargement of the silver coinage of the country, that there may be money to buy what he has to sell. So far the majority party on this floor have turned a deaf ear to his request, and it is said they are so divided between the farmer and the money-holder, between the farmer and the capitalist, between the farmer and the "gold bug," that a reconciliation is beyond hope.

The Republican party on this floor has assumed full, complete, and absolute control of measures and legislation. No Democrat can have recognition to lead any movement in the interest of the suffering millions of this land. Moneyed power is the power in this House, and the interest of the gold kings and monopolists is supreme.

Disguise it as you may, cover it up under all the finely spun theories and envelop it in all the sophistries you please, the fact stands out in bold relief and can be read, as if written in blazing letters, that the agricultural interests of this land are languishing unto death, and yet the Republican party sits here and not only refuses to lend them a helping hand, but strikes down the Democratic hand whenever extended to raise them up from the mire into which they have been cast by laws enacted by the Republican party.

Just for a moment, Mr. Chairman, let us glance at the reports of crops and prices for the years 1888 and 1889:

CORN.

Raised in 1888	bushels...	1,987,790,000
Value		$677,561,580
Raised in 1889	bushels...	2,112,892,000
Value		$597,918,820

Here we find that while the crop of 1889 was 125,102,000 bushels greater than 1888 it is worth $77,642,760 less.

WHEAT.

Raised in 1888	bushels...	415,868,000
Value		$385,248,080
Raised in 1889	bushels...	490,560,000
Value		$349,491,707

The crop of 1889 was 74,692,000 bushels more than in 1888, but the money realized for it is $35,756,323 less.

OATS.

Raised in 1888	bushels...	701,735,000
Value		$195,424,240
Raised in 1889	bushels...	751,575,000
Value		$171,781,008

In 1889 this cereal crop amounted to 49,840,000 more bushels than in 1888, but it brought to the raisers $23,643,232 less money.

RECAPITULATION.

Crops raised.

	Bushels.
In 1889:	
Corn	2,112,892,000
Wheat	490,560,000
Oats	751,575,000
Total	3,355,027,000
In 1888:	
Corn	1,987,790,000
Wheat	415,868,000
Oats	701,735,000
Total	3,105,388,000
Excess of crops of 1889 over 1888	249,639,000

Values.

In 1888:	
Corn	$677,561,580
Wheat	385,248,080
Oats	195,424,240
Total	1,258,233,859
In 1889:	
Corn	$597,918,820
Wheat	349,491,707
Oats	171,781,008
Total	1,119,191,535
Reduced value of these crops of 1889	139,042,315

This is indeed a sad picture and a gloomy prospect for the farmer of this country, a country in natural advantages the marvel of the world. The "home market" theory is a mockery to him. The cry, "You must build up and maintain home industries," sounds to his ear like his death knell when he scans these statistics, feels in his pocket and finds it empty, consults the price-list and sees his products quoted at starvation figures, listens to the demand made upon him for his fertilizer bills, and reads with a burning brain the mortgage upon the land which he has watered with his sweat and upon the roof under which dwell his household gods. [Applause.]

Mr. Chairman, I observe your gavel raised to command me to suspend, for my time has expired. Just one word more.

Dark are the clouds that hang now over the head of the husbandman in every State and in every section of this land, blessed by God, but blighted by the Republican party; favored by heaven with its refreshing dews and genial sunshine, but scorched by Republican legislation. [Applause.]

But if my voice could reach the darkened home of every tiller of the soil; if it could reach every homestead in the far West, with its every acre upon which grows a stalk of corn, a spear of wheat, or a blade of grass under mortgage I would say to the depressed soul, "Be of good cheer, keep a resolute heart, pull steady, pull hard, press your demands, stand by your colors and fight for your rights, and from the leaves of the coming autumn will be weaved your chaplet of triumph over the combined forces of money power, greedy monopolists, and blood-sucking protectionists, all marshaled under one grand Republican leadership." [Applause on the Democratic side.]

The Tariff is a Tax.

SPEECH

OF

HON. GEORGE W. FITHIAN,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 9, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. FITHIAN said:

Mr. CHAIRMAN: I can excuse the gentleman from Iowa [Mr. KERR], for what he said in the opening of his remarks, for the many good things he said in the latter part of his speech I shall hardly pardon him, however, for using one sentence that he employed a few moments ago. He said, "I protest against taxing one American industry for the benefit of another." Now, I had intended to use that sentence in my own speech, and I hardly think it fair for the gentleman from Iowa to make use of material that I had intended to embody in my own remarks. [Laughter.] But I am glad to see the gentleman showing signs of coming over to the right side of this important question.

He makes a mistake, however, when he says that the Democratic party, if it was not for the leadership of gentlemen from the South who have been leading the Democratic party astray, would come over to the wholesome doctrine that he announces. The Democratic party has not been led astray. It stands for the reduction of the tariff to a revenue basis, and that doctrine it always has and always will maintain. I am glad to know that the people of the grand State which the gen-

tleman represents are coming over to the Democratic party and to the right side of the tariff question. [Applause on the Democratic side.]

Mr. KERR, of Iowa. They are right; but they are not coming over to the Democratic party. [Laughter and applause.]

The CHAIRMAN (Mr. MCKENNA). The Chair will say to the galleries that those who are there are present by the courtesy of the House, and it is unbecoming to make any demonstration, either of approval or disapproval. The Chair hopes it will not be repeated.

Mr. FITHIAN. The gentleman from Iowa says that the people are not coming over to the Democratic party. Is he blind to the fact that in the last campaign in the State of Iowa we elected a Democratic governor? [Applause.]

Mr. TURPIN. He meant they had already come. [Laughter.]

Mr. FITHIAN. Is he aware of the fact that we came within a few votes of carrying the Legislature?

Mr. KERR, of Iowa. Will you yield for a question?

Mr. FITHIAN. Certainly.

Mr. KERR, of Iowa. Do you not know you did not come as near to carrying the Legislature as you did in 1883?

Mr. FITHIAN. Well, it was so close I do not want to draw any lines of distinction. But anyway, Mr. Chairman, the fact is patent that the whole Northwest is leaving the fold and the doctrines that have been announced by the Republican party, and are coming over to the side of tariff reform in this country. [Applause on the Democratic side.] The sentiments that the gentleman expressed are not in accordance with his party's position.

Mr. KERR, of Iowa. Why, I quoted the Republican platform.

Mr. FITHIAN. That is true, but you dissented.

Mr. KERR, of Iowa. I approved of it.

Mr. FITHIAN. You did?

Mr. KERR, of Iowa. Certainly.

Mr. FITHIAN. Well, then you can have it that way. Say that you did approve of it. Now, if you dissent from the bill presented by your own party and you stand on the platform on which you went before the people in 1888, then it seems that you have either left the party as it was in 1888 or you have left it upon the principles upon which it stands now. You can take your choice. [Laughter.]

Mr. KERR, of Iowa. Well, we will see how it stands before we get through with it.

Mr. FITHIAN. Well, it will not stand at all, my friend. For when the next election comes around your party will be flat on its back. [Laughter on the Democratic side.]

Mr. KERR, of Iowa. You made a similar prediction two years ago, and the result is that you are flat on your back now. [Laughter.]

Mr. FITHIAN. You will not be able to stand at all, then. You will have to be propped up. Do you claim that it was the policy of the Democratic party in regard to the public lands some fifty years ago that has created the present hard times and placed mortgages upon the farms of the people of the West? [Applause.]

Mr. KERR, of Iowa. Was it a Democratic President or a Republican President who said that silver coinage and greenback currency were the greatest enemies to the prosperity of the country?

Mr. FITHIAN. Answer my question first and then I will yield to you.

Mr. KERR, of Iowa. And did you not vote for him after he made that statement?

Mr. FITHIAN. If you want to evade my question, all right.

Mr. CUTCHEON. That is a simple question.

Mr. FITHIAN. I do not know, nor do I care, what some one else has said, but for myself I am in favor of free and unlimited coinage of silver; but, if my memory serves me right, it was a Republican President that signed the bill demonetizing silver, and I have no recollection of any Democratic President signing any such bill. In the platform of the Republican party in 1888 you said that you condemned the policy of the Democratic Administration in its efforts to demonetize silver. Now you have both Houses of Congress and the President, why do you not give us free coinage? [Applause on Democratic side.]

After you had demonetized silver in 1873, it was only restored to limited coinage by the act of 1878 being passed over the veto of a Republican President. [Applause on the Democratic side.]

"Kettle should not call pot black." [Applause.]

Now, the gentleman refers to the policy of the Democratic party upon the public land question way back in the fifties, and to that he attributes all of the immense indebtedness and farm mortgages that are plastered all over the Western farms of the country, and as an instance cites the Illinois Central land grant. The facts about the Illinois Central land grant will not sustain the gentleman in his position.

The land granted to the Illinois Central Railway Company was ceded in the first instance by the Federal Government to the State of Illinois, and the Legislature of that State by act granted it to the Illinois Central Railway Company, but a provision was inserted in the charter of the railway company which secured from the company 7 per cent. of its gross earnings as revenue to the State. This grant, unlike Republican land grants, was not without consideration to the people. The wise provision which was inserted in this charter by the Democrats now annually yields a half million of dollars of revenue to the State, and the constitutional convention of 1870, fearing to trust future Republican Legislatures, to prevent the repeal of this provision of the charter, inserted in the constitution of the State the section which I will now read:

No contract, obligation, or liability whatever of the Illinois Central Railroad Company to pay any money into the State treasury, nor any lien of the State upon or right to tax the property of said company in accordance with the provisions of the charter of said company, approved February 10, A. D. 1851, shall ever be released, suspended, modified, altered, remitted, or in any manner diminished or impaired by legislative or other authority, and all moneys derived from said company, after the payment of said debt, shall be appropriated and set apart for the payment of the ordinary expenses of the State government and for no other purposes whatever.

Will the gentleman say that the policy of the Democratic party in regard to the public lands in 1850, or at any other time, had anything whatever to do with placing mortgages upon the farms of Kansas, Illinois, or Iowa, or upon the farms of the people of Ohio? Certainly not. No one could take a position of that kind and sustain himself in good sound reason and good sound common sense.

Mr. CUTCHEON. Will the gentleman yield for a question?

Mr. FITHIAN. Certainly.

Mr. CUTCHEON. Under the grant or cession to the State of Illinois from the United States Government could the State have done anything else with the lands in question except to grant them to the Illinois Central Railway Company or to some other railroad company which constructed a road between the points designated? Was not the State merely a trustee for the lands?

Mr. FITHIAN. I am not disposed to debate that question with the gentleman, for it makes no practical difference. The lands were ceded by the United States to Illinois, and granting that it was for the purpose of making the State a trustee, yet a provision was incorporated in the charter of the railway company which has secured to Illinois so long as time lasts 7 per cent. of the gross earnings of that railway company, which goes into the treasury of the State as a part of its finances. And that wholesome provision has yielded and is still yielding annually from $450,000 to $500,000 a year as revenue to the State. And, notwithstanding this, the Republican machine of Illinois taxed the people of that State last year 53 cents on the hundred dollars for State purposes. And, sir, in the constitutional convention of 1870, the majority of which was Republican, the section which I have read was adopted as a part of the constitution of the State of Illinois, providing that said charter "shall never be released, suspended, modified, altered, remitted, or in any manner diminished or impaired by legislative authority."

I believe this was the only land ever ceded by the National Government to any railroad company or any other corporation of the State of Illinois. Now, I would like for the gentleman to explain how this policy of the Democratic party has placed a single mortgage upon the farms of the people of Illinois and upon the farms of the people I represent. There may be some reason he can give, but I ask him now to give an explanation of this statement which he has made that is so far from the facts and so far from the truth. The gentleman talks about measures for the relief of the farmer, and says, finally, that he is in favor of protection. What kind of protection is he in favor of? Is he in favor of that protection to the manufacturers of agricultural implements in this country whose implements are bought and used by the farmers that he represents, and bought and used by the farmers that I represent, that enables them to charge our farmers higher prices upon their implements than they, the manufacturers, are charging today to the foreign farmers and to the export trade?

I desire to read, Mr. Chairman, from a speech made by Hon. BENJAMIN F. SHIVELY in this House on the 16th day of May, 1888, in which he said:

In my district, sir, there are over one thousand manufacturing establishments, large and small. The prosperity of these industries is bound up with the prosperity of the whole country. Were the pending measure of a violent, reactionary, or revolutionary nature, I, acting under a primary obligation to my constituents, should oppose it. But, sir, it is not such; while on the other hand the exactions of excessive taxation and the burdens of unequal laws fall with peculiar weight on a vast majority of my people. We have the largest wagon, carriage, and plow factories in the world.

On these articles there is a duty, but it affords no protection commensurate with the exactions collected from these manufacturers in way of increased cost of raw material. Plows manufactured in South Bend, Ind., are to-day turning the soil in England, Ireland, Scotland, and Wales; after paying increased prices for iron, steel, lumber, and paint, our manufacturers carry their product into a free-trade market and defy the pauper labor of the world.

* * * * * * *

For instance, our plows go into the British Isles and into many countries of Continental Europe. It is safe to say that some product of American manufacture may be found for sale in every city of Europe. To my knowledge, vehicles manufactured in the city in which I have the honor to reside may be found to-day in Cape Town, South Africa, on the streets of Sydney and Melbourne, Australia, in all the principal cities of Mexico, and even in Persia, to say nothing of the South American trade. Now, will it be claimed that a tariff which increases the cost of the lumber, iron, and steel in these vehicles to our manufacturers does not place the latter at an absolute disadvantage in every foreign market where their products are offered for sale? Are not these clear cases where American enterprise, American pluck, and American skill have pushed their products into the markets of the world, not by virtue of, but in spite of, obstructive legislation?

The Tariff Reform, published at 52 William street, New York City, publishes a list of agricultural implements and machinery which are being exported from the United States, with the price in the home market to the American farmer and the price to the foreigner. This

list includes plows, harrows, cultivators, seed-drills, corn-planters, road-scrapers, rollers, mowing-machines, horse-rakes, corn-shellers (both hand and power), grinding-mills, corn and cob mills (run by steam power and by hand), cider and wine presses, root-graters, hay and feed cutters, grain-separators, fanning-mills, horse-powers (snaps and treads), farm-engines, churns, wheelbarrows, and in fact all classes of machines used by our farmers, from which I quote as follows:

THE "FARMER'S HOME-MARKET" HUMBUG.

Of all the humbugs that have persistently buzzed about the ears of the American voter the worst is that one whose song has ever been of the great "home market" afforded the farmer by protection. It has lived on in face of the fact, confirmed by every passing year, that from the day when we became a nation to the present there has never been a time when there was the slightest prospect that for a generation to come, under any imaginable tariff or other "protection," it would be possible to consume in this country the agricultural products which, if our farmers were to continue reasonably prosperous, we must produce.

There has never been a decade, though we have had high protection now for nearly thirty years, when, after deducting that part of his products which the farmer consumes or must keep in stock for seed or other purposes, the remainder, for which he must find a market abroad, has not been greater than during the preceding decade. With all that is said about the insignificance of our foreign market, and though our population was greater in 1889 than ever before, and our wheat crop not so large as in some years previous, yet one-half of the farmer's surplus had to find a market abroad; and the same is true of cotton and tobacco to an even greater extent.

The "home market" tune has found trusting listeners, even though the aggregate number of those engaged in manufacturing is so small—and, with the improvements of machinery, is so constantly growing smaller—in comparison with the population it supplies with goods, that, even if we prohibited foreign imports and our manufacturers supplied all the goods we use (they now supply nearly 94 per cent. of them), the greatest possible number of workingmen they could employ would not materially lessen the present necessity of a foreign market for our agricultural products; while any idea that the proximity of manufacturing centers helps even the farmers dwelling near by is negatived by the universal experience, most conclusively so in the States of Connecticut, New Jersey, and New York, where the greatest depression in agricultural interests has steadily progressed at the same rate as the most extraordinary development and prosperity of manufacturing communities.

In the face of experience and reason, there must be some extraordinary cause for the persistent vigor of this humbug. That cause appears to be this: That though the claim that protection secures the farmer a home market is utterly untrue, it has nevertheless been urged, and is yet being urged, by those who are on the one hand pecuniarily interested in keeping it afloat and on the other are themselves so situated as to be easily and actually led to believe the falsehoods thus kept in circulation. In other words, protected manufacturers, imagining themselves the most important portion of our people and knowing what a good thing it is to have the rest of our citizens compelled to buy of them under penalty of heavy fines, not unnaturally take it for granted that what is good for them must be good for everybody else.

THE REAL HOME MARKET AND THE WAY IT IS WORKED.

The suggestions above made are strikingly corroborated by the fact that our famous Home Market Club, which has for years shared with the Protective Tariff League the burden and expense of the high-tariff propaganda, is composed exclusively of manufacturers, is situated at Boston, is supported by an assessment upon its members "in proportion to the capital" invested by each in his business, and during the Presidential campaign of 1888 was managed by a salaried Englishman, to whom, as he officially reported, was intrusted the delicate duty of concocting and circulating such matter as, in his judgment, would best tend to make Irish voters mad.

With the hint afforded by the existence of the Boston Home Market Club it is easy to surmise the character of the real home market protection affords, and not hard to guess who gets the profits therefrom. And an examination into the facts develops just what might be expected, which is this: That our manufacturers take advantage of our tariff to keep the price of their goods in our home market not merely much higher than they could do if there were no tariff, but much higher than they themselves would be able and willing to produce and sell the same goods for if they were not protected at all—of which the most conclusive proof is that our export trade is large and steadily increasing in almost every branch of protected American manufacture; and that so generally as to be practically universal it is the practice to sell these protected manufactures at a much less price than our own people are forced to pay, thus conclusively proving that they need no protection whatever.

It is not the object of this pamphlet to argue the injustice of this practice. To any one who needs argument on this point logic would hardly be useful. As to the fact there is no doubt. The following testimony from authoritative sources—in each case that of a believer in tariff protection—is as conclusive as testimony can be:

It is sometimes looked upon as wise to ship goods out of the country at cost rather than break the regular price for which such articles sell in the country in which they are produced.—*New York Press*, October 22, 1889.

Just why American manufacturers will sell machinery and other goods from 10 to 30 per cent. cheaper in Europe than they will sell them to be used at home is rather puzzling; but any one curious in the matter can easily enough find out that many of them do this. It may be necessary to cut prices to secure trade from abroad, but it is likely to strike the American purchaser as being a little rough on him.—*American Machinist*, September 26, 1889.

So soon as an industry has attained the position where it can more than supply our home market and has to send its goods abroad, where they come into with those of foreign manufacturers, it is evident that they are either giving the foreigners the benefit of lower rates than they do our own people or that they are able to get along at home without any protection from foreign manufactures. It is not fair that our people should be made to pay more than foreigners for the products of our own land.—*Engineering and Mining Journal* (protectionist), March 15, 1890.

Objection is made in many quarters to an increase of American trade outside the home market. The opposition, however, is chiefly confined to two classes: First, those who manipulate the home market so as to make it more profitable than any export trade could possibly be, and for that reason would rather not sacrifice prices to open competition. * * * In each case the motive is reprehensible; those who sell in the home market only do not care to demonstrate that they can sell at free-trade prices.—*Age of Steel*, 1890.

In the calendar year 1889 there were exported from the United States of agricultural machinery and implements as follows: Horse-powers, $14,010; mowers and reapers and parts thereof, $2,332,296; plows and cultivators, and parts thereof, $956,545. A total of $4,246,076, or an increase of nearly 100 per cent. over our exports of 1880.

In the same year we exported hardware to the value of $6,246,220. How these exports are brought about the following pages will show. The reader will not fail to see why our high-tariff advocates have changed their arguments from "protection to infant industries to place them on their feet" to "perpetual protection for its own sake."

It must not be understood, however, that the writer has any objection to the export trade. On the contrary, he would be glad to see it thrive even under the present conditions, and he would be much more pleased to see it treble and quadruple, as it would with free raw materials. It is, however, the consideration of this export trade that throws light upon the manufacturers' "home market" and justifies the constant pressing of the question "Why should our manufacturers be aided by our laws to charge our citizens more for the same goods than they do foreigners?"

One has only to glance at the list of articles exported, as given in the Iron Age every week, to see to what extent we are exporters of hardware. One fact will force itself so prominently before the reader that its force can not escape his notice. It is a recognized fact among all those engaged in the export trade in American manufactures that it is just those articles of whose cost the labor item makes up the largest proportion that can be exported for profitable sale abroad; and, on the other hand, that it is just those of whose cost the item of raw materials is the largest that we can not sell abroad in competition with foreigners. In other words, our experience demonstrates that under "protection" labor is cheaper and raw materials dearer here than elsewhere in the world.

There can be no force in the contention that the lower prices for export are brought about by our system of drawbacks on articles exported made wholly of foreign raw materials; for there are numerous examples in which extra discounts are given to the foreign trade on goods into which foreign material could not possibly enter. In addition to this, the laws are so rigid and strict governing the payment of drawbacks, the regulation that nothing but foreign material shall enter into the composition of the article on which the drawback is to be given and the retention of 10 per cent. of the duty by the Government make the provision of no advantage to American manufacturers, and as a consequence they do not avail themselves of it. The following, from the New York Tribune of April 7, 1890, is the explanation of Mr. Farquhar, of York, Pa., one of our heaviest exporters of agricultural machinery:

"In alluding to it (the drawback provision of the Revised Statutes) I must call attention to the embarrassments which encounter the manufacturer who would take advantage of the 'drawback' privileges allowed him by law and which combine to make these provisions almost a dead letter. The least of these is the fact that the 'duty' is not 'refunded,' but only a portion of it—90 per cent. Then the regulations which are required by the Treasury Department to guard against frauds, the necessity of proving that the imported goods in each article exceed half its value, the limit of time in which drawbacks can be claimed, the danger of having orders countermanded by continual delays, practically involve so much annoyance and precious time as to eat up all the profits there were in the drawbacks even when the material was as much as 30 per cent. cheaper in England than here."

THE PROOF OF THE PUDDING.

There are two journals published in New York which are devoted exclusively to the export trade in American manufactures. These are the American Mail and Export Journal and The Australasian and South American. Both are issued monthly, and, while containing items of interest to the manufacturers, have as their chief department a price current which gives the lowest price at which the goods advertised can be obtained from the manufacturers, either through commission houses or by direct correspondence. The prices quoted in these journals are declared to be the rock-bottom prices for articles in small quantities, such as by the piece, dozen, case, etc. For large quantities "special" rates are frequently advertised and in fact generally given.

The Australasian and South American publishes its prices current as a part of the regular issue of the journal; in the case of the Mail and Export Journal it is issued in the form of a supplement. Neither of these journals is allowed to circulate in this country. When inquiries were made at the offices of publication, the reason given for this was because the prices quoted for export were considerably lower than the large dealers could get the articles for for sale in this country.

One other journal, the Engineering and Mining Journal, publishes in its issue on the first of each month a price current with the discounts to the export trade only.

What the papers aim to accomplish is shown by the following quotations:

[The Australasian and South American.]

PRICES CURRENT OF AMERICAN EXPORTS.

The quotations and discounts given herewith have been carefully revised and corrected up to date of issue; they may be consulted as practically reliable and represent the prices at which goods are being sold.

In the interests of American merchants and manufacturers, as well as for their own advantage, we request foreign buyers to give this list their careful attention and to compare the prices it furnishes with the cost of competing lines of goods of similar character supplied by European merchants. Prices quoted herein are free on board New York or Boston.

[Engineering and Mining Journal. Export supplement. New York prices current. Discounts are for export only.]

These journals aim to act as a medium between consumers abroad and manufacturers here. Further than this, large agencies have been established in the best markets of foreign countries. Such are Surra & Co., of Buenos Ayres, Argentine Republic, who, as their advertisement states—

"Represent American manufacturers of agricultural machinery, farming implements, windmills, etc.; hardware, paint, and oils; saddlery, railway, telegraph, and telephone supplies; machinery, oils, furniture, carriages, tapestry, jewelry, organs, china, glass, etc. Every class of North American goods"—and G. Waldron Blake & Co., in Australia, who claim "to work thoroughly the Australian colonies and New Zealand by competent travelers." They solicit "catalogues, together with letter giving bottom export prices, free on board New York (which will be strictly confidential)."

Through such agents as these large sales are made, but the greater part of the manufactured goods sold abroad are sold by the export houses in Boston, New York, and Philadelphia. In order that they may get the low export prices, these houses must show bills of lading, etc., so that manufacturers may be assured that the goods have been actually exported.

In looking over these periodicals and their advertisements for the export trade, one is struck, first of all, by the fact that the articles advertised for sale abroad comprehend almost every imaginable class of our own "protected manufactures," which their makers are thus keeping for sale in the free-trade markets of the world in unprotected competition with the English, French, and German manufacturers, and this, too, at so great a profit to themselves that they are willing to pay the enormous expenses of extra advertising and transportation, from which they are free in this country.

The following, from the very best of authority, sums up the situation:

It is a mistake to suppose that our goods are much dearer, as a rule, than those supplied by other countries. As a matter of fact, they are often cheaper, without taking their superior qualities into consideration, this being the case particularly with the articles on which Chili has undertaken to reduce the duty.

Nor are we under very serious disadvantages when the question of trans-

portation arises. There are nearly always ships loading in New York and Boston for ports on the west coast of South America, and the rates of freight obtained make the shipping business a paying one, so that any number of vessels required would be quickly put on.

As it is, we are supplying the bulk of the railroad supplies and equipment used in Chili, and an equally large proportion of the telegraph plant. Our sewing-machines, printing machinery, mining machinery, wood and metal working tools, agricultural implements, light hardware, woodware, etc., are popular and selling well, although we could very materially increase our trade in these lines by a more careful regard for what the buyers require. The approaching exhibition of mill machinery should open up an exceedingly profitable trade with the United States, if our manufacturers would only take the trouble to secure proper representation, for it is unquestionably held as much for the purpose of attracting American exhibitors as for anything else.

We have increased our trade with Chili for the past two months 100 per cent. as compared with the same period last year, and we can keep this rate of increase up without trouble, if we will only try to supply Chilian buyers with just what they want, in place of endeavoring to make them take what we have to sell. The preliminary work has been successfully completed, but we must exercise some judgment in reaping the harvest.—*Australasian and South American*, March 1, 1890.

Below are given, under the wood-cuts illustrating the respective articles exported for sale, the rates at which each is sold (*a*) to American citizens in our "protected" home market and (*b*) to "unprotected" foreigners. The figures have been in every case obtained from the manufacturers themselves, and in most instances are based upon a comparison of three documents: the regular price-lists, the "domestic discount sheet" to the trade, and the "export discount sheet" as furnished by each manufacturer. In order to be even more than fair, we have also reduced the home-market price as given by us below that indicated by the domestic discount sheet whenever we have found upon inquiry that for any reason the goods were obtainable at less prices.

We have neither attempted nor avoided the disclosure of the individual firm or company whose prices we use as examples, nor must it be considered that criticism is intended by us of the business methods of any one. So long as the opportunity for these practices remains what our high tariff has made it and so long as any large portion of our manufacturers are disposed to take advantage of it, others must do the same or be driven out of business. For even if rivalry in the home market alone is in question, a manufacturer having the advantage of a profitable export trade can drive from the field one not so fortified.

Foreigners are favored by American manufacturers in the following ways:

a. In some cases the favoritism to foreigners consists in an offer to pay freight from the manufactory either to the foreign country or to the seaboard, while the greater price to the home consumer includes nothing but the goods themselves at the place of manufacture.

b. In many cases the prices quoted for export and for the home trade are the same, with the same discounts, except that the retail price to foreigners is fixed at the same figure as the wholesale price here, which is a concession to the foreign trade averaging from 15 to 20 per cent.

c. Most frequently of all, however, a definite excess of discount from "list prices" is given on condition that the goods be exported, and this in addition to (*a*) or (*b*) above.

The last class of instances (*c*) is the only one developed in the following pages.

It seems to be time that somebody should explain how it is, if our tariff is necessary to enable our manufacturers to compete with English, French, and German rivals in our own markets—whither foreigners have to pay extra transportation and our manufacturers do not—that they are spending so much money in advertising in order to get a chance to compete with the same foreigners in free-trade markets outside, to which our manufacturers have to pay as much or more freight than foreigners.

Cultivators (protective duty, 45 per cent.).

	In home market.	To foreigners.
Wheel hoe, cultivator, rake, and plow	$11.00	$8.40
All-steel horse hoe and cultivator, with wheel	8.00	6.75
All-steel, plain cultivator, with wheel	7.20	4.50

The above prices to the exporters as well as for sale here are for single articles. For export the cultivators are delivered "free on board" ship at New York. They are sold in all the markets of the world, and catalogues describing their merits are printed in English, Spanish, German, French, and Portuguese.

Horse rakes, tedders, and potato-diggers (protective duty, 45 per cent.).

	In home market.	To foreigners.
Lock-lever hay rakes	$15.00	$14.21
Self-dump hay rakes	18.00	17.12
Hay tedder	26.00	25.25
Potato digger	8.00	6.75

The above are the prices to the home trade for large consignments, but to the foreign consumer for single machines.

Plows (protective duty, 45 per cent.).

	In home market.	To foreigners.
Plows, two-horse, chilled, 9-inch cut	$5.60	$5.04
Same, all steel	8.40	7.56
Two-horse, chilled, 10-inch cut	6.30	5.67
Same, all steel	10.50	9.45
Two or three horse, chilled, senior	7.70	6.93
Same, all steel	14.00	12.60
Two or three horse, chilled, junior	7.35	6.61½
Same, all steel	14.00	12.60
Two-gang plows, four horses, all steel	58.80	52.92

The above prices are the best offered by the manufacturers to the large home dealers for goods delivered on cars at the factories and to the exporters without reference to quantity taken for goods delivered free on board at New York.

As is the case with cultivators, so with plows. American-made implements are sold in all parts of the world. Some manufacturers have a very large trade with England.

Shovels (protective duty, 45 per cent.).

	In home market.	To foreigners.
Shovels, cast steel, long handles, round point, No. 1, per dozen	$9.20	$7.86
No. 3 per dozen	9.80	8.37
Cast steel, D handle, round point No. 2 do	9.60	8.21
No. 3 do	10.00	8.55
Spades, cast steel, D handles, No. 2 do	9.20	7.86
No. 3, cast steel, long handles do	9.80	8.37

These are the prices for home and export trade of the shovels manufactured by one of the most prominent members of the famous Home Market Club of Boston. Other manufacturers of shovels offer similar discounts. One firm in particular, whose advertisement has a very prominent place in the Australasian and South American, gives a discount on its list prices to the "home market" of from 15 to 25 per cent., while for the export markets its discount is 33⅓ per cent. For export all goods are delivered "free on board" at Boston or New York.

Hardware and tools – Hammers, wrenches, and braces (protective duty, 45 per cent.).

	In home market.	To foreigners.
Round hammers, No. 5 per dozen	$4.37	$4.05
No. 7 do	4.18	3.82½
No. 8 do	3.64	3.37
Solid cast steel, adze eye, nail, 7-ounce do	3.75	3.37
1 pound 4-ounce do	4.50	4.05
Machinists', ball pane, 1 pound do	6.00	5.40
2 pound 8-ounce do	10.00	9.00
Wrenches, black, 10-inch do	5.82	4.36
Bright, 10-inch do	6.75	5.08
Mechanics' wrench, black, 10-inch do	5.24	3.92
Other wrenches, bright, 10-inch do	4.65	3.99
Nickeled, 9-inch do	7.27½	6.75
Polished ratchet brace, 8-inch sweep do	12.09	10.80
12-inch sweep do	14.10	12.69
Polished patent brace, 8-inch sweep do	4.20	3.50
11-inch sweep do	4.80	4.00
Bit braces, 7-inch sweep do	9.45	7.58
12-inch sweep do	13.50	10.83
Spofford, 7-inch sweep do	7.20	6.36½
14-inch sweep do	12.60	10.64
Sleeve brace, 12-inch sweep do	13.50	10.83

Axes (protective duty, 45 per cent.).

	In home market.	To foreigners.
First quality, bronzed per dozen	$7.76	$6.75
Beveled do	8.24	7.20

Other qualities and sizes at similar prices. The above prices to the home trade are for spot cash for axes delivered on cars at the factory; for export the axes are delivered in New York.

Last month the ax-manufacturers of the United States formed a "trust" under the name of the "American Ax and Tool Company." The trust was formed by the consolidation of fourteen of the largest manufacturing concerns in the country. Concerning it the Iron Age of March 27, 1890, says: "The general feeling among the trade is that the ax-makers have formed a very strong 'association,' and have complete control of the market, or so nearly so that the outside makers will have scarcely any appreciable effect on prices.

"It is found that scarcely any orders can be placed with outside manufacturers who are not under the control of the American Ax and Tool Company. The trade will do well to notice the changed condition in this line of goods as regards the higher prices now ruling and the strong probability of their maintenance for some time to come. On first quality goods an advance is now made of $1.75 to $2.25." A further advance is contemplated.

Hatchets, sledges, etc. (protective duty: Hatchets, 45 per cent.; sledges, etc., 2½ cents per pound).

	In home market.	To foreigners.
Hatchets, shingling and lathing, No. 1 per dozen	$4.56	$3.80
No. 2 do	5.13	4.27
Claw, No. 1 do	5.13	4.27
No. 3 do	5.70	4.75
Broad, 7½ inches do	10.25	9.22
Sledges, cast steel, 5 pounds and over per pound	.081	.073
Blacksmiths', 5 pounds and over do	.081	.073
Anvil tools, top swedges do	.15	.135

Top fullers, flatters, set-hammers, cold chisels, railroad-track chisels, hot chisels, etc., are quoted at the same prices per pound as top swedges for the home and export trade, respectively.

Anvils, vises, and gaskets (protective duty: Anvils, 2c. per pound and gaskets 45 per cent.).

	In home market.	To foreigners.
Anvils weighing from 100 to 800 pounds ..... per pound...	$0.081	$0.072
Vises, solid box, No. 25	5.13	4.32
No. 100	9.40	7.92
No. 150	15.39	12.96
No. 200	23.94	20.16
Gaskets, corrugated copper..... per square inch...	.014	.008

The McKinley tariff bill proposes to raise the duty on anvils. If it passes, anvil-manufacturers may probably be able to lower the price for export.

Sad-irons and fluting-machines (protective duty, 1¼ cents per pound).

	In home market.	To foreigners.
Sad-irons, nickel plated..... per dozen, set...	$16.20	$13.50
Knox fluting-machines, 8-inch	3.90	3.24

Similar discounts on Crown, Eagle, and American fluting-machines.

Kitchen hollow ware (protective duty, 1½ cents per pound).

	In home market.	To foreigners.
Flat-bottom kettles	$1.40	$0.85
Round-bottom kettles, 10½-inch	1.83	1.10
Spider, 8-inch	.35	.27
Spider, 12-inch	.91	.55
Griddle, 10½-inch	.56	.34

Similar favorable prices to the export trade are given on all other kinds of hollow ware. The above are taken as samples only.

Ice-cream freezers, apple-parers, and meat-choppers (protective duty, 45 per cent.).

	In home market.	To foreigners.
Ice-cream freezers, 6 quarts, Gem	$2.45	$2.32
Blizzard	2.10	1.99
Apple-parers ..... per dozen...	4.50	3.50
Meat-choppers, No. 10 ..... each...	2.32	2.10
No. 42.. ..... do.....	11.62	10.50

Wringers, etc. (protective duty 45 per cent.).

	In home market.	To foreigners.
Wringers, length 10 inches by 1¾ inches diameter..per dozen..	$26.67	$24.00
12 inches by 1¾ inches diameter..... do.....	40.00	36.00
Other sizes and styles at proportionate prices.		
Clothes-dryers..... do.....	6.67	6.00

Thermometers (protective duty, 45 per cent.).

	In home market.	To foreigners.
Thermometers, 7-inch..... per dozen...	$1.00	$0.90
12-inch..... do.....	1.60	1.44

Britannia and plated ware (protective duty, 35 per cent.).

For what is called hollowware, such as tea-sets, cake-dishes, etc., listed at $10, the home dealer pays $5.40, but the buyer for the foreign market pays only $4.61 for the same articles.

On knives, forks, spoons, and other flatware listed at $10, the price to the dealer in the "home market" is $4.36; but a buyer for export, regardless of the quantity he may take, pays only $3.73 for the same articles.

The largest manufacturers of these goods have consolidated their interests and in this way control prices as well as though a trust had been formed. That the public generally may not become aware of this, the goods are sold with the stamps of the old companies, as though no change had taken place.

Lanterns and oil-cans (protective duty, 45 per cent.).

	In home market.	To foreigners.
Buckeye, No. 3..... per dozen...	$5.75	$5.60
No. 4..... do.....	5.25	5.00
Lift lanterns..... do.....	4.25	4.00
Glass oil-cans, 3-gallon..... do.....	3.50	2.15

Pulleys, trucks, and blocks (protective duty: Trucks, 45 per cent.; pulleys and blocks, composed wholly of wood, 35 per cent.; composed wholly or partly of iron, 45 per cent.).

	In home market.	To foreigners.
Trucks, No. 4*	$4.89	$4.00
Blocks for rope strap, 13 inches and over	5.40	4.60
12 inches and under	5.00	4.50
6 inches and over	5.40	4.60
Dock blocks	7.00	6.30
Iron strap blocks, metalline bushed	7.00	5.40
Iron bushed	6.00	5.40
Lizards or bull-eyes	7.00	6.00
Sheaves, iron bushed	6.00	5.00
Plain iron	5.40	5.00
Metalline bushed	7.00	6.30
Swivel blocks, metalline bushed	7.00	6.00
Wrought-iron blocks, iron bushed	6.00	5.40
Metalline bushed	7.00	6.30

*On all trucks the discount to the home trade is 40 per cent.; to the export trade, 50 per cent.

Indurated and other fiber ware (protective duty, 35 per cent.).

	In home market.	To foreigners.
Standard fiber-ware water pails..... per dozen...	$4.00	$3.40
Dairy pails..... do.....	4.50	3.80
Fire pails..... do.....	5.00	4.20
Measures, 1 peck..... do.....	4.00	3.40
½ peck..... do.....	3.50	2.92
Indurated fiber-ware spittoons, large..... do.....	18.00	14.40
Buggy pails..... do.....	3.60	2.88
Milk pails..... do.....	5.85	4.68
Water tubs, 23 inch..... do.....	20.25	16.20
Keelers, 7 inches deep..... do.....	12.15	9.72
Milk pans..... do.....	2.70	2.16
Water-coolers, 3 gallon..... do.....	24.00	19.20
Water-coolers, 15 gallon..... do.....	90.00	72.00
Water-coolers and filters, 10 gallon..... do.....	141.00	115.20

Scales (protective duty, 45 per cent.).

	In home market.	To foreigners.
Grocer, ¼ ounce to 62 pounds	$6.00	$5.40
Meat and butter, ¼ ounce to 62 pounds	7.00	6.30
Platform, 1,000 pounds	25.50	22.95
3,000 pounds	62.50	56.25
Dormant, 2,500 pounds	52.50	46.25
5,000 pounds	85.00	76.50
Hay scales, 3-ton capacity	87.50	78.75
20-ton capacity	225.00	202.50

Rules, levels, and planes (protective duty, 45 per cent.).

	In home market.	To foreigners.
Rules, boxwood, 4 folds, No. 3 ..... per dozen...	$1.60	$1.44
Ivory, 4 folds, No. 57..... do.....	14.40	11.66
Planes, wood, smooth	1.08	.97
Jack	1.35	1.21½
Jointers	2.52	2.27
Iron, smooth	1.76	1.58
Jack	2.03	1.82
Jointer	3.51	3.16
Plumbs and levels, 12 to 18 inches ..... per dozen...	3.40	2.55
24 to 30 inches, brass tipped ..... do.....	6.80	5.10

Shears, screw-drivers, awl and tool sets (protective duty, 45 per cent.).

	In home market.	To foreigners.
Shears, Victor, 4-inch..... per gross...	$3.00	$2.66
11-inch ..... do.....	12.06	9.88
Clipper, 5 inch..... per dozen...	1.05	0.77
11-inch..... do.....	2.43	1.78
Diamond shears, 9-inch..... do.....	1.80	1.62
Acme, 10-inch..... do.....	1.82	1.48
Tailors' japanned, 12-inch. ..... per pair...	3.60	2.40
16-inch..... do.....	8.40	5.60
Nickel-plated, 12-inch..... do.....	4.50	3.30
16-inch..... do.....	10.50	7.70
Screw-drivers, 2-inch..... per dozen...	0.47½	0.37½
Other sizes at proportionate prices.		
Awl and tool-sets, No. 1, 10 tools in handle..... per dozen...	8.10	5.50
No. 2, combination set..... do.....	12.15	8.50

On trimming shears, ladies' scissors, paper and bankers' shears, and pruning shears, similar favorable prices are given to the export trade.

Locks and rat-traps (protective duty, 45 per cent.).

		In home market.	To exporters.
Locks and padlocks, No. 1, brass padlocks	per dozen	$7.20	$6.00
No. 85	do	9.00	7.50
No. 29	do	12.00	10.00
Scandinavian locks, No. 119	do	.72	.60
No. 120	do	.81	.67½
No. 130	do	.99	.82½
No. 140	do	1.17	.97½
Malleable iron:			
No. 9	per dozen	.87½	.67½
No. 14	do	2.80	2.16
Other varieties are sold at similar discounts.			
Rat-traps, 6-hole metallic traps	per dozen	.75	.50
Rat-killers	per gross	18.50	15.00

Bolts, augers, and bits (protective duty: Bolts, 2½ cents per pound; augers and bits, 45 per cent.).

		In home market.	To foreigners
Common or agricultural carriage bolts:			
Length, 2 inches; diameter, ⅜ inch	per 100	$0.58½	$0.46
Length, 3 inches; diameter, ⅜ inch	do	.68½	.54
Length, 4 inches; diameter, ⅜ inch	do	.79½	.62
Philadelphia carriage bolts:			
Length, 2 inches; diameter, ⅜ inch	do	1.00	.85
Length, 3 inches; diameter, ⅜ inch	do	1.16	.98½
Length, 4 inches; diameter, ⅜ inch	do	1.36	1.15½
Tire bolts with forged nuts:			
Length, 2 inches; diameter, ⅜ inch	do	1.00	.71½
Length, 3 inches; diameter, ⅜ inch	do	1.16	.82½
Length, 4 inches; diameter ⅜ inch	do	1.36	.97
Augers and bits:			
Carriage bits	per dozen	4.05	3.42
Auger bits, under ¼ inch	do	4.05	3.42
¼ inch and above	per square inch	.21½	.18½
Hand-rail bits	do	.27	.22½
Carpenters' augers, ¼ inch and above	do	.21½	.18½
Millwrights' augers, ¼ inch and above	do	.33	.30½
Gas-fitters' augers, ¼ inch and above	do	.27	.22½
Post-makers' augers, ¼ inch and above	do	.21½	.18½
Car-builders' bits, over ¼ inch, 9-inch twist	do	.31½	.26½
16 inches	do	.40½	.34½
Pump augers	each	18.00	15.20

NAILS, TACKS, ETC.

Protective duty is specific, namely:

Tacks ..... 2½ and 3 cents per pound.
Nails ..... 4 cents per pound.

In the case of tacks the schedules are so extensive and cover such varied assortments that it is not practicable to give them in detail. The prices charged to American consumers and those at which the same goods are sold to foreigners may, however, be thus compared. The same "list prices" are issued as the basis in each case. To American consumers the discount on carpet-tacks of Swedes iron or steel or American iron, blued, tinned, or coppered, are 70, 10, and 2 per cent. To foreign consumers the discount is 70, 10, 10, and 2 per cent., and ¼ cent per pound allowance for freight, or, as given by some firms, 70, 25, and 2, which is an equivalent, delivered free on board ship.

On other varieties the basis of discount, both for home and export trade, varies from 40 to 75 per cent., but on all the extra discounts quoted above are given to the foreign trade; that is, for tacks listed at $10 (2 dozen papers of tinned iron tacks, weighing 24 ounces per paper), the American consumer is charged $2.65 and the foreigner only $2.20. Similar favorable prices to the export trade are given on cut nails, finishing nails, and other varieties. These are the prices charged the wholesale merchant in this country who takes large lots, but to the foreign trade the prices are given whether the quantity taken be small or large. Abroad, our tack-manufacturers must meet competition from those of England and the Continent; at home, protected from foreign competition by tariff duties, they have entered into agreements to fix the prices at which their goods are to be sold, which prices they adhere to.

Horse-nails.		In home market.	To foreigners.
Essex horse-nails, No. 6	per pound	$0.17	$0.14
No. 8	do	.15	.13½
No. 10	do	.14	.12½
Lyra horse-nails, No. 6		.12½	.10½
No. 8		.11	.09½

Screws and rivets (protective duty is specific).

		Cents.
Screws, 2 inches or over in length	per pound	6
1 inch and less than 2 inches	do	8
Over ½ inch and less than 1 inch	do	10
½ inch and less	do	12
Rivets	do	2½

One of the very closest combinations engaged in any branch of the iron trade controls the production and price of wood-screws as far as the home market is concerned. The manufacturers keep up prices here at their will, protected as they are by the above duties. The price-lists are so complicated that we have formed a general average, as follows: Screws which cost the home dealer $10 net can be obtained for the export for $6.66, or one-third less, provided that a bill of lading is shown the manufacturer to assure him that the goods have been actually exported and that consumers here have not profited by his generosity to foreign consumers.

The manufacture of rivets is also controlled by a combination here, and while it makes the home dealer and consumer pay high prices the exporter and foreign consumer are very favorably treated. Rivets listed at $10, for instance, are sold to the largest home dealers for $5.55, but to the exporter, regardless of quantity, for only $4.50.

Post-hole-diggers and hardware specialties, etc. (protective duty, 45 per cent.).

On all such goods as screw-clamps, saw-vises, pulley-hooks, jackscrews, barn-door-hangers, and other hardware specialties of similar description, which cost the large home dealers a net price of $10, for instance, the exporter gets a discount of at least 10 per cent., and consequently pays only $9.

		In home market.	To foreigners.
Post-hole-diggers	per dozen	$15.00	$12.33
Tree-protectors	do	9.00	8.04

Cartridges (protective duty, 45 per cent.).

Cartridges which are sold to the American dealer for, say, $10 can be bought for export at a discount of nearly 50 per cent., or for about $5.

In the manufacture of cartridges, as in other things, strong combinations are in control and protected by the duty, and the "sheet-copper trust" can charge the American consumer such prices as the manufacturers choose to exact.

MACHINERY.

Lathes, drills, saws, etc. (protective duty, 45 per cent.).

	In home market.	To foreigners.
Circular saw	$30.00	$25.55
Scrdll saw	7.50	6.35

Similar favorable prices are given to the export trade on other iron and wood-working machinery. Some manufacturers give even better prices than the above to the export trade. American-made lathes for iron-working are used all through England, and there are houses in England which deal exclusively in American-made wood and iron-working machines.

Type-writers (protective duty, 45 per cent.).

A type-writer which costs in this country $100, or, if the buyer has already purchased three, $90 for each additional one he may buy, can be bought for export for $60.

Grinding mills and brick machinery (protective duty, 45 per cent.).

	In home market.	To foreigners.
Farm mill, diameter of buhrs, 14 inches	$80.00	$57.40
18 inches	78.00	73.80
Feed grinder, No. 1	37.04	27.50
No. 2	41.38	31.14
Portable mills, 30-inch	180.00	166.00
42-inch	270.00	245.00
Brick machines	472.50	447.00
Repressing machines	121.50	116.95

On molds, mold sanders, trucks, barrows, etc., similar favorable prices are given to the export trade.

Sewing-machines (protective duty, 45 per cent.).

	In home market.	To foreigners.
Best make machines	$24.00	$21.00

The above are the prices charged wholesale dealers for one of the tread machines. This machine is sold at retail by agencies in England for $32.00 and in the United States for $45.

	In home market.	To foreigners.
Medium machines	$22.00	$17.50
Fine machines	27.50	20.75

A cheaper machine manufactured in the United States is sold to the home dealer for $18 and to the exporter for $12.

A prominent manufacturing company sells the machine for which it charges the American dealer $20 for export to South America for $5.

This system of charging American buyers higher prices for their machines than buyers in England is not confined to a single company, but is characteristic of them all.

Forges and blacksmith's tools (protective duty, 45 per cent.).

	In home market.	To foreigners.
Forges, portable, 18-inch bellows	$17.00	$16.00
22-inch bellows	25.50	24.00

Similar discount for stationary forges.

For tongs, etc., which cost the home dealer a net price of $19, the price to the exporter and the foreign consumer is 10 per cent. less, or $9.

Demagogues may try to convince the farmer that he will receive his benefits by the proposed increased duty on his agricultural products, but sensible farmers will no longer be deceived.

Had the framers of the present bill wished to do the farmers a substantial benefit, they would have reduced the duty or placed agricultural implements that are used by every farmer upon the free-list. The manufacturers of agricultural implements take advantage of our tariff duty to keep the price of their goods much higher to the American farmer than they are manufacturing and selling to the foreign farmer. In the year 1889 there were exported from the United States of agricultural machinery and implements as follows:

Horse-powers, $14,010; mowers and reapers and parts thereof, $2,332,296; plows and cultivators and parts thereof, $956,545—a total of $4,246,076. In the same year we exported hardware to the value of $6,246,220. These exported products of American manufacturers were sold to foreign buyers for less than they are sold to our farmers. Where is the justice in a law that will allow our manufacturers to charge our citizens more for the same goods than they do to foreigners?

Two newspapers are published in New York devoted to the export trade and agricultural machinery and implements. Neither of these journals are allowed to circulate in this country, and when inquiries were made at the offices of publication, the reason given for this was because the prices quoted for export were considerably lower than the large dealers could get the articles for for sale in this country. The Engineering and Mining Journal publishes in its issues on the first of each month a price current with discount to the export trade only. The Australasian and South American, in its issue of March 1, 1890, writing in regard to the export trade in agricultural and other American manufactured articles, gives the whole situation.

In the early history of this country the great and overshadowing argument from a protection standpoint was expressed in the words, "Protection to infant industries." The reasoning of all the prominent protectionist writers was based on this argument. It was the universally adopted dogma among protection advocates and those not disposed to acknowledge the validity of any reasoning in accordance with any theory of freer exchange of products of the people of one country with the people of another. This dogma has been adhered to long after the conditions to which it fairly applied belonged to the past. Conditions have changed. It is unfair in arguing this question to-day to suppose that the condition of things in the earlier history of the country exists at the present time.

If we, as a people, had made no progress in the art of inventing and if the country were now first beginning to attempt manufacturing, there would be more force in this position; new inventions and new discoveries have become the common property of all. Nor can it be claimed with any degree of truth that these new inventions and new discoveries are the legitimate result of protection, for we are keeping pace with the world in all the new ideas of thought, the new inventions, and the new discoveries. and making the same wonderful progress peculiar to American vim and enterprise under the low-tariff period as we have made under a high-tariff period.

The assertion often made by protectionists that our development as a nation is due to our protective policy is fallacious and misleading and the contrary is more likely true, that we have developed in spite of this policy that has been a burden to many industries and certainly a great burden to the masses of the people. It is common among the more ignorant who espouse the cause of protection to point to some article that was formerly turned out by hand, and before invention supplied us with the improved machinery for its manufacture, and say that the price has been reduced by protection, when in fact protection had nothing to do with it. In the consideration of this question we should not fail to inquire: What is the cost of production of the article at this time?

When you figure the cost and then add to it a reasonable profit, you have the price at which the article could and should be sold to the consumer. The question is not what the article may have cost at some past period in the history of our country, but the question is, what is the cost of the article to-day? No one would suppose that we would be plowing our land with the old wooden mold-board plows had it not been for protection. We would be using the same improved plows as we now have without protection, and we would evidently be getting them much cheaper. The manufacturers of all kinds of implements would be supplying these articles to the farmers of my own State of Illinois as cheaply as they are selling to the foreign farmer.

We have often heard of the astute tariff expert, and I can imagine I see one now in my district talking to a crowd of farmers in a country school-house, explaining to them the great benefits of protection and how it lowers the price of commodities to the consumer. I hear him ask the question: "What is the tariff on your shirtings?" and answer the question himself that it is 7 cents a yard. "Now, what did your shirtings cost you?" and answer, "5 cents a yard." Of course, the farmer who had been thinking of changing his vote and in the future casting his ballot for a reduction of the tariff after hearing this knock-down argument would have all the tariff reform ideas crushed out of him.

This bit of tariff wisdom is only equaled by the other class of tariff experts that are to be found loafing on the streets or found in our country stores in our country villages, who, with the wisdom of a Solomon, will explain to Republican farmers, when they come to have their faith renewed and to buy some sugar in blackberry time, that the enormous increase in the price of sugar was due to the great demand created by the blackberry crop. The same tariff experts will tell the farmers that binding-twine has "gone up" because there was a shortage in the crop of the material from which it is manufactured. They take great care to say nothing about the tariff duties upon such articles that enable trust combinations to impose high prices upon the consumer. Henry J. Philpott, in his work entitled "Tariff Chats," referring to a speech of Senator PLATT, made in the United States Senate, gives a complete answer to this kind of argument.

Senator PLATT said:

The protectionists insist that whenever a duty is laid which protects the American manufacturer, competition among home producers always has and always will bring down the price of the domestic article, approximately at least, to use the President's language, to the price of the foreign article on which duty is laid, less the duty. The President ought to have known this, as it seems to me. Did he or his "better half" ever buy calico? If he did, he must know that while the tax, as he calls it, the duty, as the protectionist calls it, is 6 cents per square yard on calico, he can buy the American article for less than that at retail stores here in the city of Washington.

Mr. Philpott, by way of answer, says:

I heard this story when I was a boy, but there never was any chance to run it down and corner the man who started it. I have been waiting ever since for some responsible person to make a similar argument in a tangible shape. Now, here we have something definite to which we can make replication. What have we to say to that? There is an old conundrum which runs like this: "Good morning, Mary," said her teacher, "where are you going with your brother Johnnie?" "Mistaken," said Johnnie, "she is my sister, but I am not her brother." The question is, what was Johnnie? And the answer is that Johnnie was a liar. This seems to be an unimpeachable answer, but it is not. The boy or man who tells one falsehood is not necessarily a liar any more truly than one swallow makes a summer.

It is not true that the duty on calico is 6 cents a square yard and it is not true that you can buy it at retail for 6 cents a square yard. The tariff on this class of goods is purposely made as complicated as possible so that as few people as possible shall be able to understand the tariff. On goods having less than 100 threads to the square inch, counting warp and filling, which would certainly include any 6-cent calico, the duty is 4½ cents per square yard. But you can not get 50 by 50 calico for 6 cents a square yard. You may get it for 6 cents a running yard, but such calico is only 22 inches wide. Hence you pay more than 9 cents a square yard, and while you might not get it 4½ cents cheaper in England you would certainly get it some cheaper.

Of the colored cotton goods that pays 6 cents a square yard we actually imported in 1886 two and a half million yards and paid 12½ cents for the cloth and 6 cents, of course, for the tax. That made these goods cost us wholesale 18½ cents and at retail perhaps 25. These are the nice lawns and the like which our wives and daughters like to wear. They are not calicoes at all. To speak of them as such is to perpetrate, whether intentionally or unintentionally, a falsehood. To prove this, cut out a square inch of the best calico you can get, not bias, pick it to pieces and count all the threads both ways. See if there are two hundred of them. I have tried it.

The tax on the running yard of actual calico of the common grade and width is not 6 cents, but 2¼ cents. A gentleman who has sold scores of thousands of yards of calico at retail in both countries and is now in the business tells me that, quality and width considered, there is at least 1½ if not 2 cents difference in the price between this country and England. This is one of the cases where the manufacturer is not able to realize the whole amount of the protection apparently afforded by the duty. In such cases very little, if any, of the goods are imported.

When protectionists want more protection or when election time comes round, they become very solicitous over the condition of the "poor, down-trodden laboring man." It is only at these times, however, that they bother themselves about the condition of the laborer, unless it be when he strikes for better wages, and then they meet him, not with outstretched arms of sympathy, but with Pinkerton men and Winchester rifles. Of all the false, deceitful, lying shams that were ever palmed off on a credulous people this has the least sense and the least reason at the back of it, and the man who makes the statement that a high protective tariff is beneficial to the laboring man is entitled to the belt over the home-market liar. To show that the present tariff was not made for the benefit of the laborer and that the increased duties proposed in this bill are not for his benefit, I quote the following table:

Table compiled from the Tenth Census by Mr. Seaton, Superintendent, showing value of various manufactured products, per cent. of labor-cost, rate of duty existing and proposed.

Industries.	Value of product.	Labor.	Percentage of labor.	Present tariff.	Proposed rate.
Carpets	$31,792,802	$6,835,218	21.5	46.31	60.68
Cotton goods	210,950,383	45,614,419	21.6	35.64	*38.00
Bolts, nuts, etc	10,073,330	1,98 ,300	19.7	32.00	30.00
Nails and spikes	5,629,240	1,255,171	22.3	52.00	41.00
Iron pipe, wrought	13,292,162	1,788,258	13.5	74.00	62.00
Oil, castor	653,900	44,714	6.8	220.00	125.00
Oil, linseed	15,393,812	681,677	4.4	44.00	33.00
Screws (smallest)	2,184,532	456,342	20.9	72.00	84.00
Wool hats (cheap)	8,516,509	1,893,215	22.2	68.00	111.00
Woolen goods	160,606,721	25,836,392	16.1	71.00	90.00
Worsted goods	33,549,942	5,683,027	16.9	67.00	†103.00

*Clothing made 50 per cent. †Some worsteds increased to 130.

There is no tariff on laborers. We have absolute free-trade in labor. The thing that the manufacturer has to buy and the one thing that the

laboring man has to sell, namely, labor, is on the free-list. The manufacturer wants protection for himself, and little is he concerned about protection to labor.

Hon. William D. Kelley, of Pennsylvania, in the House of Representatives, when reminded that there was no tariff on labor, said:

Yes, men are on the free-list. They cost us not even freight. * * * We promote free trade in men, and it is the only free trade I am prepared to promote.

Mr. Charles S. Hill, statistician of the State Department, is a pronounced protectionist. In his argument before the tariff commission he says that our manufacturing product in 1882 was $8,000,000,000, made by 5,250,000 hands, and that for the same time the product of England was $4,000,000,000, made by 5,140,200 hands. In submitting this statement he says:

Here is the positive proof that American mechanics in the aggregate accomplish exactly double the result of the same number of British mechanics.

The American employer does not pay high wages for the work he gets done, but, on the contrary, gets his labor cheaper than does any one else in the world.

In 1878 our then protectionist Administration had its consuls report as to the condition of labor in the several foreign countries to which they were accredited. In 1878 Hon. WILLIAM M. EVARTS, then Secretary of State, now (protectionist) Senator for New York, summarized those relating to European countries in his report on the State of Labor in Europe, May 17, 1878, at pages 36, 37, and 38, of which he says:

The average American workman performs from one and one-half to twice as much work in a given time as the average European workman. This is so important a point in connection with our ability to compete with the cheap-labor manufacturers of Europe, and it seems at first thought so strange, that I will trouble you with somewhat lengthy quotations from the reports in support thereof:

DENMARK.—Another evil is the diminished worth of wages, the descending quantity and quality of work now obtained by employers for wages higher than those paid ten years ago.—*From the report of the consul at Copenhagen.*

FRANCE.—At his work the French laborer or mechanic lacks the energy of the American of the same class, and the amount of work executed by him is much less in the same number of hours. The hours of labor are from eleven to twelve, but an average American workman will accomplish as much in nine hours.—*From the report of the consul at Bordeaux.*

GERMANY.—I am satisfied that an ordinary workingman in the United States will do as much again as will one in this district, in the same time.—*From the report of the consul at Chemnitz, Saxony.*

An active American workman will do as much work in a given time, at any employment, as two or three German workmen.—*From the report of the consul at Leipsic.*

There can be no question that, speaking in general terms, the quality as well as the quantity of the work of the German artisans is inferior to that produced by the Americans. The workman here is inclined to be sluggish, and what he accomplishes is relatively small.—*From the report of the consul at Sonneberg.*

For the first time our manufactures are now assuming international proportions. At a time of universal depression we have met those nations which hold a monopoly of the world's markets, met them in their strongholds, and established the fact that American manufactures are second to the manufactures of no other nation; and that, with a proper and patriotic understanding between a capitalist and laborer, we can command a fair share of the buying world's patronage, and command that patronage with larger profits to the capitalist and higher wages to the laborer than can be made or paid in any other country

One workman in the United States, as will be seen from the foregoing extracts, does as much work as two workmen in most of the countries of Europe.

Mr. Sargent, the great hardware manufacturer, notes the general result of his observations abroad:

I found among the manufacturing districts in England that as a general rule, although the workmen there get much lower wages than ours when counted by the day or week, yet when counted by the piece or by the results of labor, their employers pay them higher wages than we pay in America. I found, on investigating the cheap labor of Japan, China, and India, that on account of the very small product per man labor in those Asiatic countries is generally dearer than in America, although the common laborer gets in those countries only from 10 to 20 cents a day. As a manufacturer I would not fear, under free trade, the competition of foreign cheap labor, so long as cheap labor stays where it is, foreign.

All of which only confirms what Mr. Blaine, our high-protectionist Secretary of State, already said in his report on the cotton-goods trade of the world, dated Department of State, Washington, June 25, 1881, pages 98 and 99:

Owing to the different arrangements of the English and American tables of wages, it is difficult to give comparative analyses thereof which would show at a glance the difference in the wages of the operatives of both countries.

The wages of spinners and weavers in Lancashire and in Massachusetts, according to the foregoing statements, were as follows per week: Spinners, English, $7.20 to $8.40 (master-spinners running as high as $12); American, $7.07 to $10.30.

Weavers, English, $3.84 to $8.64, subject, at the date on which these rates were given, to a reduction of 10 per cent.; American, $4.82 to $8.73.

The average wages of the employés in the Massachusetts mills are as follows, according to the official returns: Men, $8.30; women, $5.62; male children $3.11; female children, $3.08. According to Consul Shaw's report, the average wages of the men employed in the Lancashire mills on the 1st of January, 1880, was about $4 per week, subject to a reduction of 10 per cent.; women, from $3.40 to $4.30, subject to a reduction of 10 per cent.

The hours of labor in the Lancashire mills are fifty-six, in the Massachusetts sixty per week. The hours of labor in the mills in the other New England States, where the wages are generally less than in Massachusetts, are usually sixty-six to sixty-nine per week. Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor.

As to calico-printing we have similar testimony. Mr. David A. Wells (tariff reformer) says:

In Lowell, Mass., printers get as much as $4.50 per day. In Germany wages in similar establishments are not more than one-third as much.

Not merely can Lowell manufacturers under such circumstances compete with the Germans, but it is admitted by the owners of the most extensive print-works in Germany that it is now useless to attempt to compete in the sale of these goods with the American manufacturers in neutral markets. Such an apparently incredible result comes about thus: In Lowell, one printer, paid $4.50 per day, with a helper at $1.50 per day, can turn out 20,000 yards per day, printed with three or four colors, or 12,500 yards printed with from eight to twelve colors. No such results are attainable in Germany; and in view of the daily production of such an immense product it is a matter of no market account whether the wages paid for tending the printing machinery are $6 or $3 per day, or three-one-hundredths or two-one-hundredths of a cent per yard if apportioned to the product.

And Mr. Robert P. Porter, formerly secretary of the National Protective League, the high-tariff editor of the Press, and Harrison's Superintendent of the Census, wrote thus in an article in The Galaxy, December, 1877:

The mistaken system of imports has done much to limit the field for our production. The Government, in attempting to protect American industries, has introduced into our tariff laws many features that oppress our manufactories, close important markets, and thereby diminish the healthy demand for labor.

It is not necessary to call attention to the prostration of the woolen mills. What has all the Government nursing done for them? Mr. Mitchell, the British judge at Philadelphia in the class of "wool and silk fabrics," in his recent report, says: "The hours of labor in America are sixty-six per week, against fifty-six and a half in England, and the wages average 25 per cent. more than in this country. But the cost of living in America is considerably higher, and I do not think the operatives are in any better position at present than with us."

And yet for years the mistaken cry has gone up that American operatives wanted protection against the pauper workmen of the Old World!

In boots and shoes the comparative cheapness of American labor is even more surprising. Mr. Howard Newhall, writing in Harper's Magazine in 1885, takes the history of the hide from the cow and follows it through all its mutations into the finest products of manufacture. This is not an article on wages, but it contains a paragraph on wages. He says:

American ladies' shoes, wholesaling at $1.50 per pair, cost for labor of making 25 cents. English ladies' shoes, wholesaling at $1.50 per pair, cost for labor of making 34 cents. American men's shoes, wholesaling at $2.60 per pair, cost for labor of making 33 cents. English men's shoes, wholesaling at $2.60 per pair, cost for labor of making 50 cents.

While, from the high-tariff Press of October 22, 1888, we quote:

The report of Consul Schoenhof, at Tunstall, giving the comparative cost of making steel rails in Pennsylvania and England, has just been made public.

The employés in American steel mills average $14.05 per week, which is fully two-thirds higher than the average earned by Englishmen employed in the same class of work. A comparison of the output of one mill in each country is then given. It is found that in Eastern Pennsylvania the total output is 4,500 tons per week, that the number of men employed is 1,048, and the output averages 4.3 tons per man. The average day wages in America is $2.17½, the cost of labor per ton of all employed in the American mill being $3.04.

In the English mill the average output is 1,500 tons; the total number of men employed is 600, making the average output per man 2.5; the average per day is $1.33. The cost of labor per ton to all employed in the steel-mill averages from $2.80 to $3.08.

In weaving of ingrain carpets Mr. Schoenhof reports:

Number of yards turned out by one weaver on power-looms:	
In America	180 to 240 yards
In England	72 to 120 yards
Rates paid per yard:	
In America	4 to 5½ cents
In England (power-loom)	4½ cents
In England (hand-loom)	10 cents

And Mr. Herwig, the well known labor organizer, of Philadelphia, adds:

The actual earnings of carpet-weavers in this country do not exceed the earnings of carpet-weavers in England. Besides that, the labor cost is not over 8 cents a yard here, while, taking everything like a fair estimate, the cost in England is 15 cents a yard. The estimate is easily arrived at and figures out exactly 15 per cent—that is, 8 cents on a carpet selling at 50 cents a yard. Many carpets, of course, sell above that without having incurred extra cost, while many sell below that at wholesale. I am prepared to give my detailed figures.

In hardware, Mr. J. B. Sargent, of New Haven, Conn., one of the largest manufacturers of hardware in the world and the largest single employer of labor in his own State, says:

I have found by personal investigation among the manufacturing districts of England and on the continent of Europe that although the workmen there get much lower wages than ours when counted by the day or week, yet when counted by the piece or by the results of labor their employers pay them higher wages than we pay in America.

The development of his business forced this conclusion upon him. He found that, in spite of a tariff whose protective features barred the entrance of the bulk of his goods into foreign markets, the finer grades of his wares found frequent outlet abroad. This was conspicuously the case with goods requiring the least raw material and the greatest amount of labor. The only deduction he could draw from this drift of trade was that raw material was higher here than abroad and that labor was cheaper.

He made a trip to Europe in 1873 to investigate this matter. With a business man's directness of method, he went right among the manufacturers and the workingmen for his facts. In that search he discovered why his fine goods entered foreign markets. It was because he could offer them cheaper; they cost him less.

In trying to introduce American goods to foreign markets the rule I have laid down was found to hold good: In articles requiring a large amount of labor and a comparatively small amount of raw material we can hold our own with any foreigners; where the raw material is large in proportion to the labor, the Englishman is on top.

Mr. Sargent took up a chain-bolt. The body of the bolt is nicely finished. It passes through four hands before it is done and the labor on the product is 88 cents per gross. He said that German labor on such a bolt would certainly cost 88 cents per dozen One man was engaged in turning brass knobs which came to him from the casting to be polished. He had a neat machine and knew how to handle it, and he could turn seven knobs a minute. A German who could turn seven an hour in the old country would be doing good work.

As to agricultural implements, we quote again from the New York Press, of October 3, 1888:

On the other hand, as a rule, the manufacturers of agricultural implements in the United States are able to get very satisfactory prices for their goods abroad, and generally in excess of prices received in our home market, and in most cases they get cash before the goods leave New York City, while in this country reapers are usually sold on one, two, and in some instances three years' time. The reason why American manufacturers are enabled to get higher prices for their goods over those manufactured abroad is because of the superiority of our implements. The free-trader is slow to admit this, but nevertheless it is true.

We pay twice as much for labor in this country as is paid abroad; therefore we get twice as good results from that labor. Labor which receives poor pay brings poor results.

The Press says, that "the free-trader is slow to admit this, but nevertheless it is true." If true, what does it demonstrate? Does it not prove that the American workmen who turn out the superior implements should have the benefit of the protection, and not the manufacturer? If it is true that American manufacturers are enabled to get higher prices for their goods over those manufactured abroad on account of the superiority of the American implements, is the American manufacturer in any danger from foreign competition, and could he not sell American manufactured implements to American consumers as cheap as he sells to export trade?

As to yarn-dyeing, Mr. F. A. Herwig, in an interview published by the New York Herald, says:

You see that man [pointing to a man on the opposite side of the room]. He is a dyer. He is a victim of skill and ingenuity, according to some of our statisticians. In Belgium it will take thirty-two hands to turn off 1,300 pounds of dyed yarn in a day. There they get 50 cents a day each, or $16 for 1,300 pounds. Here two men, working what is called a 'kettle' together, turn off from 1,000 to 1,200 pounds of yarn a day. Here they receive $2 a day each (though in some few places, such as the Dobson dye-house, the pay is not quite so high—$7.50 to $8.50 a week). You will remark that for $4 the employer here gets almost as much work done as would cost $16 across the water. Or put it this way: In the United States it costs at the rate of 40 cents per 100 pounds: in Belgium, $1.25 per 100 pounds.

And so through the entire list, proof as positive as Holy Writ, to one who wants to know the truth, it could be added that in the manufacture of every conceivable article that is made in this country the labor-cost of producing the article is cheaper than in any other country in the world. The truth is that protection has nothing to do with the price of labor. The price of labor is controlled by the law of supply and demand; and the laborers of America compete with the free labor of the world. While they may earn more wages in a day than the foreign laborers do, in point of cost of production their labor is the cheaper. They are compelled to earn more than the foreign laborer because their cost of living is greater. The laborer, like the farmer when he sells his products, must compete with the world; but when both the farmer and the laborer buy their necessaries they must buy in a protected market at protection prices.

To convince any one who is laboring under the delusion that high-tariff increases the wages of American laborers, I invite them to Europe—to the older countries—and ask them to examine the scale of prices there. In England, which is a free-trade country, or rather a revenue-tariff country, we find that higher wages are paid than in the countries of Europe where the protective system prevails; and wages in England have advanced 50 per cent. since protection was abandoned and free trade has been adopted in its stead.

The following table of wages paid weekly in the different European countries is to be found on page 2398, volume 2, of the report of the United States Tariff Commission:

Occupations.	Germany, protection.	France, protection.	Belgium, free trade.	England, free trade.
Bricklayers	$3.45	$4.00	$6.00	$8.12
Masons	4.00	5.00	6.00	8.16
Carpenters	4.18	5.42	5.40	8.25
Painters	4.00	4.90	4.20	7.25
Plasterers	4.85	.....	5.40	8.10
Blacksmiths	3.90	.....	4.40	8.12
Cabinet-makers	4.95	.....	4.80	7.70
Dyers	3.30	.....	.....	7.00
Weavers	3.00	.....	.....	5.40
Grinders in glasswork	4.87	.....	.....	10.92
Common laborers	2.60	.....	3.00	5.00

As early as in 1828 the opinion was expressed by many manufacturers that the mere cost of manufacturing was not greater in the United States than in England; that the American manufacturer could produce at as low prices as the English if he could obtain his wool at as low prices as his foreign competitor.

Mr. Shepherd, of Northampton, the manufacturer of woolen goods at that time, said:

The difference in price of cloths in the United States and in England would be the difference in the price of wool, as in my opinion we can manufacture as cheap as they (the English) can.

In the same connection another manufacturer says:

The woolen manufacture is not necessarily established in this country, but I know no reason why we can not manufacture as well and as cheap as they can in England, except the difference in the price of labor, for which, in my opinion, we are fully compensated by other advantages. Our difficulties are, not the cost of manufacturing, but the great fluctuations in the home market caused by the excessive and irregular foreign importations. The high prices we pay for labor are, in my opinion, beneficial to American manufacturers, as for those wages we get a much better selection of hands and those capable and willing to perform a much greater amount of labor in a given time. The American manufacturer also uses a larger share of labor-saving machinery than the English.

We produce less than half the amount of wool we annually consume in the United States. Even if a tariff gives the wool-grower a better price than he would receive without it it is a bad law that gives a few benefits at the expense of the many. All laws should be framed with the view of accomplishing the greatest good for the greatest number. It may be doubted whether a high tariff brings better prices for our domestic wools. The weight of evidence is against it, as is shown by the following article from the New York Evening Post in reply to an article of the Philadelphia Manufacturer, a protection organ:

[New York Evening Post.]

The Philadelphia Manufacturer has been asking the Evening Post with more or less frequency how it is possible that the admission of foreign wool free of duty can cause an advance in the price of domestic wool and at the same time lessen the price of woolen goods. That free foreign wool has actually had the effect to advance the price of domestic wool is shown by the statistics. Under the tariff of 1857, nearly all the fine wools of South America, and the Cape of Good Hope, and many of those grown in Australia, and all Canadian wools were admitted free of duty. This condition lasted till 1862, when very moderate duties (15 per cent. ad valorem) were imposed on wool. The period of highest duties on wool did not begin till 1867. The prices of domestic wool during the five years of practically free wool, beginning with 1857, and the five years under the present tariff, ending with 1888, were as follows:

FREE WOOL.	Cents.	TARIFF OF 1883.	Cents.
1857	53	1884	37
1858	45	1885	34
1859	59	1886	34
1860	54	1887	34
1861	44	1888	32

So it appears as a matter of fact that free foreign wool may be accompanied by high prices of domestic wool, while heavily taxed foreign wool may be accompanied by low prices for the domestic article. No journal that calls itself Manufacturer needs to be told that foreign wools are required for mixing with home-grown wools, and that when the former can not be had the demand for the latter declines.

As to the price of woolen goods under the two régimes, we should say that in a case where the manufacturer has free access to all the raw materials, even though the price of one moiety of those materials were higher by 25 per cent., he might still produce a cheaper article than in a case where the other moiety of his raw material was taxed 50 per cent. Having answered the Manufacturer's conundrum, we beg leave to ask what that paper means by saying in its latest issue, that of April 16, that the new (McKinley) tariff bill, with its increased wool duties, "will thrust the American wool clip once more upward and the prices of American wool once more downward?" Is that what you call backing your friends, the wool-growers, Delano, Harpster, and Lawrence?

Corroborative of this the following from a speech of Senator ALLISON will not be without interest. No one has stated the case more clearly than Senator ALLISON:

I will say, with regard to the duty on wool and woolens, that I regard it, not as an intentional fraud, but as operating as though it were a fraud, upon the great body of the people of the United States. I allude to the wool tariff, a law the effect of which has been to materially injure the sheep-husbandry of this country. In a single county in the State of Iowa, between 1867 and 1869, the number of sheep was reduced from 22,000 to 18,000 in two years; and what is true of that county is true to a greater or less extent of other countries in Iowa; and during this time the price of wool has been constantly depreciated.

As the law now is, the tariff upon fine wools of a character not produced in this country is 100 per cent. upon their cost. The tariff upon woolens of the same class is only about 50 per cent., so that the finer woolen goods are imported and the coarser fabrics. Before the tariff of 1867, our manufacturers of fine goods mixed foreign fine wools with our domestic product, and were thus able to compete successfully with the foreign manufacturer of similar wools. But being prohibited from importing this class of wools, these fine goods can not now be produced in this country as cheaply as they can be imported. Consequently, mills that were formerly engaged in producing these goods have been compelled to abandon business or manufacture coarser fabrics. If they could afford to manufacture those fine goods, they would make a market, which we do not now have, for our fine wools to be mixed with other fine wools of a different character from abroad. This want of a market, as I understand it, is the reason why our fine wools now command so low a price. There is no demand for them at home, and we can not export them in competition with fine wools grown in other countries.

Dr. E. P. Miller, writer on economic questions, of the protection school, lately published a pamphlet entitled Facts About Wool and Woolens. His testimony on this subject is important and is as follows, page 10:

A significant fact in connection with this subject is this: In 1833 wool under 8 cents a pound was admitted free of duty; the price of fine wool in January of that year was 35 cents a pound, while in January, 1834, it was 70 cents, a rise of 15

cents per pound; the price of coarse wool in January, 1833, was 33 cents a pound; in April it was 38 cents; in July, 40; in October, 45; and in January, 1834, it was 48 cents a pound, showing an advance of 15 cents a pound in one year after putting wool on the free-list. Again, in 1857, when wool valued at 20 cents a pound or less was put upon the free-list, although it fell off a little in 1858, it was 2 cents a pound higher in January, 1859, than in January, 1857.

In 1824, after thirty-five years of free wool, the price of fine wool in January was 68 cents and in April 70 cents a pound. In May of that year a tariff of 15 and 20 per cent. was placed on wool, but the price instead of going up went down, for fine wool sold in July at 55 cents; in October at 60 cents; in January, 1826, at 55 cents; and in January, 1827, at 36 cents. Again, in 1842, after ten years of nearly free wool, a tariff was placed on low-priced wool, and in January of that year fine wool was sold at 48 cents and coarse at 25 cents per pound. After the increase of tariff in 1861, wool, like all other articles, went up in price, owing to general inflation of prices resulting from the large volume of paper money circulated during the war.

After the tariff act of March, 1867, the highest in the history of the country, the price of wool declined instead of advancing, for it sold in January, 1866, at 70 cents; in January, 1867, at 68 cents; in April, at 60; in July, at 55; in October, at 48; and in January, 1868, at 43 cents a pound; in April, at 50; in July, at 46; and in October, at 48, a decline in one year of 20 cents a pound.

It may seem strange that the tariff on wool has had the effect to reduce the prices on domestic wool, but it seems that such is the fact. In the consideration of this question it must be borne in mind that no one country produces all of the different kinds of wools that are needed in the manufacture of all grades of goods. Even if we produced in this country sufficient quantity of wool to supply the demand, yet we would have to import foreign wool to mix with the domestic article in manufacturing different grades of cloth used by our people. Free raw wool would stimulate manufacturing, which would thereby create a greater demand for domestic wool and that demand would create better prices. Woolen goods would be made cheaper, the consumption of woolen goods would be increased, which would increase demands for labor and thereby increase wages. This would be a benefit to all, and, the greatest blessing it could bestow, it would give the poor people of this country cheaper clothing and would drive from the market the worthless shoddy.

The following from Mr. Hazard, of the Peacedale Manufacturing Company, explains why a high tariff has failed to give our domestic wool higher prices. After giving a table with the prices of wool for a number of years, he says:

A simple examination of this table will show that there has been no definite connection between the price of wool and the tariff. There have been high prices under low tariffs and low prices under high tariffs. The best average prices of the whole period, omitting 1871 and 1872, were obtained under almost free trade in wool in the four years 1851–1850, inclusive. No other consecutive four years gives as good an average. Immediately after the passage of the tariff of 1867 there was a marked fall in price. Then there was a rise for four years, culminating in the high prices of the wool famine of 1871 and 1872. Since then there has been an almost continuous fall, with prices considerably below the average of the low-tariff period.

The two years 1871 and 1872 were exceptional. The high prices indicated an actual scarcity of wool. The wool clip of the country had fallen to a point where it could not supply the actual wants, and in the next two years, 1872 and 1873, we imported very nearly as much foreign wool as we had imported in the previous seven years.

Scarcity was then the cause of the high prices of 1871 and 1872. But if it is claimed that these prices were the legitimate effect of the tariff, as the tariff had produced the scarcity, let the claim be granted. The tariff was impotent to maintain them. In 1873 there was a heavy fall, and the course has been downward, with few interruptions, ever since.

The tariff of 1867 has, then, most certainly failed to give the wool-grower a high price for his wool. We must be careful not to attribute the bad results which followed the passage of the tariff of 1867 solely to that act. There were doubtless other contributing causes. But we were upon very safe ground when, having found that, following the passage of that tariff, sheep were slaughtered, the product of wool decreased, and prices of wool did not rise, we infer from these facts that the enactment of the tariff of 1867 failed to foster and encourage the growth of wool, and failed to insure high prices for wool. It was expressly designed to encourage the wool-grower, and it had no such effect.

The reason of this failure is not far to seek. It is perfectly clear that wool-growers are dependent on wool-manufacturers for their market. If woolen goods can not be sold at a profit, wool must decline in price until they can be. The absence of prosperity among manufacturers is a sure indication of a bad market for wool. The fact of this dependence of wool-growers on wool-manufacturers can not be too strongly insisted on, and it must always be borne in mind in any intelligent discussion of the subject. It was through the wool-manufacturers that the tariff of 1867 injured the wool-growers. The country did not produce wool enough for its wants. It did not produce the kinds of wool required for certain fabrics, and suddenly the cost to the manufacturer of all imported wools was largely advanced. The mills could not run without these imported wools. Those mills which had used a certain mixture of domestic and foreign wools were forced either to buy their domestic wool for less or advance the price of their fabrics. A struggle was thus begun by manufacturers to put down the price of wool and put up the price of goods, and such a struggle was entirely inconsistent with prosperity. The wool-growers necessarily had a bad market.

Mr. Hazard's conclusions are verified by the authority of every accessible expert. Mr. George William Bond, of Boston, recognized as the highest authority on wool in this country, has been relied upon by the Treasury to fix the prices and grades of wool for the customs service, and has always had the confidence of the protectionists. He affirms, first, that the average prices of wool to the grower have been lower under the high-tariff policy of 1867 than they were under the comparatively low tariff which had prevailed for ten years previously; and that since the enactment of the tariff of 1867 there has been a marked and general decline in the price of wool; also that "our fine wools have always been higher, other things being equal, when we were able to freely import wools of other countries at a low duty or no duty at all."

The use and consumption of wool commences with us all at the cradle and only ends with the grave.

Of all the countries of the world the United States uses the greatest amount of fine woolen goods. This is demonstrated by the fact that of late we have imported per annum some $45,000,000 worth of woolen goods, mainly of fine cloths. Our capitalists are the most enterprising, our machinists the most skillful, and our labor the most intelligent. And yet of all the world this is the one country that does not and can not manufacture fine woolen goods, and it is the one country which is the largest customer for the French, German, and English manufacturers. In short, the positive evils of our legislation are such that not merely what should be our home market for American wools is lessened by the fact that a great portion of varieties of wool manufacturing can not be advantageously carried on here, but the manufacture of the very grades of goods of which we are the most extensive consumers in the world has been taken away from our manufacturers and given to foreign establishments.

It is scarcely necessary to suggest that the variety of woolen fabrics is almost infinite, ranging from the coarsest horse-blanket and drugget to fabrics that vie with silk in fineness, elegance, and costliness. Hence it follows, as a matter of necessity, that if the manufacture is to be carried on under the most favorable conditions—if it is to be diversified and prepared to adapt itself promptly to the successive variations in market demand consequent on the frequent changes of fashion, the manufacturer must have every facility for selecting and obtaining his raw material. And consequently every manufacturing nation in modern times, except the United States, has recognized that the best protectionit could give alike to its wool-growers and wool-manufacturers—for, the only market for the wool-grower being the wool-manufacturer, the prosperity of the former must depend upon the latter—would be to give the manufacturer the largest opportunity for obtaining such wools as his interest taught him were desirable.

We import a large amount of foreign-manufactured woolen goods, which statistics show is increasing. Suppose wool were put on the free-list, then these goods that are now imported could and would be manufactured by our own people. They would compete no more with home-grown wools than they do now, but the American wool manufacturer would get the profit of working these wools which the foreign manufacturer now receives and American workmen would have the benefit of the labor. The American manufacturer to compete with the fabrics of other nations, in the endless variety demanded by our times, must have the power of selecting a portion of his raw material from the world's sources of supply. The sudden and exceptional demand for more or new raw material must be supplied by importation. A writer on political economy says:

To-day England, France, and Germany enjoy practically a monopoly of the trade of the world in woolen manufactures. They are the only countries of the world that export woolen manufactures in excess of their importations of raw wool. In other words, these countries, by admitting wools free, have created a demand for their home wools in excess of the total amount of all wools required to clothe their people; and, after giving their laborers additional employment, export more wool than they have imported. The United States, on the other hand, by putting a high tariff on raw materials, has not merely destroyed our export trade, but so throttled our manufactures as to ruin the market for domestic wool and give to the English, French, and German manufacturers the cream of our markets for cloth. Our tariff, therefore, at once deprives our farmers of their market for wool and gives to English, French, and German operatives the employment that naturally belongs to American workmen.

Under our present tariff shoddy manufacturing flourishes. Free wool would make us the center of the world's wool manufacture and would therefore make wool in our markets worth more than anywhere else.

As remarked by Hon. John E. Russell:

Prior to 1857 we had a nominal duty on wool, and the fortunate experience of the country in every department of industry and enterprise under the tariff of 1846 led to the further reduction of the tariff in 1857. The whole delegation from Massachusetts here and at both ends of the Capitol voted for it. In that revision wool under 20 cents a pound was made free.

The effect upon wool was immediate. It went up and in 1859 it was as high as it has ever been in our history, and the manufacturers of Massachusetts and Rhode Island made more money than they ever did in any year of their business. They flourished together because their interests were identical.

No vote of mine would ever be given consciously against the interest of the American farmer, but I would take the duty off of wool, for I believe that in less than a year the price of wool would advance because the woolen manufacturer, freed from the tax on two-thirds of his raw material, would be better able to buy the other third.

President Grant stated the true economic view of this question in his annual message for 1874 in saying:

The introduction free of duty of such wools as we do not produce would stimulate the manufacture of goods requiring the use of those we do produce, and therefore would be a benefit to home production.

And again, in his message for 1875:

These duties [on raw material] not only come from the consumers at home, but act as a protection to foreign manufacturers of the same completed articles in our own and distant markets.

There is a persistent pressure by manufacturers for the specific duty because it conceals from the people the amount of taxes they are compelled to pay to the manufacturer. The specific duty always discriminates in favor of the costly article and against the cheaper one, and therefore it imposes a heavier burden as it goes down from the highest-priced articles to the lowest. This discrimination is peculiarly oppressive in woolen goods, which are necessaries of life to all classes of people. In order that this fact may be clearly seen and comprehended, we append a table taken from the First Annual Report of the Commissioner of Labor (page 251):

Price per yard of Leeds (England) woolen and mixed goods, duties, etc.

Name.	Description.		Price at factory.	Duty.						New York cost, not including packing, carriage, freight, insurance, etc.
				Rate.		Amount.				
	Width (inches).	Weight (ounces).		Per pound.	Ad valorem per cent.	Per pound.	Ad valorem.	Total.	Per cent. price at factory.	
West of England broadcloth	60	77	$3.60	$0.35	40	$0.372	$1.440	$1.812	50.3	$5.412

Cotton warp reversible	50	30	.45	.35	35	.656	.157	.813	180.7	1.263

This table states the description of the goods, their width in inches, and the weight per yard of each kind; the price of the goods at the factory; the rate and the amount of duty per pound and ad valorem, and the total amount of duty levied under the compound rate; and also the per cent. which the total duty is of the price per yard at the factory in England.

This table is well worthy of careful study. The startling inequalities in the rate of duty to be paid in this country becomes apparent. The highest-priced goods named in the table is West of England broadcloth, worth $3.60 per yard in Leeds, the specific duty being 35 cents per pound and the ad valorem duty 40 per cent.

Sugar up to and including No. 16 Dutch standard is put on the free-list, and the bill proposes to pay the sugar-growers in this country a bounty of 2 cents per pound upon all sugar produced until July 1, 1905. Last year the grades of sugar now made free yielded to the Government $54,894,181 in revenue. From now on sugar-growing is to become an annual charge upon the people. In 1888, the last year for which we have complete returns, the sugar product of this country was 37,585,587,700 pounds; and if there should be no increase in the production under the bounty system, the sum which the people would have to pay each year as a bounty to the sugar-growers would be $7,520,000, or $113,000,000 up to 1905.

The object of the bounty is to encourage the production of home grown sugar, and it is claimed that in a few years it will result in increasing the domestic product equal to supply the whole demands of home consumption. In addition to the home product we imported and consumed the last fiscal year 2,700,421,302 pounds of sugar, not above No. 16 in color, making an annual consumption of the domestic and imported article of 3,076,277,079 pounds. If the system results in our sugar-growers producing all the sugar required for home consumption, at the present rate we would be compelled to pay the sugar-growers annually a bounty of $61,325,426, and as the consumption will no doubt increase with the increase of population it may likely entail an annual charge on the people of $70,000,000 a year.

This bill also provides a bounty to those engaged in silk culture. Free sugar is a good thing, but I would not stop at any grade if I were dealing with it. But what right has the Government to tax the farmers of Illinois upon all other articles they use to raise revenue to pay a bounty to sugar-growers or to those engaged in any other industry?

What right has the Government to exercise its paternal care over one industry at the expense of another? Why should the farmers of my district be taxed to pay a bounty on sugar and silk culture and not have included in the Government's charity wheat, corn, oats, tobacco, wool, hay, wine, potatoes, turnips, cabbage, and, in fact, include all the fruits of the earth and all the products of the mill, the looms, and the mines, and everything that grows in the sunlight of heaven and everything that is extracted from the dark caverns of the earth? Each and all these products and the busy millions toiling to produce them are as much entitled to the aid of the Government they all help to support as are the growers of sugar or those who are engaged in the culture of silk, and if this bill should become a law it will not be long until every industry will be asking a Government bounty. To carry this class of legislation to its legitimate results would destroy self-reliance and individual enterprise and would be fraught with nothing but evil and disaster to the country, if not the final dissolution of Government. No government could long endure under such a system.

The following table will show the rate of increased duty on articles in common use made necessary to raise the revenue which sugar yielded to the Government and to pay bounties to sugar-growers.

Table showing great increase of duty proposed by the pending bill on articles in common use.

The annual corn crop of Illinois for the year 1889 was produced at a loss to the farmers of that State of nearly $10,000,000. The growers of sugar need Illinois corn as much as the Illinois farmers need their sugar. Why discriminate? The Illinois farmers have been playing a losing game in raising corn for the good of some one else. Corn-raising is an honorable pursuit, but I do not know of any one who wishes to engage in it simply for the good of his health. But the protectionist will say, "Oh, we have increased the duty on corn." Yes, you have; and you might as well have made the duty $10 a bushel for all the good it will do. But they say, "We will give the farmer a home market." Yes, you have fed him on home-market gruel until he is sickened nigh unto death.

This bounty proposition taxes the resources of all the people to pay to individuals a Government bounty. I do not think it a crime to buy a foreign-made article if it suits me. If I can buy it cheaper I deny the right of the Government to deny to me that privilege. It is a mistaken idea to suppose that an article, because it is produced in a foreign country and purchased by an American, is the product of foreign labor and foreign capital. When an American puts the money that he has earned by his own effort and by his own labor into an article of foreign manufacture the value of the article is then represented by American capital and American labor. If the American can earn the money at some other pursuit to buy a given article quicker and easier than he could produce the article himself, no law should take from him his right to buy the article, which, if produced at all by him, must be produced at a loss.

In section 8, Article VIII, of the Constitution of the United States will be found the only power Congress has to levy taxes upon the people. It reads as follows:

The Congress shall have power to lay and collect taxes, duties, imposts and excises; to pay the debts and provide for the common defense and general welfare of the United States.

No other taxes except taxes for public purposes were contemplated by the wise framers of this section of our Federal Constitution, and no other taxes can be legally and constitutionally laid upon the people. This section has received judicial interpretation by both State and Federal courts. In an unbroken chain of judicial decisions the doctrine has been laid down that all taxation must be for none other than public purposes. I will here quote from some of the leading jurists of the United States. Judge Cooley says:

Constitutionally a tax can have no other basis than the raising of revenue for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful. A tax on imports, therefore, the purpose of which is not to raise revenue, but to discourage and indirectly prohibit some particular import for the benefit of some home manufacturer, may well be questioned as being merely colorable, and therefore not warranted by constitutional principles.

Justice Miller, of the Supreme Court of the United States, laid down the doctrine in a judicial opinion as follows:

Of all powers conferred on the Government that of taxation is most liable to abuse. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there are no implied limitations of the use for which the power may be exercised. To lay with one hand the power of the Government on the property of the citizen and with the other bestow it upon favored individuals to aid private enterprises and build up private fortunes is none the less robbery because it is done under the forms of law and is called taxation. This is not legislation, it is a decree under legislative forms. Nor is it taxation. Beyond a cavil there can be no lawful taxation which is not laid for public purposes.

The supreme court of the State of Maine, 58 Maine, page 590, said:

Taxes are the enforced proportional contribution of each citizen out of his estate, levied by authority of the State for the support of the government and for all public needs. They are the property of the citizen taken from the citizen by the government, and they are to be disposed of by it.

There is nothing of a public nature any more entitling the manufacturer to public gifts than the sailor, the mechanic, the lumberman, or the farmer. Our government is based upon equality of rights. All honest employments are honorable. The State can not rightfully discriminate among occupations, for a discrimination in favor of one branch of industry is a discrimination adverse to all other branches. The State is equally to protect all, giving no undue advantage or special and exclusive preference to any.

No public exigency can require private spoliation for the private benefits of favored individuals. If the citizen is protected in his property by the constitution against the public, much more is he against private rapacity.

If it were proposed to pass an act enabling the inhabitants of the several towns by vote to transfer the farms or the horses or oxen, or a part thereof, from the rightful owners to some manufacturer whom the majority might select, the monstrousness of such proposed legislation would be transparent. But the mode by which property would be taken from one or many and given to another or others can make no difference in the underlying principle. It is the taking that constitutes the wrong, no matter how taken.

Whether the cow or the ox be taken from the unwilling owner and given to a manufacturer, or the gift be of money obtained by a sale made by the collector, or by the payment of the tax to avoid such sale, does not and can not change the principle. In either case the cow or the ox or the value thereof is taken from the owner and is given away by others without the owner's consent. If a part of one's estate may be given away, another and another portion may upon the same principle be given away until all is gone. What is this but manifest and undisguised spoliation?"

Judge Dickerson uses this language:

"What claim has manufacturing to such preference over other branches of industry, commerce, trade, agriculture, and the mechanic arts. These are honorable and beneficial pursuits, and the constitution of this State will be searched in vain to find any powers given to the Legislature to authorize towns and cities to discriminate against these employments and in favor of manufacturing in the matter of taxation. If municipal corporations may assess a tax upon their citizens by authority of law to encourage one, it may each and all the branches of necessary industry, and the question is reduced to this: Has the Legislature the constitutional authority to authorize the towns and cities in this State to tax their inhabitants for the purpose of aiding, establishing, or carrying on, not only manufacturing properly so called, but also farming, ship-building, trading, inn-keeping, printing, banking, insurance, and any other branch of beneficial industry?"

When another case came up afterwards, which is reported in 60 Maine, "Allen *vs.* Inhabitants of Jay," the chief-justice decided a similar question. The authorities, under an act of the Legislature, had attempted to grant aid to a manufacturing company or to a saw-mill that was about to be established. The judge said in that case:

"Taxation by the very meaning of the term implies the raising of money for public uses, and excludes the raising if for private objects and purposes. 'I concede,' says Black, C. J., in Sharpless *vs.* Mayor, 21 Pennsylvania, 167, 'that a law authorizing taxation for any other than public purposes is void.' 'A tax,' remarks Green, C. J., in Camden *vs.* Allen, 2 Dutch., 839, 'is an impost levied by authority of Government upon its citizens or subjects for the support of the state.'

"'No authority or even dictum can be found,' observes Dillon, C. J., in Hanson *vs.* Vernon, 27 Iowa, 28, 'which asserts that there can be any legitimate taxation when the money to be raised does not go into the public treasury or is not destined for the use of the Government or some of the governmental divisions of the state.'"

Coulter, J., in Northern Liberties *vs.* St. John's Church, says:

I think the common mind has everywhere taken in the understanding that taxes are a public imposition levied by authority of the Government for the purpose of carrying on the Government in all its machinery and operations; that they are imposed for a public purpose.

When tariff taxes are laid for public purposes to raise the necessary revenue to carry on the affairs of government, no objection can be urged, but when the Government levies taxes "to check imports," as the gentleman in charge of the present bill says is the object of this bill, then the Government is unlawfully using its taxing power to prevent competition, to aid private concerns, and to increase the price of commodities to the consumer.

Such tax yields no revenue; it does not go into the Treasury, but goes into the pockets of the protected manufacturer, and is an oppressive, tyrannical, and unjust burden to the consumer. The farmers of this country in memorials to this Congress have demanded "the removal or reduction of taxes on articles of necessity, convenience, and comfort to the poor to the limit consistent with equal and exact justice to all, and that the burden of taxation be placed on articles of luxury, and especially on those articles injurious to health and good morals and upon large and excessive incomes." Is this bill an answer to their appeal? What benefits are they to receive by reason of this increased rate of duty upon "articles of necessity, convenience, and comfort to the poor?"

In my judgment the bill is not even an attempt to meet their just and reasonable demands. It seems that it is not the intention of this Congress to do the things that the great masses of the people want done, but is given over to high taxes, the interests of special classes, and the looters of the National Government. When the present Speaker in a Democratic House discussed the question of a constitutional quorum he was then of the opinion that the "constitutional idea of a quorum was not the majority of all the members of the House, but a majority of the members present and participating in the business of the House." "It is not," he said, "the visible presence of members, but their judgment and their votes that the Constitution calls for."

But, now, when his party is in power, to further the interests of the classes and against the masses, he not only violates the Constitution according to his former interpretation, but does violence to his own conscience, overrules all former speakers, including Hon. James G. Blaine, and sets aside the precedents of a hundred years to "see" a quorum "to do business" in the interests of higher taxes and against the interests of every farmer that I represent. Under former rules the minority of this House would have had some show in resisting the passage of this bill of abomination by refraining from voting, but under the present rule less than a majority of affirmative votes can pass this bill with the aid of the Speaker's power to "see" a constitutional quorum. The minority are powerless to enact legislation or to prevent the enaction and imposition of such a burden upon the people. This may be tolerated for a time, but I mistake the temper of the American people if they long submit to such tyranny in a free Republic.

The Democratic minority in this House opposes this bill as an unjust and infamous wrong upon the farmers and the consuming millions of this broad land. In the principles of the Democratic party will be found the safeguards against the evils that are driving to the wall and impoverishing the agricultural and industrial classes of this country. I appeal to the sober sensible judgment of the American people to condemn this wrong and injustice upon the farmers that I represent. I appeal to the voters who have heretofore been led by their blind prejudice to lay aside their partisan feeling and for once go in for the common good and vote for the party that favors a reduction of the tariff.

When all the branches of the Federal Government are in the hands of the Democratic party then you will have relief from burdensome taxation and not before. All legislation should be general, should have for its basis equal and exact justice for all and especial privileges for none. Burdens levied upon one class for the benefit of another are un-American and unpatriotic and revolting to all ideas of fairness and justice. To tax the farmers that I represent for the mill-owners of some other section of the country is a wrong that is only equaled by robbery and theft. The Government is but a mere agent or trustee for the people. It has no money to bestow upon favorites except what it takes from the people by taxation. Its constitutional taxing power should be limited to the requirements and necessities of an economically administered Government.

This is an old principle that can not be too often repeated. It should always be kept in view in matters of expenditure of public money and in the general administration of the Government. The Republican party unmindful of this principle asserts the right and power of Congress to impose taxes for other than public purposes. What right has Congress to tax the farmers of Illinois to pay the growers of sugar a bounty? What right have we to be taxed for the benefit of those who are engaged in the silk culture? If this Government is to be a great parent, dealing out its charity and its munificence to all its people, why not give to Illinois farmers a bounty to grow wheat and corn?

With the Republican party are arrayed all the organizations and combinations of capital and power that seek wealth by legislation through the agency of this party.

The Democratic party stands as the only bulwark against the encroachments of these combinations upon the rights of the people. It is the party that claims that all taxation of the people by their Representatives, in whatever form imposed, must be for public purposes. It is the only constitutional party that ever lived in the history of this Government, and it will survive to be the great mediator of the people and will be found fighting against the encroachment of the classes as long as the Republic stands and as long as we have a free Government. These are the questions that divide the two great political parties of to-day. The questions at issue are as old in principle as the establishment of government among men.

The people that I represent are agricultural people. They are not engaged in manufacturing industries, and therefore are not the beneficiaries of a protective system that builds up great fortunes for a few and impoverishes the many; a system that has created millionaires and inflicted on our country innumerable tramps and paupers. No section of the country feels this any more than the district that I represent; no people have more proof, in the way of cut-throat mortgages spread upon their farms, of the evil effects of constantly paying tribute to those who are protected by buying their necessaries in the protected home market and selling their products in the free markets of the world. We have had this system for nearly thirty years. The promise has always been that the home market would afford a ready sale for the products of the American farm.

How well it has accomplished the result the annual exports of our surplus products will tell. Stagnation and oppression in business have followed this system; farm lands have depreciated in every State in the Union. The attempt may be made by political adventurers to sidetrack the issues of tariff reform, but he who attempts it is an enemy to the farmer and all classes of industrial people and strike a serious blow at their welfare and prosperity. No compromise must or will be made in this fight. Let the friends of freedom stand as one solid body and present a solid front in opposition to a longer continuation to so ruinous and burdensome a system of government. The home market has failed to find a sale for the products of American farms, and by our narrow-sighted policy we are being driven from the foreign markets.

What relief is offered by the friends of this measure to our farmers for the loss of their market? The bill proposes to increase the duty upon agricultural products to protect them from ruinous (?) foreign competition. The duty on corn is to be increased 15 cents a bushel; cornmeal, 20 cents a bushel; oats, 15 cents per bushel; rye, 10 cents per bushel; wheat, 25 cents per bushel; wheat flour, 25 per cent. ad valorem; apples, green or ripe, 25 cents per bushel; apples, dried, 2 cents per pound; bacon and hams, 5 cents per pound; beef, mutton, and pork, 2 cents per pound; lard, 2 cents per pound; tallow, 1 cent per pound, and potatoes, 25 cents per bushel. We produce a great surplus of all these products which we send abroad and sell in the free markets of the world in competition with similar products of all the other countries of the earth.

The duty of $10 a bushel would not add to the price. In my own village last fall potatoes in the local market went begging at 15 cents per bushel and are selling to-day in the same market, after passing through the winter and being sorted and culled, for 25 cents a bushel. What country will import potatoes that compete with the farmers from my district? What country will import wheat, corn, and oats to compete with the farmers of Illinois? These are the staple products of the people of my country. During the last fiscal year we exported 69,592,929 bushels of corn and imported only 2,388 bushels. We exported 312,186 barrels of corn-meal and we imported 396 bushels of corn-meal.

Our exports of wheat amounted to 46,414,129 bushels and our imports amounted to 1,946 bushels. Of oats we exported 624,226 bushels, we imported 22,324 bushels; rye, exports 287,252 bushels, imports 16 bushels; wheat flour, exports 9,374,803 barrels, imports 1,155 barrels; apples (green or ripe), exports 942,406, imports none; apples (dried), exports 22,101,579 pounds, imports none; bacon and hams, exports 400,224,646 pounds, imports 272,130 pounds; beef, mutton, and pork, exports 286,991,121 pounds, imports 215,575 pounds; lard, exports 318,242,990 pounds, imports 1,073 pounds; tallow, exports 7,784,455 pounds, imports 34,931 pounds.

The average price of the wheat that was imported into this country was $2.05 a bushel; the average price of the 16 bushels of rye imported was $1.50 per bushel, while the average price in the Eastern market was 80 cents for a bushel of wheat and 57 cents per bushel for rye. These importations were evidently for seeding purposes. On the pretense of protecting the farmer by increasing the duty on agricultural products, this bill simply adds more burdens to his already heavy load by taxing still higher the few bushels of seed he may want to improve the quality of his crop; and, to please the growers of garden and vegetable seeds—a growing monopoly—and to enable them to contribute more "fat" to the campaign fund, they increase the duty on these seeds which every farmer and truck-gardener is compelled to buy, which will add to their burdens over $18,000. This is more than all the duty received by the Government on hogs, corn, meal, wheat, flour, and oats, which are the staple articles of the farmers of Illinois.

Ralph Beaumont, chairman of the Knights of Labor legislative committee, in an open letter to the chairman of the Committee on Ways and Means in regard to the bill under consideration, says:

These overburdened tillers of the soil are in no mood to be trifled with. They are desperate, bordering upon madness.

You, as the leader of your party in the House, are on the point of pressing a measure through the House known as a tariff bill, which, you say, is to protect the tillers from ruinous competition from abroad. Let me again warn you that since the last campaign, which was fought out upon that issue, these same tillers have come to the conclusion that during that campaign they were laboring under a delusion; and they have come to a further conclusion that it is not from competition from abroad that they are suffering, but on the contrary from legal discriminations against them in the interest of corporate wealth, by just such unfair legislation as in contained in this bill.

These are prophetic words, well and bravely spoken.

And again, Mr. Gerard C. Brown, a representative farmer of York County, Pennsylvania, who addressed the Committee on Ways and Means, tells the story of the farmers' so-called protection so truthfully that I quote from his statement at length. He shows that the farmers of the Eastern States, right at the doors of the home market, are in no better condition than the farmers of the West. I commend this statement to the home-market farmers of Illinois, who carried torches in the last campaign and bellowed themselves hoarse for more protection to their potatoes and other agricultural crops. He says:

STATEMENT OF GERARD C. BROWN.

Mr. Gerard C. Brown, of York County, Pennsylvania, next addressed the committee. He said:

Mr. Chairman and gentlemen of the committee, I appear here to say a few words as to the present condition of agriculture in Pennsylvania, one of the great agricultural States. Agriculture is greater than any one of all her leading interests. It represents more capital, employs more labor, and yields a greater annual product than any other. The census reports and those of the agricultural departments of the State and nation substantiate this, and it would not have been worth mentioning were it not that the greatest activity of those representing and managing other interests have caused the agricultural to be somewhat overshadowed.

But its present state is very unsatisfactory. The farms of Pennsylvania have largely depreciated in value in recent years, and this downward movement still continues. I am safe in saying that no single staple crop is now produced at a profit. It is no wonder, then, that the census of 1880 showed a loss of near $68,000,000 in the value of these farms when it also indicated an annual loss of $54,000,000 in the value of the product of those farms. What this depreciation may now amount to I can not inform you; there are no available data. But we see its evidences on every hand. For a farm, especially one of any size, it is difficult in many sections to find a purchaser. Land so located that it has a speculative value for building purposes will sell for a good round price, but this is not based on its productive capacity for farm purposes. This depreciation amounts to as much as 50 per cent.; certainly so in the case of the richest and most productive farms in the best farming districts of the State.

I live in York County, about equal distances from York and Columbia, say 7 miles from either, 38 miles from Harrisburg, 50 from Baltimore, less than 100 from Philadelphia, somewhat further from New York or Washington, not far from the great emporiums of the country, and surrounded by some of its great manufacturing centers, a location which should afford good home markets if any can, and yet our wheat has averaged below $1 per bushel for some years, below cost of production. It is now, I believe, 74 to 76 cents; corn about 35 to 40 cents.

Fattening cattle, once a very profitable venture, has declined wonderfully. It is rare for feeders to get market price for corn fed to fatten stock.

Tobacco-raising no longer pays, the risk and outlay of so expensive a crop being considered.

Dairying, to which many turned for refuge, even when, as is the case in our neighborhood, it is conducted under the best known system, with the most approved machinery and appliances, is not remunerative; creamery stock is too often dead stock.

Our people are noted for their industry and perseverance; they are good

farmers; their skill in the management of their land is proverbial; they are wide awake and prompt to adopt improved methods of agriculture, the best farm tools and machinery available; they are liberal users of artificial fertilizers.

I think York County ranks second among the counties of the country in the amount of phosphates applied to the crops, about $500,000 worth a year. They have more than doubled the annual production of their farms in quite recent years. They are temperate and frugal, and as a rule had saved and accumulated considerable sums of money in addition to their holdings; that is, in the former years and before times had become so hard. This has enabled many to ride over the present time. These remarks apply to the farmers of all sections of the State, to a great degree.

The descendants of the Germans, the Scotch, Irish, and Quakers, illustrate to-day the virtues of their ancestors who settled the valleys of Pennsylvania and made a great and flourishing State out of the wilderness. With a good soil, an excellent climate, and natural advantages second to none, they ought to command prosperity.

Yet, as a class, they are slipping backward; are losing ground instead of gaining. The retrogression is more apparent in the older, more thickly settled, and wealthier farming districts, where is the greater percentage of loss.

There were more properties sold under the hammer in York County last year than ever before. In Berks County more sheriff's sales of farms than in any three previous years. This was not on account of any failure of crops, which were about the average.

Other property is not similarly affected. We find towns and villages as a rule still growing; in cities the growth is in some instances marvelous.

Country stores of ten or a dozen years ago have so flourished that now you see a fine two or three-story building in the place of the shabby little grocery. A prosperity is indicated which does not characterize the farms in the neighborhood which represent a much larger investment. It is only a question of time, however, when the impoverished condition of the farmer will react on other interests.

Nor does the evident determination of the population to towns give us the needed relief. The prices of our cereals continue to be made in Liverpool and London; their value fluctuates from day to day per advices by the cable.

The highest prices paid for our beeves, those of course are the choicest cattle, is for exportation. As to poultry or butter or eggs, we ship them to Philadelphia, New York, or Baltimore, because prices range higher than in our own local home markets. For instance, turkeys will bring 16 cents in New York, but only 10 in York, and yet in New York they are sold in competition with those from all parts of the country, even from the boundless West.

Creamery butter, no better can be made, has not averaged over 20 cents for the season; in local markets it is often 15 or below.

The fact is prices are too low to yield a living profit while taxes remain unreduced and the expenses of living are disproportioned to the means of meeting them.

The protective system has not, at least in the case of those farmers located near the great protected industries, resulted in the protection promised them—that of an ample and sufficient home market.

Hence the loss of profit on their products followed by the loss of value of their farms, which unless checked must result in the loss of the farms themselves.

Pennsylvania farmers are not alone "confronted with this condition." In New England the "dry-rot" is still worse. Lacking some of the advantages which enabled us to still hold out they sooner went to the wall.

I quote from a recent report: "There are 887 deserted farms in New Hampshire with buildings on them in a fair state of repair or that might easily be made fit for occupancy. This information has been received in reply to an official circular of the State commissioner of emigration making inquiry of the selectmen of 160 towns. These deserted farms are in easy reach of the busy factories of New England. They have a home market with its attractions and are a sample of the way the home market enriches the husbandman."

Further, as to New Hampshire I cite another authority: "Perhaps no better answer to the stock argument of the protectionists that the farmer gains more from the local market made by manufacturing villages and towns than he loses in the increased cost of the goods he buys can be found than a statement of the condition of some of the towns near these manufacturing cities on the Merrimac River. The Merrimac turns more spindles than any other river in the world. Within a few miles of each other, around the great bend of the river from south to east, are the cities of Nashua, Lowell, Lawrence, and Haverhill. In the farming towns of Windham, Pelham, and Hudson, N. H., situated within the bend, and so within easy access of all four of the above-named cities, we ought to find prosperous 'protected' farming.

"On one main road from Lowell to Windham, 12 miles, I count six deserted sets of farm buildings, besides several which have already gone to ruin. Fields and pastures are growing up to wood; houses in which, a generation ago, sturdy manhood and womanhood flourished are gone to utter ruin; in many school districts there are not sufficient children to have a school. The whole appearance is one of poverty and decay; to ride along our country roads is extremely depressing. In no part of New England with which I am acquainted is the decay of the farming interests so obvious and so complete as here by the manufacturing cities.

"Instead of the homogeneous population of thrifty, intelligent, self-respecting farmers and mechanics that occupied this section fifty years ago, we now have, in our cities, a few fine streets of residences for the capitalists and employers, and in our 'French Acre,' 'Irish Acre,' corporation boarding and tenement houses, and in our country a desert, for it is already nearly that.

"Possibly this may be 'progress,' and a modern, improved kind of progress—one that has not been brought about by rude, natural causes, but one that results from the incomparable wisdom of our legislators, who are so kindly taxing us into wealth. Our farming interests would have suffered enough from the inevitable competition with more favored sections; but the ruin has been precipitated by the tremendous burden of taxation that the farmer has borne. It is no small thing when a nation renders impossible the existence of a class that has been the source of so much energy, talent, and character as have the New England farmers."

While as to Massachusetts, Connecticut, and New York we do not have a similar official record, it will be noticed by the traveler that deserted farms are not unknown, and it is a fact that hundreds of farms can be purchased in those States for less than the cost of buildings, making the land practically free of cost to buyers.

In New Jersey, Judge Forsyter, of Pemberton, says: "The farmers are not prosperous; although they are all depending on a home market they are all going behind hand."

Mr. Edmund Cook testified at a late meeting of the State board of agriculture: "The farms of Burlington County if put on the market to-day would not bring the cost of buildings and improvements, to say nothing of the land."

In New York, State Assessor Wood says "that in a few decades there will be few or none but tenant farmers in this State."

In Illinois the report of the bureau of labor statistics for 1887 shows farm indebtedness—

1870	$95,721,900
1880	103,525,237
1887	123,733,098

and states that "mortgage indebtedness of farmers for money borrowed has increased 23 per cent. since 1880, more than twice the increase of farm lands."

From report of same bureau for the next year, 1888, I quote:

"This table shows that there are 8,082,794 acres of Illinois land under mortgage besides the mortgages on 237,336 lots and on chattels. From statistics on the same page it appears that there were filed in the single year 1887 a total of 125,923 new mortgages for the immense sum of $117,152,857, covering 2,178,532 acres of land and 65,066 lots, as well as miscellaneous property or chattels to the value of $17,000,000. These figures of the new indebtedness for a single year are, it will be observed, more than one-fourth of the total mortgage indebtedness of the State, as estimated in the table quoted above. This fact shows that the estimated total is below the real amount, yet even the low estimate is startling.

"The population of Illinois by the census of 1880 was 3,077,871. Say that is now 4,000,000, and divide that amount by five to arrive at the number of heads of families. We have thus 800,000, which is close to the real number, as the total Illinois vote of 1888 was 748,000. Averaging among these the total mortgage indebtedness, as estimated by the State administration, it makes a debt of $520 for every head of family in the State, while the new debt contracted in 1887 alone makes $146.25 for each head of family.

"The condition of Kansas and other Western States is even worse."

Another report places indebtedness represented by Western farm mortgages at $3,422,000,000, or $200 per capita for about 17,000,000 population. From Kansas, a private letter from an old resident, who moved into the Neosho Valley from Pennsylvania in 1866, a good, successful business man, says:

"Times are close, never so bad before. Though blessed with good crops, we can not sell for half what they are worth. During all the years I have been here I never knew things so low. Corn is 15 cents a bushel; oats, 10 cents; wheat, 55 cents; potatoes, 22 cents; fat cows and heifers, 1½ cents on hoof; hay, $2 a ton; 50 bushels of corn for a plain overcoat. To sell 25 acres of corn, or 1,000 bushels, for $150, after hauling it 10 miles, is a hard way to make money."

But why multiply the "cloud of witnesses?" No one denies the unfortunate condition of our finances, and no one can claim that the vaunted home market has materialized. It is proper for this committee to consider the facts, as they are about to consider the revision of a system under which this unfortunate condition has arisen.

I do not come here with any panacea. I present admitted facts. They are stubborn. Other great and important interests, which, however, their warmest devotees will not vote as more important than agriculture, may claim that a protective tariff has benefited them; it clearly has not us. They may assert it as necessary to their existence; that "it is the breath of life to their nostrils;" it does not seem to vitalize agriculture.

If agriculture was as flourishing as manufactures ought to be with 47 per cent. tariff, then doubtless they would be told that this was the cause of their prosperity. How, then, can we resist the inference that it is a factor of our depression?

Now we hear the cry that agriculture must have the same protection as manufactures. Grant it; how can we get it through a tariff?

What will you favor with higher rates of duty? How can you thus help the price of any of our great staples when we produce them largely in excess of our needs and always have a surplus to sell abroad?

If we produce 450,000,000 bushels of wheat and consume but 325,000,000, the remaining 125,000,000 must find another market or eventually rot here, and the price wheat sells for in that market limits the market price of the much larger portion that we do use here. The present tariff of 20 cents a bushel does not affect the price, and were it twice 20 cents, or were it $20, it still would not increase it 1 cent a bushel. This illustration holds for the great staple products of our farms.

As we can not help their producers by imposing a higher tariff I do not see how we can aid them by giving more protection to sundry minor crops, mere specialties, of which the major part can only be produced in certain localities or under peculiar conditions.

To do any real good to agriculture we must do that which will benefit the great majority, and not the small minority.

As the present tariff does not solve this problem, as its increase since 1861 has been accompanied by a decline of agricultural prosperity, it seems also to look in that direction for relief.

We might try the other way out of the dilemma and see what would be the result of reducing the tariff on those things which the farmer needs, but does not produce.

Since you ask what is my remedy, I say, knock off the tariff of surplus. Give us a tariff which is not framed to pay a bounty to other interests at the expense of the farmers who are the largest consumers and the heaviest tax-payers, which is limited to the needs of an honest economical government, and which is levied as much as possible on the luxuries, and as little as possible on the necessaries of life.

This is the kind of protection we need, and I think is about all the real protection you can give us.

The great cry is that we must create a home market for the farmers. If our farmers would stop to think how much each individual of our population would have to consume to keep down our surplus product and furnish a market for all the surplus we produce, he would see the folly of this hollow pretense.

Col. Don Piatt, in a vein of humor, illustrates the absurdity of this claim, from which I quote as follows:

OVERPRODUCTION MEANS UNDERCONSUMPTION.

If for overproduction we read underconsumption we shall be nearer the fact. However, for half a century we have been waiting for two things: one is the time when the infant industries will come of age and be able to stand alone; the other for that home market. We are no nearer either than when we began.

THE SWALLOW OF A HOME MARKET.

Way back in 1843 the writer of this was driven to a little calculation, since widely used, but which is ludicrously unanswerable. A home market means, of course, a consumption of what the farmer and planter have to sell. Very good. Now take from the census the class really protected. From this exclude farmers, merchants, mechanics, laborers, other than of mines and manufactures, and professional people, for they are not protected, nor are they dependent directly or indirectly on mines or manufactures.

Come down strictly to the people in whose behalf the Government interferes. Now select five leading States from the North and South and put to paper their surplus. It will be found that for the protected class to consume that surplus each man, woman, and child will have to eat each day twenty barrels of flour, masticate three hundred bushels of corn, get down twenty hogs, ten beef cattle, chew a hogshead of tobacco, and wear forty suits of woolen and cotton goods. The swallowing capacity of a protectionist is vast, but I hardly think it would accomplish this State.

Colonel Piatt, in a more serious mood, has the following to say, which is worthy of careful consideration:

BUYING UNDER PROTECTION AND SELLING UNDER FREE TRADE.

You see we sell under free trade and are left to the mercy of the worst form of pauper labor.

What is our condition when we come to purchase? Why, we are met with protection. All that we buy, from a horseshoe to a mower, all that we wear, all that we build for shelter, all that we use over and above our products, from the cradle we are rocked in to the coffin we rot in—the clothes we wear, the shingle that shuts off the storm, the glass we look through, the blanket we sleep under, to the tombstone that records our supposed virtues, are augmented in price to double their value, so that we sell under free trade and buy under protection.

Now, do you wonder that we work at a disadvantage? If protection is such a good thing, we want it; if free trade is such an evil, we do not want it; and yet we have the one and not the other; we get what we do not want and are denied what we do want, and it is the most barefaced, impudent swindle ever perpetrated on an intelligent people. There is precisely where insult is heaped on injury.

We are considered so ignorant and stupid that we may be plundered with impunity. [A voice: "They'll slip up on that"] I hope so. [A voice: "How about wool, colonel?"] Let me tell you. They pretend to protect us on wool. Well, we have lost more on our protected shears than we ever made on our protected wool. If the Government will give us free lumber, free salt, cease its protection to the barbed-wire monopoly, and see that I am charged a reasonable rate for transportation on these public highways, called railroads, I will undertake to undersell at a profit any wool grown in any other part of the earth than that of these United States. [Applause.]

What happens to us in Europe? At Liverpool our wheat comes in competition with the wheat of the Baltic, where the laborer works at $18 a year and a goat-skin coat; with the wheat of Egypt, that is to-day the house of bondage, having slavery in its worst form; with the wheat of India, where labor is in as bad a condition; and worse yet, of Australia, where the shipper takes manufactured articles back in payment, an exchange denied us by law.

We passed a bill a few days ago to prohibit and punish trust combines, and now we propose to pass a law to encourage trusts and make their existence possible. This bill increases the duty on starch from 98 per cent. to 110 per cent.; and now a starch trust is to be added to the list. I quote from one of the many protests received against this bill:

A starch trust has just been formed. The new tariff bill proposes a protective duty of 98 per cent. to 110 per cent. Vote against this trust and protect the thousands of manufacturers and consumers who use this staple. To effectually protect the majority of our people against this new monopoly put starch on the free-list.

If you, gentlemen of the majority, do not take the starch out of this proposed new trust, the people will take the starch out of you at the coming November election.

In the debate on the anti-trust bill a few days ago the gentleman from West Virginia [Mr. WILSON], in reply to a question propounded by the gentleman from Maryland [Mr. MCCOMAS], used the following language, which is so applicable here that I quote it:

Mr. WILSON, of West Virginia. In answer to that, I would say that when the gentleman from Maryland and myself were over the sea I went to the gentleman I have already referred to (Professor Thorold Rogers, of Oxford University), who was recommended to me as being the best informed man as to British industries and trade; and he told me that he had never heard of such a thing in England and that he did not know how there could be one.

Mr. MCCOMAS. But you and I had read about them in the papers.

Mr. WILSON, of West Virginia. I admit, of course, that there could be a trust in England, where there is a natural limitation of supply, but I was arguing against the Government coming in and making an artificial limitation of supply. [Loud applause on the Democratic side.]

You hold out to a man great prizes; you dangle before his eyes the opportunity of making great wealth, and then you say, "If you seize upon these prizes we are going to punish you." Now, human ingenuity is going to be sharp enough to evade the threat of punishment and to get the prizes.

I remember an old rhyme that runs something like this:

"I hear a lion in the lobby roar.
Say, Mr. Speaker, shall we shut the door
And keep him there, or shall we let him in
To try if we can turn him out again?"

This is your position in regard to "trusts." Instead of keeping out the lion Brother MCKINLEY comes opening the door and says, "Let him in, and then we are going to chase him around and try to get him out again." [Laughter.]

The Tariff.

SPEECH

OF

HON. WILLIAM M. KINSEY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. KINSEY said:

Mr. CHAIRMAN: It was not my purpose to engage in the general debate on the great economic question which is now absorbing the attention of this House and the country. I would have been content to remain silent, leaving its presentation to the very able and distinguished leaders upon this side, but for a statement made on the floor this morning by one of my colleagues from Missouri [Mr. DOCKERY], which I can not allow to remain unchallenged, and I regret he is not here to-night to hear what I may have to say in response to it.

In the course of his remarks, he was endeavering to create the impression upon this House and the country that the result of the election of 1888 should not be taken as an indorsement of the protective system because, as he claimed, it was in part brought about by improper means; and, in referring to the city of St. Louis, he said that "it is notorious and known to all men that the result in that city was largely due to the contribution of money by protected industries which carried it for the Republican party and elected three members to this House."

Mr. Chairman, the manner in which the gentleman made this statement carried with it the insinuation that money had been corruptly used to secure the election of three of his colleagues on this side of the House. Now, I want to say to him and to this House that there is no truth either in his statement or insinuation in so far as my district is concerned, nor do I believe there is any truth in it in so far as the Eighth and Ninth districts are concerned. I want to say to him and to the House, as I understand my colleague [Mr. FRANK] has already said to-day, that there never was a fairer election held in the city of St. Louis than that in 1888.

The machinery of that election was under the control of a Democratic register of voters, who, I am glad to say, is an honest man, above corruption by his own or any other party. Under these conditions, the Republican majority in St. Louis, upon the Congressional vote in 1888, was something over 7,500. I know that my friend from the Third district did not intend to cast any personal reflection upon any of his three colleagues who sit upon this side. I doubt if, upon due consideration, he would have made the statement at all, because it is an imputation upon the character of the good people of St. Louis that is without justification or excuse.

Mr. Chairman, we have heard this sort of vaporing in Missouri before; the local Democratic press and party bosses, in endeavoring to explain "how it happened," were driven to this silly charge which nobody ever seriously believed for a moment. But it has been left to the gentleman from the Third district to publicly reiterate it here.

If, in attempting to show that the vote cast in 1888 was not an indorsement of the protective system, my friend had been as frank as he was ungenerous to my city, he would also have invited your attention to his own Congressional district, which is purely an agricultural one and which he has had the honor of representing in this House for many years. He participated in the proceedings here when the Mills bill was under consideration. I have no doubt that he went home after the adjournment of Congress and during the campaign of 1888 addressed his constituents much in the same strain in which he has addressed this House to-day.

I have no doubt that he held up before them the iniquities of the protective system, as we have seen those iniquities depicted by him here to-day. I have no doubt that he told his farmer friends that they were taxed on their clothing, their hats, their boots and shoes, and everything else that they were compelled to buy, for the benefit of the protected industries of the country. Yet what was the result, Mr. Chairman? Notwithstanding he is one of the most popular men in his district, these same farmers whom he claims to represent returned him to this House in 1888 by a majority over 1,800 less than they gave him in 1886. Did the protected industries of the country also invade the gentleman's district and despoil him of nearly half of his former majority? Or has the growing intelligence of his people enabled them to penetrate the thin guise of revenue reform in which he has been masquerading as the farmers' friend and to see the fallacy of the economic system of which he is so frequently an advocate on this floor? [Applause on Republican side.]

Mr. Chairman, when President Cleveland and the Democratic party assaulted the protective system in 1888 there were 237,000 Republicans in Missouri who were not slow to detect in this movement a blow to the vital interests of their State. With a soil and climate that are unsurpassed; with a variety and abundance of mineral resources that are unequaled; with her great mining and manufacturing interests just beginning to keep pace with her magnificent agricultural development; possessing in her wonderful resources the means of giving employment to labor and capital in almost every field of industry; with a people generous and hospitable to a fault; a people who love their State and have an abiding faith in its future, Missouri sent up no uncertain protest against the destruction of an economic system that has started her out on the highway to imperial greatness.

I regret, Mr. Chairman, that some of my colleagues, in their zealous opposition to the protective system, are disposed to hold up to the gaze of this House and the country a picture of the financial distress which they say exists among a large number of the people of our State. I am not one of those who believe in advertising my district to the country in this way, and I am sure the facts do not warrant such statements as have been made by them. While I know that we are suffering in some degree from a depression that generally exists among the farmers of the West and which I hope and believe will soon be dispelled, I am sure that Missouri, both in point of her public credit and the prosperity of her people, is the peer of any State in the West.

We have heard much said on the other side in this debate about trusts, combines, and monopolies being the outgrowth and legitimate offspring

of the protective system. If any sort of credence were given to the wild and reckless statement made in the heat of debate, this side would stand convicted of an attempt to betray a great public duty. We can not try this question by the brutal force of assertions which have no foundation in fact. What the people want to know about this matter is the truth, the whole truth, and they will not be misled or deceived in the end by arguments which are addressed only to party prejudice and designed to mislead rather than to throw the light of honest, open, and unbiased criticism upon the bill under consideration. That the greatest monopolies and trusts in this country can not from the very nature of things receive support from the protective system, is too well known to need further denial.

If there are others that by unlawful means have undertaken to control the markets in this country in respect to articles protected against foreign competition by our tariff legislation, are we to strike down the whole system because of this abuse? It would not be the first time in the history of legislation when laws designed and operating for the good of the whole people were perverted and made to serve other ends than those for which they were enacted; still we do not repeal a good law because it is abused, but rather guard it from such abuse by further legislation. It will not be denied that without the formation of corporations by law, thus affording means for the aggregation of capital, it would have been impossible to build and operate the great railways in this country. Neither will it be denied that this privilege afforded by the law has been abused sometimes; yet nobody thinks of striking down the whole system of corporate existence because of this abuse, but, on the contrary, the country is rapidly finding means to correct such abuse. So will the country have to crush out trusts and monopolies by law, and this question will have to be met just the same whether we have a free-trade or protective system.

Mr. Chairman, gentlemen on the other side contend that we are trying to stifle competition by the passage of this bill. Competition with whom? Certainly not among ourselves; for that much we invite, believing that in a country containing 65,000,000 of intelligent and progressive people, with an area as large as the whole of Europe and having greater natural resources than any other country on the globe, there is room and opportunity enough for all the competition needed for healthful and legitimate trade in this country. No, you say we are trying to stifle competition in the markets of the world; trying to keep out foreign trade and, as the gentleman from West Virginia [Mr. WILSON] expressed it, "keep our fish at home."

Does anybody imagine that the farmers of the great West are pining to sell their surplus products in the Liverpool markets rather than sell them at home for American consumption? Who of them does not know that the price of his wheat sold for export is the price in Liverpool, less freight charges for 4,000 miles of transportation, with the profits of the middlemen added; that when his wheat reaches that port it must meet in competition that wheat of Russia and East India? Who of them does not know that he never gets so satisfactory a price for his grain, his hay, and his stock as when he sells for consumption right at home? We sometimes have in this country what is called "a short crop," when the prices of farm products are always good and quite often high. What do we mean by "a short crop?" Simply that there is no surplus farm products for export and that the home demand nearly, if not quite, exhausts the supply.

Mr. Chairman, it is one of the objects of the protective system to so diversify, extend, and enlarge the industries of this country, so multiply the consumers of farm products here that there will always be a "short crop" of farm products in the sense that home consumers will be able to exhaust the entire supply, no matter how great that may be. There will be no grander, no more prosperous or happy period in the future of the United States than when our great industries in mining, farming, and manufacturing shall reach that equilibrium by means of which each can supply all the wants of the others.

The bill under consideration contains many provisions which will tend to bring about this result. While manufacturing in every line that promises a reasonable degree of success is encouraged by levying duties up to the protective line on competing foreign products, thus diversifying and widening to the greatest possible extent home industries and giving employment to a large number of our own people who will not only be consumers of farm products, but will either be withdrawn from or kept out of agricultural pursuits, it also directly offers greater encouragement to a wider range of farming than has ever been given before.

Recent experiments and investigations have demonstrated beyond a doubt that we can successfully produce on our own soil a large number of products which now swell our imports, either in the raw or manufactured state, and which we can and ought to produce and manufacture at home. To encourage agriculture in these new and inviting fields of industry the Committee on Ways and Means have labored with much earnestness and care. Mr. Chairman, it was not my intention to embody any statistical information in the few remarks which I have to offer, but, as there has been some dispute in the course of this debate as to the decline in prices of farm implements and machinery and for fear the information will not be presented by others in so complete a form, I submit the following table, prepared with great care by three of the oldest and most reliable dealers in St. Louis, Mo.:

Article.	1889.	1880.	1873.	1865.	1860.
One-horse steel plow, wood beam	$2.75	$6.50	$6.00	$8.00	.....
Two-horse steel plow, wood beam	12.00	15.00	20.00	26.00	.....

Crow-bars, iron	.05	.06	.10	.15	.....

* None in use.

Mr. Chairman, it is still claimed by our friends on the other side that the laboring men of this country are in no sense beneficiaries of the protective system; that a protective tariff can neither raise nor lower wages, but that supply and demand regulate the price, just as they do the price of commodities in the market. This proposition has already been so completely answered by gentlemen on this side that I will not venture to repeat their arguments here. It seems too plain to admit of any doubt that where, by the adoption of the protective system, manufacturing industries are created and sustained in this country there is also thereby created a new and greater demand for labor; and in this sense the labor of the country is given employment by this system, where it would otherwise either have to remain idle or come in direct contact with labor employed in the so-called non-protected industries.

To illustrate the clear and terse statement of Mr. Blaine that "the tariff question is a question of wages only," I beg to call your attention to the testimony of men who from experience are able to speak intelligently upon this question. The great Crystal Plate Glass Works in Missouri is a notable example of a magnificent industry that has been absolutely created by the protective system. Its superintendent said to me in all candor, "If our men were paid only the same wages that are paid for like service in Europe, we would have no need of a protective tariff; it is a question of wages only, so far as we are concerned." An officer of the great St. Jo Lead Company, which is also in my district, said: "If you will give us wages at 75 cents a day, you may take the tariff off lead and we can compete with the world." The wages paid by both of these companies to their employés are about three times as much per day, on the average, as are paid for like service in Europe. So, Mr. Chairman, the tariff is a question of wages after all.

Naval Appropriation Bill.

SPEECH
OF
HON. WILLIAM ELLIOTT,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 9, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 8909) making appropriations for the naval service for the fiscal year ending June 30, 1891, and for other purposes—

Mr. ELLIOTT said:

Mr. CHAIRMAN: I move to strike out the last three words.

In reply to what has been said by my colleague on the committee, the gentleman from Massachusetts [Mr. LODGE], with reference to the

heavy outlay that would be required for the construction of these navy-yards and docks, I wish to make a correction. No great amount of money is necessary to be expended at any time, and whatever is required will be spread over a period of three years. The only recommendation as to expenditure that is made by the commission as to New Orleans and Port Royal is that a Simpson dry-dock, which costs much less than the old-fashioned stone dock, shall be constructed at each place, at a cost not exceeding $600,000 or $700,000, the expenditure to be spread over a period of three years. So, I repeat, not much money is involved in these propositions which have come before the Committee on Naval Affairs, and which will come before this House, in consequence of the appointment of this commission to select sites for these yards and docks. Now I desire to call the attention of the committee further to the recommendations of the commission as to Port Royal.

The last Congress, foreseeing that, in consequence of the increase of the Navy, provision must soon be made for navy-yards and docks in those sections of the country where there were either none or an insufficient number, provided for the appointment of two commissioners, one to select a suitable site on the Pacific coast and the other to select suitable sites on the South Atlantic and Gulf coasts for such establishments. The latter commission made an elaborate and searching examination of the South Atlantic and Gulf coasts, and as the result of their labors recommended, as to the South Atlantic coast, the building of a dry-dock at Port Royal. The report of this commission, consisting of Commodore W. P. McCann, Capt. Robert Boyd, Lieut. Commander Willard H. Brownson, members, and Lieut. Duncan Kennedy, secretary, is so full and complete in every respect I need hardly do anything more than quote from it. As to the general requisites for a navy-yard the report says:

The great and radical changes in the art of naval warfare which have been brought about in late years by the introduction of armored ships, high-powered, long-range guns, torpedo-boats, mines, and fast steamers have most materially altered the conditions which must be filled before any site can be considered as suitable for a navy-yard. As a first requisite there must be a depth of water sufficient to admit the heaviest vessels at all times, for it is not difficult to imagine a vessel seeking the harbor as a place of refuge when hard pressed, when any delay outside would be fatal; or ships might be inside waiting for the tide to rise so that there would be sufficient water on the bar to permit their going to sea, and in the mean time the enemy, possibly, that it was the intention to attack has sufficient time to collect his forces if scattered, or to move rapidly away if he prefers, while all the time the ships that might do so much are cooped up helplessly inside, unable to strike a blow.

Sites that were well suited for the purposes of navy-yards some thirty or forty years ago are, many of them, out of the question now, for the reason that they are too near the sea.

* * * * * * *

On the Atlantic, we have a long stretch of coast on which there is no place where a man-of-war can run in and find a supply of ammunition waiting for her, where she can find material and men all ready to make any repairs that an action or the exigencies of active service may make absolutely necessary and indispensable, or where she can be docked, and possibly most important of all, no point of rendezvous for a squadron that it might be the intention to collect for operations in the West Indies. For all such work in the Bahamas, on the eastern end of Cuba, in San Domingo, or among the Windward Islands, some point on the Atlantic coast would have great advantages over one in the Gulf from the fact that it would be nearer the field of operations, and vessels would not lose so much time in returning to port for ammunition, coal, or repairs.

In the event of war with a foreign power that had any commerce with the West Indies or to the Isthmus of Panama, some point on the Atlantic would make an excellent base from which to send out vessels or squadrons to break up such commerce. It is true that to a number of points among the islands, the distance from some point on the Gulf would be less than from an Atlantic port, but it will be well to note that all vessels starting from the Gulf must, of necessity, pass through the Yucatan Channel or the Florida Straits as through a gate, and an enemy could lie in wait for them at these points, knowing that there was no other way for them to go. On the other hand, there would be no means of determining beforehand what direction a fleet starting from an Atlantic port would take, and a slight détour might throw the enemy completely off the track and permit the delivering of a blow on the enemy's commerce entirely unopposed.

* * * * * * *

An important point in the selection of a navy-yard site is the extent of the immediate water front, both close alongside the wharves and off in the stream, where vessels must lie when not needed at the wharf for repairs or to take in coal, ammunition, etc. A restricted water front would be a serious inconvenience in case it were necessary to fit out several vessels at the same time, and, if possible, all such impediments to rapid work should be avoided. Deep water off the yard is also a necessity, in order that it shall be possible to move vessels at all stages of the tide.

* * * * * * *

In the present day of steel ships the necessity of dry-docks is greater than ever. For many years, even with coppered wooden ships, we have felt the want of dry-docks, and now that we are constructing a Navy of steel vessels that must be docked very frequently if they are to be kept in a serviceable condition there must be facilities for keeping the bottoms clean and well painted, and this can only be done by taking the vessels out of the water at comparatively short intervals. It has been found by experience in all navies that an iron or steel vessel which has been in the water for three or four months loses very much of its speed, oftentimes as much as 25 per cent., so that by the end of six months the amount of coal consumed if maximum speed is to be maintained, and oftentimes this will be an absolute impossibility, would at least pay for the cost of docking, and perhaps something over. The loss of speed in any vessel where the bottom is foul is so well known that it is hardly necessary to allude to it; but the rapidity with which all kinds of marine growths accumulate on the bottoms of all steel and iron vessels is not so well known, but all the same it emphasizes the necessity of having navy-yards and good docking facilities at various points where they may be available to all our cruising vessels without their steaming a long distance to find them.

The healthfulness of any locality should be carefully considered before deciding upon its fitness for the site of a navy-yard. On the southern coasts the land is generally low and swampy and there is great difficulty in finding a place that will be free from low, malarial fever, while most of the places are more or less subject to periodic visitations of yellow fever.

In deciding upon a site a place should be chosen where the prevailing wind does not blow across any fresh-water marsh, but comes in directly from the sea. The presence of fresh water in any quantity would be advantageous in facilitating the construction of fresh-water basins in which to lay up steel ships, but it may make a place so unhealthy as to preclude its acceptance.

Such are the chief points demanded. Many other requirements are stated by the commission, but I will not detain the committee even to refer to them.

The report shows that all these demands are filled by Port Royal, and I will extract only a part of what the commission says as to that place:

PORT ROYAL, S. C.

The geographical position of the superior harbor of Port Royal, midway between Norfolk and Cape Florida, or about the middle of the southern Atlantic coast of the United States, with its well sheltered, safe anchorages in the sound, and on the Broad, Colleton, and Beaufort Rivers, offers unparalleled advantages on this coast for the establishment of an important naval station. This harbor is well known, and its value as a naval station was fully appreciated when it was occupied by Rear-Admiral Dupont in 1861.

* * * * * * *

The absence of facilities for docking and equipping naval vessels on the long stretch of coast between Norfolk and Pensacola, a distance of 1,440 miles, has already been seriously considered by the Department and recognized by official boards authorized to report on this subject. Port Royal is about 480 miles from Norfolk, 960 from Pensacola, and 450 from Key West. As regards communication with the West Indies, Port Royal is 480 miles nearer to the Bahamas than Pensacola, while the distance of the two places from Havana is the same. As a point from which to communicate with the Windward Islands, Port Royal has the advantage over Pensacola or any other Gulf port.

The geographical position of Port Royal, nearly midway between the cities of Charleston and Savannah, explains why it has hitherto been neglected, the larger places completely overshadowing it. These cities, so long as small vessels were used for foreign commerce, were amply sufficient for all wants; but now, when vessels of greater size and draught are common, a deeper harbor is required, and in this particular Port Royal is far superior to its neighbors. The vast network of railroads that lead from the South and West and have their outlet at Brunswick, Savannah, and Charleston could easily be directed to Port Royal, to which point at the present time there is but one railroad, the Port Royal and Augusta Railroad, connecting with the Charleston and Savannah Railroad, and through it with the interior.

The bar, 10 miles distant from the entrance, has a least depth of 21 feet at mean low water and would require but little expense to straighten and deepen it for the entrance of the larger class of vessels at low water. In consequence of the great size of Port Royal Sound, Broad River, and its tributaries, the mean rise and fall of the tides being 6.7 feet, the currents are moderate, and there is little filling in or shifting of the bar due to local action or to the bringing down of any deposit by the rivers flowing into it.

* * * * * * *

The forests of yellow pine and other timbers suitable for the construction of docks, basins, and for building purposes in this State are practically inexhaustible, near at hand, with ample facilities for transportation by land or water, while the vast coal-fields and iron mines of Northern Alabama are accessible by the system of railroads connecting Port Royal with every part of the country.

* * * * * * *

The examination of Beaufort River and the land about the naval station at Paris Island proved more satisfactory. This position is 5 miles below Beaufort, 6 from Bay Point, and 15 from the outer bar. Twenty-one feet is found at the end of the wharf at the naval coal depot and 24 feet in the channel off it, admitting the heaviest draught vessels at high tide, and but little dredging would be required at one or two points in the channel of Beaufort River to render it accessible at low water or to deepen it to 25 feet. This position offers a far more suitable site for docks and a depot of supplies than any other point examined inside the headlands, and it could be successfully defended by an inner line of fortifications on Paris and St. Philip's Islands, in addition to those that might be established on Hilton Head and Bay Point. The naval station being near the terminus of the Port Royal and Augusta Railroad could be easily connected with the whole railroad system. The distance from Port Royal to Charleston, S. C., is 83 miles; to Augusta, Ga., 112 miles; to Birmingham, Ala., 450 miles.

* * * * * * *

The commission would therefore recommend the establishment of a dry-dock, depot of naval supplies, and coaling station on Paris Island, right bank of Beaufort River, South Carolina, at the site of the present naval station.

When this report was filed in the Navy Department it received the following indorsement by the Chief of the Bureau of Yards and Docks, the late Commodore White:

The bureau thoroughly agrees with the commission in its statement of the great advantage of Port Royal as a depot of supplies and a repair and coaling station. A timber dry-dock there is also essential and necessary and can be built at less expense than in other localities. Port Royal being so much nearer the Windward Islands than other navy-yards, and south of Cape Hatteras, in addition to all the other advantages enumerated, would seem to indicate it as a very important point for a repair station.

The report was filed only a few weeks before the present session of Congress, but Secretary Tracy, although pressed with many duties, considered the recommendation of the commission as to Port Royal of such vital importance as to demand immediate action by the Department, and, in his annual report, says:

The suggestion that the naval station at Port Royal, S. C., be provided with a dry-dock and other necessary facilities for docking vessels is heartily approved.

It is not surprising, Mr. Chairman, that these officials so promptly indorsed the action of the commission as to Port Royal. During the late war its importance as a harbor for ships, depot of supplies, and a base for military operations was clearly demonstrated, and although until within the last few years there has been no naval establishment there, yet the Department has been compelled, almost without interruption, to make use of it for many purposes that could not be served at any other port on the South Atlantic coast. Among other instances, a fleet of ironclads was kept there for many years, and was finally removed only because there were no facilities at hand for cleaning their bottoms.

There has been constant effort on the part of the most distinguished naval officers to provide such facilities. In 1876 another commission, of which Admiral Porter was the chairman, made a report in favor of the improvement of Port Royal equally as strong as

the report of this commission. Every reason then urged for a naval establishment at Port Royal exists still more strongly to-day. The following letter from Admiral Porter, which I will ask the Clerk to read, shows that the most distinguished of our officers still considers a well equipped naval station there a pressing necessity:

The Clerk read as follows:

OFFICE OF THE ADMIRAL, *Washington, D. C., March* 31, 1880.

DEAR SIR: In answer to your request that I should furnish you with certain information with regard to the importance of a navy-yard and dry-dock at some prominent position on the Southern coast, I beg leave to state as follows:

By an act of Congress a commission, consisting of myself, Vice-Admiral Rowan (recently deceased), Rear-Admiral John Davis, Chief Engineer King, and Naval Constructor Easby, was appointed to visit the Southern coast and report upon a proper site for a navy-yard.

In obedience to that order we made a personal inspection of every port on the coast as far south as Florida. The result of our observations was that within these limits there was but one place where it was possible to establish such a dock-yard as would meet the wants of the Government. That point was Port Royal, S. C.

I am informed that you have a copy of our report in your possession; if so, that document will give you all the facts in the case better than I can give them, as I have not a copy by me at present. All I have to say is that I stand by all that is embodied in the report.

You might search the whole coast of the United States and not find a place so well adapted for the purpose of a naval station as the harbor of Port Royal. There is plenty of water for any sized ship. The place is perfectly defensible against an enemy, who could not, with the longest range guns, reach a navy-yard at that point where it may be desired to put one.

All officers of the Navy who have inspected the place are strongly in favor of it; it will hold all the navy we are ever likely to have, and has sufficient depth of water to permit vessels to enter and depart at any stage of tide, a valuable feature.

The board of which Commodore McCann was president recently examined and reported on Port Royal, and, I believe, entertain the same views on the subject as the board of which I was president.

There is one very important thing to be considered in selecting a naval station, and that is the health of the place. In this respect Port Royal is unsurpassed by any point on the Southern coast, so much so that the pretty little town of Beaufort has long been the favorite summer resort of the people of South Carolina and Georgia.

A well appointed naval station is an absolute necessity on our Southern coast, and Port Royal seems to be the place best adapted for that purpose. In case of war a navy-yard at this place would dominate the entire Gulf Stream from Cape Hatteras to the capes of Florida, as far even as the Gulf of Mexico. Even if Port Royal was cut off from receiving supplies by sea, guns, munitions, and everything necessary for a navy-yard could be transported either by rail or inland water communication. Workmen could be employed in Port Royal throughout the year, a great advantage in the cost of building and equipping ships.

While north of Cape Hatteras there are seven navy-yards and stations, there is none south of that point, with the exception of Pensacola, which latter will not compare in any way with the facilities for access and for defense with Port Royal, which may be called one of the finest harbors in the world for a naval station, where ships at all times can find shelter from the severest storms.

We must sooner or later establish important naval stations on our Southern coast, unless we propose to abandon that coast altogether in the event of war and allow our enemies to ride safely at anchor in the harbors during the winter months and carry on operations not only against the South, but also against the Northern ports during the prevalence of good weather, returning South again for supplies and repairs. Such will be the inevitable result of a failure to provide proper naval stations on our Southern coast.

I beg leave to remain, very respectfully, yours,

DAVID D. PORTER,
Admiral United States Navy.

Hon. WILLIAM ELLIOTT,
House of Representatives.

Mr. ELLIOTT. What stronger recommendation can be made than this! Admiral Porter says his commission concluded—

There was but one place where it was possible to establish such a dock-yard as would meet the wants of the Government. That point was Port Royal, S. C.

Again he says:

You might search the whole coast of the United States and not find a place so well adapted for the purpose of a naval station as the harbor of Port Royal.

Again:

A well appointed naval station is an absolute necessity on our Southern coast, and Port Royal seems to be the place best adapted for that purpose.

It would be impossible, Mr. Chairman, to get stronger official indorsement than is here given of the two all-important points: first, that a dry-dock is essential at some place on the South Atlantic coast and, secondly, that Port Royal is that place.

Admiral Porter calls attention to the fact that all the navy-yards on the Atlantic coast are north of Hatteras. These are embraced within a distance of about 550 miles, leaving a coast-line of 930 miles wholly unprovided for. North of Hatteras the average distance between the yards and docks is about 110 miles. South of Hatteras there is neither yard nor dock for a stretch of 930 miles.

I have already referred to the presence some years ago of a fleet of vessels, chiefly monitors, at Port Royal. An examination of the medical reports at that time, contained in Hygienic and Medical Reports, 1879, Navy Department, volume 4, discloses the most complete and convincing evidence of the health of this section of country, evidence coming from the daily routine work on board ships and given without the slightest reference to the present inquiry.

Medical Inspector Samuel F. Cones says:

Port Royal Sound having been made the rendezvous for the fleet, several vessels have been permanently located there, and it has been visited by nearly all. The advantages of the position of these waters, for the purpose designated, are very obvious. The winter is mild and the heat of the summer months is tempered by almost uninterrupted sea-breezes. Facilities for living are excellent, and there is daily communication, by rail, with Savannah, Charleston, and Augusta.

It will be seen that the region is peculiarly healthy; that, in a sanitary point of view, it compares most favorably with any other portion of the coast.

Surgeon John C. Spear, of the Dictator, says:

The sick-rate for the year, aboard, has been 1½ per cent. No deaths have occurred.

The average daily population in Port Royal waters since April 14, has been 499, which would give an average yearly naval population of 356 souls. There were two deaths in the entire force, one on board the Colorado from an injury and the other on the Pawnee from drowning. This makes the annual death-rate of the Navy in Port Royal waters 5.6 per one thousand men. In an average yearly population of three hundred and fifty-six persons not a single death has occurred from any disease.

Owing to insufficient berthing space below, half of the crew of the Dictator is obliged in warm weather to sleep on deck under the awning, and her people are in consequence specially exposed to any malaria there might be in the night air. It therefore seems that the remarkable healthfulness of her crew, under the circumstances, affords good evidence of the comparative freedom of this locality from malaria.

The Dictator during the time referred to was anchored in Beaufort River, opposite Mr. English's plantation, half a mile from low, marshy shores on either side. No large body of fresh water empties into the rivers here, so that the river water is nearly as salt as that of the sea. The sea breeze in July, August, and September begins by 10 a. m. and continues till midnight, blowing generally quite fresh.

Surgeon John H. Clark, of the New Hampshire, says as to 1876:

Medical topography.—The New Hampshire is anchored, swinging to the tide, in the Beaufort River, near its confluence with Johnson's River, 4 miles below Port Royal, S. C., and 7 miles below Beaufort City, 400 yards from the western and one-half a mile from the eastern shores, in mid-channel, with a depth of water varying from 22 to 36 feet.

This is directly in front of the present naval station, where the proposed dry-dock is to be built. Again he says:

This land on each side is composed entirely of islands, which supply part of the so-called "sea-island cotton," now grown in but small amount, and which are separated by tidal creeks, to which the salubrity of this station is chiefly due. The larger of these islands contain a few fresh-water ponds, but they are so small and distant as to produce no perceptible effect on the health of this ship. The summer sea breeze adds materially to the health of this place, which is further increased by the isolation of the ship.

But three cases of malarial fever in the past eight months (the New Hampshire anchored here May 13, 1876) are traceable to this climate. For over two weeks in November and December not a single person was sick enough to be excused from duty, and several days in the last quarter passed without a case of sickness in the squadron here.

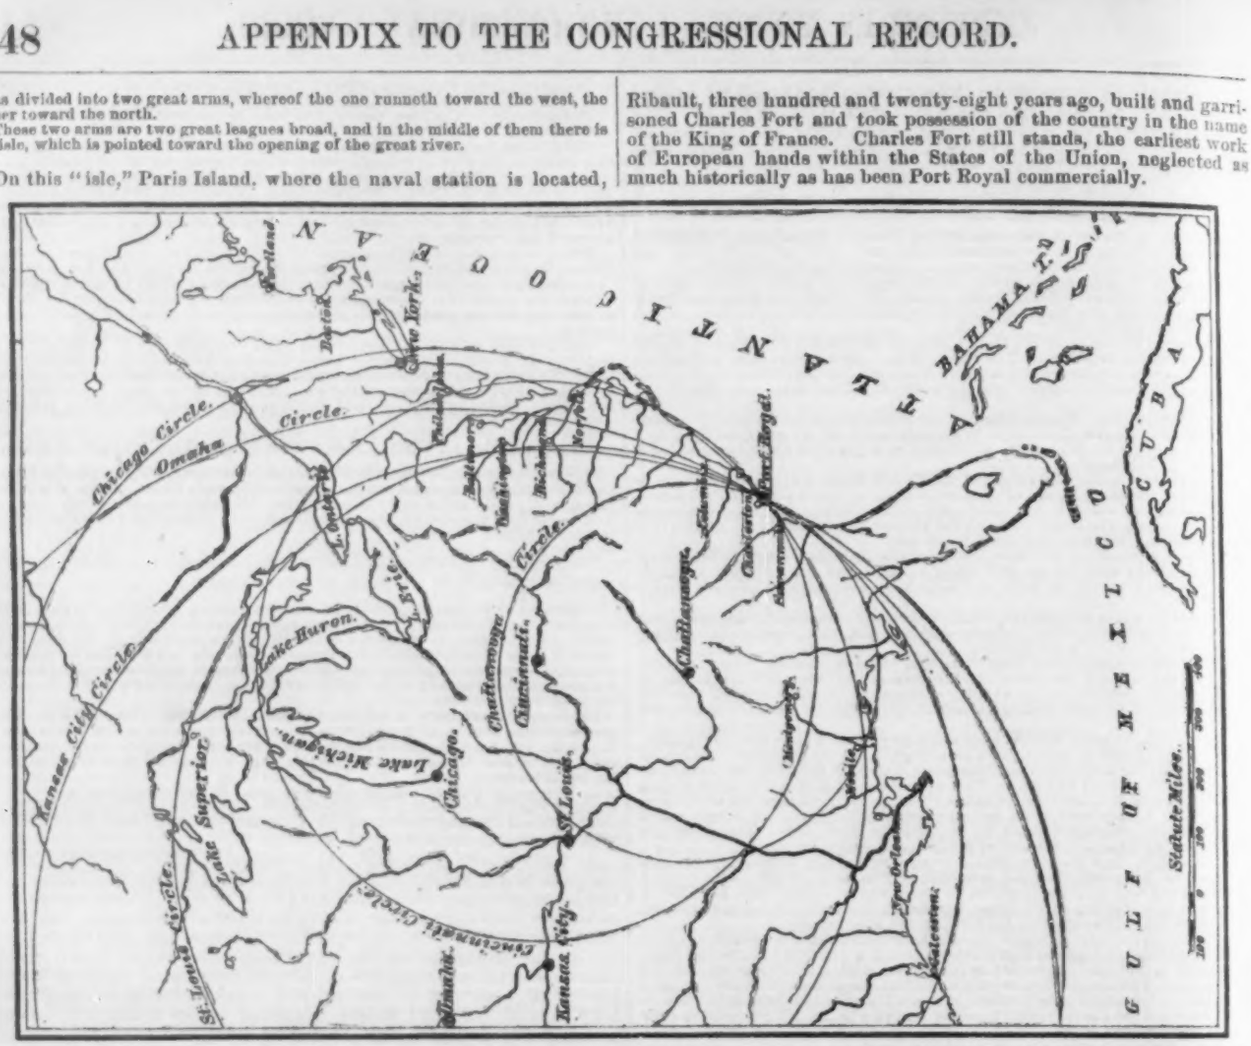
Well might Admiral Porter say that "in this respect Port Royal is unsurpassed by any point on the Southern coast," and it might be added "on any coast."

As has already been said, the commission recommend the building only of a dry-dock at Port Royal, a dock for cleaning ships. If the labor necessary for maintaining such an establishment could not be drawn from the vicinity, the three cities of Charleston, Augusta, and Savannah are within three and a half hours' run. But at the hearing on this subject before the Naval Committee it was clearly shown that there was an abundance of labor of every kind right at hand; that a large number of mining and manufacturing companies are now at work on these waters, operating heavy machinery, having in use many dredges, tugs, and other craft, and employing a large force of machinists and mechanics. During the past year these companies loaded one hundred steam-ships for foreign ports.

The statistics show that the port of Beaufort ranks twelfth among seacoast ports in foreign shipping. And all this is bound to increase. The wonderful advantages of Port Royal from a commercial standpoint must, at no distant day, place her among the most important shipping ports of the country. Nature has been most lavish in her gifts to her. Her position on this continent is as wonderful as are her bar, harbor, and climate. A glance at the annexed map, prepared by the Superintendent of the Coast Survey, will show this.

From her position at the extreme re-entering point of what is really a gulf, Port Royal, notwithstanding her extreme southern position, is 90 miles nearer Omaha than is New York, and is almost 200 miles nearer Kansas City and St. Louis, and is 85 miles nearer Cincinnati than is New York, from those cities. Although Chicago is almost due west of New York, the distance from Chicago to Port Royal is only 25 miles greater than to New York. She is the nearest Atlantic seaport to Omaha, Kansas City, St. Louis, and Chattanooga.

A line from Port Royal due west to San Diego, Cal., is shorter than any similar line across the continent, and is 600 miles shorter than a line from New York due west to the Pacific coast. These extraordinary advantages of position combined with her splendid harbor and climate must not only, at an early day, make Port Royal commercially a place of such importance as to demand attention from the Government, but fix her as a point most easy of access to all parts of the country for procuring supplies of coal and iron, and, in case of war, for transporting troops and munitions.



Laudonnière, the historian of Ribault's Voyages, thus describes the discovery of Port Royal, in 1562:

After we had sailed three or four leagues we began to espy our pinnaces which came straight towards us and at their arrival they reported to the captain that while the foul weather and fogs endured they harbored themselves in a mighty river, which in bigness and beauty exceeded the former, wherewithal the captain was exceeding joyful, for his chief desire was to find out an haven to harbor his ships, and there to refresh ourselves for awhile. Thus making thitherward we arrived athwart the said river (which because of the fairness and largeness thereof we called Port Royal) we stroake our sails and cast anker at 10 fathoms of water; for the depth is such, namely, when the sea beginneth to flow that the greatest shippes of France, yea the arguzes of Venice, may enter in there. * * * The river at the mouth from cape to cape is no less than three French leagues broad.

It is divided into two great arms, whereof the one runneth toward the west, the other toward the north.

These two arms are two great leagues broad, and in the middle of them there is an isle, which is pointed toward the opening of the great river.

On this "isle," Paris Island, where the naval station is located, Ribault, three hundred and twenty-eight years ago, built and garrisoned Charles Fort and took possession of the country in the name of the King of France. Charles Fort still stands, the earliest work of European hands within the States of the Union, neglected as much historically as has been Port Royal commercially.

The Tariff.

SPEECH
OF
HON. ISAAC H. GOODNIGHT.
OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 9, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. GOODNIGHT said:

Mr. CHAIRMAN: A little while ago I read from Mr. Andrew Carnegie's Gospel of Wealth that "the great problem in this country is not how to make a fortune, but how to spend it."

A little later I passed through the mining district of this iron king in Pennsylvania. There, where I might have expected incalculable wealth and opulent abundance, I found want more pronounced, poverty more imperative, and destitution more degraded than I had ever seen before.

The honest men and women, courageous, brave-hearted, and true, who, by brawn and brain, have mined fortunes from the peaks of the Alleghanies and heaped millions upon millions for their professedly beneficent king, bear no evidence of wealth in person, habit, or home, but every proof of poverty.

These architects of a fortune which Mr. Carnegie claims as his own are crowded upon barren hills and cooped in huts many degrees more humble than the average cabin of the colored man in the South, for whom it is so fashionable to profess commiseration. [Applause.]

Later still I passed through the mines of West Virginia, and as women and children plowed the snow barefoot I saw poverty's picture painted in still deeper coloring.

Looking unwillingly upon the scant clothes, the frosted feet, the sallow features, the dispirited faces of these poor people, Mr. Carnegie's gospel thrust itself upon me, and I wondered whether these impoverished hosts would agree to the philosophy of this millionaire.

Passing south and west, I saw the farmer selling his stock at nominal prices, while for want of markets his grain wasted in garner, and his provender decayed in barnyard, and the question repeated itself, whether these people who work so tirelessly and save so frugally could agree that "the problem is not how to make, but how to spend a fortune."

This new "gospel of wealth" has so compelled itself upon me that I have revolved it many times to find if it contain a "sparkle of truth;" and, if so, where, since it is said by one whose life was more a poem than his writings that—

There is nothing so false that a sparkle of truth is not in it.

[Applause.]

After all there is more truth in this "new gospel" than the god of its inspiration dreamed of, though of an entirely different meaning.

This people's poverty is largely due to their spending. Their spending is mainly due to the exactions of our laws which compel them to

contribute, however unwillingly, one-half of all they earn as a sacrifice to the high priests of protection.

That this spending is compulsory does not mitigate the ills of poverty. On the contrary, to the man without "money in his purse," who has spent it according to his "own sweet will," there is some sort of satisfaction, while he finds no comfort in being forced to surrender his wealth upon the fiat of the robber.

This spending which is exacted by force is indeed the problem of wealth in America.

Can there be surprise that the people who have spent, under the present law, an average of 50 per cent. tax on all the necessities of life have not grown rich?

Can there be found promise for these humble consumers in this new law which proposes that the lowest grades of woolen yarn, worth not over 30 cents per pound, are to be subjected to a duty of 112 per cent., while the most costly yarn will pay 72 per cent.? One grade of coarse, cheap blankets will be required to pay 106 per cent., but the finest blankets will pay 72 per cent. The coarsest and cheapest woolen hats will be subject to a duty of 111 per cent., and the finest to 66 per cent. Women's and children's cheapest dress goods with cotton warp are to be taxed 106 per cent., and the finest 73 per cent. The lowest grade of woolen cloths will pay 125 per cent. and the highest grade 86 per cent. The cheapest qualities of knit goods for underwear range from 112 to 138 per cent., but the finest and most expensive will pay 78 per cent. Woolen shawls of the coarsest and lowest grade, used by the poorest people, will pay 135 per cent. duty and worsted goods of the lowest grade will pay 130 per cent., while the highest grade will pay 90 per cent. Other increases to be imposed upon the humble will be seen from an inspection of the following list:

Table showing increase in the rate of duty on many articles in common use.

Articles.	Present duty.	Proposed duty.
350. Hosiery	40.00	60.00
450. Shirts and drawers	40.00	65.00
363. Burlaps	30.00	50.00
368. Brown and bleached linens	35.00	50.00
369. Brown and bleached linens	35.00	60.00
390. Yarns	69.00	100.00
391. Woolens and worsteds, knit goods, etc	94.59	125.00
Do	88.43	135.00
Do	93.81	124.00
Do	68.41	147.00
Do	67.60	130.00
391. Worsteds, knit goods, under 30 cents	73.20	130.00
391. Worsteds, knit goods, 30 to 40 cents	68.41	147.00
391. Worsteds, knit goods, 40 to 60 cents	67.60	130.00
391. Worsteds, knit goods, 60 to 80 cents	68.98	112.00
391. Worsteds, knit goods, above 80 cents	71.22	90.00
391. Worsted shawls	61.82	93.00
391. Belts for presses (printing)	53.14	101.00
392. Blankets and flannels and hats	69.70	110.00
393. Women's and children's dress goods	68.00	107.00
Do	60.00	73.00
394. Women's and children's dress goods	85.00	110.00
395. Clothing, ready-made	54.00	84.00
396. Cloaks, dolmans, etc	60.00	82.00
397. Webbings, gorings, etc	64.00	99.00

As exacting as this table shows the dry-goods manufacturers to be, they are not more so than are the glass and iron industries, as seen from the accompanying table:

Table showing increase in the rate of duty on many articles in common use.

Articles.	Present duty.	Proposed duty.
116. Common window-glass, 10 by 15 ..... per pound	67.61	73.72
116. Common window-glass, 16 by 24 ..... do	115.41	123.10
116. Common window-glass, 24 by 30 ..... do	128.58	135.34
116. Common window-glass, above that ..... do	132.29	138.04
131. Freestone, granite	20.22	40.00
131. Freestone, granite, hewn or dressed	20.00	50.00
144. Cotton-ties ..... per pound	35.00	115.00
147. Tin-plate	34.00	74.00
150. Steel ingots, etc., above 1¢ cents per pound	11.89	45.00
151. Wire-fence rods, No. 6	45.00	54.00
169. Penknives, etc	50.00	75.00
171. Table cutlery	35.00	50.00
174. Shotguns	35.00	60.00
206. Mica	Free.	35.00

Here the glass industry, with a present tax almost prohibitive, is demanding an increase.

Its rate of over 100 per cent. must be enlarged on the articles used by the common people lest these manufacturers perish.

To show how they perish and how you are legislating for the oppressed I read a clipping as to a recent lawsuit in Pittsburgh:

On the trial of a motion to restrain the Pittsburgh Plate Glass Company from issuing $750,000 additional stock, it was found necessary to bring the books of the concern into court at Pittsburgh, and it was shown that during 1889 a net profit of 35 per cent. upon a capital of $2,750,000 had been earned. This almost equals Mr. Carnegie's gains. No wonder Pennsylvania is rich. When her protected industries are so enormously profitable, she should in time own about all the wealth of the Union. If Henry Clay could only come back and look at his "infant industries" he would find them Brobdignags, still fed with a nursing-bottle.

Thus we see the manufacturer, who on an investment of less than three millions is harvesting a yearly net profit of a million dollars, still demanding of Congress an additional tribute from the people.

The gentleman from Massachusetts [Mr. MORSE] who preceded me referred to a legend as to Hercules. There is another more fitting this subject:

It was thought that when Hercules was a babe nursing at his mother's breast he pulled so hard as to scatter the lacteal fluid and thus made the Milky Way.

Hercules is monopoly. [Cheers.]

The increase of duty on knives, guns, wire, etc., in the above list is equally burdensome upon the common people, and can be supported only by those willing to take millions from the pockets of the poor and transfer them to the coffers of the rich.

These increases explain the consuming anxiety of the other side to remove the sugar duty. The tariff on sugar is purely a revenue tax. The majority report admits that the duty "does not materially affect the price." Yet you take all the duty from low-grade sugars and thus justify increases on other commodities already fully protected.

Sir, is your party willing to strike down the only industry of the South whereon there is any duty from which the colored man (your professed ward) can expect a benefit, as an excuse for enlarging taxes on industries of the North?

But the committee have not stopped with simply placing the remitted sugar-tax on other products. They have gone $10,000,000 beyond this limit. They take $56,000,000 from sugar and raise $66,000,000 on other articles. Even were this an honest change, where is the benefit to the American people? How are they profited by paying sixty-six millions for a fifty-six million reduction?

But, Mr. Chairman, it is not an honest change. It is a deceit and a snare. It is to benefit the refiner and the sugar trust, and not the consumer. The low-grade sugar, freed of duty by this bill, is not used by our people.

I invite the House to the consideration of the following statistics of sugar importation, as shown by letter just received from the Librarian of Congress:

WASHINGTON, *May* 9, 1890.

DEAR SIR: In reply to your communication of 9th, I have to advise you that the statistics of sugar importation for fiscal year ending June 30, 1889 (last published), show:

	Quantity.	Value.
	Pounds.	
Cane sugar, not above No. 13	2,275,159,339	$69,495,455
Cane sugar, above No. 13, and not above No. 20	223,331	10,963
Besides this, we imported, free of duty, from Hawaiian Islands:		
Sugar, brown (no standard given)	243,324,683	12,078,518

Very respectfully,

A. R. SPOFFORD,
Librarian of Congress.

To Hon. I. H. GOODNIGHT, M. C.

From this it is seen that during the year we imported free of duty from the Hawaiian Islands over 243,000,000 pounds of brown sugar, worth $12,078,518, less than 5 cents per pound.

It will be seen further that, aside from this free importation and a small quantity not above No. 20, the sugar imported was not above No. 13, which is almost a total stranger in our retail markets. The refiners import this black, unwholesome sugar, refine and brighten it and sell to the country. The advantage of this bill is, therefore, to give the refiner free material, but by retaining a duty on the refined article he can still exact his price from the consumer, increased by the duty on refined grades.

This is a fancy price to charge the people for the privilege of raising their taxes $70,000,000 on other articles of necessity.

As a specimen increase examine the duties on tin-plates:

Description.	Present duty.	McKinley bill, proposed duty.
IC, 14 by 20 ..... per box	$1.08	$2.43
IX, 14 by 20 ..... do	1.36	3.06
IXX, 14 by 20 ..... do	1.57	3.54
IXXX, 14 by 20 ..... do	1.78	4.01
IXXXX, 14 by 20 ..... do	2.00	4.50
IC, 20 by 28 ..... do	2.16	4.86
IX, 20 by 28 ..... do	2.72	6.12
IXX, 20 by 28 ..... do	3.14	7.08
IXXX, 20 by 28 ..... do	3.56	8.02
IXXXX, 20 by 28 ..... do	4.00	9.00
ROOFING PLATES.		
IC, 14 by 20 ..... per box	1.08	2.43
IC, 20 by 28 ..... do	2.16	4.86

An increase of over 125 per cent. in amount of duty to be paid.

Here is a commodity of universal utility. It is upon our houses and in all the homes of the country. Not a pound of it is produced in the Union, yet, although we now pay an immense duty thereon, you propose by this bill to increase this unreasonable tax by more than 125 per cent. Mr. Chairman, the arguments of your committee are bewildering.

In treating of sugar they hold that no tax should be levied upon an article which can not supply the home demand. In dealing with wool they say it must have an increased tax because it can not half supply the home demand. When they reach tin-plate they philosophize that a tax is imperative because there is no home product at all. [Applause.]

The distinguished chairman [Mr. MCKINLEY] argues that to reduce the glass tax and make the price of a dozen chimneys a little lower will do the consumer no good; hence they increase the tax. His distinguished colleague [Mr. BURROWS] insists that to add a few cents to the price of a dozen tin cans and make them a little higher will not hurt the consumer; therefore they raise the tax. So whether the play be high or low the monopolist takes the trick. [Applause.]

The tax is increased on wool; therefore the tax must be raised on woolen goods.

All tax is removed from jute; therefore the tax must be raised on jute goods.

Whatever be the first term of a Republican equation, the last is bound to be "increased taxes."

It is the old puzzle which perplexed the red man in dividing the game with his Caucasian brother. However the "poor Indian" scanned the problem, the white man got the turkey. [Applause.]

This greed of growth has characterized protection since tariff legislation begun.

In 1789, when our industries were really infants, they were content with a duty of 8½ per cent.

Upon their implorings this was raised from time to time till in 1824 it became 37 per cent. In 1828 the law known as the "tariff of abominations" aroused the agricultural classes and brought general discontent; while that of 1832, preserving all the protective features of the past while repealing many of the revenue taxes, accomplished nullification, which had been previously threatened.

The widespread public sentiment, demanding reformation, drove Mr. Clay in 1833 to propose the compromise measure providing for the return to a revenue standard. This act provided for striking off in 1835 one-tenth of the excess over 20 per cent. and one-tenth every alternate year thereafter until 1841, and after 1842 no duty should exceed 20 per cent., which was recognized as the revenue basis.

This promise of relief appeased the people, the nullification acts were repealed, and contentment followed. But so soon as the people slept the manufacturer renewed his demands, and in 1842 the tariff was again fixed at 33 per cent.

The pauper-labor argument appeared for the first time in the tariff debates of this Congress, protective legislation having been justified theretofore by the youth of our institutions and the fiscal restrictions of other nations. Even Mr. Hamilton's famous report (still the chief source of argument for the protectionists) bases his advocacy of protection upon the "restrictions of husbandry and commerce by other and more powerful nations." This, happily, is not now the case, except as we make it so by our own unwise restrictions.

In 1846 the demands of the people were again heard, and Mr. Robert J. Walker issued the historic report which marked him then and will distinguish him ever as a great philosophical economist and practical financier. This accomplished the tariff of 1846, placing the average duty at 25 per cent. and fixing the greatest tax on luxuries, which is the very reverse of the present and proposed laws. The annual revenue gathered under this law was $46,000,000, against $26,000,000 under the higher duty of the act of 1842.

The era from 1846 to 1861 has been denominated our "golden age." All industries prospered. Agriculture, commerce, mechanics, and arts grew and waxed strong. The manufactures which, it had been said would perish, did not perish, but made steady, genuine progress. England repealed her corn laws, furnishing a market for our produce. Thus was destroyed the potent argument of Carey and Niles, that "England wanted free trade in other countries, but would not take their products." The effects of reciprocity upon both countries were most beneficent.

The two great nations seemed to pour marvelous and increasing wealth into each other's laps. Our shipping rapidly increased. Our cotton crop became amazing, lands grew in price, while actual and prospective wealth was general. "The States repeated the old currency follies, and the panic of 1857 occurred, but it was only a stumble in the career of headlong prosperity," from which we recovered in a year. This panic was probably somewhat aided by a diminished circulation owing to excessive revenues collected even under the low tariff and locked up in the National Treasury, which evil is again upon us; but, while it led in 1857 to a reduction, it now gives rise to an increase of the taxes.

The war brought a necessity for greatly increased revenues, and finally as a "war measure" the tax was caried to extreme protection.

It was not dreamed that such a tax could be justified or would be claimed in time of peace. Yet, writes Mr. D. A. Wells, special commissioner of revenues under President Grant:

> With the termination of war and with accruing receipts from the tariff in excess of the actual requirements of the Treasury, the popular tendency as expressed by legislation, accomplished or projected, has been to reverse the order of principles and to make the idea of revenue subordinate to protection rather than protection subordinate to revenue. And in carrying out this idea of protection but one rule for guidance would appear to have been adopted for legislation, namely, the assumption that whatever rate of duty could be shown to be for the advantage of any private interest, the same would prove equally advantageous to the interests of the whole country.
>
> The result has been a tariff based upon small issues rather than upon any great national principle, a tariff which is unjust and unequal, which needlessly enhances prices, which takes far more indirectly from the people than is received into the Treasury, which renders an exchange of domestic for foreign commodities nearly impossible, and which, while professing to protect American industry, really in many cases discriminates against it.

It appears, therefore, from Commissioner Wells (if there be those who will not see it independently), that, by our own exacting laws excluding imports and precluding the privilege of swapping commodities, we have put ourselves exactly where we were placed by the restriction laws of England and other nations, which were so roundly abused in days agone by Carey, Hamilton, and others.

By this hurried review we see the taxes have grown until the original rate has been many times multiplied. And now we are asked to "go forward." "Take no backward step," is the cry of the monopolist, who formerly begged protection for "infant industries," but now demands it for "protection's sake." The corporations have grown too gray and corpulent of wealth to longer plead the baby act. They now ask for protection for the laborer and the home market.

Mr. Chairman, if only labor is to be protected, the only needed tax is simply enough to pay the difference between the price of American and foreign wages. Yet, while the present tax covers all the labor and on many articles more than pays for the entire labor and material, you still urge that the duty be increased.

If the tax be for the laborer, why not give it to him?

Where the tax on a ton of pig-iron is $6.72, why turn the laborer off with only $1.25 for making it?

Where the Government levies a tax of $17 per ton on steel rails, why compel the laborer to accept $4 for the work that is in it? Is it asked what goes with the excess? It is pocketed by the manufacturer, which explains his millions and how the problem with him is the spending, and not the making, of fortunes. He does not bother with the small matter of making fortunes. They are made by humble men; by working men. It is only left for the Carnegies, under the favoritism of the law, to garner the fortunes other men have made.

It is the general in the tent, aback of danger, reaping the glory of the battle won by the bravery and blood of a self-sacrificing soldiery. [Applause.]

But we are solemnly assured that, next to your concern for the employés of the factories, your consuming interest is for the farmers. Over them you have prayed and wept, as did the Prophet of Nazareth over Jerusalem, that you might gather them to yourselves, "as the hen doth gather her brood under her wing." [Applause.]

Might not the farmer also make his millions if the Government would pay for his labor, his implements, and stock, and compel the country to buy his products and pay more for them than they are worth in the markets of the world?

The chairman assures us that this bill does all for the farmer that the law can do. You give him duties which can never benefit him and increase the tax he is bound to pay.

Sir, the farmers of this country will not accept your gift. They remember that ten years of ceaseless war failed to vanquish the Trojans, but that Troy fell when she accepted gifts from the Greeks. They realize, what you know to be true, that your pretended gifts are coverings under which you hide while they are fleeced. They have learned that the "voice is Jacob's voice, but the hand is the hand of Esau," gloved with deceit that it may rob them of their inheritance. They properly interpret your pretended favor as the caress of a Judas, who kissed that he might destroy. [Applause.]

Can you expect the farmer to believe that a duty on corn can protect him from a foreign market to which he ships 70,000,000 bushels yearly and from which was imported last year only 2,388 bushels, which any good farmer might make on 50 acres of land? Do you esteem the farmer as simple enough to believe that a tariff on wheat can benefit him, when he exports over 46,000,000 bushels yearly and imported last year less than 2,000 bushels; when he sold and shipped away 9,374,813 barrels of flour and imported only 1,155 barrels? Or do you expect them to exclaim "Great art thou, Diana of the Ephesians!" thou hast taxed the "16" bushels of rye which we imported last year, while we exported over 287,000 bushels?

Mr. Chairman, you do yourself injustice in supposing that such coin will pass current with sensible people. It is an effort to entertain stalwart men with the baby's rattle. But it is too innocent to amuse, and, having already cut their teeth, it can not profit them. [Applause.]

But we are told by the chairman of the committee that as the farmers are charged no duty upon their exports they should be happy. He regards it as a great boon to the agriculturist that he is allowed to compete with the markets of the world. Why, then, is it not a good thing for the manufacturer?

If an open market is a good place for the farmer to sell, why is it not a good place for him to buy? Why compel him to compete with the world while he pays tribute to the factories to protect them against competition?

After the farmer has gone into the open market of the universe and returned with his dollar, made by competition, where is the justice in forcing him to pay half that dollar to the manufacturer to protect him from like competition? Sir, this no right can justify, except "the right of might." [Applause.]

Gentlemen argue that the tariff is to furnish a home market, and the distinguished chairman zealously proclaims that "the American consumer is good enough." But he fails to exemplify his preaching. If he believes it why provide a premium for the manufacturer who sells to foreigners?

Under his bill the Government pays back the duty upon the goods sold in foreign markets. He thus provides that if the goods are sold to Americans (whom he loves so well) they must pay the tax but when foreigners buy they are relieved from the tax.

The cry is that the home market is good enough. Yet the manufacturer ships his products to free-trade lands, pays the freight, and sells them to foreigners cheaper than to the American consumer. [Applause.]

Last year the factory men sold more than $4,500,000 of farming implements and over $6,250,000 worth of hardware to foreigners at less than they charged Americans for the same articles.

One other thing may be worthy of note just here: the manufactured goods exported from America are those grades whose cost embraces the greatest per cent. of labor, showing that American labor can and does compete with foreign labor.

But, instead of protection furnishing the farmer a home market for his produce, he is exporting yearly more and more. Though he offers his product to the home market at foreign prices, he can not sell, and his surplus has grown larger and his exports increased with every decade of our history.

During the last campaign our Republican friends attributed all low prices to the proposed "Mills bill" and the Democratic Administration. They promised, if Mr. Harrison was elected, hogs, cattle, wheat, corn, and other farm products should advance. As showing how the promise has (not) been kept and how their prophecy has (not) been fulfilled, I submit the following tables as to the products of 1888 and 1889 and the values thereof:

	Bushels.	Dollars.	Cents per bushel.
CORN.			
1888	1,987,790,000	677,561,580	34
1889	2,112,892,000	597,918,829	28
Increase in quantity	125,102,000		
Decrease in value		79,642,751	
WHEAT.			
1888	415,868,000	385,248,030	92
1889	490,560,000	342,491,707	69
Increase in quantity	74,692,000		
Decrease in value		42,756,323	

Stock.	1888.	1889.	Increase or decrease.
Horses	$992,194,827	$978,516,562	— 3,678,265
Mules	179,444,481	182,394,099	+ 2,949,618
Milch cows	366,226,376	353,152,133	—13,074,243
Oxen and other cattle	597,236,812	560,625,137	—36,611,675
Sheep	90,640,369	100,659,761	+10,019,392
Swine	291,307,193	243,418,336	—47,888,857
Total	2,507,050,058	2,418,766,028	—88,284,030

Interesting in connection with this showing of the aggregate values is a statement of the average price per head of each class of animals at the same date.

The aggregate gain of mules in value is but about 1½ per cent., while they have declined per head, while that of sheep is over 11 per cent. All other live-stock shows a decrease in aggregate value. Sheep constitute the exception. The official tabulation of prices referred to is as follows:

Stock.	1888.	1889.	Increase or decrease.
Horses	71.89	68.84	Decrease —3.05
Mules	79.49	78.25	Decrease —1.24
Milch cows	23.94	22.14	Decrease —1.80
Oxen and other cattle	17.05	15.21	Decrease —1.84
Swine	5.79	4.72	Decrease —1.07
Sheep	2.13	2.27	Increase —0.14

We raised in 1889 over 125,000,000 bushels more corn than in 1888 and got $79,600,000 less for it. We raised 74,692,000 bushels more wheat and received $42,000,000 less money for it. And so in stock, except with mules and sheep: a decline in the value of stock during the year of $88,284,030, and in corn and wheat of $122,399,074, or upon these items alone a total decline of $210,683,104.

How do tariff advocates admire this as a home-market argument? [Applause.]

Sir, the normal laws of commerce and trade are supplied by nature. One land by reason of climate and soil can produce what another wants but can not make, while the different endowments and varied tastes of men adapt them to diversified pursuits. This, taken with the fact that the highest right in property is to exchange it for other property, would seem to indicate that every man's pursuit, as well as his place and terms of trade, should be decided by taste and experience as the only determinants, except so far as variance may be needful in support of government. Kentucky needs the sugar and cotton of Louisiana and Georgia. They need our mules, corn, wheat, and bacon. These mutual needs bring a liberal exchange of labor and its products.

Is there any who think that these people would be bettered if taxed for the interchange of these commodities? The natural law is the same between Massachusetts and Mexico, between Texas and Canada, between the Union and the South American States. With these States we have been indulging in the farce of an alliance or conference looking to reciprocity. The experiment has furnished place and profit to a few favorites, which is, and will be, the only result so long as we close our ports to South American products. No nation will bring empty ships to our shores to take away our products. But they will gladly come if they can exchange their goods for ours. England saw this immense advantage when she removed her trade restrictions in 1846 and 1849 and saw her exports rise from $289,000,000 in 1846 to $1,432,000,000 in 1880. Her commerce increased during the first thirty years of free trade $2,460,000,000.

The repeal of England's navigation laws in 1849 was resisted as vigorously as was her repeal of duties on food and manufactures. It was asserted that free shipping would ruin the British ship-owners, destroy ship-building, and drive her sailors to foreign service.

None of these prophecies was fulfilled. In ten years the tonnage increased over 1,250,000 tons and in 1880 it had grown to 6,574,000 tons. On the other hand, our laws have destroyed our commerce, driven our ships from the sea, and now the only remedy proposed is to further tax the people to pay large bounties as bribes to the men who will float our flag. This is a patriotism akin to that of the soldier who has no higher sense of loyalty than is measured by his pension or his pay. [Applause.]

Sir, there are evils that taxes can not cure. Laws of business, rules of trade, though statutes may modify them, are still inexorable.

Taking tax from the poor can not make them rich. You may gild the taking as you will, but when you have gotten his money you have left him with less in his pocket. [Applause.]

If you take only enough for the expenses of an economical Government and take it equally from the governed, none will complain that protection is given where it will most benefit the greatest number.

But when the Government has a surplus; when it is collecting more than is needed; when the arteries of trade are being drained of the blood that gives life to business, by a tax already enormous, unequal, and oppressive, and when the people are impoverished, they will refuse to believe that the proper remedy is increased burdens. Sir, the common people are being disillusioned as to the blessings of a law that takes from sixty millions of people to enrich a few.

The service associations, the laborers' unions, the farmers' alliances, are not the ravings of bad men "bent on mischief," but danger signals that should warn the monopolist to stop this side of absolute ruin to others. They are the crystallized demands of conservative, honest men, men who, while bearing the heat and burden of the day, have suffered and thought.

These are the reasoning demands of men who are terribly in earnest because of acute disease, unheeded complaints, and promises unredeemed. They sound in universal chorus the same note of alarm given upon this floor by the immortal Garfield when he demanded tariff revision lest an indignant public should destroy the system. [Applause.] These are the men who have run the entire gamut of unrequited toil. The mutterings of their deep-toned bass, the tenors, and altos of discontent having been unheeded; they now sound out the grand soprano for a reckoning and a righting. [Applause.]

It is the protest against a law which has made millionaires of a class by reducing the many to want, a revolt against the system which subjects the agriculture and labor of our land to the dictates of capital and aggregates the money of the country in the hands of a few.

I have been asked by my friend from Massachusetts [Mr. MORSE] whether I do not applaud a law and a land that enable men to grow from humble life to riches and greatness, as have such men as Carnegie, Lincoln, Johnson, and Garfield?

Mr. Chairman, an equal race, an even chance in life's tournament, the test of merit, and "the survival of the fittest" have made our Lincolns, our Johnsons, and our Garfields. This we need. This the com-

mon people want, and this they are determined to have. But the law which yearly makes millions for Mr. Carnegie is the very antipode of equality. [Applause.]

It builds on the one hand an aristocracy and in opposition a serfdom, that threaten our security and prosperity alike. This is evinced by the strikes and discontent of the one class and the mammoth wealth of the other, which already presumes to dictate our legislation. [Applause.]

The gentleman thinks there is no danger in wealth. There is no danger, but universal good, when its dissemination is general; but aggregated wealth has been the decay of nations more strongly built than ours.

As lately said by the American Standard:

When darkness settled over Egypt and she lost her place among the great nations of earth, 3 per cent. of her population owned 97 per cent. of her wealth. The people were starved to death. When Babylon went down, 2 per cent. of her population owned all the wealth. The people were starved to death. When Persia bowed her head, 1 per cent. of the population owned all the land. The people were starved to death. When the sun of Rome set in black despair eighteen hundred men owned and controlled all the then known world. For the past thirty years—more particularly since the close of the civil war—the United States has moved rapidly along the path followed by these old nations. In 1850 our capitalists owned 37½ per cent. of the nation's wealth. In 1870, only twenty years later, they owned 63 per cent., having almost doubled their accumulations.

The rate has increased until a comparatively few men now (1890) own over 85 per cent. of the wealth of this Government. They are using it and its immense power in all departments of business and government. If the future is to be known of the past, who can say that our millions may not find for us the fate that fell upon Egypt and Babylon, Persia and Rome? [Applause.]

The Tariff.

No legislation will meet the demands upon the statesmanship of this Congress that does not provide for the lifting of the burdens now resting upon the agricultural and industrial interests of the country. The farmer, the laborer, the mechanic, the artisan, the men who create wealth and prosperity, are entitled to demand and receive at the hands of Congress careful consideration of their interests and just enactments for their benefit.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 10, 1890.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes—

Mr. GROSVENOR said:

Mr. CHAIRMAN: I represent an agricultural and industrial Congressional district. I represent a district composed of farmers and laboring men, men engaged in the production and marketing of the proceeds of agricultural industries, men engaged in mining and manufacturing. I represent a district which produces large quantities of coal, some salt, much iron, and splendid agricultural productions, including the great industry of wool-growing.

I was raised from infancy on a pioneer farm in Ohio and grew up to manhood in a struggle for livelihood, while aiding my father in subduing the primitive forest in the county in which I still live. I know something of the struggle of agriculturists in subduing the natural obstacles in their way and in keeping pace with the progress of the country and abreast of the growth of prosperity therein.

I claim, therefore, to be a representative, in every proper sense of the term, of the industrial interests of Ohio and my district, and I claim—I trust with due modesty—that I have some knowledge of the great questions that are being here discussed. I am a Republican, and believe in the faith and doctrines of the Republican party. I am proud of its history, confident of its present position, and hopeful of its future.

But, Mr. Chairman, upon no consideration and under no set of circumstances would I vote for the bill now pending, strongly partisan as I am and thoroughly as my party is committed to this bill, if I believed that there was one proposition in it that would increase by the weight of a feather the onerous burdens now pressing upon the industrial classes in my country, and especially if I believed that the result would be to add burdens to the agriculturists or if I believed the bill fell short of subserving their great interest, the just measure of relief to which they are entitled. [Great applause.]

I am for this bill, and will support it heartily when it is ready for passage, because I believe that it is right upon two great economic questions. I believe that the tendency of this bill is, first, to the enlargement of the market for the farmer and, second and incidentally, to an enlargement of the scope and field for labor in this country. It will create a demand for labor with proper remuneration and create new markets for the surplus products of the country, and these two things combining will operate to the prosperity of the classes which I represent.

There is no greater necessity of the farmer to-day than a better market for his product, and the field of statesmanship demands that by every exertion within our reach that market shall be improved and made more certain of remuneration. Akin to it are the demands of labor. To me it is an amazing proposition that the Democratic party should place itself in the attitude of seeking to fatten on the misfortunes of the country. The burden of the song of the Democrats on this floor during this entire battle has had two strings, upon which have been played, first, the poverty of the country and, second, that therefore the Democratic party was coming back to power.

It was in power four years in the House of Representatives and did not pass a bill that by any possibility could benefit the farmer. But now they look about them and bewail the broken-up condition of the industries of the country as they see them, and cry out that it assures a Democratic victory, as though wherever there is poverty and squalor and degradation there the Democratic party flourishes. So this Democratic party grows fat upon the meat it feeds others upon and fattens upon disasters which it creates. It waved the wand of its power for four years and the agricultural and manufacturing industries lacked reward, and now they coolly turn around and say, "Because we destroyed confidence in this country we must be put back into power." [Applause.] They never touched the reins of Government in this country that danger and disaster did not follow in their train.

We have just emerged from four years of Democratic domination, and I stand here to say to gentlemen on the other side, and defy successful contradiction, that during that time no act of Congress was ever advocated by them which by any pretense was ever intended or calculated to lessen the burdens of labor in this country.

The cry on this floor from the beginning of this session to the present time is that the agricultural interests of this country are in such a condition that beggary and poverty exist throughout the whole scope of the agricultural territory of the nation. I admit that from all the reports that come to me there is a condition of depression in agricultural interests. Prices are low; markets are overstocked, and, in a general way, the outlook for the farmer is not what it ought to be.

But what has all this to do with the question of a protective tariff? I maintain here now, Mr. Chairman, what I have often maintained elsewhere, that the agricultural interests of this country are more benefited by the protective system than is any other industry. Then, it is said, why this depression? The eloquent gentleman from Iowa [Mr. HENDERSON] has just told us something about it, and I want to indorse all that he has said. I recognize the fact that combinations and trusts exist and to some extent injure the farming interests of the country, and while the Democratic party was in power four years passed over their heads and yet they never sought by legislation to lessen the power of trusts and combines and never passed a bill even intended for that purpose. They went out of office on the 4th of March, 1889, without putting a single legislative enactment on the statute books of the country against trusts or against any of the combinations which are so detrimental to the interests of the country.

A Republican Senator introduced the first assault against such trusts and combinations in this country and it has been passed by a Republican Senate. A Republican House has passed that bill, a Republican President has signed that bill, and the same has become law. The first great step to throttle and crush this system of monopolies has been taken, and it is all due to the Republican party, the only party that ever did anything for the people, the common people of the country.

Cumulative upon the evils which my friend from Iowa [Mr. HENDERSON] has referred to, I note without hesitation as one of the greatest evils that have affected the agricultural, mining, manufacturing and industrial interests of this country the passage by Congress and its approval by a Democratic President of the interstate-commerce law. In my humble judgment it has done more to unsettle the agricultural interests of the country than any one statute that has ever marred the legislative enactments of the country. And right here I beg to quote from a short speech which I had the honor to make in 1887 in opposition to that bill. I said:

It inveighs against monopolies and yet creates the greatest monopoly of modern times; it denounces discrimination and makes discrimination not only possible but destructive; it proposes to give all shippers a fair and equal chance and hedges about its remedial clauses with conditions which destroy its effectiveness; it proposes to equalize the opportunities of shippers, and then does more to discriminate against railroads and in favor of water routes than all the railroads ever tried to do; it puts a degree of political power into the hands of the President and a commission which will enable them to force all the industries of the country to contribute to the election of a political party to office; it is full of vague expressions which will lead to delays in administration.

It makes the cost of redress to a wronged shipper so great as to disarm his remedy and leave him in the hands of the extortionate tendencies of the railroads or the ignorance or helplessness of the commission. It will unsettle rates, disorganize the industries of the country, and thus force a reconstruction of systems of production. In the mean time labor will suffer, the farmers' products will lack remunerative market, and uncertainty will discourage industry. It is a dangerous stride towards the centralization of power in the hands of the few to the hinderance,

vexation, and permanent injury of the many. The good in the bill does not compensate for the evil; and controlled by my conscientious judgment I will vote to abide by the evils we have rather than to fly to greater which we know not of.

And now I ask my friends, the candid men of this House, in the light of the published condition of affairs in Iowa, Nebraska, and across the continent, to say whether that which was prophecy has not become history now. I warned the agricultural States in my feeble way that they were destroying the only avenue they had for the outlet of their products. I warned the people of those States that they were perpetuating the almost insurmountable barrier of distance and time between them and the markets of the country or the world; but with the innocent idea that Democrats always manifest, that they could in some way punish railroad corporations and cultivate the good-will of the Granger sentiment of the country, they struck down the instrumentality that made the country great, and they are suffering for it now.

Why is not the corn of the Northwest in the markets of the world? Why is it that with all the great lines of communication stretching from the Atlantic to the Pacific the mighty surplus of agricultural products is debarred from the markets of the world? It is simply the blind zeal of partisans and demagogues to do something that would look like an attack upon the corporations and so have rendered invincible and insurmountable the distance from tide-water to the corn-field, and we see the ingenuity of man and the enormous capacity of railroad corporations to annihilate time and distance overthrown and baffled, and by this law the Democrats say that these great advantages shall not be brought in to aid the farmer in securing a market for his product. The insurmountable barrier of the "long and short haul clause" renders it impossible to overcome distance and equalize possibility, and the country is mourning under it, and it is the duty of statesmanship to address itself to the removal of this barrier between production and market.

The baneful influence upon agriculture of the far-famed "long and short haul clause" of the interstate-commerce law is just being felt. I append in this connection sundry extracts from newspapers and other publications, showing the baneful effect upon the commerce of the country that this enactment has confessedly had, and it is a remarkable fact that these publications and these extracts come from the very newspapers and the very men who most loudly insisted upon the enactment of the interstate-commerce law, and most strenuously opposed the men who opposed its enactment.

I have collated from a recent speech of Hon. E. A. MORSE, of Massachusetts, in this House, and the remarks of that distinguished gentleman in that connection.

Mr. Carpenter, of the well known firm of J. W. Carpenter & Son, of Detroit, says:

Every shipper and every consumer, from Maine to California and from Minnesota to the Gulf of Mexico, should say "God speed you" in the good work of repeal of that infamous law known as the interstate-commerce law. It is doing more injury to the country at large than any law that has had the approval of Congress for fifty years. It is simply damnable. It is a law for the protection of a few to the destruction of many. Our Southern brethren, and the entire West and Northwest, in fact the whole country, as I have before stated, consumer as well as shipper, and the entire traveling public should arise in a mass and say amen to your able and much desired movement in the direction of the repeal of this law, and if every interested party in the country would express itself you would receive such encouragement as has not been accorded to a Representative in the House or Senator in the Senate for many a long day.

The above letter was addressed to my namesake, Leopold Morse, who introduced a bill into the Fiftieth Congress for the repeal of this law. Where Leopold Morse threw down the glove I take it up and throw it down again.

A commercial paper printed in Chicago has this to say with reference to the law: "Can any shipper, can any business man, point to any benefits they have won in their business from it? Has it given them any better shipping facilities? Has it done anything except to shrink the value of railroad property nearly $1,000,000,000? It has taken the income away from thousands and thousands of people who had invested their little all in railroad securities. It has stopped the building of railroads all over the land. It has paralyzed our iron industry. This infernal bill is sapping the life-blood out of the two great industries we have, the railroad and the iron business. We ask again, what have we gained? Is not this a subject to think over seriously and take action upon before it is too late?"

Governor Ames, in a recent interview, charges the interstate-commerce law as in part responsible for the low condition of the New England iron business, and says that he regards the law as a needless and unwise interference with the laws of trade. He says that the railroads ought to be free to compete as they please under the natural condition of trade, without interference on the part of the Government.

I append here a few out of hundreds of remarks of the press I have received from different sections of the country, since the delivery of the above remarks before the Committee on Commerce, but these are specimens of hundreds in the same line:

[From the Iowa State Register.]

It has closed up nearly every Iowa manufacturing institution which shipped goods out of the State. The worst stab the manufacturers of Iowa have ever received was in the abolition of the cheap long haul, and it has been almost equally disastrous to farmers.

[Portland (Oregon) Oregonian.]

It is the fashion to commend the interstate law because it cuts off the "cheap long haul;" but in fact, as every one knows who examines the subject, the change has hurt the producer and the interior merchant and manufacturer far more than it has helped them.

[The Mountain News, Denver, Colo.]

Representative MORSE, of Massachusetts, has introduced a bill to repeal the long and short haul clause of the interstate-commerce law. As nine-tenths of the great trading points of the country, on account of water connections, are exempt from the operations of this clause, it is practically a dead letter and is appealed to for the purpose of harassing shippers rather than protecting them.

[From the Omaha (Nebr.) Bee.]

It is not questionable that there is a considerable number of people who agree with the views of the Massachusetts Congressman. They are most numerous in New England, where investigation has shown the belief to be pretty general that the interstate-commerce law has been inimical to the interests of that section. There is some sentiment in the Northwest also unfriendly to the law, and opposition could doubtless be found elsewhere, for the reasons in whole or in part urged against it by Mr. MORSE.

[From the Detroit (Mich.) Press.]

AMENDING THE ACT "TO REGULATE COMMERCE."

The interstate-commerce law is one of the best of modern illustrations of that principle in legislation which Dickens so aptly pictured in the Circumlocution Office. More perhaps than any other bit of modern legislation it exemplifies the art of "how not to do it." Designed as a check on the growing powers of the railroad corporations, its effect has been to strengthen the railroads as against the people; and though it has been productive of a good deal of strife among the former the settlement of the contests has almost invariably deprived the public of some right or privilege.

The farmer, for whose express benefit the law was said to be framed, has certainly not profited by it; and while it is unquestionably possible by an honest enforcement of the law to make all railroad charges, whether for freight or passage, much more nearly equal than they formerly were, there is a general impression that in some way or another there is as much discrimination as ever.

The law is, at any rate, not in good odor.

[From the Philadelphia News.]

In his recent speech in the House, at Washington, Representative ELIJAH A. MORSE, of Massachusetts, made some telling points against the interstate-commerce act, and his criticisms of the long and short haul and anti-pooling clauses have a refreshing novelty, because they do not mince words.

Mr. MORSE says that the law, to a large extent, has stopped railroad building; that good authorities estimate it has caused a shrinkage of more than $200,000,000 in the value of railroad property in this country; that under the operations of the interstate act the old custom of high rates to competing points and nominal rates for long hauls has been abolished, and the manufacturing States have no longer easy methods of exchanging their products with agricultural Commonwealths.

If the law has righted any wrongs, in Mr. MORSE's opinion it has made greater ones.

He may be wrong in many of his assertions, but the widespread complaints against this act deserve the most careful investigation under the authorization of Congress.

[From the Burlington (Iowa) Hawkeye.]

One of the strongest appeals against the interstate-commerce law in its present form comes from the farmers. An immense petition has been sent to Congress by agriculturists of the West, asking for a repeal of the "long and short haul" clause. This provision of the law, it will be remembered, was avowedly enacted in the interest of large business centers, and it has by no means proved satisfactory to them. It has, however, so the farmers claim, been little short of disastrous to their interests.

One of the chief elements in building up the farming interests of the West was the cheap through rates to the seacoast. The railroads were in the habit of making those rates as low as possible to meet their expenses, and repaid themselves from local rates with a large margin of profits. The long and short haul provision of the interstate law struck at this custom by forbidding through rates lower than local rates between intervening points on the same line. Then the State Legislatures, as for instance in our own State of Iowa, came in with their limitations of rates on local traffic, and thus the railroads, in self-defense, kept through rates at such figures as the cost of working their roads demanded. Under this state of affairs the farmers say they are greatly injured; those in Kansas and Nebraska in particular attribute the low prices of produce in their localities to this cause, and they now demand that the part of the law which is proving a grievous burden to them be repealed. It thus appears that the interstate legislation has by no means justified itself as yet.

[From the Kansas City (Mo.) Journal.]

Congressman MORSE, of Massachusetts, urges the repeal of the interstate-commerce law, which, he says, has already shrunk the value of railroads over $200,000,000. Congressman MORSE can produce some facts to back up his assertions. The interstate-commerce law is far from being a model measure. Its results would have been much more serious, however, had not the enforcement of its provisions been in the hands of a commission with enough common sense not to demand strict compliance where it would be ruinous.

[From the Chicago (Ill.) News.]

Representative MORSE, of Massachusetts, is after the interstate-commerce law with the sharpest kind of a scalping-knife. He is bent upon proving that the law enables railroads to charge a freight rate which bears hardly upon New England, which has to trade manufactures for food-stuffs. The increased freight is just so much more lifted out of their earnings. If this be true of New England it is also true of other sections of the country, and if it be a fact that freights have increased, as Mr. MORSE passionately declares, then it is worth while looking into this interstate-commerce law. It is dangerous to put too heavy a burden on commerce within the boundaries of the nation.

[From the Denver (Tex.) Herald.]

Mr. MORSE's claim that the law had stopped railroad development and caused a shrinkage of over $200,000,000 in the value of railroad property, without compensating advantages to the people, may be difficult to prove by cold facts and figures, but he is unquestionably right when he says that the old custom of high rates to competing points and low rates for long hauls is infinitely more satisfactory to the people at large than the present custom established by law. He knows what he is talking about, too, when he declares that the law, by not applying to Canadian roads, is throwing millions of dollars' worth of traffic over to those roads which formerly went to American roads.

Senator REAGAN, the father of the interstate-commerce law, so it is reported, will not be a candidate for re-election. Possibly the report is put out as a "feeler," but our observation goes to show that such action on the part of Mr. REAGAN would not meet with a very strong protest in any quarter unless perhaps from certain railroad magnates and the well fed members of the Interstate Commission. What the Senator intended should be crowning glory of his Senatorial career has proved to be a millstone about his neck. Like Dick Deadeye, he "meant well, but didn't know."

[From the Brockton Enterprise, Republican.]

Congressman MORSE's ungloved assault upon the interstate-commerce law is receiving much commendation in New England. When Mr. MORSE argued that the law is working injury to business interests in this section of the country he knew what he was talking about.

[From the Taunton Gazette, Republican.]

Congressman MORSE told some solid truth about the interstate-commerce law in the address before the committee which is printed elsewhere in this paper. He is about the only man who has dared to stand up in public and riddle the humbug law as it deserves, and the manufacturers of New England ought not only to thank him, but back him up in any effort to abolish the affair.

[From the Taunton News, Democratic.]

Congressman MORSE is a business man more than a politician, and his bold and fearless attack upon the interstate-commerce law will meet the approval of business men of all parties in this city. The law was believed to be in the interests of the consumer and the people, as against the railroad monopolies. It has proved to be exactly the opposite.

[From the Attleborough Sun, Republican.]

We find opportunity of shaking hands with Congressman MORSE. We mean his battle against that great big humbug, the interstate-commerce law, with all its incoherencies, inequalities, discriminations—of interpretation and language—its interference with matters that are purely business in their character and not proper subjects for national or other interference. Mr. MORSE can use his time to no better purpose than to consolidate the opposition to the law, and break up, if he can, the commission, which does not earn its salary.

[From the New England Grocer (Boston), non-partisan.]

On Saturday, before the House Committee on Commerce, Hon. E. A. MORSE made an able argument in advocacy of his two bills, one for the entire repeal of the interstate-commerce law and the other for the repeal of the short and long haul and anti-pooling sections. As his views are in accord with the sentiment of seven-eighths of New England's merchants, we shall publish his argument next week. It's worth reading.

[From the Milford Journal, Republican.]

Congressman MORSE is in earnest in his opposition to the interstate-commerce law. A few days ago he appeared before the Congressional Committee on Commerce and made a sharp address against the law. Reports from Washington say he found a lively interest in the committee in his argument, and has hopes that even if the law can not be repealed altogether the anti-pooling clause and possibly the long and short haul clause can be stricken out.

All who have watched the evil effects of the interstate-commerce law and the debilitating results its enforcement has thus far brought upon the country will wish Congressman MORSE a hearty Godspeed in his efforts to wipe the monstrosity from the national statute-book.

[From the Newburyport (Mass.) News.]

THE WORTHLESS INTERSTATE LAW.

Congressman MORSE, of this State, has come out against the interstate-commerce act of Congress, saying it has worked great injustice to railroads and manufacturers of the country and has benefited no one. It will not take much argument to impress people that Mr. MORSE is right.

[From the Haverhill (Mass.) Bulletin.]

Congressman MORSE is doubtless nearer right than wrong. As near as can be ascertained there never was any particular call for an interstate law and, although it has been in force several years, to-day the vast majority of people know nothing about it whatever. Even railroad officials have studied the law and its provisions to no purpose. They live in eternal fear that they may violate some feature of this useless enactment, but just when, where, and how they can not point out nor can the most astute lawyer. A law so obtuse that nobody can understand it is worse than none at all.

[From the Canaan (N. H.) Reporter.]

Mr. MORSE presents facts and arguments which the friends of the law will find it hard to answer. That there are instances where railroads need regulating there is no doubt, but any law which prevents a road from taking paving stone from Fitzwilliam at a nominal rate to Western points rather than let the cars go back empty, works an injury to the people as well as the road. There are doubtless other similar cases, but Mr. MORSE makes a strong point of this; and it is hoped that other members from New England, which is a sufferer by the law, will have the courage of their convictions and join Mr. MORSE in showing up the injustice of the law and the injury which it works to the people.

[From the Boston Traveller, Republican.]

If Senator CULLOM and the majority of the Interstate Commerce Committee of the Senate insist on the bill, which it is reported they have agreed upon, to apply the provisions of the drastic interstate-commerce law to the Canadian railroads as a condition of their having the privilege of transporting goods in bond, New England should make a vigorous and emphatic protest. The operation of the interstate-commerce law, especially of its long and short haul provisions, has from the beginning been inimical to New England interests, and they have thus far escaped disaster only because they have been able to avail themselves of the facilities which the great Canadian trunk lines—notably the Grand Trunk and the Canadian Pacific—have offered. New England is a part of the United States, though there are indications that in some sections of the West and on the part of some Western Senators and Congressmen this has been lost sight of. Congressman MORSE followed the instincts of a New England business man when he announced himself in favor of the absolute repeal of the law. New England has certainly the right to demand repeal, or fair play, and that the interests of her metropolis shall not be sacrificed to those of New York.

[From the Boston Traveller, Republican.]

Senator CULLOM explains that the action of the Senate Interstate Commerce Committee, in unanimously adopting the report drawn by himself on the subject of Canadian railroads, is not to be taken as implying that there will be like unanimity in supporting any bill which may be brought in under this report. Indeed, nothing is more certain than that Senators BLAIR and PLATT will decidedly oppose the plan of legislation which Senator CULLOM proposes. The time has come when New England should insist upon it that she is a part of the United States. There has been altogether too much of a losing sight of this at Washington the past winter.

New England has been the chief sufferer from the interstate law. Such advantages as that law has created have accrued to other sections of the country, while its disadvantages have been New England's. If the law is to be kept on the statute-book, New England is certainly entitled to fair play in this matter, and her Representatives in both branches of Congress should demand it.

The congratulations and indorsements thus given to Mr. Morse indicate a rapidly growing public sentiment in favor of the repeal of this law, or at least the abrogation of the "long and short haul" clause.

Here, then, is one of the fruitful sources of the evils that oppress the agricultural interests, and to-day it is the duty of statesmanship in this and the coming Congress to get rid of this incubus upon the productive industries of the country. Aside from this, I deny that the agricultural interests of the country are suffering to the extent it is claimed. It is unwise for the purposes of partisan effect to proclaim to the people of the world that our farmers are mendicants and beggars. Gentlemen from Missouri uniformly proclaim that their constituents are in the throes of poverty and distress; that their lands are yielding no remunerative products; that they have mortgaged their property beyond the hope of redemption.

Whole volumes could be collated out of the record to show that the constituency represented here by the Democracy of Missouri on this floor are in a condition of squalid, wretched, absolute bankruptcy, awaiting simply the will of the creditor to crush them by foreclosure.

I have practiced law in the courts of Southeastern Ohio (with the exception of the period of the war) since 1857, and I state here, and I defy investigation to contradict it, that never since 1857 have there been so few suits to force the collection of debts in nearly all sections of Ohio as there are to-day. I do not say that the farmers are growing rich.

On the contrary, they are not receiving that adequate reward to which they are entitled and which they will receive upon the enactment of this bill; but I do say that they are not vagabonds, nor beggars, nor mendicants, and I do say to the world at large, trust the farmers of the Fifteenth Ohio district; sell to them; deal with them; they are able to pay.

The Democrats threatened that the defeat of the Mills bill would prostrate the wool industry of the country, which is an important one in my district. But the defeat of Cleveland, the overthrow of the Mills bill, and the election of Harrison sent wool up an average of more than 6 cents a pound between the clip of 1885 and that of 1888, and the farmers of my district garnered a benefit to the tune of more than $200,000.

What does this bill propose now to aid the farmers? for I am here in my representative capacity to insist step by step and inch by inch that nothing shall be left undone for my constituents that can be done. I am here to vindicate the judgment of that constituency in my election. I am here to guard jealously and vigilantly every avenue of attack upon their interests. This bill puts better protection upon wool than wool has ever had since the industry was established; therefore I favor it in the interest of the farmer in my district. There is more benefit to the agricultural interests of this country in one item (that of wool) in this bill than all the enactments suggested, introduced, or supported by the Democratic party in all its long, fitful, and fateful career.

Why should farm products be brought here and put upon our markets from foreign countries? To show what has been going on during the last year I quote from the speech of Hon. NELSON DINGLEY, jr., in this debate:

FARM PRODUCTS.

The largest increase of duties in any schedule has been made in that of farm products, including tobacco. In prior tariffs the average duty on imported farm products has been comparatively small, under the impression that there was little danger of any considerable importation of such articles. The rapid increase of importations of animals and farm products, not only from Canada, but also from Germany, has attracted the attention of our farmers and led to a general and just demand for increased protection to their interests. The following list of the more noteworthy importations of animals and farm products in the last fiscal year will show the extent of the competition to which our farmers are already subject, and awaken solicitude for the future. These importations were as follows:

Horses, sheep, and cattle	$3,917,031
Barley	7,691,763
Other grains	169,199
Potato-starch and dextrine	230,069
Eggs	2,419,004
Flax	2,060,664
Hemp	2,047,927
Hay	1,082,685
Hops	1,109,408
Meats and dairy products	1,769,892
Flaxseed and seeds	4,557,198
Tobacco	8,603,168
Potatoes, vegetables, and beans	2,295,499
Lumber	9,768,644
Wool	17,432,758
Total	65,132,519

We intend to close this market to the foreign producer and open it to the extent of $65,000,000 per annum in addition to our present market.

In this connection, the following were some of the imports of manufactured articles brought from foreign countries last year. I quote from the same authority:

Mr. Chairman, it is not our own manufactured products that have glutted our home markets; notwithstanding the fifty-five hundred millions in value of our manufactured products in 1880 our own markets took fifty-three hundred and sixty-two millions. It is imported manufactured goods that interfere with us. Why, in the last fiscal year we imported manufactured articles to the value of over $258,000,000, while our exports of manufactured products were but little more than half of this amount.

I call attention to some of the items of imports of manufactured articles:

Manufactures of—	
Wool	$52,681,482
Iron and steel	43,570,133
Other metals	3,621,950
Cotton	27,105,509
Flax, jute, and hemp	25,955,222
Silk	34,956,728
Leather and leather goods	11,202,906
Glass	7,750,877

Manufactures of—	
Earthen and stone ware, etc	$6,473,357
Paper and paper goods	22,506,849
Lumber	9,768,644
Rubber	338,111
Clocks and watches	2,073,860
Fancy articles	6,659,966
Gunpowder and explosives	356,064
Hats, brabis, etc	4,247,000
Stone and marble	1,005,484
Oils	1,366,324
Paints	1,280,712
Buttons	2,728,356
Chemicals	13,186,290
Total imported manufactures	258,777,524

It is estimated that the manufacture of the above imports would give direct employment to 500,000 workingmen, as many more indirectly, and that their wages would add an equivalent of 5,000,000 consumers of farm and other products. And yet, according to the theory on which the gentleman from Texas proposes to legislate, the importation of these $258,000,000 of foreign-made goods is a blessing so great that he desires to have it doubled.

Why should not all this be made in the United States? Why not employ this army of laborers and thus enlarge the home market of the farmer?

To do this is the object of this bill. For this the Republican party has been striving. Our victory is in sight.

What do the farmers and laboring men want to better their condition? Two things, as I said in the outset. The farmers want a better market for the products of the farm. The laboring men want uniform wages at higher rates and shorter days. What is there in this bill that promises all this? What is there that will benefit, all alike, the nine or ten millions of laboring men in this country?

Now, Mr. Chairman, at this point, and before stating further, I want to say that he is no statesman, no proper representative of the people of this country who seeks to array one class of people against the other. There has been incendiarism enough uttered during the progress of this debate to have caused one half of the people of the United States to take arms in their hands and proceed to murder and pillage the other half, if there was the slightest attention paid by the average American citizen to the insane, incendiary vaporings which sometimes we hear in this Chamber.

Occasionally a Representative, or an alleged Representative, comes upon the floor and charges this side of the Chamber with being representatives of robbers and seeking to rob the people of the country, and they charge this upon the Republican party, the party that has done all that ever was done by legislation up to this time since its existence, for the laboring people of this country. The party that has stood by and defended the rights of labor, that lifted it up out of the degradation of Democratic ideas and Democratic beliefs and planted it upon the solid foundation that it has. These men shout in the ears of the public "You are robbers. The people of the country are being robbed by your legislation."

The people of the country are so disgusted with such utterances that, instead of rising in their might to take vengeance upon the alleged robbers, they despise the men who make such utterances, and such utterances are enough—made by American Congressmen—to put in motion murder, rapine, incendiarism, and robbery. It is an appeal to the passions and prejudices of men. It is never to be called statesmanship, and is a burlesque upon common sense and the common decency of the people of the country; and the people of the country listen and despise the noise and the makers thereof. The American people, the American farmer, the American artisan, the American laboring men have interests in this Government; it is their Government. The laboring man understands this. He is not a serf. He is not trodden under foot. He understands his freedom. He understands his freedom and is not afraid to maintain it.

We want a wide market for our farm products and upon equal terms and conditions. This bill seeks to bring it about. We want to draw away from agricultural pursuits as many of the workingmen of this country as can be profitably employed in other branches of industry. We want to lessen the number of farmers and enhance the profit of the remainder. If there is overproduction of farm products, let us have fewer farmers. If there are too many engaged in agriculture, let us seek other avenues of enterprise for the surplus.

Let me here answer, in a few words, a large number of utterances which have been made upon this floor. Upon each recurring paragraph of this bill some Democrat gets up and shouts that there is a tax of a certain per cent. upon the article, and if it is an article of common use among the people of the country, you are raising the price of that article and wringing the money from the pockets of an overtaxed people. Mr. Chairman, I ask the intelligent farmer and the intelligent laboring man of this country to compare the prices of every commodity that he uses in the home, on the farm, on the field, with the prices he had to pay for them under Democratic free trade. I say to you that there is not one single article, not one, Mr. Chairman, that is not cheaper by a great per cent. than it ever was before in the history of this country.

People need not come to me and they need not go to the intelligent farmers to teach them by theoretical argument what they know by experience. What are the facts? What do we see? Every article of cotton goods, every article of silk goods, every article of woollen goods, every article of mixed goods, everything that enters into the clothing of the people is cheaper now than it ever was in the history of the country. Every shoe, every boot, everything in leather is cheaper, and is cheaper than it is in England. You can not buy a pair of shoes in the United Kingdom for the price you can in the United States. Everything of iron, every creation of man in which iron enters is cheaper than it ever was before. The farming implement of every kind and description, cutlery, crockery-ware—an amazing reduction from anything that was ever known in free-trade times. But gentlemen on the other side believe that they can make the farmer believe that he is paying a higher price than he was before when they know it is utterly and unqualifiedly false. The farmer is not easily fooled.

What next. Our farm products are too low, say these Democrats; so say I. The price which is offered to the farmer is not remunerative, so they say; so say I. But to-day, in the markets of the country, a given quantity of farm products will buy more of the commodity that people use than ever before in the history of the world. You can buy more clothing for a bushel of corn than ever before. You can buy more shoes and boots, hats and caps, glassware and crockeryware and hardware for a horse to-day than you ever could before in the history of the world, and yet we want better markets, and that ought to be the leading aim of every American statesman. How are you to get at it.

This bill proposes to keep out of the United States hereafter the enormous importation of farm products, which amounted last year to the great sum of $65,000,000, as I now show. Not one of these articles ought to be imported. The farms of America can produce every article of farm production that is needed. We ought not to import a pound of wool. We ought to produce 600,000,000 pounds and sell it in the markets we have. The climate is particularly fitted for the industry; we have the land particularly adapted; we have the men with the money and brains to carry it on; we have the labor, and all we want is the protection by law against the cheap labor of Australia and foreign countries, and we will produce, not only in quantity but in quality, every pound of wool America can consume and be an exporter inside of four years. [Long applause.]

Mr. Chairman, I recur at this point to the subject about which I spoke briefly a few minutes ago. I have been shocked and disgusted at one prominent feature of this elaborate debate. From the beginning to the end there has been a vein of argument running through speeches on the Democratic side manifesting, clearly, a purpose to bring about riots, strikes, insurrections, and bloodshed in this country. The farmers have been told that they are down-trodden and are being robbed, and gentlemen have stood upon this floor and declared that they would not stand it much longer, in language that meant—if it were not the idle vaporings of men without reason—that they favored the uprising of classes in this country to take vengeance for supposed wrongs against farmers and laboring men.

Now, Mr. Chairman, I want to denounce as utterly vicious and utterly wrong in every sense and from every standpoint all such appeals. This country is not the exclusive property of one class of people, and whenever statesmanship seeks to segregate into detached and separate combinations or organizations any one class of our people, it is an effort to destroy the prosperity of the whole. [Applause.]

The farmer of this country is interested in the wealth and prosperity of the manufacturer, and the manufacturer is deeply interested in the prosperity of the farmer, and the laboring man is deeply interested in the prosperity of both, and both are interested in the prosperity of the laboring man. The farmer depends upon the success of the manufacturer to furnish the market for his products. Without prosperity among farmers, the manufacturer has no market. Without prosperity among manufacturers and farmers, the laboring man has no prosperity of any kind.

So, Mr. Chairman, no legislation will meet the demands upon the statesmanship of this Congress that does not provide for the lifting of the burdens now resting upon the industrial and agricultural interests of the country. The farmer, the laboring man, the mechanic, the artisan, the men who create wealth and prosperity, are entitled to demand and receive at the hands of Congress careful consideration of their interests and just enactments for their benefit.

Mr. Chairman, there has been a good deal said in the course of debates about strikes among laboring men, and the fact that we have some strikes in the country occasionally has been pointed to as an evidence of a bad situation and bad blood among the laboring men of the country.

In the first place, I want to remark in this connection that combinations among laboring men for the purpose of bettering their condition as such are absolutely defensible and proper, provided, always, they are conducted in a peaceable manner and the management of the strike is kept within the bounds of legal conduct, and this we find has been the case with most of the strikes of modern times.

But this is not the important observation I desire to make. That which is important to this argument lies in the fact that laboring men do not strike when times are hard. When the strike is for wages they uniformly strike for a fair division of profits. So when you hear that there is an organization among the labor of the country and demands are made for higher wages you may always set it down as a fact that the business interests of the country are profitable.

There is no more intelligent people so far as labor interest is concerned than the laboring men themselves, and it is not a bad sign when they see, or believe they see, reasonable ground for demanding better remuneration for their labor. So much for the Democratic outcry that there are strikes in the country. Strikes may be wise or unwise. Strikes may be judicious or injudicious. Strikes may be beneficial or non-beneficial, but when they happen in a community like ours we who have lived in communities where strikes have taken place know perfectly well that there is something to strike about, and something to strike for, and something to strike at.

It was a magnificent spectacle that the world witnessed in the recent occurrence of Labor Day; millions of men throughout the habitable globe who create wealth were marching in long lines with patriotic banners at their head; but nowhere, so far as I know, on this continent or on the old, was there rioting, bloodshed, or disorder. They demonstrated to the world that they have an interest in the welfare of their country, and that patriotism is to them something more than a meaningless word. The people of the country gained confidence in the patriotism and virtue of the laboring man when Labor Day had come and gone. Let us stand together, the men of the shop, the manufactory, and the mines; the men of the farm and the men of the office; the men who produce and the men who consume; one common brotherhood of mankind, the one dependent upon the other; the consumer looking for his production to the producer at a fair price; the producer looking to the consumer for a buyer of his product at a fair price; all classes of individuals jealous of the rights of each other. So shall we build up and not pull down the common prosperity of our common country.

The issue, Mr. Chairman, in this contest is a very plain one. Under the pretense of benefiting the farmers and laboring men of this country, the Democratic party would open our seaports on one side to the introduction, free of tariff duty, of the manufactured articles of the older countries of the world. Temporarily, perhaps, there would be a reduction in price of some of the articles which the American farmers and laboring men use. As to many of them, however, we manufacture just as cheaply as any place in the world; in fact, the same may be said in the majority of instances.

The Democrats claim that clothing should be reduced. That proposition does not deserve respectable consideration at the hands of anybody. We have American cloth, and of American clothing manufactured by American workmen, now on sale in this country, you can buy a cheaper suit of clothes than in any other place in the world, and you can buy it cheaper now than at any time before in the history of this country.

The articles covering a long line of agricultural implements are manufactured here and are sold here cheaper than in any place in the world. That foolish idea that entered into the debate here that our manufacturers were sending their goods abroad and selling them cheaper than to the American people has been exploded over and over again. It is not true. It is absolutely false.

Now, it must be admitted by every candid man that in the item of sugar the American people are taxed the amount of revenue collected upon imported sugar, less, perhaps, a matter of 10 per cent. We pay for imports in one year about $54,000,000 on sugar. We raise only about one-tenth of the sugar we use, and my opinion is that there will be no greater production of cane sugar than there has been in the past unless the production is stimulated by the bounty. So in this case, as in all other articles that are imported into this country which we do not and can not produce in America and upon which there is a tariff tax, the consumer pays the tax; and this is true especially of sugar.

That is to say, nine-tenths of the sugar used in America is not raised here and can not be raised; at least it is not raised at this time; therefore nine-tenths of the fifty odd million dollars collected on the article of sugar came from the people of the United States. This bill puts sugar for the purpose of the consumer absolutely upon the free-list. So the Republican party, carrying out its principles, have concluded to relieve the agricultural interests, the laboring interests, and every other interest in the United States of this tax on sugar, and, in order that the production of sugar may not be discouraged and that the beet product and all the canes may be cultivated, as heretofore, we propose to put a bounty of two cents a pound on the production of sugar in the United States.

The country will save $45,000,000 at least the first year, and it may be more than that, and the industry will not be discouraged thereby. In doing this we test the question, moreover, of the effect of protective duties upon trusts and combinations; for the most flagrant and oppressive trust in the United States to-day is the trust in sugar. If it be true, as our Democratic friends claim that a protective tariff promotes trusts, then we shall strike down this great trust in this way. [Applause.]

All the Democratic legislation of the past forty years has not been so beneficial to the masses of people of this country as has this one article of the McKinley bill. [Applause on the Republican side.] So, Mr. Chairman, I claim, and I claim it with confidence, that this bill meets the demands of the people of the country and is a redemption of the pledges of the Republican party at Chicago. [Great applause on the Republican side.]

There is not in this bill any trace of favoritism to monopolies. It is a bill framed honestly in the interest of American labor, and, happily, it classes all qualities of American labor as entitled to just consideration. It is not strange that in the selfishness and greed of mankind we should have men here clamoring, even among Republicans, for special consideration of their special interests. It is not strange that the pathetic appeal that has been made here so often for free "raw materials" should have impressed itself upon some of our Northern brethren in a favorable light. Selfishness is a characteristic of humanity, and it is not strange that we find some of our friends occasionally talking about "free raw materials."

The greatest raw material used in this country to-day is bituminous coal and iron ore. Placing them on the free-list would drive out of employment one-half of the men employed in the mining industry of this country. I can not stand here and see the coal of New Brunswick and the products of the mines of other countries cross the rivers into this country and cross the broader line, the sea, to drive out the industries of my district and the country. The farmers of my district and my State have filed with me a summary of their demands, and I incorporate herein an official copy of the action of the Ohio State Grange, under date May 1, 1890.

COLUMBUS, OHIO, *May* 1, 1890.

To the Senators and Representatives in the Congress of the United States from Ohio:

GENTLEMEN: The executive committee of the Ohio State Grange, Patrons of Husbandry, in session this day, beg leave to inform you that we heartily indorse the action of our national legislative committee in demanding efficient legislation to prevent the adulteration of food, gambling in farm products, supression of trusts, and the complete remonetization of silver.

We also indorse the demand for such a revision of the tariff as will protect adequately agricultural products.

We also indorse the proposed amendment to the interstate-commerce law introduced by General C. H GROSVENOR, of Ohio.

We also urge the speedy passage of the Butterworth bill and the Conger bill as reported by the Committee on Agriculture.

Very truly, yours,

S. H. ELLIS, *Master.*
T. R. SMITH, *Secretary.*

It will be seen at a glance that the Republican majority on this floor is engaged in carrying out just what this document calls for. Already the Republican majorities of our committees have given the Butterworth and Conger bills their approval. Already we have given the tariff such a revision as will protect agricultural products. Already we have passed a bill for the suppression of trusts, and already we are on the highway to the passage of the silver remonetization bill.

Mr. Chairman, in conclusion, the Republican party has pledged itself to the doctrine of protection. It has made labor free in this country and will protect it. It has by the wisdom of its statesmen made the industries to blossom as the rose. It has stretched the results of American agriculture in waving fields across the mighty pathway of travel from ocean to ocean. It has dotted the great American plains with cottages, hamlets, and homes. It has brought into successful operation manufacturing industries sufficient in diversity and capacity to furnish all the products needed by the American people; and it will continue its benign influences. There may be tides of misfortune which will beset its pathway; there may be outbreaks of depression that may seem, for a time, to check the growth of this great system, but the Republican party looks over and beyond these incidents of political warfare, and athwart the horizon of the future it recognizes the bow of promise, the harbinger of assured triumph, and across its radiant span it reads with unfaltering faith and confidence, "Protection to American labor, American industry, and American prosperity." [Great applause.]

The Tariff.

REMARKS
OF
DAVID B. CULBERSON,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, May 20, 1890.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. CULBERSON, of Texas, said:

Mr. CHAIRMAN: I had occasion several days ago to submit some remarks upon the tariff and its relation to agriculture.

By associating the measure to extend the time for the deposit of distilled spirits from three to five years with interest upon the amount of the tax at the rate of 5 per cent. for the additional period, which was considered by the Forty-eighth Congress, with the existing laws upon the subject, an error of statement occurred which escaped my attention until after the remarks were published in permanent form.

The error consisted in the statement that depositors of distilled spirits for the period of three years or less were subject to the payment of interest at the rate of 5 per cent. per annum upon the amount of tax.

This statement was not material to the argument presented, but because it was erroneous and occurred from inadvertance I desire to withdraw it, and I avail myself of this opportunity to do so.

The Farmers and the Tariff.

SPEECH

OF

HON. JAMES W. COVERT.

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 12, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

The Clerk read as follows:

Muriatic acid, one-fourth of 1 cent per pound.

Mr. COVERT. I move to strike out the words just read.

Mr. Chairman, from the very commencement of this tariff discussion down to the time when my esteemed friend from Michigan [Mr. ALLEN] took the floor, the changes had been rung upon the existing depression of the agricultural interests of this country. I regret that I can not share the feeling which the gentleman from Michigan seems to entertain, that an improved condition in this regard will follow the passage of the McKinley bill in its present form.

If he exultation of which the gentleman speaks exists among the agriculturists of the country in view of the probable passage of this bill, it must be founded, it appears to me, upon an entire misconception of very many of the other provisions of this proposed enactment.

It is true, sir, that in terms and upon the face of the bill a few articles of farm produce are placed upon the dutiable list, and this is the whole measure of concession made to the most important interest in the country, an interest now languishing in a condition of serious paralysis.

My idea is that the best thought of the whole land will be that this is not the only way to proceed and this not the extent to go to remedy existing evils and to benefit the large army of workers in the field of agriculture. To benefit the farmer, to make his condition more prosperous, the necessaries of his home and farm life, what he consumes, what he wears, the implements of his labor, and what are the absolute essentials of his farm should be supplied to him at the lowest possible cost, and the heavy burden of taxation from which he suffers should be lightened and reduced.

My criticism upon this bill is that it holds out the shadow only of a benefit to the farming interests; that this shadowy benefit, embodied in bold type in this measure, has "a string at the end of it;" that when the toil-worn hand of the farmer is stretched out to grasp the good results which he fondly imagines are to come from the enactment of this bill he will find that these supposed benefits are wrested from him by the operation of other provisions in this measure. Whence do the benefits to agriculture come?

Not from the duties placed on wheat, or corn, or rye. Comparatively infinitesimal quantities of these productions are imported into this country, and these importations are, I apprehend, chiefly for seed purposes. If this be so, a duty upon these articles really militates against our farmers who may desire to experiment with foreign seed, and the same criticism applies with equal force to the duty of 40 per cent. ad valorem upon garden seeds, heretofore taxed at 20 per cent. only. Cabbages are taxed, it is true, at 3 cents per head, but the importation of this vegetable, in recent years at least, has seemingly been so inconsiderable as not to warrant any entry whatever in the departmental statistics bearing upon the subject.

Petition after petition from the farmers of my district has been introduced during this session asking that turnips, cauliflowers, Brussels sprouts, and other articles of field and farm produce should be placed upon the duty side of the list. These petitions have been considered by the Committee on Ways and Means with the result that no duty whatever has been established upon any of the articles last specifically mentioned.

What else is there in this measure, this bill which the majority claim is to be so beneficial to the farmer?

Sir, this proposed law contains a provision which it seems to me the best judgment of the whole country will pronounce to be absolutely iniquitous. Out of the hard earnings of the farmer he is called upon in common with his fellow tax-payer to contribute a bounty of 2 cents a pound on sugar for the benefit of the producers of that article in this country. Profound constitutional lawyers have held that the system underlying this bounty is unconstitutional; but, whether this be so or not, it requires no argument to prove that the provision is absolutely unjust.

Why should my constituents and the constituents of other gentlemen, who have petitioned for relief under this bill only to have their petitions rejected, be called upon to pay this bounty, which is to run for fifteen years, and which amounts, at the lowest estimate, to over $7,000,000 annually, for the benefit of the producers of another section of the country, who are no more entitled to bounty or protection than are the farmers of Long Island?

It seems to me, sir, that this one feature alone—unjust if not unconstitutional—ought to condemn this measure utterly and absolutely.

But let me proceed to the discussion of the amendment I have offered to the pending paragraph.

The distinguished chairman of the committee [Mr. MCKINLEY] in opening this debate said:

The agricultural condition of the country has received the careful attention of the committee, and every remedy which was believed to be within the power of tariff legislation to give has been granted by this bill.

Listen, gentlemen, while I try to explain the provision of the pending measure which my proposed amendment seeks to strike out and see "how plain a tale shall put you down."

This article, muriatic aci , and the article next following it, sulphuric acid, which also I propose to strike out, are two of the most important ingredients entering into the composition of fertilizers used by farmers throughout the entire length and breadth of the land. Never before in the history of tariff legislation, so far as my memory extends, has any attempt been made to place a duty upon either one of these articles. Why is it that, claiming to be the friends of the farmer, and contrary to the whole record of recent tariff legislation, you take bodily out of the free-list and subject to this heavy duty these two important articles entering so largely into the composition of fertilizers used by farmers every year in the operation of their farms?

Mr. GEAR. The gentleman from New York has stated that never before in the history of tariff legislation was there a duty placed upon these articles. The tariff of 1846, which was enacted, I believe, by a Democratic Congress, imposed a duty upon them.

Mr. COVERT. I stated that no duty had been placed upon them by recent tariff legislation. Let me say to the gentleman from Iowa [Mr. GEAR] in this connection that at the time to which he refers, over forty years ago, these articles were not used—nor was either of them—in the composition of fertilizers. [Applause.]

* * * * * * *

The Clerk read as follows:

Sulphuric acid, or oil of vitriol, one fourth of 1 cent per pound.

Mr. COVERT. I move to amend by striking out the clause just read.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. COVERT].

Mr. COVERT. Mr. Chairman, at once upon the conclusion of the remarks of my colleague [Mr. PAYNE] and again when the gentleman from Pennsylvania [Mr. BAYNE] resumed his seat, I tried to get the floor in denial of certain statements erroneously made by both these gentlemen.

The gentleman from Pennsylvania [Mr. BAYNE] has asked what agriculturists I speak for, and he has seemed to doubt my sincerity in speaking of the interests of agriculture. Let me say that, in the district I have the honor to represent, broad fields tilled by some of the brightest, most industrious, and most progressive farmers of the Union constitute a great part of the wealth of the district.

Mr. FLOWER. I am afraid some of these farmers have not of late had much at the end of the year.

Mr. COVERT. In some instances I fear that about all they had left, to use the words of another, have been "a few fence rails and an execution from the sheriff;" and they want an improvement of these conditions. [Laughter.]

It may not be of interest to the gentlemen who have in a sense challenged my position or to the members generally of this House, but I may be permitted to say in this connection that my earliest youth was passed in pretty hard work on the farm and that I feel fully competent to give object lessons in farming to any son of toil from manufacturing Pennsylvania, if not from "screaming Kansas." [Applause.]

I very much fear that instead of trying to digest the agricultural provisions of this bill my friend from Pennsylvania [Mr. BAYNE] has been seeing visions and dreaming dreams.

I know of nothing but this that could stand as a reason for his statement, and that of my colleague [Mr. PAYNE], that in offering these amendments I was acting in the interests of a syndicate interested in Canadian sulphur mines. Now, I want to say in the most direct and positive manner that I have not the fortune, good or bad, to stand here as the representative of a syndicate or to be interested in any way, directly or indirectly, in any manner or form, with any combination of gentlemen who are interested in any Canadian sulphur mine or in any other mine.

Mr. BAYNE. If the gentleman will pardon me, I did not say that he represented a syndicate.

Mr. COVERT. Will the gentleman be so good as to state just what he did say? Possibly I did not correctly understand him.

Mr. BAYNE. I said there was a syndicate in his district who had gone to Canada and established this industry and that in offering this amendment he was representing their interests instead of the farmers that he spoke of in his first speech.

Mr. COVERT. It is barely possible that somewhere in my populous district, in Queens, in Suffolk, or in Richmond, some of my constituents, industrious, forehanded, and enterprising, as I know them to be, may have invested some of their savings in Canadian mines. I hope so for their own sake if the investment is a good one; but I want to say in the fullest and most direct way possible that if this syndicate or association exists, or if any of my constituents have

made any such investments, I am not aware of it, and this is the very first intimation I have had of the fact.

Let me say again that I speak for the consumers of the article affected by this proposed duty, and I may add for the manufacturers of it as well. The Laurel Hill Chemical Works, owned and operated by the Messrs. G. H. Nichols & Co., are located in my district, and they are probably the most extensive chemical works in the United States. The Messrs. Nichols have built up a large and exceedingly prosperous business in the manufacture of fertilizers, absolutely without "protection." They have never asked it. They do not ask it now. But I ask for them and for all the manufacturers of this article, and I ask for the farmers of the whole land who are obliged to use it, that sulphuric acid, which is practically a raw material, be not subjected to this duty, which must largely increase the cost of manufactured fertilizers to every consumer in the land.

Gentlemen of the majority, do you know what you are doing and what you propose to do in this matter? Let me quote from the statement made by Mr. A. J. Wedderburn, representing the National Grange, before the Ways and Means Committee:

> I will explain to you what this means, and leave it to your ideas of equity and fairness whether such an outrage should be perpetrated upon the farmers of the country. Sulphuric acid is largely used in the manufacture of every ton of complete fertilizer. It will be plain that the cost of this important article would be increased not less than $1.14 per ton if the suggestion (65 per cent. tariff) was carried out. At a low estimate the amount of South Carolina dissolved phosphate, dissolved bone, and complete commercial fertilizers used by the farmers of the Eastern, Middle, and Western States is not less than 1,000,000 tons, and the increased cost to them would very nearly reach $2,000,000 each year. Further comment is unnecessary.

Every word which has been uttered on this side of the House in favor of my previous amendment to strike out muriatic acid from the bill applies with added force and emphasis to the item now under consideration. It is a much more important factor in the composition of fertilizers than the article previously considered. The duty sought to be placed upon it seriously and very seriously affects every farmer in the land. Again I say that if you of the majority are sincere in your professions you will show your sincerity by your support of this amendment.

If you desire to lighten the burdens of the farmer, if you desire to aid in breaking the bonds which fetter agriculture and to strengthen and promote its interests, I appeal to you, nay, I challenge you now and here to "let it appear so; make your vaunting true!" [Applause on the Democratic side.]

The Tariff.

SPEECH

OF

HON. GEORGE T. BARNES,

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 10, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. BARNES said:

Mr. CHAIRMAN: Protection for protection's sake may be defended by its advocates on grounds of policy, but it can never be sustained on the principles of justice. It necessarily divides the country into classes, those which are favored and those which are not. It is born of selfishness and it must necessarily breed disorder and discontent. History, Mr. Chairman, is replete in every age and under every form of government with accounts of the struggles between the privileged few and the great mass of the people.

SPIRIT OF PRIVILEGE.

The French Revolution and the civil commotions which followed greatly ameliorated the condition of the people of Europe. But this amelioration has not resulted in conferring on the people equal political rights. The good accomplished has rather been the extinction of the privileges transmitted from the feudal system and the relief of the people from the burdens which those privileges imposed. But the spirit of privilege is ever alive. Destroyed under one system it is revivified under another. It always seeks, however, through the agencies of government the acquisition of benefits for special classes, acquired at the expense of the many, whether they be the citizens of a republic or the subjects of an empire. In our time this spirit appears in the form of the money power. It now seeks, through the exercise of the fiscal powers of Government, concentration of wealth in the hands of a few at the expense of the multitude.

Our fathers, far removed from European influence, fondly indulged the hope that they could create a Government where all could equally enjoy its blessings and under which favored classes could not find existence. But in the creation of the Government they found it necessary to confer vast and varied powers of taxation, together with the great power of the regulation of commerce between the different States and with foreign nations. In the debates in the conventions of the different States which ratified the Constitution occur many evidences that there were those who foresaw how, through the exercise of these powers, vast individual wealth was to be secured. Thomas Dawes, in the Massachusetts convention, urged the adoption of the Constitution on the ground that under it New England would acquire the carrying trade between the States.

Warned by the history of the past, the framers of the Constitution sought to restrain the exercise of these powers by limitations as to the purposes for which they were to be employed, namely, to pay the debts and provide for the common defense and general welfare of the United States, and by providing that all duties, imposts, and excises should be uniform throughout the United States, that is, the burdens imposed should be borne equally alike. But power once bestowed is never restrained within the limits prescribed for its exercise. The history of every written constitution in this respect has been the same. Paper restraints are vain and futile. The powers are first exercised with moderation, but their limits are gradually extended, and selfish desire, leaping over written barriers, exerts itself with uncontrolled, if not undisputed, sway.

TARIFF LEGISLATION BEFORE THE WAR.

Such has been the history of our tariff legislation under our Constitution. The first tariff act passed, that of 1789, provided a general levy of duties of about 5 per cent. The highest duty on articles of luxury was 15 per cent. This moderate policy continued for a period of twenty years. The complications growing out of the Napoleonic wars in Europe and our own war with Great Britain established for a time non-intercourse with most foreign nations, and when peace came in 1815, it was deemed expedient to adapt the tariff to the new situation. A discriminating policy in favor of protecting certain industries was consequently introduced in the tariff of 1816. This, however, was a mere temporary policy; it was not a permanent system. This is clearly seen in the fact that while the duties laid on woolen and cotton goods were fixed at 25 per cent., the bill provided that after 1819 these duties should be reduced to 20 per cent.

The general rate of duties under the act of 1816 rose to 20 per cent., but it must be borne in mind that the war with Great Britain had forced upon us a heavy debt, which had to be met, and duties were still imposed with due regard to the limitations imposed by the Constitution. When 1819 was reached the manufacturer was unwilling to relinquish the advantage acquired. The protective spirit grew until finally the excessively high tariff of 1828 was passed, followed by the act of 1832, which imposed duties at an average rate of about 33 per cent. In 1833 the compromise act was passed which provided for a gradual reduction of duties for the next nine ensuing years, at the end of which time the uniform rate was to be 20 per cent.

But the act of 1842 again raised duties. This, however, continued in force only four years. In 1846, under the Democratic administration of James K. Polk, the Walker tariff, which provided for a low system of duties, went into operation, and was followed by the tariff of 1857, which provided for a still further reduction. During this period of low duties not only the increase in the prosperity of the country was marked, but there were equally marked evidences in the general contentment and constant employment of labor. Mr. CARLISLE, in the debate on the Mills bill, produced statistics based on the census returns of 1860, estimating that the reduction of duties of 1846 must have had their full effect by 1849 and were fully continued up to 1859, which covers the period of census returns for that decade, which conclusively establish these facts.

During this period woolen manufactures increased in New England 42 per cent., the number of hands increased 18½ per cent., and the total amount of wages increased 37 per cent. The value of cotton manufactures throughout the country increased 77 per cent., the number of hands employed increased 28½ per cent., and the total amount of wages increased 39 per cent. Thus the increase in the amount of wages was twice as great as its percentage of increase in the number of hands employed. Mr. Blaine, himself the great advocate of protection, bears this testimony in favor of the low tariff of 1846. Speaking of the flourishing condition of the country at the time of General Taylor's Administration he says in his Twenty Years in Congress:

> The principle embodied in the tariff of 1846 seemed for a time to be so entirely vindicated and approved that resistance to it ceased, not only among the people, but among protective economists, and even among manufacturers to a large extent. So general was this acquiescence that in 1856 a protective tariff was not suggested or even hinted by any one of the three parties which presented Presidential candidates.

Notice—for Mr. Blaine is careful in the use of language—that it was not the rates imposed, but the principle embodied in this bill, which was so entirely vindicated.

We thus see that the country commenced its history with a very moderate tariff, but that after the system of protection was introduced it gradually grew stronger and stronger, with some fluctuations, until

the reaction took place under the tariff act of 1846. But protection was not advocated then save as an incident to revenue and only as a temporary policy, until our infant industries should attain sufficient strength. In September, 1843, Mr. Clay, in a letter to S. F. Bronson, of Georgia, expressed the opinion that—

> There is no danger hereafter of a high tariff founded on the gratifying fact that our manufactures have now taken a deep root. In their infancy they needed a greater measure of protection, but as they grow and advance they acquire strength and stability, and consequently will require less protection.

Who can doubt if Mr. Clay was alive in our time he would be found among tariff reformers.

TARIFF POLICY SINCE THE WAR.

The moderate system introduced in 1846 would probably have continued but for the war. Our present tariff system is based on the war measures of 1864. The tariff act of that year, the internal-revenue act, and the loan of $400,000,000 were passed about the same time, and constituted, says a learned political economist, practically one measure, and that probably the greatest measure of taxation which the world has seen. The high duties imposed were granted as a compensation to the manufacturer for the high internal duties imposed upon his products. The internal taxes, with the exception of the taxes on whisky and tobacco, and also the income tax have long since been repealed, but the high duties on imports still continue.

"Gradually," says a learned professor of political economy—Professor Tanssig, of Harvard University—"as the organization of industry in the country adapted itself more closely to the tariff as it was, the feeling that no reform was needed obtained a stronghold. Many industries had grown up or had been greatly extended under the influence of the war legislation. As that legislation continued unchanged still more capital was embarked in establishments whose existence or prosperity was in some degree dependent on its maintenance. All who were connected with establishments of this kind asserted that they would be ruined by any change. The business world in general tends to be favorable to the maintenance of things as they are.

"The extreme protective system, which had been a temporary expedient for aiding in the struggle for the Union adopted hastily, and without any thought of deliberation, gradually became accepted as a permanent institution. From this it was a short step, in order to explain and justify the existing state of things to set up high protection as a theory and a dogma. The restraint of trade with foreign countries, by means of import duties of 40, 50, 60, even 100 per cent. came to be advocated as a good thing in itself by many who under normal circumstance would have thought such a policy preposterous."

The protective system was no longer to be used merely to prevent undue competition from abroad with home industries, but was used as a system prohibitory of foreign importations; and this system it is now sought to fasten permanently on the country.

UNEQUAL DISTRIBUTION OF WEALTH.

We already find that the country has become divided into the two classes of the immensely wealthy and the great body of the people reduced to comparative poverty. A writer in the September number, 1889, of The Forum says on this subject:

> Let us inquire whether there is any excessive concentration of wealth going on in the United States.

And in response to this inquiry he cites numerous facts, from which I select a few:

> As lately as 1847 there was but one man in this country who was reported to be worth more than $5,000,000; and though some estimated his wealth at $20,000,000 there is no good reason for believing it to have been so great. The wealth of his lineal descendants is estimated at $250,000,000. The St. Louis Globe recently published a list of seventy-two persons who were worth collectively the whole amount of our national debt, averaging $16,000,000 each. At the lowest reasonable estimate, there must now be more than two hundred and fifty persons in the country whose wealth averages for each more than $20,000,000. But let us call the number only two hundred. Income-tax returns in Great Britain and the United States show that in general the number of incomes, when arranged in large classes, multiplies by from three to five fold for every reduction in the amount of one-half. For extreme caution, however, we estimate the increase in the number of incomes at a very much lower rate than this. At this reduced rate the amount of wealth in the hands of persons worth over $500,000 each in the United States would be about as follows:

200 persons, at $20,000,000	$4,000,000,000
400 persons, at $10,000,000	4,000,000,000
1,000 persons, at $5,000,000	5,000,000,000
2,000 persons, at $2,500,000	5,000,000,000
6,000 persons, at $1,000,000	6,000,000,000
15,000 persons, at $500,000	7,500,000,000
24,600	31,500,000,000

> This estimate is far below the actual truth. Here are less than 25,000 persons controlling more than one-half of the wealth of the nation, which, at the highest estimate, does not exceed more than $50,000,000,000.

These figures are appalling in themselves, but when we contrast them with the decrease in the wealth of the agricultural classes as compared with the increase of our population within the past twenty-five years they become absolutely startling.

AGRICULTURAL DISTRESS.

No statement of amount of mortgages on farms, no picture of agricultural distress, universally admitted to exist, can convey to the mind a more accurate idea of the real situation in contrast with these figures than the figures based on official records lately produced before the Senate Committee on Agriculture by Mr. Polk, of North Carolina, the president of the Farmers' Alliance. In 1850 the value of farms in the United States was $3,271,575,421. In 1860 their value had increased to $6,645,045,007, showing an average yearly increase of $337,346,958. This was during the period when the Walker revenue tariff of 1846 was in force. In 1860 the value of farms in the United States was $6,645,045,007. In 1880 the value of farms was $10,197,036,776, showing a total increase in twenty years of $3,352,051,769, or an average annual increase of $177,602,588.

It was during this period that we had entered on and continued to maintain our present prohibitory tariff policy. In the one period there was an average annual increase of 10½ per cent., while in the other this average was reduced to 2½ per cent. From 1850 to 1860 farm values increased 101 per cent., from 1860 to 1870 they increased 43, and from 1870 to 1880 the increase was at the rate of 9 per cent.

These figures abundantly demonstrate that a vast body of the wealth of the country is being concentrated in the hands of a few favored classes, while the great body of the people, if not absolutely, are becoming comparatively poorer in each succeeding decade.

CAUSES OF THIS UNEQUAL DISTRIBUTION.

Mr. Chairman, this is said to be a republican government, a government of the people, established by the people, and for the people. Now, Mr. Chairman, how can these things be under such a Government? These results could only have been brought about by a perversion of the powers of government from their legitimate purposes to selfish ends. The war offered the opportunity for the exercise of governmental powers to bring about these results, and as a heritage of the war they have been perpetuated to our own time. Many causes operating through the exercise of the agencies of government have contributed through a long lapse of years in effecting these dire consequences.

But the two most potent of these causes have been the present contraction of the currency, through the demonetization of silver in the interest of the bondholding class, and our prohibitory tariff system. The first, by reducing the value of property and at the same time enhancing the value of gold, in the hands only of the wealthy classes, has enabled them to transfer vast quantities of property, purchased either in the market or at forced sales from the unfortunate debtor class, to themselves. This has been a more universal cause because it has generally operated throughout Christendom. Everywhere it has been an advantage the creditor bondholder, exacted of his debtor Government, and an advantage which war had given him the opportunity to exercise.

In England originally it came as a consequence of the Napoleonic wars. In our own time it came in Continental Europe as a result of the war between France and Germany. In our country, it came in 1873, as a consequence of the war between the States. But while the contraction of the currency—through the demonetization of silver—has been the most universal cause, operating alike in Europe and America, in concentrating wealth in the hands of the favored few, yet in our own land the prohibitory tariff system has greatly added to this result and aggravated its consequences.

The tariff is a tax imposed by the Government on goods imported into the country. The tax paid by the importer he adds to the price and with it a profit on the amount he has advanced to the Government as duty when he sells to the wholesale dealer. The wholesale dealer repeats the process when he sells to the retail dealer, and he in turn, each adding a profit for the advance of tax made by him when he sells to the consumer, so that the consumer finally pays not only the original duty, but the added profit of the different dealers through whose hands the commodity has passed before it finally reaches him. But the poorer classes of the community seldom buy articles purchased abroad. Nearly all their purchases are articles of domestic manufacture. But the domestic manufacturer, protected to the extent of the duty imposed on like articles sought to be imported from abroad, adds the amount of that duty to the price of his own manufactured product, and this additional price the consumer must pay. When the duty is paid on an article imported from abroad, the amount so paid goes into the national Treasury. When this additional price is paid on an article of domestic manufacture, this additional price paid by the consumer goes into the hands of the manufacturer.

The writer of the article in The Forum, from which I have already quoted, says that a sufficient cause for the immense and growing chasm between the rich and the poor of this country is to be found in indirect taxation. What he means by indirect taxation is when the burden does not fall directly upon the party upon whom the tax is imposed, but ultimately on the consumer. No stronger illustration of an indirect tax can be given than that of a tariff tax.

Now, let us test the accuracy of this declaration of this writer by a simple statement. Let us take the case of two parties, one a man of great wealth and the other a man of moderate circumstances. The one, A, has an income of $100,000 a year and spends, say, $20,000. Of this $20,000 he buys articles which would otherwise be worth $2,000,

but in consequence of a 50 per cent. duty imposed by the tariff he pays $3,000, or $1,000 additional, which is 1 per cent. of his income. Of course he makes great savings at the end of the year. B has an income of $1,000 per year. He buys articles worth $200, but in consequence of the 50 per cent. duty of the tariff he pays $300, or $100 additional, which is 10 per cent. of his income. The burden of tariff taxation in the one case is ten times as great as in the other.

It is there the chasm is ever widening, and under this system the rich are becoming richer and the poor poorer. The illustration I have made may be an extreme one, but it serves to show how, under the existing system of taxation, the process is daily going on which serves to increase and widen the chasm between the rich and poor in our country. When we consider how long this prohibitory system has prevailed—that during this long period this additional percentage of taxation has been paid by the one class as against the other—we begin to appreciate how the country has been divided into the two great classes of the rich and the poor to the extent that 25,000 persons own more than one-half the wealth of a nation of a population of 60,000,000, and he can not fail further to appreciate what a potent cause our tariff system has been in bringing about such a result.

THE MILLS BILL AND THE M'KINLEY BILL.

It is unnecessary, Mr. Chairman, to picture the distress which the unprotected classes must endure with such a system. Since the tariff discussion began with Mr. Cleveland's famous tariff message in December, 1887, all parties have conceded the necessity of a revision of the tariff. We are not left now to a platform, a declaration of principles, or even messages of Presidents, to understand the difference between the modes of revision which the two great parties of the country propose. The principles of revision recognized by the one party were embodied in the Mills bill two years ago; the principles of revision of the other party are set forth in the McKinley bill of to-day. We know the existing law, and we know the changes which each measure would make in the existing law.

While the Mills bill preserved the tariff system as the best mode of collecting the revenue and proposed moderate reductions on manufactured goods—for the average of reduction was from about 47 to 40 per cent.—it sought to reduce taxes on the necessaries of life. It placed salt on the free-list, which now in bags pays about 39 per cent. and in bulk 79 per cent. It placed tin-plate on the free-list, which now pays a duty of 1 cent per pound, equivalent to a duty of 33 per cent. It placed wool on the free-list, which now under different classifications pays duties varying from 28 to 69 per cent. It reduced the duties on steel railway bars from $17 to $11 per ton, thus cheapening transportation.

It reduced the duty on jute bagging from 3 cents a yard to three-quarters of a cent, and would have opened our ports to foreign-made bagging, and thus effectually have destroyed the jute-bagging trust. It placed cotton-ties, which under existing law pay a duty of 35 per cent., on the free-list. It helped the manufacturer by the introduction of free raw material, it helped the laborer by thus affording him constant and regular employment and by increasing the demand for his labor, and it helped the farmer by reducing the burden of taxation and lowering the cost on the necessaries of life for himself and family and his business.

Now, what does the McKinley bill propose to do? After hearing the representatives of the manufacturing industries throughout the country, who, as usual, represent themselves as ruined and cry out for more help, the Ways and Means Committee respond by presenting to the House this bill. The patient, enfeebled by former stimulants, is not to be restored to a normal condition by removing the causes which have brought about decay, but is to be resuscitated by again applying more stimulant. Instead of reducing taxation and opening our ports to foreign commerce, whereby our farmers can find new markets for their surplus products, duties are to be increased and a more stringent policy of prohibition is to be adopted. The most striking increases are possibly those in wool and woolen goods. While the Mills bill placed wool on the free-list, this bill increases the duty on all wools which we import.

The minority report of the Democratic members of the committee informs us that the lowest grades of woolen yarn, worth not over 30 cents per pound, are to be subjected to a duty of 112 per cent., while the most costly yarn will pay 72 per cent. One grade of coarse, cheap blankets will be required to pay 106 per cent., but the finest blankets will pay 72 per cent. The coarsest and cheapest woolen hats will be subject to a duty of 111 per cent. and the finest 73 per cent. Women's and children's cheap dress goods, with cotton warp, are to be taxed 106 per cent. and the finest 73 per cent. While jute for the manufacturer is put on the free-list, jute bagging for the cotton-planter is advanced from the present duty, equivalent to 44 per cent., to 47 per cent. If a trust could be formed by the home manufacturer of jute bagging under the present law against the cotton planter it is to be rendered still more easy to establish such a combine under the proposed law.

Take the case of cotton-ties. Under the Mills bill they were placed on the free-list; under existing law the duty is 35 per cent.; under the McKinley bill it is proposed to increase the duty to 114 per cent.

Tin-plate, which under the Mills bill was placed on the free-list, under existing law pays a duty of 1 cent per pound, and it is proposed under the present bill to increase this duty to 2.15 cents per pound. Under existing law, as we have no tin-plate manufactories in this country, all the duty raised, which amounted last year to over $7,000,000, goes into the Treasury. The bill now proposes to create this new industry at the expense of the people, and to impose double the present tax, which will shut out the foreign article, and which the consumer must pay in the form of enhanced price, and with a knowledge that this enhanced price goes entirely to the manufacturer, and not one cent of it will go into the public Treasury. Well, does Mr. MCKENNA, a Republican member of the committee, say in his dissenting views, that—

The bill protects even the hope of a production of some articles.

These illustrations must suffice, as there are one or two other features in this bill I desire to notice. The farmer is sought to be deluded by imposing a duty on farm products. The very object of protection is to prevent foreign competition in our own country, but there is no foreign competition in our country with our corn, our wheat, our rye, and our cotton, for of all these articles we raise a surplus. To impose a duty on these articles on the plea of protecting the farmer is a sham and a mockery.

One of the features of the bill is the odious and unjust bounty system. It proposes to give to the sugar producers a bounty of 2 cents a pound until July 1, 1905. This would impose a tax upon the country, on the estimated product of last year, of over $7,500,000, to be paid by the people. But as it is supposed this measure will foster production, the amount to be paid must increase from year to year, so that when production equals our present consumption the tax on the country on this account will reach the enormous amount of over $60,000,000. But why should a bounty be thus paid to one particular product? Why should not a like bounty be paid to the producers of cotton, of corn, of wheat, of hops, or any other article? The mere statement of the inquiry is sufficient to illustrate the injustice of the system.

But I can not dismiss the bill without calling attention to what is termed drawbacks. The twenty-fourth section of the bill provides that on all articles exported manufactured of materials upon which duty has been paid there shall be allowed a drawback equal to the duty paid on such materials, less 1 per cent. for expenses, to be paid only to the manufacturers or actual owner of the merchandise. This is at once an invidious discrimination in favor of the foreign consumer of our manufactures as against the home consumers, and it is a confession of the gross injustice of the whole protection system. When the manufacturer imports raw material from abroad, to be manufactured here, and then exports the manufactured article abroad he is virtually allowed the foreign raw material free, in order that he may compete with the foreign manufacturer, but when he sells that manufactured product in his own country he adds to the price of that product the entire duty on the raw material; and this the American farmer is compelled to pay. This bill virtually protects and benefits the foreign consumer and at the same time thus robs the American consumer at home.

REMEDY FOR THE SITUATION.

Mr. Chairman, this bill is emphatically in the interest of the favored and privileged classes against the great body of the people. What the country needs now is tariff reform which will reduce the burdens of taxation, an income tax so graduated that the wealthy bondholder who has become enriched through the results of the war shall pay off the large pension appropriations which the consequences of the war have imposed upon the country, the rapid extinction of the public debt upon which our banking system rests, and which must expire with it, free silver coinage, with an increased volume of currency, to supply the business wants and to revive the languishing industries of field and farm throughout the country. These matters have not concerned the framers of this measure. They tell us in the majority report that they have not been so much concerned about the prices of the articles we consume as they have been about fostering industries in the manner indicated in the bill. The bill may pass; it may ultimately become a law.

The hour of reform and amelioration may be delayed. It has been long delayed by keeping alive the passions engendered by the war. But as they become softened by time the people will see more and more clearly each day, whatever the Republican party may have been in the past, that it has now become the party of favored monopolies and privileges. The discussion of this subject will continue. Day by day the cause of tariff reform will strengthen, and at last the Democratic party, with its distinctive principle of equal rights for all under the Constitution, and special privileges to no class, will restore the Government to what our fathers intended it to be, a Government shedding its blessings on all alike and leaving individual effort unencumbered to work out its own prosperity. When that happy day shall come, with sectional passions allayed, the sun will shine on a people busy at home pursuing, without restriction, the avocations of their own choice and extending their commerce abroad over every sea, in transporting, free from prohibitory systems, the products of our own industry and bringing back in exchange the wealth of foreign and distant lands.

The Tariff.

SPEECH

OF

HON. WILLIAM D. BYNUM,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 13, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. BYNUM said:

Mr. CHAIRMAN: I move to strike out 30 cents and insert 15 cents per gallon.

The condition of affairs throughout the country calls for calm thought, honest conviction, and sincere deliberation. As the representatives of the people, holding within our grasp their welfare, we owe to them a higher duty than mere acquiescence in the tenets of parties or the platforms of conventions.

We are confronted with difficulties the correct or incorrect solution of which may bring prosperity and happiness or disaster and suffering to millions of people. The great problems which are presented to us are not likely to be correctly solved in the blindness of partisanship, the rancor of debate, or under the lash of the caucus, which enslaves freedom of thought and liberty of action. Patriotism will never consent to be influenced by the one or bound by the other in matters of such varied and vital concern.

To successfully treat any disease or affliction requires a correct understanding of its nature and its effects. These are ascertained by an examination of the condition of the patient. No other method can be pursued in treating diseases of the body politic.

Never in the history of our country has there been such a demand upon Congress from all classes, interests, localities, and industries for legislation in their behalf as at the present. Why is it that the workingmen have sent here a committee to guard their interests and to urge legislation in their behalf?

Why is it that the farmers have here representatives to watch legislation which may affect their welfare? Is it because Congress is supposed to be possessed of some peculiar or supernatural power to shower prosperity and wealth upon all, with injury to none? The people do not believe this; they know that the Government is and always has been a pauper; that it never had a dollar from the hour of its creation that it did not take from the earnings of some citizen. That it is incapable of conferring a farthing, directly or indirectly, upon one citizen that it does not by its strong hand extort from another is self-evident. The people know this and they know it to their sorrow. Through the favoritism of the Government they have witnessed the growth and development of combinations and trusts to limit the supply and control prices until the great body of the people have become dependent upon concentrated capital for many of the necessaries of life, and they demand that this favoritism shall cease.

A PROTECTIVE TARIFF A TRUST.

The present tariff law, which is a free-trade measure as compared with the bill under consideration, is the charter of the most gigantic trust that has ever been formed. The provision of the Constitution conferring upon the Federal Government the power to lay and collect taxes, duties, imposts, and excises to pay the debts and to provide for the common defense and general welfare was seriously canvassed by the ablest minds long before that instrument was framed and adopted. In urging such a power, Mr. Hamilton said:

> No mode can be so convenient as a source of revenue to the United States. It is agreed that imposts on trade, when not immoderate or improperly laid, are one of the most eligible species of taxation. They fall in a great measure upon articles not of absolute necessity, and being partly transferred to the price of the commodity, are so far imperceptibly paid by the consumer. It is therefore that mode which may be exercised by the Federal Government with least exception or disgust; Congress can easily possess all the information necessary to impose the duties with judgment, and the collection can without difficulty be made by their own officers.
>
> They can have no temptation to abuse this power, because the motive of revenue will check its own extremes. Experience has shown that moderate duties are more productive than high ones. When they are low a nation can trade abroad on better terms, its imports and exports will be larger, the duties will be regularly paid, and arising on a greater quantity of commodities will yield more in the aggregate than when they are so high as to operate either as a prohibition or as an inducement to evade them by illicit practices.

I doubt if a clearer or fairer exposition of the powers conferred by the eighth section of the Constitution can anywhere be found. In the opinion of Hamilton there would be no danger of the abuse of such a power. "Motives of revenue would check extremes." From the enactment of the first tariff law in 1789 down to 1888 no party ever claimed, no individual ever advocated that it was within the power of Congress to levy duties with a view to the destruction of commerce. Large imports mean large exports, and our forefathers were as jealous of the right to trade with foreign nations as they were of the right of representation with taxation. All that was ever claimed prior to the Chicago convention in 1888, which every delegate who has not received an office is now satisfied was a blunder from beginning to end [laughter], was that duties should be fixed high enough to put American manufacturers on a level with foreign producers.

It was not long after the first law, which fixed an average rate of 8 per cent., was enacted till the clamor was for more, and it has been for more ever since, although the average rate is now 45 per cent.

When the people revolted at this abuse of constitutional power, when they demanded that a system of taxation that had grown so exorbitant that a large surplus was being extorted from them each year by the Government should be reduced, the members of this great national trust shouted in tones of apparent agony, "free trade;" and every time you pinch one of the members of this trust that is robbing the people under the protection of law he cries out, "free trade," "free trade." This is the trick of the burglar who fires the old dilapidated structure upon the outskirts of the city to attract attention while he plunders the grand palaces in the center of their richest treasures.

"None but the friends of the protective system," shouted these cormorants, "should be permitted to revise this sacred institution!" The tax-payers had no rights to be considered. Their representatives, should they approach this monument of oppression and injustice, were to be treated as vandals. Only the protected barons, who had grown sleek and fat off of the producers of the country, should be consulted as to changes that ought to be made, and when the Committee on Ways and Means of this House undertook to frame this measure they issued invitations to the protected monopolists to come before them and tell them what they wanted.

They came! and they said, in substance, We want the sole right to plunder the masses of the people of this country, and they got it. We are plainly told by the majority of the committee that the objects of of this bill are not to obtain revenue, but to shut out importations; and, if we had not been told this, a glance at the provisions of it would be sufficient to convince us of that fact. Was there ever a bolder attempt to pervert to base and selfish uses a constitutional prerogative granted by the people to the Federal Government to enable it to protect their rights and properties?

Shall Congress increase and strengthen the powers of this combine to commit greater crimes against the helpless victims of its rapacity? Hamilton was unable to comprehend that this great power would be abused, that it would be subverted to enrich the few and impoverish the many.

What are the leading features of this measure? It is provided therein:

> That until July 1, 1905, there shall be paid from any moneys in the Treasury not otherwise appropriated * * * to the producers of sugar * * * from beets, sorghum, or sugar-cane grown within the United Stated a bounty of 2 cents per pound.

No longer does the robber seek to gather his plunder under the mask of protection. Boldly and defiantly has he thrown it from his face and in the open light of day proposes to exact his tribute in true brigand style. Where in the Constitution is the power to be found to tax one industry to support another? Why should the wheat-grower of the West be forced to pay a bounty of 2 cents per pound to the sugar-producer of the South and of the Pacific coast? Was it the purpose of the framers of the Constitution that the Federal Government should take from one citizen the fruits of his toil and industry and bestow them upon another?

If the right exists to pay a bounty of 2 cents per pound to the producers of sugar, why not a dollar a pound? If it exists to pay a bounty for sugar, why not for wheat or corn and other products? If the power exists to take one penny from the earnings of one citizen to bestow it upon another, why not to take without limit? Under our Constitution we have confidently believed that the rights of the humblest and the property of the poorest citizen were as sacred and secure as those of the loftiest and the highest; and until within recent years it was our pride and boast that no communistic sentiment was harbored by any class within the confines of our country. The civilized world was startled one morning when the news came that a band of socialists in one of our great cities had marched to Haymarket Square to proclaim on American soil their foul doctrines and that they had in their frenzy taken the lives of the peace officers who attempted to thwart their designs.

The leaders of this bloody conspiracy were tried, condemned, and executed. If this bill becomes a law the communist will no longer march to Haymarket square under the red flag, for which he may be taken to the gallows, but bearing aloft the Stars and Stripes he will march to the Halls of Congress, where under the forms of law he can carry out his doctrines of taking the property of one citizen and giving it to another, without fear of arraignment or dread of punishment. Once this power is recognized, no one can foresee the result to which it may lead.

There was produced in 1888 within the United States over 375,000,000 pounds of sugar; a bounty of 2 cents a pound would take from the Treasury annually over $7,500,000. It is but just I should say that the sugar-producers do not ask this bounty; they are as bitterly op-

posed to it as I am; they know that the only protection which an industry can constitutionally receive is that which is incident to a tariff for revenue. They know and the framers of this bill know that the people will never tolerate the payment of a bounty to any industry.

Why, then, this discrimination? The reason is plain: the tax upon sugar is a revenue tax, eight dollars out of nine paid by consumers go into the Treasury, and therefore this industry is to be thrown overboard. The duty upon sugar last year yielded over $54,000,000; if this can be gotten rid of the iron, the pottery, the oil, the steel, and other trusts and combines can extort for themselves $200,000,000 before the Government will secure the amount of its revenue upon sugar. I am for a reduction of the duty on sugar to the revenue standard, but never for a bounty.

TAXES INCREASED.

The rates of duty by this bill have been increased upon those articles consumed in greatest quantities by the people. The duty on pottery from 1857 to 1861 was 24 per cent. In 1861 it was raised to 25 per cent. In 1862, when the "temporary" war measure was enacted, the duty was increased to 35 per cent. In 1864 an internal-revenue tax of 5 per cent. was placed on domestic manufactures, and as a compensation therefor the duty was increased from 35 to 40 per cent. Soon after the war the internal tax was removed, but the 5 per cent. duty given as compensation for the same was not touched.

In 1883 the tariff commission fully investigated the pottery question. They found that the duty on packages increased the duty about 15 per cent. on the common grade of earthenware and that this was an unjust discrimination against the grades used by the masses of the people. In the revision of 1883 the duty on packages, crates, etc., was removed; and as a compensation therefor and as an additional protection the duties were increased to 55 and 60 per cent. The committee after having secured the passage of a measure restoring the duty on packages, which will increase the duty on the lower grade to 70 per cent., report this measure without making any reduction whatever. It can not be claimed that the increase is necessary to protect wages, because prior to the increase of 1883, when the duty was only 40 per cent., the operatives in this industry presented to Congress the following petition:

To the Senate and House of Representatives:

We, the operative potters of the city of Trenton, being convinced by experience that a high rate of duty on crockeryware yields no benefit financially to the workingman and is inimical to his interests in its effects in increasing the price of living generally, respectfully petition your honorable bodies for such a revision of the tariff as will reduce the rates on crockery to a revenue basis, etc.

It is a well known fact that the most prosperous manufacturers in the country to-day are those engaged in making earthenware, and yet they are to be given an increase of at least 15 per cent. upon the common ware. The pottery combine must have contributed handsomely to the campaign fund.

TIN-PLATE.

The duty on tin-plate is increased by this bill from 1 cent to 2.2 cents per pound. At the present rate the aggregate amount of duty on tin-plate is $7,279,459. The increase will add about $9,000,000 more, making the duty $16,000,000 or more. No tin-plates are produced in this country; all we consume are imported. Then, why such an increase? Why not give to the poorer people cheap tinware? Why not put this article on the free-list and enable our canning establishments to sell their products at lower prices and to enlarge their business by exportations? By so doing, they would employ more hands and pay higher wages. The majority of the committee inform us that the increase will enable us to make our tin-plate in this country and that twenty-four thousand men will find employment in the industry. Now, contrast the difference between the Mills bill, in which tin-plate was placed on the free-list, and this measure, which fixes the duty at 2.2 cents per pound. To produce the amount of tin-plate consumed by us in this country will cost the people over and above what it would had the Mills bill become a law $16,000,000. This expenditure, the committee tell us, will enable us to give employment to twenty-four thousand men.

For the sake of argument let us grant that the men that will secure employment are all idle. Sixteen millions of dollars divided between twenty-four thousand men gives to each $666. Now the average annual wages paid to each employé in this country is only about $330. Would it not be cheaper to pay these men the annual rate of wages to remain idle? In fact the whole tax would enable us to maintain forty-eight thousand men in idleness. The only purpose, I apprehend, in putting a man at work is to enable him to become a consumer of agricultural and other products; but if by free tin-plates we can secure two consumers by allowing them do nothing to where we could only secure one by making them work, where is the benefit in making them toil? Is not this a remarkable showing? But this is not all. The advocates of this tax assume that all the products imported are so much loss of wealth to the nation. They say by producing our tin-plates at home we will save $21,000,000, which we now send abroad.

In this idea is embodied the fallacy of the protective doctrine. They consider this as so much money sent out of the country, as so much lost. The truth is the loss of wealth is all the other way; by not buying this abroad, by preventing the exchange and compelling our workmen to make it. The twenty-four thousand men if unrestricted will manufacture other products. If they can produce tin-plates at a cost of $37,000,000 (twenty-one millions cost and sixteen millions of tax) they can produce thirty-seven millions' worth of products of some other kind.

If given an opportunity to exchange upon a fair basis they will export the thirty-seven millions' worth of other products, exchange twenty-one millions' worth of them for the tin-plates we must have, and have a surplus of sixteen millions of money or products they have taken in exchange to bring home and add to the wealth of the country. Instead of benefiting the country by this increase it would simply destroy the producing capacity of the twenty-four thousand men just $16,000,000.

What is the object of this enormous increase in tin-plates? It can not be because of that old threadbare argument that home competition will reduce the price below what we are now paying. The manufacturers of sheet iron and steel, who have enjoyed protection for years, are selling their product at 4 cents per pound. Ninety-five per cent. of tin-plates is sheet iron or steel, and yet we are paying to foreign manufacturers but 3 cents a pound for tin-plates. The only persons who will be benefited by this increase of duty are the manufacturers of sheets of iron or steel, who will be able to supply the tin-plate manufacturers at 4 cents per pound.

The sheet-iron trust has been well provided for by the committee.

TAX ON TOBACCO.

The duty on tobacco and manufactures of same has been increased from 81.50 to 152.46 per cent. The rate on Sumatra leaf used by cigar manufacturers has been increased from 75 cents to $2 per pound. The increase in the revenue on tobacco is $9,454,070. The farmers will derive no benefit from this increase. We imported in 1888 11,501,749 pounds of Havana and 7,093,393 pounds of Sumatra. Our farmers during the same year raised 563,794,264 pounds, of which they exported 262,683,821 pounds, nearly 15 pounds exported to 1 imported. The Sumatra leaf sold for $1.80 per pound, while the American wrapper-leaf commanded only about 25 cents per pound. Sumatra wrappers and Cuban filler-leaf is imported and worked up by our cigar manufacturers because our consumers will have nothing else. The great difference in the cost of imported and domestic tobaccos under the present rates ought to convince any person that one can not be substituted for the other.

A great majority of our smokers will use only the best of cigars, and if they are not made in this country they will be imported.

If the duties were reduced instead of increased, so that our manufacturers could afford to make a good five-cent cigar for export, our manufactures would be increased, a greater amount of domestic tobacco consumed, a larger number of operatives would find employment, and our farmers would find a better market for their surplus products. The increase of duties as provided will greatly cripple, if not destroy, an industry in which are engaged 150,000 employés. Drive these men from the bench to the field and where is the benefit to the farmer?

WOOL.

The duties on wool and woolen goods have been greatly increased. If it were possible for the wool-growers to derive any benefit from the increase of duty on raw wool, they are robbed of it twice over by the additional protection put upon woolen goods.

It is impossible to go fully into the details of the effect of a duty upon wool in a general argument, and I shall only touch upon the main points.

The committee state that we produced last year about 245,000,000 pounds of wool. The gross value of the clip was about $70,000,000. We are also informed by the committee that the number of persons owning flocks were in excess of a million. A division of the gross products between the wool-growers would give to each about $70 for his year's labor. This is certainly a thriving industry! This large number of wool-growers was, say the committee, to a considerable extent withdrawn from the business of raising grain and other farm products, to which they must return if wool-growing can not be profitably pursued.

It is conceding too much, however, to give to the shepherds credit for the entire product; capital invested in lands and flocks should be deducted; this would leave much less than $70 as the net income. At least $10 should be deducted, leaving the enormous sum of $60 per annum as the earnings of each man engaged in sheep husbandry. Evidently these persons were too busily engaged to do anything else. Think of it, 1,000,000 wool-growers at work constantly for 20 cents a day.

The fact is that except upon our cheap lands in the West the production of wool is not an industry of itself; it is a mere incident to the agricultural industry, and the profits from it, so far as the growth of wool is concerned, are less than those from the poultry that run in the barn-yard, taking care of themselves and costing nothing. A flock of sheep can profitably be kept on almost every farm, but the number will

not be largely increased; the price of lambs for food is too great, in this meat-consuming climate, to admit of their being kept simply for the wool they produce. The consumption of sheep is increasing in this country every year.

The tariff on wool has not increased the number of sheep. In 1850 we had 21,723,220 sheep, and in 1889 42,599,079. In 1850 we had a population of 23,191,876; so that with free wool we had nearly one sheep per capita, while in 1889, under twenty years of high protection, we had the ratio of only about two-thirds of a sheep per capita. The committee, however, inform us that the fleece is much larger than under free trade. This protective invention is a wonderful machine; it operates in mysterious ways and accomplishes marvelous results.

We imported last year, in different forms, about 350,000,000 pounds of wool, our consumption being about 600,000,000 pounds. The price of wool ever since 1867, when the high tariff was adopted, has been going down. The committee in their report say the industry was in a prosperous condition in 1883, but that since then it has been going down. The fact is, while there was a large increase in the number of sheep, incident to the discovery of the arid regions and opening up of our cheap lands in the West, the price of wool during all that time was going down and the number of sheep in the older sections of the country was diminishing, and it was only a question of time when the limit would be reached and we should start on the downward grade. It was reached, not in 1883, when the tariff on wool was reduced, but in 1884, when we had over 50,000,000 sheep, and since then the number of sheep has dropped to our present standard, and the production of wool from 308,000,000 pounds to 245,000,000. In 1886 we had 48,322,331 head of sheep; on January 1, 1889, this number had been reduced 5,723,252.

In the United Kingdom, where they have free wool and high-priced lands, they had, in 1886 28,955,240 head of sheep and in 1888, 28,936,716, a reduction of only 18,424 head. With free wool France had in 1885 22,616,547 sheep and in 1887 22,808,190, an increase of 191,643 head. How is it that with free wool the United Kingdom can maintain 235 sheep to the square mile, France 100 sheep to the square mile, while we in the United States, under high protection, can not maintain 14 to the square mile. The United Kingdom imported in 1888, 664,123,829 pounds of wool and exported 400,160,602 pounds.

Instead of prohibiting importations, of destroying trade, she opens wide her ports to the wool producers of the world, gives the greatest varieties and cheapest materials to her operatives to work up, furnishes commerce for her ships, and establishes within her city the wool market of the world, thus giving employment to millions of her people that might otherwise be out of work. We import more wool from the United Kingdom than from any other country; in 1881 we imported 24,556,110 pounds and in 1889 53,923,402 against 10,242,914 pounds from Australia, the greatest wool-producing country in the world. That we have been injured by the tariff on wool there can be no question. The production of domestic wool has been going down and the importations of manufactured goods, under a high rate of duty, going up. Last year we imported over fifty-two millions' worth, upon which we paid duties to the amount of over $35,000,000. The duty last year averaged 67.15 per cent., and by this measure it is proposed to increase it to 91.76 per cent.

Mr. Chairman, a large number of my constituents are wage-workers. In the railroad yards and shops, in the foundries, in the factories, in the mills, in the packing-houses, in the glass-works, and everywhere within the district I have the honor to represent are to be found hundreds of wage-workers, in a climate often severe and rigorous, and in their behalf I protest against a tax of 92 per cent. upon the clothing they and their families must consume. If such a burden upon those who toil year in and year out and see nothing but toil in advance is necessary to sustain an industry that now, confessedly, pays to those engaged in it but 20 cents per day, why should it be fostered at such a sacrifice? The injuries inflicted upon the people by this enormous tax are tenfold the benefits conferred upon the wool-growers. The prosperity of the people and the wealth of the country depend upon the greatest good to the greatest number, and we should legislate with that view.

The woolen industries under the present rates have been crushed. With an increase of duty on wool from 34 to 46 per cent. will they be any better off? Prosperity to the manufacturer can only come with prosperity to the consumer. The present rate of duty on wool has driven nearly every manufactory to the production of shoddy; it is said in many localities in the East not a mill can be found that has not a shoddy-picker attached. In 1870 the shoddy mills used about 19,000,000 pounds of shoddy and in 1880 over 52,000,000 pounds. Instead of increasing the production of wool we have driven the manufacturers to the use of substitutes, and by that means have reduced the price of domestic wool. In 1888 we imported 4,057,731 pounds of rags, shoddy, mungo, etc.; last year the receipts were more than doubled, 8,478,984 pounds coming in.

Not long ago a steam-ship with more than six hundred emigrant passengers on board was reported lost; days passed with no tidings, and a pall of sorrow and gloom began to settle upon the faces of those whose dear ones, it was believed, had gone down in the fathomless ocean. What a change, when the news was flashed across the ocean that, though the vessel had foundered in the storm, not a passenger had been lost, but that all had been rescued by the heroism of Captain Murrill, who had thrown his cargo into the sea and taken on board his ship every person on the ill-fated vessel, that was fast going down.

For this noble deed the gallant, generous, and brave captain was lauded by the press, banqueted by exchanges and municipalities, and honored by the people of the civilized world. I would not now pluck a single laurel from the wreath of honor and renown placed upon the brow of the generous-hearted commander for his noble sacrifice, but I confess that the sentiment and poetry of the deed, in casting his cargo overboard, was appreciably marred when I read that the precious freight dumped into the ocean was rags—rags out of which some manufacturer would have made all-wool cloth for a ten-dollar suit of clothes, to be exhibited, not worn, by the chairman of the Committee on Ways and Means as the beneficent result of a protective tariff.

The number of failures in the woolen industry within the last few years has been appalling, and the increased rates on wool will cripple if not destroy those that have withstood the crash.

The tariff on wool has not only been destructive of the woolen industry, but its effect on commerce and other industries has been incalculable. We can not trade to any large extent directly with wool-producing countries. Only certain grades of wool can be imported. It takes an expert to purchase wool for the American market. A trader who would take a cargo of our surplus wheat, machinery, or agricultural implements to South America or Australia and exchange for wool would likely be bankrupt on the first trip.

Wool containing a large per cent. of waste can not be imported except at a loss; consequently, the wool is gathered up by British ships and taken to London, where the American purchases, with freights, commissions, insurance, and interest, all going to the British dealer, added. No one can estimate the disadvantages of an unnatural trade. England to-day is our middleman; she takes more than half of our products and distributes them to other nations and purchases from them supplies which we must have. Her commissions freights, and profits off of our foreign commerce are sufficient to impoverish any nation. With free wool new life would be infused into every industry, our commerce would begin to grow, and a general era of prosperity would return to gladden the hearts and homes of our laboring people.

THE POLICY OF PROTECTION BY RESTRICTION A FALLACY.

It is beyond comprehension how a great party can tenaciously cling to a theory that is contrary to every experience from the foundation of the world. No nation has ever grown great, no people prosperous and intelligent except by trade and commerce. The efforts of the King of Great Britain to cut off the trade of the colonies from all parts of the world was a cause for rebellion. Ex-Senator McDonald, of Indiana, forcibly presented this thought, and I quote his words:

> In every age of the world the wealth and power of a nation have been judged more by the extent and character of its commerce than by any other standard; and in ancient as well as in modern times those nations that displayed the most enterprise in commercial pursuits have led the van in the march of civilization. Of the ancient nations the Phœnicians are undoubtedly entitled to the front rank as a commercial people. Their landed possessions were not important, consisting of a strip of country not more than 20 miles wide and 120 miles long, lying north of Palestine; bounded on the west by the Mediterranean Sea and on the east by the Lebanon Mountains, its whole extent did not exceed 2,000 square miles, and was little else than the foothills of the Lebanon range, with here and there a promontory jutting out into the sea. On two of those promontories were founded two of their chief cities, Tyre and Sidon.
>
> The mountains of Lebanon furnished them materials for constructing their ships; their supplies were drawn from the island city Cyprus, and soon the then known world paid tribute to them. Eight hundred years before the dawn of christianity they had reached the zenith of their power. Their colonies had been planted on both sides of the Mediterranean as far as the Pillars of Hercules. The most notable of these was the Carthaginian republic on the African coast. Their ships had taken the soundings of every bay and inlet of that sea and had passed through the Hellespont and the Bosporus and explored the Black Sea; but, not content with the land-locked waters of the Mediterranean and the Black Sea, they pressed their victorious sails through the straits of Hercules into the Atlantic Ocean, and sailed as far north as the British Isles. These cities became the workshops as well as the marts for the world's commerce, and the raw material brought from distant lands by their ships was turned into all manner of merchandise.

The benefits of trade are that it gives to the people of every country the same advantages of the natural growths and products of every climate, soil, and season round the globe. It brings to a nation the greatest diversity of industries, to the manufacturer the cheapest and best materials, to the laborer the greatest luxuries and highest wages, to the farmer the greatest number of consumers, to the merchant the greatest number of customers, to the country the highest prosperity, and to the people the greatest contentment and happiness.

The difference between the high protectionist and the revenue reformer is that the protectionist would keep out of the country those things which can, from natural causes, be produced cheaper abroad and compel their production at home, while the revenue reformer would take advantage of those laws and encourage the production of those things which can be produced at home at the lowest cost and sold abroad at the highest price, or rather exchanged for those things that are produced there cheaper than we can produce them. Trade is but an exchange of

products, and if we exclude what other nations have to give us in exchange we at the same time prevent our own people from selling to them. If the people of Australia can not sell to us their wool they can not buy liberally of us our agricultural implements, carriages, railroad cars, wheat, tobacco, lumber, etc.

We sold to them last year considerable quantities of these and other articles. In the city of Indianapolis is a manufactory of mill machinery in which is employed a large number of skilled workmen. The manufacturers two years ago supplied two or three mills in South America and Australia with machinery. While working in this shop the men received much higher wages than farm hands, because they were skilled workmen. The manufacturer, when he sold the machinery in these countries, received as much for it as he would or could in the home market.

Directly or indirectly this machinery was exchanged for the products of those countries, chiefly wool.

Wool is grown in Australia for 20 cents a pound; if the product of the laborers in the shops at Indianapolis was taken to Australia and exchanged for wool at 20 cents a pound, are not these men practically producing wool in that establishment for 20 cents a pound; are not they growing wool at the lowest cost for the highest wages? Wool can not be grown profitably in this country on the farms, so the Ohio farmer tells us, for less than 40 cents a pound. The farmers that sell breadstuffs and fruit to the people of Australia are raising wool on the very land they are cultivating, at the lowest price, if no duty had to be paid.

Now, the authors of this bill propose that the Government shall put such a tax on wool as that it will cost, when brought within the limits of our country, 40 cents per pound. By depreciating the purchasing power of the labor of our farmers and wage-workers one-half they claim they are protecting them.

This is the effect of a prohibitory tax as applied to materials.

It drives labor out of the most profitable industries and into those requiring less skill, it cripples manufacturers, reduces both production and consumption, and imposes upon the people the hardest conditions of life. Let the rates of duty upon articles of manufacture be sufficient to fully compensate for the difference in the labor-costs of production; if this does not yield a sufficient revenue, raise the balance from revenue articles, but keep hands off of raw materials which our manufacturers and workmen must have to make articles for home consumption as well as for export.

ATTEMPT TO DECEIVE THE FARMERS.

The monopolists, aware of the destruction and ruin that has been brought upon the agriculturists, are now attempting to play upon their credulity and make them believe that they have been taken into full partnership and that they will receive large dividends upon their investments. The farmers are told that this bill was framed with special reference to the protection of their interests.

FLAXSEED.

The duty on linseed oil used by the farmer is fixed at 30 cents per gallon, and the duty on flaxseed, which the farmer raises and which produces the oil, is fixed at 30 cents per bushel. This may appear all right to the farmer, but a bushel of seed produces 2½ gallons of oil.

The manufacturers, therefore, import the oil in the seed for 12 cents a gallon, while the farmer must pay 30 cents per gallon tax if he imports. The linseed-oil trust has been in existence about two years. Before it was formed oil sold at from 35 to 40 cents per gallon; to-day you can not buy a gallon at wholesale for less than 60 cents per gallon. The trust regulates the price of the seed, and by the aid of the tariff has raised the price of the oil almost a hundred per cent. The gentleman from Wisconsin [Mr. LIND], in the last Congress, upon the due proportions between the rates on oil and seed, said:

> One bushel of flaxseed will produce 2½ gallons of linseed oil. The protection on the linseed oil is 25 cents per gallon. Hence you will see that a bushel of flaxseed has a protection of 62½ cents. These rates are disproportionate. It is doing injustice to the farmer and to the consumer, and leaves a margin for the trust in oil.

Why is he not denouncing the rates fixed in this bill, which are a greater outrage upon his farmer constituents than the present law and not half as just as the Mills bill, to which he took exceptions? Under the provisions of the measure under consideration the farmer pays to the trust 30 cents a gallon tax or protection, while the trust brings in the oil in the seed for 12 cents a gallon.

The gentleman from Iowa [Mr. GEAR] says since the duty was increased on flaxseed oil mills have sprung up in his State and are prosperous. Certainly, and there is not a mill in his State that is not a member of the trust, and they are charging the farmers of that State 60 cents a gallon for oil, and he has aided the trust to maintain this price, while he has given to the farmers on their seed not one-half so much. This bill is full of just such protection as this to the farmer. [Applause on the Democratic side.]

The duty on wheat has been increased from 20 to 25 cents per bushel. This they say has been done to keep out the foreign products and secure the home market from ruin. Last year we imported 1,946 bushels, for which we paid $2.05 per bushel. I do not know for what purpose this wheat was imported. I have been told that flour from American wheat would not make noodles, and I presume this 1,946 bushels found its way here that we might have some fresh noodles and enjoy noodle soup.

The duty paid was $389; the increase of protection amounts to $97. This action of the committee has been heralded all over the country as a triumph for the farmers.

This great increase of protection on wheat I know will gladden the hearts of the farmers in Indiana, who in a single year have harvested over $50,000,000 worth of the golden sheaf.

And the duty on corn is raised from 10 to 15 cents per bushel. Thanks; we are going to hold our corn market too. Last year we imported 2,388 bushels, about as much as one man with a team could raise. I do not know what this corn was used for, but I know what would have become of it if it had ever reached Kansas.

The increased protection on corn amounts to $119. What wealth our farmers will harvest from the increase of duty on wheat and corn.

The duty, we are reminded, has been increased on cattle, sheep, and hogs. The idea of trying to keep a hog out with a protective tariff. Last year we imported $542,767 worth of cattle, $4,770 worth of hogs, and $1,189,192 worth of sheep; in all, $1,736,726. The duties paid on these importations were $347,344; the proposed rate would increase the duty to $926,724, a net increase of duty on corn, wheat, cattle, sheep, and hogs of $579,588.

The farmers are given a little over a half million dollars on five leading productions, which is of no benefit whatever to them, but unquestionably an injury, while the manufacturers of sheet-iron and steel are given $9,000,000 on tin plate.

Is there any farmer of so little intelligence as to believe that these importations affected the prices of the domestic products one penny? We exported during the same year $17,000,000 worth of cattle, sheep, and hogs, besides $44,000,000 worth of bacon and hams, $22,000,000 worth of beef products, and over $8,000,000 worth of other meats.

The rate fixed in this bill gives to the wool-growers $2,643,906 increase of protection, while it gives to the manufacturers of woolen goods $12,972,349 of increase.

SILK.

I admit, Mr. Chairman, that the committee has effected a great thing for the farmers by providing a bounty of $1 for each pound of silk as reeled from cocoons in this country and 7 cents for each pound of cocoons, scientifically known as *Bombyx mori*. But, Mr. Chairman, I am afraid the farmers I represent will not appreciate this effort of the committee. They are in fact a peculiar people. They have a fondness for raising two-year-old steers that will weigh 1,800 pounds, and nine-month-old pigs that will weigh 300 pounds, and large, fine draught horses, and I am afraid they will not abandon these and take to the *Bombyx mori*.

But, Mr. Chairman, the committee has been exceedingly kind in making a suggestion in relation to this. They say, "To produce the cocoons necessary will give temporary but remunerative employment to the families of half a million farmers every season." It is not the farmers they propose to put to work, but their wives and children. They have burdened the farmer till he is unable to keep up and they now graciously assume to provide work for his children, so that the bleeding process may continue awhile longer.

Having done so much for the farmer, they say to him, "Come now; let us join together and pass this bill and establish a home market for all our products."

The Secretary of Agriculture has discovered what that Department was created for and has issued a manifesto to the farmers calling their attention to the depressed condition of the agricultural industry and declaring that he will make war on the fellah of Egypt and the ryot of India should they attempt to invade our "home market."

The American farmers do not, and never will, compete with the labor of the peasants of Europe, the fellah of Egypt, or the ryot of India in the home market, but for years, while taxed upon everything they consumed of manufactures, have met them, in the sale of their products, in the European market, which fixed the prices for the whole world. A home market for our products! I had occasion some years ago to expose this sophistry and I can not improve upon what I then said, and I repeat it.

In answer to this claim Governor Whitcomb said:

> Let us see if the manufacturers can give us a double price for our produce. Let us see if they can consume it. In the good old times of virtue and simplicity the mother and daughter in a thrifty farmer's family did their own spinning and weaving, and were able to clothe their fathers and brothers. By modern improvements most of our clothing is made in the large manufactories. Now, suppose that two men engaged in manufacturing were able to clothe as many who might be engaged in raising provisions, and that they should mutually supply each other.
>
> But the thrifty farmer and his sons could easily raise a great deal more provisions than the whole family, men and women, could eat. Ten able-bodied men on our Western farms, therefore, can furnish far more than ten puny manufacturers could consume.
>
> But this comparison would be conceding entirely too much. Calculate the number of yards of clothing, the number of hats and pairs of shoes that the ten

farmers would use in the course of a year, and then how long it would take the ten manufacturers to make those articles. Now, the real condition of our manufactories makes the difference still greater. The great difference consists in the wonderful improvements made in machinery. It is ascertained that one man with a spinning machine can produce as much yarn as two hundred and sixty-seven men can each with a one-thread wheel.

Now, even if it took one manufacturer all his time to make clothing for one farmer, the same manufacturer with the assistance of a machine could make enough, from the above calculation, to clothe two hundred and sixty-seven farmers. But this labor-saving machine has but one mouth to feed (the man who tends it), and one farmer by planting a few more rows of corn could stuff that mouth into an apoplexy. What will the other two hundred and sixty-six farmers do with their surplus?

This was nearly fifty years ago. There has been greater improvement in the last fifty years.

In 1860 we produced about 171,000,000 bushels of wheat, less than 6 bushels per capita, while in 1880 we produced over 454,000,000 bushels, about 9 bushels per capita. The increase in manufactured products per capita has been equally as great. In 1860 we produced of manufactures $1,885,861,671, about $60 per capita, while in 1880 we produced $5,369,579,191, over $100 per capita.

In 1880 the farmers exported more wheat, including flour, than the entire crop of 1860. The increase in population from 1860 to 1880 was about 62 per cent, while the increase in manufactured products was over 350 per cent., and the increase in wheat over 375 per cent.

Upon one side the manufactories have multiplied until we can no longer consume their goods, and upon the other the farmers have, by the use of machinery and improved methods of farming, increased their crops until we are unable to consume their products. In this condition the manufacturers say to the farmers, "Give us protection and we will increase in number and increase the number of our employés till we can consume all your surplus."

But the manufacturers are already making more than we consume in many kinds of products.

Now, when they propose to increase their number, so as to be able to consume our surplus of agricultural products, will they tell us where and to whom they expect to sell their goods?

Suppose, Mr. Chairman, for the sake of argument, we could so adjust and so regulate production and consumption that for a single year the home market would be equal in supply and demand, what assurance would we have that the same results would obtain the next year? The condition of the winter is likely to reduce or increase the yield of wheat 100,000,000 bushels. A drought in the corn belt may reduce the corn crop 25 to 40 per cent.

The potato crop may be a failure any year. We might by a favorable season produce a large surplus over the standard we had fixed; the crop in Europe at the same time might be short; here would be a chance for the farmers, but, having established a home market, no ships either foreign or American would be plying between our shores and other countries; hence we could do nothing but consume the whole crop. Should we have regulated the "home market" by a favorable season, the next year might be an unfavorable one and our supplies fall short; this would be exceedingly embarrassing; we might at such a time be willing to see the ryot or the fellah come over and bring a few sacks of corn and wheat.

Production and consumption are matters that are a little difficult to control, at all times, and I submit that those who are engaged in this "home market" theory are likely to encounter some obstacles before they get things in perfect running order.

The thought of our having to play gluttons one year and of being put on half rations the next will not be relished by many.

WHAT HAS INJURED THE FARMERS' MARKET?

The farmers have not only been hoodwinked on the tariff question, but have been defrauded on other questions, and unless they align themselves with their friends, and that very soon, they will be sadly outwitted again.

In 1880 our farmers exported over 144,000,000 bushels of wheat, valued at $170,000,000, and flour valued at $35,000,000; total, $210,000,000; while Russia exported about 30,000,000 bushels, valued at $48,000,000, and British India about 14,000,000 bushels, valued at $16,000,000.

During that year the American farmers sold $210,000,000 worth of wheat and flour, while Russia and India sold $70,000,000 worth, a balance of $125,000,000 in our favor.

In 1888 our farmers shipped abroad about 50,000,000 bushels of wheat, valued at $44,000,000, and $54,000,000 worth of flour; total, $98,000,000; while Russia exported 126,000,000 bushels, valued at $119,000,000, and India 32,000,000 bushels, valued at $36,000,000. During the latter year the balance was against our farmers to the extent of $57,000,000.

Why is it that our farmers in such a short space of time have been almost forced out of the European market? The main reason is because of the unreciprocal adjustment of our tariff. But there is also another cause.

The demonetization of silver was a most serious blow to our agricultural industry. It was done in the interest of capital and against the producers and the debtor class. The conception and enactment of such a measure, when the people were recovering from the losses of a terrible war and the nation had outstanding $1,500,000,000 of bonds, payable in coin, truly illustrate the merciless greed of the money power to grasp the entire wealth of the country and reduce the people to the condition of slaves.

At the time silver was demonetized we had discovered vast deposits of silver ore in the Western Territories, and soon would have been able to resume specie payments without the ordeal through which we passed from 1873 to 1879. From the time of the demonetization of silver to the present time the price of silver bullion has been going down. In 1873 it was worth par, while to-day it is worth 79½ cents on the dollar. The partial restoration of coinage in 1877 gave some relief to the debtor classes by supplying about twenty-four millions of money per annum, but the coinage of that amount, being only about half our output, did not arrest the downward tendency of silver bullion.

From 1873 to the present we have exported about two hundred and twenty millions' worth of silver bullion. The farmers of India using nothing but silver and having but little of that, here was a grand field for the Europeans. They bought our silver at a large discount; passed it off in India at par; developed the agricultural fields there; built railroads and purchased all the wheat that could be raised, and are fast forcing the American farmers out of their market. It was the profit made upon our silver, which we should have coined into money, that has enabled the British Government to develop her possessions in India and to draw from there a great portion of her supplies.

The money powers have framed and have pending in this House a most cunningly devised measure for stopping the coinage of the silver dollar, without furnishing anything to take its place, and, like the tariff bill, it is all for the benefit of the farmer.

These are not the only insidious measures which the majority side have brought into this House and propose to enact into law. By maintaining the war tariff, which places high rates of duty on materials used in the construction of ships, our merchant ships have almost disappeared. The farmers are told that if we only had ships we would have commerce, and the surplus wheat, corn, etc., would find a market abroad, notwithstanding the ryot and the fellah.

The farmers of the West, influenced by this seductive argument, are expected to join in and help pass a measure now on the Calendar to subsidize ships. This bill provides that there shall be paid to the owners of American vessels carrying freights to foreign countries and returning from same 30 cents per ton for each thousand miles traveled. The practical effect of such a measure has been aptly illustrated by the gentleman from Alabama [Mr. WHEELER] in his minority report, in which he says:

Wheat could be transported from California or Oregon to Liverpool and receive a bounty of 20 to 25 cents a bushel. It would also be possible to ship wheat from San Francisco, Cal., or Portland, Oregon, to some South American port, and then reship to New York and other Atlantic cities, and receive from the Government 40 cents a bushel, thus militating against the wheat-growing interests of the Eastern States.

To illustrate, suppose a ship of 4,000 tons, with 1,000 bushels of wheat, sailed from Portland, Oregon, to some South American port, a distance of 7,000 miles; the ship would receive $8,400—that is, 7,000 miles at 30 cents a ton for every 1,000 miles sailed. The wheat could then be reshipped in a vessel of like character to New York, say 5,000 miles, and for this voyage the Government would pay $6,000. The same wheat could then be reshipped in a similar vessel for Liverpool, for which the Government would pay $3,600.

To illustrate the consequence of such a changed condition upon wheat-growing sections of the Middle and Eastern States, I will cite the following from a recent address by the president of the New York Produce Exchange: "The difference in the cost of a single penny in laying down grain at Liverpool may determine the question whether millions of bushels shall be supplied by this country or shall be drawn from the ample fields of Hungary or Southern Russia."

It would be well for us to inquire if under this bill, should it become a law, it would not become profitable to bring wheat from British India to New York. Coal could be brought from Nova Scotia and compete with American coal in all our Atlantic ports, and by the use of the Welland Canal could compete with our coal in all the lake cities. To illustrate, a 2,000-ton ship, carrying 500 tons of Nova Scotia coal for New York, would receive a bounty of $60, *i. e.*, 30 cents a ton for 581 miles, and the duty would be $375, thus entering the coal free of duty and leaving the ship-owners $ 25 bounty.

Iron ore could be brought from Spain and draw a bounty from the Government of $1 per ton, and thus transfer the iron furnaces to the Atlantic coast.

Let the farmers of the West contemplate for a moment the effects of this measure. The bounty on sugar pales into insignificance in comparison with it. They pay freights a thousand miles to the seaboard, and when their grain is landed there it may meet in competition the grain from some other country or from California or Oregon which they have been taxed to carry around the coast.

It looks, Mr. Chairman, as if the farmers of the Mississippi Valley were to be taxed until there was nothing left to tax but their taxes.

They are taxed to improve our harbors and then taxed to close them up with a prohibitory tariff.

They are taxed to prevent any commerce from coming to us from other nations and are to be taxed to send American ships after the same. Taxed to build up a home market, then taxed to tear it down.

Mr. Chairman, if prosperity shall ever return to our agricultural industry; if our manufacturers ever succeed in giving to the producers a better market for their products; if our wage-workers are ever given better wages and steady employment, it will not be done by a further exercise of the taxing power of the Government, but by taking off some of the burdens that have dragged them down until their appeals for aid are borne to us upon every breeze. Expansion, and not contraction, emancipation, and not coercion, deliverance, and not captivity, are what the industries, the energy, and the labor of the country require to restore them to a free and prosperous condition.

Newton W. Nutting.

REMARKS
OF
HON. THOMAS C. CATCHINGS,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 5, 1890,

On the resolutions of respect to the memory of Newton W. Nutting, late a Representative from the State of New York.

Mr. CATCHINGS said:

Mr. SPEAKER: A warm friendship existed between Judge Nutting and myself almost from the beginning of our acquaintance.

The first time I ever saw him was the day the Committee on Rivers and Harbors of the Fiftieth Congress, of which we were members, assembled for organization. I was immediately attracted by his uncommonly handsome face and figure and his quiet and modest though manly demeanor; and, seeking an introduction to him after the committee had adjourned, a long and to me most interesting conversation ensued. The acquaintance thus began soon ripened into a warm attachment, and many times after the labors of the committee for the day were finished did we linger in the rooms and exchange our thoughts and opinions and experiences.

He was a man of deep convictions, large information, and charitable judgment. Though our early environments had placed us wide apart as to many things, I found him singularly free from intolerance, a good listener as well as a good talker, patient in argument, and always courteous and kindly.

He was a very patriotic man, an ardent believer in American institutions, hopeful always of the nation's future (though not blind to the perplexing problems confronting us), and firm in the belief that a great people, though at times swayed by passion, will always in the end triumph over difficulty and danger.

His own early struggles and his own successes, no doubt, had laid the foundation in his mind and heart for his absolute faith in the destiny of his country. I found that he had been a careful student of history and had given great thought to all matters pertaining to the art and science of government. He discoursed upon this theme with great wisdom and eloquence, and would not admit a doubt as to the advantages of popular sovereignty. He believed that the people were the safest repository of power, and his admiration for the sagacity and wisdom with which the Revolutionary fathers had laid the foundation for our institutions was limitless. He rejoiced that the country was once more united, and was fond of drawing pictures of what it would be one hundred, two hundred, or three hundred years hence.

Both belonging to the legal profession, we naturally fell occasionally into the discussion of subjects relating to it. I found that he was not merely a thoroughly informed and equipped practitioner, but a jurist who had studied law as a great science, bearing upon all the relations of life, whether public or private, without which there could be no safety, no order, no government. He often spoke of the grave and solemn duties a lawyer owed both to his client and his state, and deplored the facility with which persons not fitted by learning or character were admitted to the profession, whereby its power for usefulness became so sadly diminished. I am sure that in the practice of his profession he reached the high standard he would have set up for all.

In his committee work he was always serious and earnest. While believing that it was the duty of the Government to provide its citizens with every possible facility for their commercial pursuits, he was careful always to see that under the guise of public improvements no fraud was countenanced or imposition upon the Government permitted. He was fair and just in all of his work, and commanded the unqualified respect and confidence of his colleagues upon his committee.

He shirked no labor, even after the hand of death had touched him and his end was almost in sight. During the second session of the Fiftieth Congress, when it was known to all (and to none better than himself) that he was fatally stricken, he was as devoted and attentive to his committee work as ever. The only difference to be noted was that he was more quiet and serious, and that now and then for a moment he would seem to forget his work and to be looking afar off at something that no eyes but his own could see. But not a complaint fell from his lips. He trod the path of duty to the end, without a thought of turning aside. During this period, however, the conversations with him which I had so frequently sought and had so enjoyed altogether ceased.

When not engaged in his Congressional work his mind and thoughts were given over doubtless to the contemplation of his past life and preparation for that strange one which he was so soon to know. And so the days went by. His step became heavier, the ruddy hue of health left his cheek, his manner became more and more serious, but to the last he bore himself as a dignified, courteous, and considerate gentleman. I never saw him after the adjournment of the Fiftieth Congress, but my sympathies and affections were with my stricken friend.

The story of his sickness and his suffering and his death would be the saddest that I have ever known were it not illumined by heroism, patient fortitude, and a christian resignation which emblazoned the end of his noble and well spent life with a halo of holiness and glory.

To me it will always be a pleasure to think of this dear departed friend. I wish that I could somewhat at least repay to his sorrowing family something of his unvarying kindness to me. But nothing is left save to give assurance of my affection for him and my profound sympathy for them.

The death of such a man as Judge Nutting is a great loss to the country he loved and had served so well. He was in the very strength of manhood, mentally and physically, when the shadow fell upon him. His ripe experience, his learning in all those things needed in the performance of high public duty, and, above all, his earnest and conscientious purpose, gave assurance that higher honors and loftier fame were within his grasp.

But while his onward and useful career was thus abruptly ended it should be a consolation to his friends to know that his useful and blameless life went out with honors and success crowding thick upon him.

He died in the enjoyment of fame, of the esteem of his friends, and in the hope of reward in that kingdom not made by the hands of men. It was a fitting end of a noble life.

Kansas and the Tariff.

SPEECH
OF
HON. BISHOP W. PERKINS,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Monday, May 12, 1890.

The House being in Committee of the Whole on the state of the Union and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. PERKINS said:

Mr. CHAIRMAN: I desire to supplement briefly some suggestions of my colleague [Mr. PETERS] in connection with the questions brought to the attention of this committee from time to time. During the discussions we have had upon almost every topic our friends on the Democratic side of the House have seemed to be extremely solicitous concerning the welfare of Kansas and its people. We learned many years ago to beware of the Greeks bearing gifts, and I am satisfied the arguments indulged in by our friends on the other side of the House in this debate will not deceive the farmers who are engaged in cultivating the fields of Kansas. It has been suggested here that they are paupers, bankrupts, and the objects of charity, and in listening to the suggestions of some of our Democratic friends upon this floor we would be led to suppose that they were ready to make contributions at once for the relief of the people of my State. What empty offerings!

Mr. Chairman, it is unfortunately true—and I am not here to controvert the proposition—that for five years or more the agricultural interests of this country have been depressed. In fact, every man who occupies a seat upon this floor knows that every day that Mr. Cleveland was President of the United States farms depreciated in value, every single day. [Applause on the Republican side.] Farm products were low and agricultural lands depreciated in value, and the farmers were without thrift and prosperity, and in Kansas, as elsewhere, we suffered from these conditions and from this depreciation. But, as my colleague said, the glad tidings now come from the prairies of the West that under the encouragement and inspiration of the proposed legislation of a Republican Congress conditions are improving [applause]; prices are advancing; despondency is giving way to hope; and we propose to give to the people of Kansas, as we propose to give to the people of this nation, legislation which will overcome in part at least the policy and spirit that animated and controlled the last Democratic Administration and which depressed agricultural efforts and reduced prices so generally in this country. [Renewed applause.]

Gentlemen on the other side talk of "strikes." It is true that there are "strikes," but they are "strikes" for higher wages, for shorter hours of work, for still better conditions. But who ever heard of such a strike in the old Democratic free-trade days. We heard of strikes then, but they were strikes for the opportunity to work; they were strikes for something to eat, not strikes for shorter hours of labor. In those days laboring people were glad to get the opportunity to work for any compensation, no matter how many hours' work might be required of them. But under the legislation that the Republican party has given to the people of this country we hear the workingmen say that the manufacturers and others can afford to pay them better wages than

they are receiving, that it is not necessary for them to work so many hours to sustain themselves, and hence we hear of strikes for better compensation and for shorter hours of work.

Our friends on the Democratic side cry out for cheapness. They say, "Let us give to the people something that is cheap." Why, Mr. Chairman, in my judgment, things are unfortunately too cheap in this country at this time rather than too dear. If wages were higher, if farm products were higher, if manufactured goods were higher, it would be better for us all. We would then, perhaps, enjoy an era of prosperity similar to that which we enjoyed immediately following the war. Then every man found an opportunity to work at good wages. Business was good, prices were high, and the avenues for the investment of capital were open to all. The desolation that followed in the wake of war gave, I concede, many of these opportunities. Old homes were to be rebuilded, waste places were to be rehabilitated, and new activities were to be organized and put in motion.

The military necessities of the Government had called 2,800,000 men from the fields of production and had marshaled them in the ranks of consumers. The Government had been one of the largest purchasers and consumers, but with the return of peace the armies were disbanded, and as the men were discharged they engaged in new activities, new enterprises. They became employers and operatives; and the five years following the war, because of these conditions, were the most prosperous and productive in our nation's history; and that prosperity was largely, if not entirely, the result of the influences I have indicated, and because of the legislation that the Republican party gave to the people of the country.

Mr. McCOMAS. Will the gentleman allow me one question?

Mr. PERKINS. With pleasure.

Mr. McCOMAS. Is it not the fact with respect to the farm mortgages in Kansas that most of them are dated between March 4, 1885, and March 4, 1889, the period of the Cleveland administration?

Mr. PERKINS. A very great majority of them were given during that period. [Applause on the Republican side.] And, as was admitted by the gentleman from West Virginia [Mr. WILSON], it was during that period that the trusts were formed, the trusts which have prostrated so many of the industries of this country and that were organized to foster and to fatten at the expense of the producing classes. As has been admitted in this debate, when Mr. Cleveland was inaugurated President there were but three trusts, and they were Democratic trusts: the sugar trust, the whisky trust, and the Standard Oil trust. The other trusts of which we have heard so much to-day have grown into life and activity under the encouragement and fostering care of a Democratic Administration.

But, Mr. Chairman, I desire to speak for a moment concerning the indebtedness of the agricultural sections of the country. It is true, as already suggested, that many of the people of Kansas are involved in debt. They went there as pioneers; they went there poor, hoping to secure lands under the homestead laws. Many went to the new and unorganized counties in the extreme western portion of the State and located upon the unoccupied lands. They were enterprising and progressive. They were not content with their condition. They wanted school-houses, churches, and the advantages of the old, settled sections of the country. To secure these they involved themselves in debt. They abandoned their original purpose to take their lands under the homestead law, and the most of them entered them under the pre-emption law. To accomplish this they necessarily borrowed the money and mortgaged their homes as security, and it is of these mortgages that we hear so much to-day. Rates of interest were high, and in consequence of low prices and unfortunate seasons these pioneers, as well as farmers generally, found it difficult to meet their obligations, pay their taxes, and preserve their homes.

Last year we had a bountiful harvest; our farmers raised almost enough to feed the world, but prices had been depressed until they were lower than at any time since 1860. Hence the bountiful harvest did not bring to our farmers the relief they had hoped for and expected. Corn sold for 10 cents a bushel, fat cattle for $2.75 per hundred, wheat for 60 cents a bushel, and other products correspondingly low. Can we wonder that at such prices the farmers felt dissatisfied and complained? Can we wonder that they ask for favorable legislation? But it gives me pleasure to bear testimony to the intelligence and integrity of the Kansas farmers, and in most instances they promptly met their obligations when due, and, in fact, reduced the amount of their mortgage indebtedness. I will send to the Clerk's desk and have read a few extracts from Kansas papers proving this statement.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PERKINS. Then I will ask, Mr. Chairman, to be recognized again in a few minutes for the purpose of continuing this subject.

* * * * * * *

Mr. PERKINS. I move to strike out the last word, and would like to have the Clerk read the extracts I have sent to the desk.

The Clerk read as follows:

Register of Deeds Flora reports that for the month of April there were placed on file in his office chattel mortgages amounting to $22,486.20 and there were canceled from the record $50,221.58, making a difference in favor of those released of $27,735.38. This is another cold and chilling fact for those to swallow who have been harping on the woes of the people and asserting that the country was rapidly going to financial ruin. The report for the month of April is but a repetition of the showing for several months previous and is gratifying in the extreme.—*Oswego Independent*, May 8, 1890.

NOT A BAD SHOWING.

During the month of April there were seventy-six farm mortgages released in Crawford County and forty-two placed on record.—*Girard Press*, May 15, 1890.

THE DISTRICT COURT.

The district court will convene next Tuesday. There are eighty-four court cases on the docket, thirty-three jury and twelve criminal cases. The docket is a light one. This is particularly the case in suits for foreclosure of mortgages.—*Parsons Sun*, May 3.

THE BOTTOM FACTS.

The faith of the Republican in its belief that the farmers of Kansas were getting out of, instead of into, debt, which led it to examine and publish the record of recorded and released mortgages in Franklin County, is bearing fruit elsewhere.

The Girard Press has made a like examination for the past few months in Crawford County, and finds the same condition of facts discovered by the Republican here, namely, that the "dead center" had been passed and the machinery of mortgage liquidation fairly in motion again.

The Press reports for the month of February, 1890, forty-four farm mortgages recorded and sixty-two released. For the month of March, 1890, forty-seven farm mortgages recorded and eighty-three farm mortgages released.

The total sum of the mortgages recorded in the month of March was 28 per cent. less than those released. This is a showing which tells a story of fact, not fiction, and should check the epidemic of unreason and demagogic howl which has sought political capital in magnifying misery, impairing hope, undermining faith, and destroying individual and public confidence and credit.—*Ottawa Republican*.

Mr. PERKINS. These extracts are but samples of those that might be taken from papers published in every county of the State, and I introduce them now to show whether they corroborate the accusations that have been made upon the floor of this House or not. The accusations that have been made upon this floor are but repetitions of the slanderous accusations that were made in the campaign of 1888; in fact the very statements appearing in the press and repeated upon this floor were formulated as a campaign document by the chairman of the Democratic State central committee of Kansas in 1888. He circulated it as a political document in all sections of the country, making these same charges and defaming and dishonoring the reputation and credit of his own State, and the people at the ballot-box answered these slanderous accusations in tones of condemnation by giving to President Harrison and the Republican party 82,000 majority. [Applause on the Republican side.] Our Democratic friends should learn that the people of this country like decency and justice and that they have but little love or respect for birds that befoul their own nests, and in my judgment the people of Kansas and of the country generally will return an answer to these slanders when they get the opportunity of doing so that will not be particularly encouraging to the free-traders of the country. [Applause on the Republican side].

Mr. Chairman, the people of this country want the Republican party in power to give to them legislation that is responsive to their aspirations and in harmony with their interests. They believe in protecting this country because it is their home. They believe in the doctrines of the Republican party because that party believes in the people and in the Government of the United States. The Republican party says that our home extends from the Great Lakes upon the north to the great inland sea upon the south, the Gulf of Mexico, and sweeps from the rock-bound coast of the Atlantic to the golden sands of the Pacific, and for it we should legislate and work. To make this people prosperous and happy should be our ambition.

Here we have more than sixty million people who constitute and make up this great Republic of America. These people believe in legislating so that as among ourselves we will have free trade. No State lines shall stand as barriers, and county lines shall not be interposed as objections to free and unrestrained commerce and traffic among ourselves. We will buy and sell, barter and exchange on terms of equality and as inclination and a spirit to better our condition prompts and moves us. No man representing the Government of the United States will be permitted to stand at an American workshop or an American factory and, in the name of the Government, impose taxes or restrain trade. But as to the people who live abroad, beyond the ocean, who constitute no part of us, who invest their money and pay their taxes abroad, who employ European labor, and who do nothing to contribute to the growth and prosperity of this country, as to them we say, when they bring their wares, manufactured goods, and agricultural products and desire to sell them to us in this great home interior market of ours, let them pay for the privilege. [Applause.] Is this wrong?

Is not this patriotic and American? And this is all there is in the Republican doctrine of protection. [Applause on the Republican side.] And when those men who live abroad have paid for the privilege of selling in this great home market in competition with our farmers and manufacturers we will cover the money into the Treasury of the United States and with it we will carry on the concerns of our Government, and will do justice to the men who wore the blue and defended their country against treason and rebellion. [Applause.] And we will do this in the name of patriotism and our country, because we believe it right. [Loud applause on the Republican side.]

[Here the hammer fell.]

Mr. DOCKERY.

* * * * * * *

Now, one word in reference to Kansas. I have no desire to obtrude any suggestion of mine with reference to the delicate financial troubles of that State; for I respect the Kansans that I know, in the main, especially some of the gentlemen who represent that State on this floor. But I want to say to the gentleman from Kansas [Mr. PERKINS] that among the most prosperous years which Kansas has known, to my knowledge, were two of the years under the Administration of Grover Cleveland. [Applause on the Democratic side.] I traversed that State myself looking for investments, and Kansas soil commanded during those two years five to ten times the price that Missouri soil did; and there is none better on the face of the earth than the soil of my section of Missouri.

Mr. PERKINS. Will the gentleman permit a question?

Mr. DOCKERY. The gentleman will not deny this statement.

In one of the years of the Administration of Mr. Cleveland there were constructed in the State of Kansas over 7,000 miles of railroad. The whole State was honey-combed with railroads. Prosperity was visible on every hand. The prices both of real estate and farm products were exceedingly satisfactory. Everywhere peace and contentment were to be seen. And in those years no corn was burned by the farmers of that State.

* * * * * * *

Mr. PERKINS. Mr. Chairman, I thought before this debate closed the music that we have heard with such united chorus from the other side of this House would change. From the opening of the session to the present time we have heard nothing from that side of the House but a cry of bankruptcy, ruin, mortgages, taxation, and death. But now, according to the argument of my good friend from Missouri, two years ago the farmers of Kansas were enjoying an era of unexampled prosperity and farm lands were so high that he could not think of investing even a dollar in them. [Applause.]

Why, according to his confession they brought ten times as much in Kansas as they brought across the line in Missouri, where he claims the land is equally good or better. I am willing to confess to the truthfulness of his accusation in part, and I am willing to give him here and now an explanation. Kansas was then, is now, and will be hereafter a Republican State. [Applause on the Republican side.] Across the line in Missouri bourbonism dominates and controls, and the advocates of free trade and cheap labor are in the ascendency; as a result its lands do not increase in value and progressive immigration does not look to it as an inviting field. [Applause on the Republican side.]

But, Mr. Chairman, I do not desire to speak unkindly of my neighbors and will call attention to some pleasing figures concerning my own State which further answer the slanders repeated from day to day.

The aggregate bonded indebtedness of Kansas is less than one million dollars; it is $801,000, and our bonds bearing a reasonable interest bring a premium in all the money markets of the world. Last year we expended for school purposes, as a State, $5,137,460.87. [Applause.] In fact we spent more for school purposes than most of the Democratic States disbursed for all purposes. [Laughter and applause.] In every little town in Kansas we have better buildings for our common schools than most counties in the Democratic States have for county purposes and for their courts of justice. [Laughter and applause on the Republican side.]

We have a school fund in the State that owns in bonds bearing from 5 to 7 per cent. interest $5,321,440.77. We have due to the State school funds in consequence of school lands sold $3,000,000, and we have unsold school lands aggregating in value $600,000 more. These are some of the advantages that we possess as a people; and perhaps this is in part an explanation of the statement made by my friend from Missouri, that he found our homes so prosperous and contented and our lands so valuable. One gentleman upon the floor a few days since stated that the aggregate mortgage indebtedness of Kansas was $13.50 per acre. Why, there is not a Democratic State in this Union in which the average value of farm land is $13.50 per acre, unless it should be New Jersey, and yet, according to the statement of our Democratic friend, in Republican Kansas, we have been able to mortgage our farm lands for more than they are worth or will sell for in any Democratic State in this Union. This is a great compliment to our young and growing State, but it is a very great exaggeration as to the extent of our mortgage indebtedness. My friend from Missouri [Mr. DOCKERY] suggested that in one single year over 7,000 miles of railroad were built in Kansas under Mr. Cleveland's Administration. Mr. Chairman, I am sorry to dispel the illusion. I am willing to admit that Kansas is a great State, but the truth of history compels me to confess that we have only a few more than 8,000 miles of railroad in our State at the present time in the aggregate. [Laughter and applause on the Republican side.] This is more than any other State has, with one exception, and speaks of the energy and ambition of our people.

It is for this wonderful State I speak, and in the name of her intelligent and patriotic people I protest against the slanders that have been repeated upon this floor and elsewhere to the prejudice of her credit and to the detriment of her growth and prosperity.

A few more figures, Mr. Chairman, concerning Kansas, figures collated by our State board of agriculture in 1887. I will take five counties and give the estimated value of the farms and the estimated value of the farm products for that year:

Counties.	Value of farms.	Product of farms.	Per cent.
Saline	$5,119,656	$1,674,686	32.7
Labette	4,344,613	1,802,117	41.7
Ottawa	3,082,216	1,306,521	42.3
Kingman	2,897,261	1,611,134	55.7
Sumner	7,556,776	3,854,112	51.0
Total	22,980,522	10,248,574	44.6

The estimated value of the farms is a low one I confess, but upon the estimate given the farmers living in those five counties in Kansas raised in a single year in farm products 44.6 per cent. of the aggregate value of all their farms.

For the entire United States the same year the estimated per cent. was but 22. These figures tell a tale that can not be answered and tell why it is that our State has had such a wonderful growth and development.

But, Mr. Chairman, I desire to give a little attention to some of the free-trade sophistry of this debate. It is claimed by our free-trade friends that the tariff has depressed the price of agricultural products, while it has added to the cost of living and to the cost of agricultural machinery and implements used upon the farm. No assertion is more easily disproved than this, and yet our British free-trade friends repeat it from day to day with an appearance of sincerity and with the apparent hope of deceiving the farmers by its constant repetition. In answer to this statement I will send to the Clerk's desk and have read an editorial which appeared in the New York Tribune on the 9th instant, and in which some figures are given that should for all time to come silence this illogical and silly proposition.

The Clerk read as follows:

PRICES TO FARMERS.

If the depression of agriculture is in any measure due to the tariff, as some assert, prices will tell the story. That test free-traders invariably try to evade. Prices ought to be lower than at any former time, they admit, but would have been lower still if duties had not prevented. But if prices generally "ought to be lower," what sense is there in attributing the low prices of farm products to the tariff? When prices of products which the farmer buys at different periods are compared, and also prices of products which he sells at the same periods and in the same markets, if the decline in what he buys is less than in what he sells, it is conclusive proof that the tariff, at all events, has not plundered him.

Such a comparison has been made by the Fort Dodge (Iowa) Messenger, which deserves attention as a useful contribution to that knowledge of the facts without which reasoning of value is impossible. The prices of 1880 at Fort Dodge are compared with those charged or paid there this year. Some of the figures are here arranged in tabular form.

Farm implements and supplies.

Articles.	1880.	1890.
Self-binder	$315.00	$130.00
Corn-planter	80.00	40.00
Riding cultivator	45.00	25.00
Wood pump	15.00	6.00
Farm wagon	85.00	50.00
Spring wagon, two-seat	160.00	75.00
Iron nails, per keg	6.00	*2.80
Cook stove	33.00	24.00
Milk pans, per dozen	2.25	1.00
Salt, per barrel	2.25	1.25
Flour, per cwt	4.50	2.50
Barbed wire, per pound	.10	.04
Plow steel, per pound	.13½	.06½
Sugar, granulated, per pound	.12½	.07
Kerosene, per gallon (150° test)	.25	.13
Muslin, unbleached, per yard	.08	.06
Calico, per yard	.07	.05
Gingham, per yard	.12½	.10

* Steel.

Farm products.

Products.	1880.	1890.
Corn, per bushel	$0.18 to $0.20	$0.18 to $0.20
Oats, per bushel	.21	.18 to .20
Flaxseed	1.25	1.15 to 1.25
Hogs	3.50 to 3.75	3.50 to 3.72
Cattle	3.00 to 4.00	2.50 to 3.50
Eggs	.07	.09
Butter (roll)	.16 to .18	.16 to .20

As respects farm implements, it is stated that the full list shows a decline of 33 to 60 per cent.; that window glass is 25 per cent. lower than in 1880, household hardware 25 to 60 per cent. lower, crockery 25 per cent. lower, tea 30 per cent. lower, and tobacco 35 per cent. lower; that in ready-made clothing the decline has been from 30 to 50 per cent., in boots and shoes 33 per cent., in furniture 25 to 50 per cent., and in lumber, drugs, and all the articles that make up the farmer's expenses there is not a single exception to the rule of lower prices. The aggregate decline in all the things he has to buy is obviously far greater than the decline in the prices of things he has to sell.

For the accuracy of these figures the Fort Dodge Messenger is responsible, but they correspond as to other than farm products with tables of prices recorded at New York, for the latter tables show since 1880 an average decline of more than 25 per cent, in all the articles not produced on the farm. Meanwhile the fall in prices of farm products at this city has been much greater than on the farms, because of cheaper transportation, but no record yet obtained of prices on the farms has indicated a decline nearly as great as that shown in the products which the farmer has to buy. The net result is that the farmer gets more for his labor than he could get ten years ago. He actually gets more for his products, reckoned in the things he wants to buy, than he could get ten years ago, and far more than he could get thirty years ago under a revenue tariff. Not one of the tariff agitators ever ventures to examine or combat such comparisons as these, but they go on asserting that the farmer is plundered by the tariff all the same.

Mr. PERKINS. Again, Mr. Chairman, our Democratic friends claim that those who stand by the American doctrine of protection favor high prices for the necessaries and every-day articles of life, while they ask for cheap luxuries. This assertion does not rise to the dignity of argument and scarcely deserves notice, but permit me to call the attention of the House to one familiar illustration in answer and refutation. When the Democratic party laid down the reins of government on the 4th day of March, 1861, after an almost uninterrupted control for fifty years, our people were compelled to pay 15 cents a yard for a poor quality of English calico, or perhaps 12 yards for a dollar. If a farmer's wife needed a new dress and the farmer could raise a dollar, he gave it to her and she bought 8 yards of calico and made her a Democratic dress. [Laughter.] Eight yards in those old Democratic free-trade calico dresses, and they cost a dollar. [Laughter.] We all remember how they hung about the limbs of the good-looking ladies of those days.

Why, when Abraham Lincoln was inducted into office and with uncovered head and uplifted hand he swore he would support the Constitution of the United States and defend it against its enemies, and the patriotic ladies of the land desired to manifest their joy and step to the music of the Union, they could not do so without splitting in twain the skirts of those old Democratic dresses. [Laughter and applause.] But after the Republicans had been in control of the Government for less than a quarter of a century, legislating and governing in the interest of the people, the English calico disappeared, and in its stead came good American calico, the product of American toil, and instead of selling for 15 cents a yard it sold everywhere for 5 cents a yard. [Applause on the Republican side.] And now, when our good ladies want a calico dress, they get a dollar from their husbands and instead of making a Democratic dress with 8 yards in it they make a Republican dress with 20 yards in it. [Loud applause on the Republican side.] And this Republican dress of 20 yards does not cost any more than the old Democratic free-trade dress of 8 yards, and our ladies can step as long and as often as they please without endangering the skirts of these Republican dresses. [Applause.]

Mr. Chairman, during the campaign in Virginia in the fall of 1888 I learned of an old farmer living on the side of the mountain overlooking the beautiful valley of the Shenandoah River. He had been a Confederate soldier and a Democrat all his life, but, like many ex-Confederates and farmers, he began to think for himself and to ask why he should continue a Democrat. He asked his neighbors to give him some good reason why he should not strike down the prejudices and ties that had bound him and vote for protection and the Republican party. His farm was small, but a little above him on the side of the mountain was an iron furnace where from seventy-five to a hundred laboring men found employment and good wages. As he watched their labors from day to day and thought of other and similar activities scattered throughout the country he began to question in an intelligent and dispassionate way how their welfare as well as his own would be promoted by a Democratic victory and by Democratic ascendency. His questions and logic could not be answered by his Democratic neighbors, and the more the old farmer thought and the more he reasoned the more firmly he became convinced it was right and best to vote the Republican ticket. Democratic workers were informed of the old man's lack of political orthodoxy and committees were appointed to wait upon him and to convince him of the necessity of Democratic ascendency. Appeals were made to his prejudices, and the usual methods resorted to by Democratic politicians in the South to keep the white vote solidly Democratic were indulged in, but still the old man doubted. As a last resort a representative of Mr. Cleveland's Administration, that happened in the county, an appointee and agent of the Internal Revenue Division, was sent to labor with him. After reminding him of his services as a Confederate soldier and of his life-long devotion to the Democratic party, the representative of Mr. Cleveland's Administration suggested to him that he could not understand why he should think of voting with the "black Republican, nigger-loving people of the North." But the old man resisted the appeals to his prejudices and inquired for some good reason—some reason addressed to his conscience and to his understanding—why he ought not to vote the Republican ticket. The Democrat from Washington thought of the rallying cry of his party, "Cheap goods and cheap labor," and so he answered the old farmer by saying that if the Democrats succeeded the farmers would be able to buy their nails cheaper. He thought he would try the old farmer with the nail argument. [Laughter.] The man who told me the incident said that when this proposition was advanced the old farmer straightened himself up and calling attention to a little garden in front of his door said, "You see that truck-patch there; well, sir, I can raise more cabbages on that truck-patch this year and sell them to the men who are employed up there at that furnace than is necessary to buy all the nails I need for four years" [applause], and so the old man was not satisfied with the cheap-nail argument. In fact, the old farmer had already learned that it was a good deal more important to him that the fires in that iron furnace should continue to burn; that its smoke should continue to ascend to the heavens above him; that the iron should be mined and the laborers employed and paid, that they might continue to buy and consume his cabbages and other farm products, than it was that he should buy nails cheaper. [Loud applause on the Republican side.]

This is the whole argument; and this was the verdict of 1888. America for Americans and legislation for the people of the United States! If our friends upon the Democratic side of this House think the farmers and working people want cheap prices, cheap labor, and the cheap conditions that are found in the most of the governments of the Old World they but little understand their patriotism and intelligence. And in Kansas we will answer their slanders and misrepresentations by an old-time majority in favor of decency and good government. [Loud applause.]

The Tariff.

SPEECH

OF

HON. JUDSON C. CLEMENTS.

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 16, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. CLEMENTS said:

Mr. CHAIRMAN: The report of the Committee on Ways and Means states that—

We are advised from the annual report of the Secretary of the Treasury that the ordinary revenues of the Government, actual and estimated, for the fiscal year ending June 30, 1890, will be $385,000,000, and that the expenditures for the same period, actual and estimated, will be $293,000,000, leaving a surplus of $92,000,000.

The estimated amount required for the sinking fund will be $48,321,116.99, leaving an estimated net surplus of $43,678,883.01.

The excess of revenues over expenses estimated for the fiscal year ending June 30, 1891, we are advised from the same source, will amount to $43,569,522.30, which with the amount of cash now on hand and available, reaching nearly $90,000,000, the committee believe will justify a reduction of the revenue in the sum contemplated by this bill.

The exact effect upon the revenues of the Government of the proposed bill is difficult of ascertainment. That there will be a substantial reduction, as we shall show, admits of no doubt. It is not believed that the increase of duties upon wools and woolen goods and upon glassware will have the effect of increasing the revenues. That would, of course, follow if the importations of the last fiscal year were hereafter to be maintained, which, however, is altogether improbable. The result will be that importations will be decreased, and therefore the amount of revenue collected from these sources will be diminished.

In every case of increased duty, except that imposed upon tin-plate (which does not go into effect until July 1, 1891) and upon linen fabrics, the effect will be to reduce rather than enlarge the revenues, because importations will fall off.

That there should, therefore, be a material reduction of the revenue, now yielding an annual surplus, no one will question. Both parties agree in this conclusion. There should not be a constantly accumulating surplus. Such a policy is hurtful in more ways than one.

First. It withdraws from circulation and its proper function in the business of the country and locks up in idleness in the vaults a large part of the money of the country. The amount of money in circulation is already inadequate and should be increased. It is needless for me to present any argument to prove this proposition, for it will not be seriously denied.

Second. A surplus is a great evil, in that it is a constant temptation to reckless and improper appropriations and expenditures. Experience teaches that an era of plethora tends to establish a higher scale of salaries and the inauguration of new and doubtful schemes and enterprises requiring vast sums in the coming years to carry them out. The annual outlays of the Government are greater now than the public good requires. The tendency in the face of a surplus has been upward in greater proportion than the growth of the country justifies. It is a patriotic duty on the part of Congress to remove the temptation.

Let the revenue be promptly reduced to the bare necessities of the Government economically administered. This being done, we will have taken an important step in the correction of the evils to which I have referred. This brings us to the question, By what method shall the reduction be made? While considering this question let us keep all the time in mind the broad difference between reduction of the amount of receipts or of revenue and reduction of taxes. The latter does not by any means necessarily follow the former.

There may be, and in my judgment ought to be, a reduction of revenue in a manner and upon a principle that would at the same time relieve the burdens of taxation. Upon the other hand, there is a method whereby the tariff revenue may be not only reduced, but utterly annihilated and yet the taxes upon the people greatly increased. By the former method the taxes borne by the people, in a large degree, though not altogether, go to the Government for the benefit of those who have paid them for public purposes.

By the latter method, though the people pay more the Government receives less. The manufacturers pocket the great bulk of it. The higher the duty upon foreign goods of any class the less competition there can be by importations and the higher therefore can the home manufacturer price his goods to the consumer. Especially is this true upon articles the manufacture of which in this country does not exceed the demand for consumption. In this era of combinations called trusts, where the tariff is high enough to exclude the importation of a given article, it is in the power of all home manufacturers by means of the trusts to gauge the amount of their combined output of goods to fall within the demand for consumption.

By their combination, supplemented by the unrighteous exercise of the power of the Government in the practical exclusion of the foreign product, they are enabled to exact from the consumer extortionate and oppressive prices. It is in the prices thus extorted that the tax upon the people is paid in the purchase of what they daily buy for use. In this way, little by little, on many hundred articles of every-day use, from a tin cup up to an outfit of machinery for a factory, the earnings of the great mass of consumers in every walk of life contribute to the formation of a constantly flowing stream of wealth, to be distributed in dividends to the protected few engaged in manufacture. Such a device for such a purpose is not legitimate taxation.

It is a wicked, indirect, and concealed method of transferring the earnings of one citizen to the pockets of another. Hear the powerful words of Justice Miller, of the Supreme Court of the United States, upon a more direct method of doing that which our high tariff does indirectly. Certain bonds of the city of Topeka had been issued to a manufacturing company to encourage manufacturing. In holding the bonds to be void the court said:

> Of all powers conferred on the Government that of taxation is most liable to abuse. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there are no implied limitations of the use for which the power may be exercised. To lay with one hand the power of the Government on the property of the citizen and with the other bestow it upon favored individuals to aid private enterprises and build up private fortunes is none the less robbery because it is done under the forms of law and is called taxation. This is not legislation; it is a decree under legislative form. Nor is it taxation. Beyond a cavil there can be no lawful taxation which is not laid for public purposes.

A majority of the committee have presented to the House a bill which we are now considering, to reduce revenue by building higher the walls of exclusion against healthy foreign competition by prohibitory duties. The average rate of duty is increased by this bill about 10 per cent. above the rate under existing law. This is done with the distinct and open avowal on the part of the honorable chairman of the committee that one purpose is to "check imports," notwithstanding he says, "The committee will admit that free trade or revenue duties would temporarily diminish the cost of products consumed by the people."

We are in the midst of widespread depression in agriculture. More agricultural products are produced in this country than our people can consume. For their surplus wheat, corn, cotton, etc., the farmers must find a market in other countries. Your tariff laws prohibit by a high duty an exchange of his surplus farm products for cheap salt, tinware, cutlery, crockery, and hundreds of other necessary articles, including clothing, blankets, etc. Thus, by a tariff which in the nature of things gives him no higher price on what he sells, at prices fixed in foreign markets, he is forced to pay higher prices on what he buys, in order to insure profits to the manufacturer; and this, under your merciless law, he must do steadily, in times of depression and distress as well as in times of prosperity.

Who contributes to a fund to insure the farmer against drought? Who contributes to make certain reward for his labor and a reasonable profit on his investment? You say the manufacturer must have protection to keep him from going to the wall. What does the prosperous manufacturer contribute to keep the farmer from going to the wall? Under this highly protective system, by the exclusion of competition from abroad, you enable the trust at home to so limit production as to prevent an oversupply and thereby keep prices always up to the point of good profits. Not so with the farmer; he has no relief from overproduction.

Hear what the gentleman from Ohio [Mr. BUTTERWORTH], a leading Republican, said on this floor in discussing this bill a day or two ago:

> Certain it is that in some lines of production we have, by our system of adjusting the tariff, enabled a few individuals to accumulate more money than the entire agricultural and working population of some States have been able to earn during the same period of time.

This startling result has taken place under the present law, and yet, with this fact before us, it is proposed to greatly aggravate existing wrongs by heavier taxes and greater inequalities. You seriously propose and will doubtless pass in this House an increase of 10 per cent. over the present law. But hear, again, what the gentleman from Ohio says:

> Now, I propose to show, with the indulgence of the committee, just the inequalities of some of the provisions of this bill as it affects the farming community, concerning whose interests we treat with such tender and delicate solicitude. I propose to show that under certain tariff regulations, which have had the approval of some of my friends and which it is proposed in large degree to continue and in some instances aggravate, they have in fact taken out of the farmers of this country, out of our people, hundreds of millions of dollars, for which we now seek to atone by presenting to them pictures of prosperity. For instance, we propose to double, and more than double, the tariff on tin.

He seems to stand alone on that side of the Chamber on this question. Will gentlemen not heed these warnings?

It is not my purpose to denounce. It is not my purpose to indulge in partisan abuse. I would infinitely prefer to see prosperity among the agricultural and all classes substituted for the depression that now hangs over them than merely to see the triumph of any party. But certain it is that this bill, for which the Republican party is wholly responsible, will increase burdens. This is admitted in the language I have quoted.

The bill bristles with bounties and subsidies, both direct and indirect. It is the boldest and most completely unmasked measure of extreme protection that has ever made its appearance in Congress with the indorsement of any political party.

No political party that ever came into power for the first seventy years of our national existence ever boldly proposed a tariff except it had for its primary and leading object revenue for the Government.

Even since the war up to this time it has generally been claimed that such was the purpose, though in fact it was in many particulars far from it. Now, for the first time, we are openly and boldly invited to enact a law, not for revenue with incidental protection, but for protection to American manufacturers with increased taxation upon consumers and incidental reduction of revenue to the Government.

A bounty is to be paid out of the earnings of labor to the producer of silk. Two cents a pound is to be paid directly as a bounty to the producer of sugar in this country. On the production of sugar made in this country last year, it will take $7,000,000 from the earnings of other people to pay this.

I ask my friends from Kansas and Iowa who propose to vote for this bounty what they will say when they come to give an account of their stewardship. By what reasoning can you convince the farmer whose corn is selling at 20 cents a bushel that it is equal and exact justice for the Louisiana sugar-planter to be paid a free cash bounty of $2 on every 100 pounds of his sugar, a sum equal to the proceeds of 10 bushels of corn, and at the same time sell his sugar to this same farmer for its full market value?

The manufacturers have by their own acts admitted that they are enabled to and do receive unreasonable profits in respect to many articles they manufacture. They go out of our country and sell to foreigners cheaper than they demand and are enabled to receive of our own people by reason of a prohibitory tariff and the trust. On this point I read from the New York Herald:

> Under the present tariff and before we get to McKinley prices, American axes cost American citizens $7.76 per dozen, but the same axes are sold by the same American manufacturers to foreigners for $6.75 per dozen. A plow for which the American farmer is charged by the American manufacturer $11 is sold to foreigners by the same manufacturer for $8.40. A plow for which the American manufacturer charges his fellow-citizen, the American farmer, $5.60, the same manufacturer sells to a foreigner for $5.04. For a gang-plow the American manufacturer charges the American farmer $58.80, but he charges the foreigner only $52.92. For a dozen shovels the American manufacturer charges his fellow-citizens $9.20, but he lets the foreigner have them for $7.86.

This bill offers a further bounty to the manufacturer to extend this discrimination against our own people. This bounty is called a drawback. The manufacturer is to receive back from the Treasury 99 per cent. of any duty he has paid on imported raw material that has entered into his finished product for foreign export. Will the voice of reason and justice not be heard in this or the other House in time to stay this threatened increase of burdens and discriminations?

See to what length the advocates of taxation of the masses in favor of the classes will go. Here is the consolation of a strong protective paper, the American Economist, of New York, to the farmer whose corn, cotton, and wheat are low on account of overproduction.

The Clerk read as follows, from the American Economist of April 18, 1890:

CORN AS FUEL.

> To some extent in the West, where diversified industries have not yet been established and consequently little or no home markets have been created which would absorb much or most of the neighboring farm products, many of the farmers are using their corn for fuel. Of course, such conditions are lamentable, but not unprecedented. Even in the centers of civilization, commerce, and distribution, when markets have been glutted by oversupplies, large holders have often relieved such markets from the depressing influence of such supplies by destroying a part, finding their compensation for the same by the larger prices they were able to obtain by the decrease of quantity seeking a market. It is related of Charles Fourier that he was started in his career as social critic by his disgust when a boy at being intrusted by his employers with the charge of destroying a large quantity of rice by dumping it into the sea to enhance the price of what remained.

Mr. CLEMENTS. The farmers of this country could dispose of their surplus at fair prices if commerce between this and other countries was not so fettered by prohibitory taxes. There can be no considerable or

advantageous commerce between this and other countries except upon the basis of exchange of products or reciprocity in business. No people can buy from us altogether and not sell to us.

We are urged now by a report made to this House by one of its committees to offer bounties out of the public Treasury to steam-ship lines to South America to foster commerce.

We are asked to tax the people to raise millions of dollars to hire private individuals to carry on a business for their profit which we make impossible by a tariff that would compel the vessels to return to our shores empty. We put it out of the power of a neighboring people to buy from us because they can not long buy anything if they can not also sell.

Mr. Chairman, it is admitted by the very frank statement of the gentleman in charge of this bill that its purpose is to check imports, to restrict commerce; and it is almost admitted by our friends on the other side that it is practically impossible to relieve the farmers on account of their overproduction by any duty that can be put on their farm products, though it is true the attempt is made here to make them believe that this can be done to some extent.

Now, I do not wish to dwell longer on that point, but I ask the serious attention of my friend from Massachusetts [Mr. WALKER], a sincere man—I ask his humane attention to a particular class of laborers, for he says this protective system is in the interest of labor, and not of manufacturers.

Mr. WALKER, of Massachusetts. That is true every time.

Mr. CLEMENTS. Now, I wish to ask the attention of the gentleman to a class of laborers to be found largely in the ten cotton States of the South. About five-sevenths of the colored people of this country live in those States and produce mainly cotton. That cotton has to be sold in the market of Liverpool in competition with the world; and you can give those laborers no protection. You claim that these protective duties benefit the laborers in the workshops of Massachusetts and elsewhere; but when my friend from Michigan [Mr. BURROWS] and my friends from Kansas [Mr. PETERS and Mr. PERKINS] go next fall to Virginia, Louisiana, or elsewhere in the South to talk to the colored people, I want you to tell them what you have provided in this bill for them. They are laborers; they are laboring in the fields of the South in the production of cotton; and they get no benefit from your protection. You can give them none for the reasons stated.

Indeed, after the war you taxed every pound of cotton of their production, not indirectly, but directly. I invoke the attention and sympathy of gentlemen on the other side for this class of laboring people. You make them pay a bounty on clothing, salt, cutlery, fertilizers, farming implements, etc., to the manufacturer.

Mr. MILLIKEN. Perhaps if the gentleman's friends in the South would give those people a chance to vote and have their votes counted the case might be different.

Mr. CLEMENTS. I will not enter into a discussion with my friend about the question of voting. When that question is up I will discuss it with him. There is less corruption of the ballot in the South than in the North.

No other cause has contributed so much to the present depression of agriculture as the present oppressive tariff system; yet when the people plead for relief you press through a worse law than the present and an effort is made to hoodwink the people and lead them away from this the real cause of their troubles. It is sought to divert the farmers from this issue of reducing taxation on the necessaries of life. An attempt is made to seduce them into the indorsement of other demands and untried measures which you know you will not and can not adopt. They will make no mistake. They will not be led away from the real issue by any seductive bait.

I commend to them the words of wisdom of that unselfish patriot, Grover Cleveland, expressed in a very recent letter to a member of the Farmers' Alliance on this subject. His words are as follows:

> It has always seemed to me that the farmers of the country were especially interested in the equitable adjustment of our tariff system. The indifference they have shown to that question and the ease with which they have been led away from a sober consideration of their needs and their rights, as related to this subject, have excited my surprise.
>
> Struggle as they may, our farmers must continue to be purchasers and consumers of numberless things enhanced in cost by tariff regulations. Surely they have the right to say that this cost shall not be increased for the purpose of collecting unnecessary revenue or to give undue advantage to domestic manufacturers. The plea that our infant industries need the protection which thus impoverishes the farmer and consumer is, in view of our natural advantages and the skill and ingenuity of our people, a hollow pretext.
>
> Struggle as they may, our farmers can not escape the conditions which fix the price of what they produce and sell according to the rates which prevail in foreign markets, flooded with the competition of countries enjoying freer exchange of trade than we are. The plausible presentation of the blessings of a home market should not deceive our depressed and impoverished agriculturists. There is no home market for them which does not take its instructions from the seaboard, and the seaboard transmits the word of the foreign markets.

I also commend to them the following words of Senator VOORHEES, of Indiana:

> The tariff, with all its overwhelming prominence and its overwhelming oppression at this time, is but a part of the vast system devised more than a quarter of a century ago, whereby a moneyed aristocracy has been created, labor degraded and deprived of its earnings, and the Government itself revolutionized in substance and in form. It is true that while the tariff is only a part of the money-power system of Government, yet its place and agency in that system are of the most vital and commanding influence in its execution. To take toll from all the laboring men, women, and children of the United States on all their wants and necessities, not for Government revenue, but for the protection of the millionaire manufacturers, powerful corporations, trusts, and syndicates, is the base function of the tariff laws now on our statute-books.

Also the following, from the Alliance Farmer, of Atlanta, Ga.:

> HOW THE TARIFF AFFECTS THE FARMER.
>
> But few, if any, of our people have ever taken the time to investigate the effect of the tariff upon the farming interest. The farmer learns from the newspapers, as he does sometimes from a public speech, that the tariff is a grievous tax. But he does not have the time nor the inclination to look into it and see to what extent it curtails his own income. His ideas about the tariff are vague and indefinite, and will remain so until he wakes up and gives it more thought. The general depression that prevails over the whole country is largely due to the tariff.

This bill enacted into law under the present circumstances of depression, indebtedness, and despondency will carry in its inequalities and oppressions more of the seeds of socialism, communism, and discontent than all the vessels that have ever crossed the seas have brought to our borders. Reason, justice, humanity, and patriotism all dictate that you stop and consider.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Tuesday, April 29, 1890.

The Senate, as in Committee of the Whole, having under consideration the bill (S. 2781) to forfeit certain lands heretofore granted for the purpose of aiding in construction of railroads, and for other purposes—

Mr. PLUMB said:

Mr. PRESIDENT: It has not been my purpose to address the Senate on this subject. It is comparatively stale here. It has been debated over and over again in all its phases, certainly on two former occasions, and I think perhaps on three or four, and the Senate has on the main question established a policy which the committee has followed and which I think the Senate is disposed to adhere to, because it is founded in what is certainly the law applicable to cases of what are known as earned lands.

But, as the chairman of the committee and having reported the bill, there are some things which perhaps ought to be said concerning the matter which is more especially in controversy now, affecting some lands in the State of Florida, and also upon the general proposition which is embodied in the bill as reported by the committee.

In the first place, it may be said as affecting what might be called the sentimental side of this question, if it properly has such in the present attitude of affairs, that there is no evidence before the Senate outside of the statement of the senior Senator from Florida that there are any considerable number of people upon the lands in that State covered by his amendment claiming to make entry under the general land laws.

I think I am entirely safe in saying that there has been no petition presented from any such people at this session of Congress, and I do not recall any at preceding sessions of Congress, although there may have been. But, if there were they were signed by only a handful of persons. There has been no evidence from such a source of threatened injury to any one. The Legislature of Florida has not spoken nor has there been presented any evidence of the assembling of any body of people to express their feelings on a subject of the transcendent importance which it would be if the homes of some thousands of people in the State of Florida or in any other State were in peril on account of any action proposed to be taken by Congress. If what the Senator from Florida says on the subject were well founded, there would be some evidence of the deep interest which a circumstance of that kind would undoubtedly evoke in the minds of the neighbors of these people and in all the people of the State.

I know that in my own State, whenever any settlement upon the public lands or upon lands which people had gone upon with the impression that they were public lands, was drawn in question, the Legislature of that State by memorial addressed itself to the subject, and in various ways popular attention was called to it with a view to action favorable to the settlers.

There must be in the State of Florida something which is known elsewhere as public opinion. There must be there such a thing as sympathy, as everywhere else in the world, in proportion to the number of people, and if the spectacle presented itself in that State of a large number of people who had in good faith gone upon lands which they supposed to be public lands, who were in danger of being ejected, I think certainly we should have heard more of it than we have.

I am, therefore, bound to say that I think the Senator from Florida is mistaken in regard to the number of cases involved and as to the in-

terest felt in the subject by the people of his State. I do not say that the principle is not as valuable as applied to one individual as to a hundred or as to a thousand, but there are other considerations, which I shall advert to presently, which lead me to think that, whether the number be one, or whether it be ten, or whether it be fifty, or whether it be a hundred, the case for the exercise of power or authority on the part of Congress does not exist.

The amendment which the Senator proposes would destroy every title growing out of the land grants of 1856 in the State of Florida. That there are such titles or assumed titles upon which taxation, mortgages, transfers by means of public sales, and so on rest, there can be no doubt. The Senator himself, by an amendment which he offered to a bill similar to this in the last Congress, which was adopted, distinctly disclosed the existence of such cases and provided for the ratification of all such titles. If there were no such conditions then, of course, his amendment would have been totally unnecessary; but he proposed the amendment, insisted upon it strenuously, and the Senate agreed with him and adopted the amendment, which confirmed the titles up to a certain time; that is, all titles which were derived from any railroad company claiming lands in Florida under the granting act of 1856.

Now the amendment which he proposes ignores all that class of cases and proposes to wipe out with one single act, or at least to have Congress do it if Congressional action can accomplish it, every single title that has accrued since 1856 to all lands covered by these various grants, whether they accrued last year, or the year before, or twenty-five years ago, or thirty years ago, and some of them accrued I have no doubt more than thirty years ago. That would make this bill if it were adopted not a bill of peace and quiet, but a bill of destruction, and it seems to me incredible that the Senator from Florida should submit a proposition of that kind.

Nothing that he could have done would do more to hinder the settlement and development of that State; nothing more to put its people at loggerheads, to send them to the courts, and to destroy all the interests which from time to time have grown up under the peaceful condition of things existing in that State during the last ten or fifteen years, and which has been so fruitful of inducement to people from outside to go there and make investments.

So, Mr. President, if this were not a question of power, but a question of propriety, every principle that ought to underlie legislation, everything that relates to the interests of that State and of its people, would unite in saying that the amendment should not be adopted. If it were to accomplish all that it contemplates, the people who have bought, improved, and paid taxes on the faith of the Congressional grant would all be put out and other people, with whom the Government is not in privity, be put in. It would be a complete overturning. Perhaps I ought not to speak of these things in the presence of the Senators from Florida, but I am emboldened to do it because one of the Senators from that State has taken the same view of this amendment which I take. The opinion, therefore, in regard to the amendment of the senior Senator from Florida, now under consideration, upon the part of those who represent that State on this floor, is divided.

But, Mr. President, the power to declare what the amendment of the Senator from Florida declares does not, in my judgment, reside in any legislative body, and, if it does so reside, it is not in Congress, but in the Legislature of the State of Florida.

By a practice which was abandoned some years ago, but which was unwisely prevalent at the time these grants were made, in 1856 and the years immediately succeeding, as soon as a grant was made or as soon thereafter as the Land Office could get down to it the lands covered by the grant were certified to the State within which the railroads were to be built. The practice in later years has been not to certify the lands to the State until they were earned; that is, until the roads to which they were granted had been constructed.

In 1859 and 1860 the Commissioner of the General Land Office certified all these lands to the State of Florida; that is to say, all the lands that had been granted by the act of 1856 for the building of several hundred miles of railroad in that State. They went to the State of Florida, according to the terms of the granting act, in trust for the performance of certain conditions; that is to say, they were to be turned over by the State to such railroad companies as it might select for the purpose of building the railroads as they were built in sections of 20 miles, the State having the power to determine whether the roads had been built according to the terms of the granting act or not, such determination to be evidenced by the certificate of the governor of the State.

If these roads have not earned the lands granted and if it be true, as is alleged here, that large numbers of citizens of Florida are about to be deprived of their homes upon these lands improperly and unlawfully, it can only be because the State of Florida, by its Legislature and by its governor, is not only consenting to that act, but is actively engaged in accomplishing it.

I hope I do not need to say that if any citizen of that State is called on to appeal to Congress against his own State government, and if hundreds, as is alleged, and possibly thousands of people are in that condition, being oppressed and threatened with unlawful ejection from the premises which they are occupying, it is a melancholy fact, but one for which the Senate is not responsible.

If there is anything which can be done in a legislative way for the purpose of determining the non-existence of the fact upon which the validity of this grant alone rests, that authority is with the Legislature of the State of Florida, and not with the Congress of the United States. Not one single acre of the land covered by the amendment of the Senator from Florida can go to any railroad company unless the Legislature of the State of Florida authorizes it to go there; and inasmuch as the allegation which is here made is that the State of Florida has not done the things which were necessary to be done in order that these grants might devolve upon some railroad company, the sole question is one which that State alone is competent to decide. If it so decides it will only need to do nothing or to instruct the governor to do nothing and no lands can go to any railroad company, and the rights of settlers be completely preserved.

Mr. GIBSON. I should like to ask the Senator from Kansas whether the State has diverted these lands from the purposes for which the grant was made to the State in trust by the Federal Government.

Mr. PLUMB. There is no evidence of such diversion.

Mr. GIBSON. Have the railroads been built?

Mr. PLUMB. I am told that the railroads have all been built, every mile. I do not say that they have been built in precise accordance with the act of Congress; I do not know, though I have here on my table a certificate attested by the Secretary of the Interior as a copy of the certificate of the governor of the State of Florida issued on the 19th day of the present month of April in which he certifies that a certain map or plat which is attached to his certificate is the map or plat of a certain portion of the—

Florida Central and Peninsular Railroad duly filed in my office, by H. Rieman Duval, president of the Florida Central and Peninsular Railroad Company, which shows that portion of said railroad beginning at Waldo, in section 23, township 8 south, of range 21 east, and ending at the waters of Tampa Bay, in section 24, township 29 south, of range 18 east, a distance of 155.33 miles, which has been completed and equipped as required by the act of Congress approved May 17, 1856, entitled "An act granting public lands in alternate sections to the States of Florida and Alabama to aid in the construction of certain railroads in said States," and the act of the Legislative Assembly of the State of Florida approved January 6, 1855, entitled "An act to provide for and encourage a liberal system of internal improvements in this State," granting lands to the said railroad company.

It appears from that that the present governor of the State has made a certificate of the final completion of one of these roads, and he certifies that the last sections of the same, whatever he may have certified as to the remainder, have been completed in compliance with the act of Congress making the grant and with the act of the Legislature of Florida accepting the same.

Mr. MITCHELL. Would the effect of the adoption of the amendment of the senior Senator from Florida [Mr. CALL] be to declare forfeited lands adjacent to roads already completed?

Mr. PLUMB. Undoubtedly it would.

Mr. BERRY. Will the Senator permit me?

Mr. PLUMB. Certainly.

Mr. BERRY. As modified by the Senator from Florida on last Friday, it does not touch any part of the road that was completed within the time specified in the act.

Mr. PLUMB. I think the Senator misunderstood the question of the Senator from Oregon. He did not ask if it would forfeit lands adjacent to roads completed since the date named in the granting act, but he did ask if it would forfeit the lands adjacent to roads already completed.

Mr. MITCHELL. That was my question.

Mr. PLUMB. The suggestion of the Senator from Oregon indicates a difference upon this subject of what Congress ought to do which is fundamental, and which is broader than the Senator from Florida, as it relates to the entire bill.

The question it brings up is as to whether Congress can or ought to forfeit lands opposite to portions if never completed after the date named in the granting acts and concerning which I shall speak presently.

Now I am told, in the line of inquiry suggested by the question of the Senator from Louisiana, that within the last year or so an adjustment has been made of the land grant of another line of road completed under the act of Congress of 1856, and all the lands to which the railroad was entitled according to the judgment of the authorities of the State of Florida and of the United States have been certified to this railroad company, and that 5,000 acres of land, embraced within the apparent limits of this grant and that had been certified by the General Land Office to the State in 1860, were deeded back to the General Government, and thus a settlement so far as the State of Florida and her land office and the railroad company could effect one has been effected. The railroad company is known as the Pensacola and Atlantic.

I do not know that the acts of the State of Florida through its Legislature and governor and the General Land Office are valid, but I submit that we can not determine that fact here upon *ex parte* statements made by a Senator, fortified by no documents or other statements, and no judicial decisions determining the existence of the necessary facts or their legal effect. They have got to be determined by some judicial tribunal. And, Mr. President, if it be true that the State of Florida has not done the various things necessary to the com-

pletion and giving effect to the grant of 1856 as they ought to have been done in order to meet the requirements of the act of Congress, then the act of forfeiture embraced in the first section of the pending bill takes every bit of land away from the State and away from the railroad companies. This is its language:

That there is hereby forfeited to the United States and the United States hereby resumes the title thereto all lands heretofore granted to any State or to any corporation to aid in the construction of a railroad opposite to and conterminous with the portion of any such railroad not now completed and in operation, for the construction and benefit of which lands have heretofore been granted; and all such lands are declared to be a part of the public domain.

That is to say, lands which have not been earned in accordance with the terms of the act of Congress conveying them to the State for that purpose; and, if what the Senator from Florida says is true, there is an adequate remedy for every person who has an adverse claim, and an opportunity to every person to assert his right to the lands covered by this grant. In fact, this bill, if passed by Congress, removes every single barrier that remains in the way of the people who have cause of complaint growing out of the claims of the railroad companies with the State of Florida.

But the Senator says that will require a lawsuit. I imagine he does not expect that if we should adopt the measure which he has proposed, arbitrarily taking away from these railroad companies what they believe they have a right to under the law, they are going to submit without a lawsuit. He seems to think that an act of Congress disposing of private rights acquired under a law of the United States or assumed to be so acquired are to be settled by a "Be it enacted," and that whoever that act of Congress may be leveled at will not appeal to the courts for the protection of his rights. Such is not the history of railroad companies or any other corporations. The amendment would not prevent but incite litigation.

Mr. President, it is a significant fact that while all this discussion has been going on, of which we have had more or less at nearly every session of Congress in the last four or five years, based upon the assertion that the State of Florida had never disposed of any of the granted lands; that nobody had earned any of them; that no railroad had been built in compliance with the act of Congress or with any act of the State of Florida, yet the State of Florida, which the Senator so ably represents on this floor, by its Legislature and its governor, has been saying precisely the opposite thing during every year while the construction of these roads has been going on. Acts of the Legislature whereby the lands were apportioned among different railroads have been passed. The State granted them in the first place directly to the companies, and then it recognized them afterwards in various ways, amending the act and recognizing the disposition of the lands which had been made, and so on until up to date, as I understand, the final certificate of the completion of all these roads has been issued, whereby *prima facie* at least every fact which the Senator from Florida has stated is disputed.

I am bound to presume of that action of the Legislature and the governor, a governor and Legislature elected by the people, representing the great political party to which the Senator belongs, which claims to be especially devoted to human rights and opposed to railroads and other monopolies—I am bound to presume that if all this has been going on it is because it was proper that it should be so, that nobody's rights were being trampled upon. I am willing to give that much presumption to whatever the State of Florida has been doing, and, as I have suggested, if there is any ground for complaint, that complaint ought to be made in Florida to the Legislature and to the public opinion supposed to be extant in that State, and not here.

Perhaps I am not warranted in saying so much, but I may say at all events that it is equally significant that the men who have been elected to serve the people of Florida at the present and previous sessions of Congress in the House of Representatives have never offered any bills or memorials or made any disturbance about this matter. That is not a conclusive fact, but it is worthy of note, and, taken in connection with the affirmative action of the governor and Legislature of the State of Florida, and which has at least the negative support of the people of that State, I am bound to presume there is no serious cause of complaint.

The senior Senator from Florida [Mr. CALL] commented upon the first section and said it was a grant of land, and seemed to think that this section was very vicious; yet he will bear in mind that he himself voted for it in its present form when it passed the Senate two years ago or about two years ago. I say he voted for it. The bill passed unanimously. There was no opposition to it on its final passage, and therefore the Senator from Florida was at that time consenting to it.

But the amendment which he then offered did recognize the fact that a large portion of these lands had been earned, in the proper acceptation of that term, and his amendment provided for confirming the titles to such lands as should have passed from the railroad companies to the persons who had purchased from them. I call attention to the language of this section.

The Senator from Florida dwells on the joint resolution of the Legislature of the State of Florida of 1869 which he has read, which in its preamble recited that whereas by reason of the war and other obstructions the railroads for the benefit of which lands had been granted by the act of Congress of 1856 had not been completed according to the terms of the grant, and then proceeding upon the supposition that these lands had reverted on account of this lapse of time to the General Government, they asked Congress to regrant them to the State for similar purposes.

I understand there is an inside history to that. But independent of that the Legislature of Florida did not reconvey the lands to the United States or assume to do so. It used the preamble of the resolution as a predicate on which to found a request that the lands should be granted to other companies, and it acted upon the theory in regard to the lapse of time which then prevailed in the Land Department and elsewhere in the country.

Mr. President, since I have been in the Senate it has passed by a unanimous vote a bill introduced and advocated at great length by the present Secretary of the Treasury, Mr. Windom, then a member of this body, extending the time within which the Northern Pacific Railroad Company should be allowed to construct its line, upon the theory then in vogue that lands not earned within the time named in the granting act reverted to the Government without further action. The opinion in the case of Schulenburg vs. Harriman had then been delivered, but the scope of it was imperfectly appreciated and it was then believed that the extension of time contemplated by the action of the Senate was necessary.

The Interior Department acted upon that theory and sold large quantities of land within the limits of the various grants where the roads were uncompleted at the date named in the granting act, and in one of the old cases which have been before us, where lands in the State of Michigan were supposed to be forfeited, they sold thousands of acres embraced within the land grant on the supposition that the grant had lapsed by reason of the expiration of the time within which the road was to be built, by reason of which great confusion resulted.

The House of Representatives about 1874 had before it, and came within 1 vote of passing, a bill extending the time within which the Atchison, Topeka and Santa Fé Railroad should be authorized to build its road and become entitled to the lands covered by its grant. It was then conceded that if the road was not built in time its lands would be forfeited. The bill failing, the company hastily and at great expense completed its line within the time named in the original act.

Afterwards the Supreme Court passed upon the case of Schulenberg vs. Harriman, deciding that until an act of forfeiture was passed the land-grant roads had a right to go on building, and becoming thereby entitled to lands opposite constructed road. It has been denied that such was the effect of the decision. Anybody can deny, but the court has not done so. On the contrary it has over and over again and directly and indirectly affirmed the full scope of that decision as rendered and as I have asserted it to be.

The executive department of the Government has acted upon it, not that department of the Government while under Republican administration, I beg to say, but under Democratic administration only. At the very time when these Halls were ringing with denunciations of the Republicans of this body because the Senate would not consent to the passage of an act which it believed to be illegal, to forfeit lands earned under that decision of the Supreme Court, the Administration of President Cleveland was then certifying to a railroad in the State of Wisconsin several hundred thousand acres of land, every single acre of which was earned, if at all, after the date named in the granting act for the completion of the road. Portions of the road had been built in proper time, but that portion for which Mr. Cleveland's Administration certified lands was wholly built out of time.

Mr. Cleveland, acting under the advice of his Attorney-General, Mr. Garland, who for years sat in this body, an able lawyer and a conscientious and upright man, patented the lands to that railroad company in the last days of his Administration. What was done was no doubt on account of the conscientious belief that the law required it to be done, but it was in opposition to the theory asserted by the Senator from Arkansas, and made the subject of reproach upon Republicans who propose similar action.

The same Administration performed a similar act concerning the part of a railroad in the State of Minnesota, known as the Manitoba Railroad, also built out of time. The principal owner of that road was one of the pillars of Mr. Cleveland's last canvass.

Now, Mr. President, let us go back over the history a little further. The decision in Schulenberg vs. Harriman was rendered in 1874. That year the Democratic party came into control of the House of Representatives for the first time after a long hiatus, and it has had power in that House ever since except during two terms. It was succeeding the decisions of 1874 that the railroad companies saw for the first time that they had the right to go on and complete their roads notwithstanding the lapse of time, and thereby earn the lands granted up to such time as Congress should declare a forfeiture. Now, if the public interest in forfeitures is so great, how does it happen that the Democratic House, fresh from the people and loud in professed devotion to the public welfare, did not during the fourteen years of its unquestioned power, and during the very period in which the roads were building, pass an act declaring forfeiture of unearned lands and thereby cut off the opportunity of the companies to go on earning lands by constructing roads out of time? If the Democratic House had done this the

party it represented could have claimed some credit, but it did not, but only tried to lock the door after the horse had been stolen. Ten years later, after nearly all the roads had been constructed, it began the attempt to forfeit lands opposite constructed road and with full knowledge of the decision of the Supreme Court, from which it is fair to presume that what it proposed was merely for effect.

Mr. President, the subject of land grants has never been in any proper sense a party question. It is sought to be made so now and then, but the effort is made by those who I think are oblivious to the record. In 1856, before the formation of the Republican party, or at least before it had any status in Congress, lands were granted to every public-land State in the Union in large quantities, mainly to aid in the construction of railroads not yet begun, and oftentimes not even chartered; and as soon as possible after the granting act was passed the Interior Department proceeded to pass the title of the United States to the granted lands to the States in order to put it out of the power of the General Government to exercise control over the grants, and that is where a part of the trouble comes in which is the occasion of the amendment proposed by the Senator from Florida.

The lands granted to that State were all conveyed before a mile of railroad was built, and to other States the same. I do not speak of that as evidencing intentional wrong on the part of the Interior Department. The main object in view was to get the roads, and there was no great care about the public lands. We are wiser to-day than we were then. The men of those days did what they thought was for the best interest of the Republic, although it would not be now so considered, and some of the men in public life thirty or forty years from now may look back at what we are doing and may say, and probably will if they happen to be a little bilious, that we did wrong when we were doing the best we knew how.

But the system was inaugurated, and from 1850 to 1866 its grants were made for railroad purposes, the chief ones, during the control of the Republican party, being those made to aid in the construction of the transcontinental lines, which had been demanded by the platforms of both political parties, as the records will show. All these acts granting lands to the transcontinental lines were passed by the votes of the leading men of both parties in both Houses of Congress, and during all this period of time, when the grants were being made, it was never suggested that they were in any sense or would ever become a party question.

As I have said, all the lands about which there is now controversy and which it is claimed we ought to forfeit were earned during the time the House of Representatives was under the control of the Democratic party, which made no effort to forfeit them. That came later, too late to accomplish any good. It was spasmodic and insincere, and took the form of saying that unless all the lands opposite portions of road which were not completed in the time named in the granting act should be forfeited none should be forfeited, and as the Senate would not and could not yield to this, in view of the decision of the Supreme Court, no legislation was passed. The Senate proposed to forfeit the unearned lands, but this the House would not agree to, and during the pendency of this controversy the company have built new road, by reason of which it became entitled to over 3,000,000 acres of land which might have been saved to the public land if the House had agreed with the Senate in forfeiting unearned lands.

If the House had passed the bill the Senate sent it every acre of land along the Cascade branch of the Northern Pacific Railroad since constructed would have been forfeited to the United States. "No," the House said, "we will have all or nothing; we will forfeit back to Bismarck, even though the courts have decided that we can not legally do so;" and as a consequence legislation failed. At the same time for some occult reason it did consent that the lands of the Atlantic and Pacific Railroad should be forfeited on the same conditions; that is to say, forfeit the unearned land, saving the earned lands to the company, notwithstanding every acre of the lands so saved was earned after the date named in the granting act for the completion of the road.

So last year, when we came to the land grants in Michigan, we passed a bill to forfeit the unearned lands and the House concurred. But for some reason or other there has been an effort made to stick at this one grant, that of the Northern Pacific, the main one now remaining upon which no Congressional action has yet been taken though there are half a dozen smaller grants which are subject to forfeiture and which are covered by the pending bill, and probably 8,000,000 or 10,000,000 acres of land will be restored to the public domain if this bill is promptly passed. If it should not be, doubtless a large portion of this land will be secured by the companies by construction of road.

Now, Mr. President, what is the duty of Congress under the circumstances? It is to act in accordance with the law as decided by the Supreme Court, doing all we can lawfully do to forfeit lands granted to railroad companies. "Well," some may say, "why not try to do more than the court says can be done and see how it would work?" In the first place, that would not be a proper performance of public duty, which requires Congress to take the responsibility of doing its duty, and it would be doing what equity forbids, an idle thing. Worse than that, it would be doing a wicked thing. We should thereby invite people to go upon the lands which we assumed the right to forfeit, on the assumption that after the passage of the act of forfeiture they were public lands, and every man who went upon the lands would so go on the faith that the Government would give him a title after proper settlement. He would see the act of Congress and inquire no further, only in time to be evicted with a loss of his time and his money spent upon the land, and then no doubt come to Congress asking for damages, or otherwise remain as a perpetual monument of the unwise and wicked act of the General Government whereby he was tempted to do that which he otherwise would have avoided. That is not wise legislation. Legislation ought to be designed to prevent litigation as far as possible, not to promote it.

Mr. GIBSON. I should like to ask the Senator a question. He is very familiar with this subject, as the chairman of the Committee on Public Lands, and I ask whether he knows of a single instance in which, after a land grant has been made and the road for which it was made has been completed by the company, the land grant has been forfeited by the Government of the United States?

Mr. PLUMB. Never.

Mr. GIBSON. There is none.

Mr. PLUMB. There is no such case, and in the very nature of things can not be.

Mr. President, there are but two courses of procedure before us: Either to let these grants go on until the railroad companies get ready to and do build the remainder of their lines and thus acquire such lands as appertain thereto, which under the circumstances would be equivalent to making a new grant; or, on the other hand, to pass the bill under consideration as soon as possible and thereby save somewhere from seven to ten million acres of land which, if we do not act, presumably within a brief period of time will be put under such conditions that we can not act with any effect.

That, I think, is something which ought to have been done years ago. It was a subject to which I addressed myself on coming into this body, and during my term of service I have reported a number of bills forfeiting the unearned lands pertaining to a number of individual grants, as well as on two occasions bills similar to the one before us now forfeiting all unearned grants. The decision of the Supreme Court in Schulenberg *vs.* Harriman was an unfortunate one. I wish it had been different. But the only thing we can now do is to limit our action to its requirements and forfeit such lands as we have power over. This the pending bill does.

Mr. President, I opposed the amendment of the Senator from Arkansas [Mr. BERRY] because I did not want to hold a threat over any of these lands. There is no one thing that is so much at the bottom of social order, of growth, of all prosperity, as security of title. Given trouble about title and everything goes wrong; there will be disturbance, disorder, paralysis, crime. The Supreme Court has said in numberless cases covering every phase of this question that we can not forfeit lands opposite constructed roads though earned out of time. This is a final settlement of the question. We can not take away the right which they say is enshrined in the law and grows out of a contract and its performance. Why should we not recognize this and go ahead in the performance of the duty which it enjoins, forfeit the unearned lands and close the account?

Would it be proper, wise legislation to forfeit up to the limit of your legal authority, and then fire a shot at the lands which belonged to the company or its assignees, by saying we will come down on you some of these days and make trouble about your title? True, we can not take the title away, but a threat of that kind would have a bad effect. The wicked would take advantage of it to make trouble, the weak would shun the locality, and even the strong and wise would take hold with reluctance. It would stop growth and improvement and be of great detriment to large and important sections of the country, and of no possible good to any one. If we believe we have the right of forfeiture let us exercise it now, and not hold it as a threat over these communities.

Mr. President, one or two matters affecting this local question in the State of Florida I will refer to for a moment. A complication of circumstances arose in connection with one of the land grants in that State. Somebody representing the company to which the grant was conveyed by the Legislature came here during the administration of the Interior Department by Mr. Chandler, about 1874, and sought to file a new map of location, none then being found on the files of the office. Mr. Chandler denied the right, and said if these people had filed their plats and thereby their rights had attached before the expiration of the time named in the granting act for the completion of the railroad, that would have been all right, but as they had not done it he would not allow them to acquire new rights to the granted lands, and thus the matter rested until the year 1881. In the fore part of that year these same parties, or some parties representing them, appeared in Washington and demonstrated to the then Secretary of the Interior that a map had been filed in proper time in the year 1860. When it was offered for filing in the first instance a question was raised as to its form or as to the certification. At all events it was withdrawn by permission of the office, though afterwards decided to have remained a part of the official files.

In 1881, Mr. Schurz then being Secretary of the Interior, it was decided that the plat had been properly filed, and he ordered a withdrawal of the lands along the route defined in the map, or whatever was nec-

essary in order to fix the rights of the railroad company, and he either exacted of the railroad company or the railroad company voluntarily conceded (it is not material which) that the company should file a relinquishment of its right to every acre of land upon which any one had, at that date in 1881, settled.

It is important to consider that after that date in 1881 the Government never received a cent from any man on account of an entry upon those lands and has never permitted filings thereon. Thus practically public notice was given to everybody that these lands were not subject to entry, and whoever has gone upon them since that time has gone upon them with full notice that the Government would not confer title upon him or otherwise recognize his settlement as rightful.

Mr. President, the Senator from Mississippi [Mr. GEORGE] had occasion to make some remarks about the injustice of the proposed action of the Senate upon the amendment of the Senator from Florida, assuming for the purposes of his argument that the Senate was going to vote the amendment down, which it may or may not do, and he had a great deal to say about the poor men we were thus going to injure. As I look at it, the only blemishes upon this bill as reported are the reservations in favor of land grants in the States of Mississippi and Alabama, made as to the excepted grants to the former State at the request and with the concurrence of the Senator himself, not only as found upon this bill, but upon two other occasions when similar bills were pending in the Senate.

In other words, it was at the request of the Senator from Mississippi that the committee has reported a provision, found in this bill, giving one year additional time before forfeiture to a company in the State of Mississippi, whereby its rights are not only not cut off, but extended so as to enable them to go on and earn lands which they are not now entitled to, and which Congress has the right to take from them. There is where the blemish is in this bill, in my judgment, and I am a little surprised after the argument made by the Senator that he did not lean toward the poor people of Mississippi within the limits of that grant which he is asking to have extended, and who presumably are as much entitled to consideration as though they lived in Florida or elsewhere. The Good Book commends that charity which begins at home.

But it so happens that there is a difference, as the old phrase has it, as to whose ox is gored. The echo of the Senator's complaint that the Senate would do nothing for a poor man had not died away before this body paused in its regular proceedings under the rule and passed unanimously a bill giving $150,000 out of the public Treasury for the benefit of the poor and homeless people upon the banks of the Mississippi River, a portion of them at least citizens of the Senator's own State. I do not think the Senate is subject to the charge of being regardless of the poor and the suffering. I do not know a body of men anywhere who respond more promptly and more willingly at all times to the claims of sympathy than does the Senate, and it is equally open to the claims of justice.

Mr. President, I will venture a suggestion which seems to the point. A few years ago there was a proposition for a great exposition at New Orleans. Congress voted out of the Treasury, and without limit or condition and as a gift, $1,000,000 to that exposition and appropriated funds—$600,000—to make a show of governmental instrumentalities in connection therewith. As I now remember, there was not a vote against either proposition on this side of the Chamber. Everybody said, "Give to New Orleans a million dollars in order that there may be an exposition in the extreme South which will be helpful to the industries and interests of that section."

I was not especially enamored of the idea of the exposition of 1892 at Chicago, but I could not help noting that when that measure was under consideration every vote against it came from the other side of the Chamber. Possibly these votes did not represent sectional bias. I hope not. But the comparison is worth recalling.

The question at issue is not one of helping or hindering the poor man. It is a question of performing a plain duty, the performance of which, however, will hurt no one and help thousands, and I have no doubt that the Senate will follow the right path.

The Navy.

SPEECH
OF
WILLIAM S. HOLMAN,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 9, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9909) making appropriations for the naval service for the fiscal year 1891—

Mr. HOLMAN said:

Mr. CHAIRMAN: The general provisions of this bill comply substantially with the provisions of existing law. The sum of $7,645,000 is appropriated directly for the increase of the Navy. This large appropriation for the increase of the Navy, it must be admitted, is now authorized by law. When the creation of the new Navy was entered upon, about eight years ago, substituting steel and iron ships in the main for our wooden ships, beginning with moderation, I think there was a general acquiescence on both sides of the House. It was not then expected that anything extravagant or extraordinary in the character of the Navy was in contemplation, but that we were substituting for the wooden ships of the old Navy ships of modern construction; that seemed entirely proper. For although there are many of our people who are not convinced of the necessity of expending any considerable sum of money annually on our Navy, yet it would seem to be proper, even in a Government like ours, with no war in contemplation, that we should keep up a respectable navy with about the same reason we have for a small army, to meet any possible peril that might arise in the future. Of course the reason in favor of a small permanent army is and always has been the strongest on account of our frontier on the Indian possessions. Some years ago, now and then, the fact was urged on Congress of the necessity of keeping up navy-yards for ship-building, for fear that in an emergency, if one should arise, we should not be able to build ships of war.

But in view of the fact that our now enormous coastwise trade is increasing every year, requiring great navy-yards which are increasing in capacity and number every year, it seems impossible that an emergency could arise which our people would not be fully prepared to meet. In former years we had few navy-yards, few ships were being built, and it was then possible that in the event of a possible war we might be embarrassed for the moment. But of course all that has gone by. Our coastwise trade, which now exceeds very much our foreign trade and greatly exceeds that of any other nation, results in the building every year of more and more ships for commerce, of modern construction, of steel and iron, and thus furnishing every possible facility required to meet any possible emergency. Our present facilities for building vessels of war now surpass those of any Government in the world unless it be that of Great Britain; so that any apprehension that an emergency might arise that the energy and enterprise of our people would not be able to meet is now of course utterly without foundation.

The policy of confining our enormous coasting trade to our own ships must always keep up great navy-yards. It will be remembered that our coastwise commercial policy gives to our own ships exclusively the right to clear from one port in our country to another; therefore the magnitude of this trade is seen in the vast extent of seacoast on the Atlantic and Pacific Oceans. In the late war, with our navy-yards insignificant in comparison with their present proportions, a commanding navy sprang up as if by enchantment. The Monitor, which revolutionized naval architecture, was completed as soon as her services were needed to drive the Merrimac from the ocean.

But, sir, we are confronted with a new state of things. A respectable navy, such as we have kept up during our past history, will not suit the ambitious schemes of gentlemen. I objected, but not very strenuously, to some of the appropriations made for naval purposes and vessels of war heretofore. I thought that some of the last vessels authorized to be constructed were unnecessary, but now the fact is disclosed that we are to build a great navy, not a navy such as has been common to us during all our past history, except during periods of war, when we of course enormously increased our naval force, not such a navy as seems to be necessary for our intercourse with other nations, but a great navy, corresponding to the navies that afflict the nations of Europe and impoverish their people and bring poverty and wretchedness to every fireside on the other side of the Atlantic Ocean. We are entering upon just such a system, and what most of us have regarded as a navy completed, or the completion of which was provided for by laws heretofore enacted, is, we find, only a beginning. The recommendations of the honorable and able Secretary of the Navy are simply startling. We are now informed that "the necessities of our vulnerable position demand the creation of two fleets of battle-ships, of which eight should be assigned to the Pacific and twelve to the Atlantic and the Gulf. These must be the best of their class in four leading characteristics, armament, arms, structural strength, and speed."

So that we have here but a mere beginning. Twenty line-of-battle ships are to be constructed, and what is meant by line-of-battle ships is indicated by this bill, which proposes the construction of three of them at a cost of $4,000,000 each without armament, and we all know that that estimate will probably be found below the actual cost. So this bill provides for three line-of battle ships each to cost $4,000,000 without armament. With armament more than $5,000,000 each. This is the state of things upon which we are about to enter. I know that, as a general rule, American citizens feel great pride in their country and are confident of its capacity to meet any emergency. I think the honorable Secretary of the Navy must have inadvertently used these words, "the necessities of our vulnerable position." Why, surely, Mr. Chairman, there is no nation upon the face of the globe to which that expression can be applied with less propriety than to the United States. The Secretary of the Navy speaks of the great oceans on either side of our continent as though they were to us a source of weakness and peril, yet for more than a hun-

dred years our ancestors and ourselves have rejoiced in the fact that Providence, in preparing for mankind this new continent, the last hope of the race, had so organized the geography of the earth that the new world should be widely separated from the old, so that political society might here renew its youth and that here, through the blessed influences of peace, humanity might attain its highest perfection and government its just end, the happiness of the people, setting an example to the nations of the world, of just government!

What nation can afford to assail us? What enemies have we to apprehend? I have referred to this subject once before. The only two European powers that could possibly come in conflict with us are Great Britain and Spain, on account of their possessions on this continent and on our coast. By no conception of human wisdom could matters have been so well ordered for our protection as they have been by Providence in that respect. The vast possessions of Great Britain on this continent are within our grasp and would become ours at the first tap of the war drum, and so would her islands on our coast; and as to Spain, her most valuable jewel, Cuba, lies within our reach. These valuable possessions of these nations are placed as it were by Providence within our reach as pledges for the preservation of their peace with us. This nation is less vulnerable than any power on the globe. A people capable of bringing into the field and arming promptly for any emergency 7,500,000 men, a nation that for years past has given the law to the greatest powers of Europe can hardly be exposed to the depredations of any other power.

To speak of our nation as vulnerable could only be true in the sense that an indiscreet commander of a ship might fire upon one of our cities, but with the absolute certainty that at once the nation to which it belonged would be driven from the ocean, its commerce destroyed, unless prompt apology and reparation were made.

But, sir, how vulnerable are we if our defense depended on a navy! We have now a larger Navy than we have ever had, except during the late war, and that Navy sprang up at once when the necessity arose. We have now in commission the following vessels:

List of vessels of the United States Navy, serviceable.

FIRST RATE.

Name.	Type.	Hull.	Propulsion.	Guns (main battery).	Displacement (tons).

St. Louis		do	do		830
Dale		do	do		673

In addition to all this force we have by law heretofore authorized the construction of the following vessels of war, which are now in process of construction:

ARMORED VESSELS.

BATTLE SHIPS.

Name.	Keel laid.	Displacement.	Estimated horse-power.	Cost.
		Tons.		
Texas	1889	6,314	8,600	$2,500,000
Maine	1888	6,648	9,000	2,500,000
Armored cruiser No. 2		7,500		3,500,000
Puritan	1875	6,060	3 700	
Amphitrite	1874	3,815	1,600	
Monadnock	1874	3,815	3,000	
Miantonomoh	1874	3,815	1,426	
Terror	1874	3,815	1,600	
Coast-defense vessel		4,003	5,400	1,028,950
Steel cruising monitor		3,130	7,500	1,500,000
Ram for harbor defense		2,000		

In addition to this naval force, by former laws we have authorized the construction of the following vessels:

	Type.	Displacement.	Cost.
No. 6	Cruiser	5,300	$1,800,000
No. 7	do	3,000	1,100,000
No. 8	do	3,000	1,100,000
No. 9	do	2,000	612,500
No. 10	do	2,000	612,500
No. 11	do	2,000	674,000
No. 5	Gun-boat	1,000	350,000
No. 6	do	1,000	350,000
Steel practice vessel		800	260,000
Torpedo boat No. 1		99	82,750
Dynamite gun-boat No. 2			450,000

All of which are in progress of construction or preparation is being made for their construction.

It therefore appears that the following table shows the present state of our Navy and the number of vessels of war now being constructed or the construction of which has already been authorized by law:

Number of steel vessels in our Navy	15
Number of iron vessels in our Navy	26
Number of wooden vessels in our Navy	19
Number of vessels of war in progress of construction	11
Number of vessels of war in progress of construction or authorized to be constructed by existing law	11
	82

This list does not include the ten sailing war vessels.

When, therefore, the vessels now authorized by law are completed we will have a navy of eighty-two war-ships, all of which, except the nineteen wooden ships (probably the best of the lot, but that will never be tested, for it is almost absolutely certain that none of them will ever be employed in actual war), are steel or iron war vessels. So we shall have, under existing law, sixty-three steel and iron war ships, constructed according to the modern idea of naval war architecture, the largest Navy we have ever had in time of peace, without including the wooden ships, tugs, and ten wooden sailing war-ships.

And now, sir, Congress is invited to enter upon the construction of a navy of such magnitude as would have appalled any Congress in our former history, and which only an overflowing Treasury, with its profligate and corrupting tendencies, could have suggested. Here are the views of the honorable Secretary of the Navy, as expressed in his last report to Congress:

The necessities of our vulnerable position therefore demand the immediate creation of two fleets of battle-ships, of which eight should be assigned to the Pacific and twelve to the Atlantic and Gulf. They must be the best of their class in four leading characteristics: armament, armor, structural strength, and speed. The last is nearly as essential to the battle-ship as it is to the cruiser. It may safely be assumed that, other things being equal, the battle-ship of the highest speed will as a rule be the victor in action, for she can choose her position and keep the enemy at a disadvantage. Not only must the speed of our battle-ships be high, but it must be uniformly high, for the speed of the fleet is regulated by that of the slowest vessel.

In addition to the battle-ships, the situation of the country requires at least twenty vessels for coast and harbor defense. These vessels, although restricted in their range of effectiveness, are necessary components of a naval force which has a seacoast to defend. Their employment as floating fortresses requires that they should have a powerful battery and the heaviest of armor, combined with moderate draft. At the present time eight vessels of this type are under construction, five of which are reconstructed monitors.

The one problem now before the Government, in the matter of a naval policy, is to get these forty vessels built at the earliest possible moment. The steps necessary to their completion, namely, legislation, designs, and construction, can not take less than five years in the case of each one. Unless the existing yards, public and private, are enlarged and restocked with plant, not more than eight could be built at one time, and the construction of the others would have to wait for the launching of the first. Using the utmost promptness, the ships most essential to efficient protection could not be supplied in less than twelve or fifteen years.

It is therefore recommended that the construction of eight armored vessels be authorized at the coming session, and that they be of the type of battle-ships rather than coast-defense ships; the former being more generally serviceable, and there being only three of them now in process of construction as against eight of the latter.

This sounds like an appeal to arms, and yet never in our history of peaceful progress, interrupted but only three times in a hundred years, has our exemption from even the probabilities of war been so absolutely assured.

Our present and authorized Navy of eighty-two ships of war, including the large list of vessels of war now authorized by law, most of them constructed and to be constructed according to the views of modern naval architecture, is greatly beyond the wants of our Government, without taking into the account the ten wooden sailing vessels and smaller vessels.

We need a navy for the purpose of cultivating proper and peaceful relations with other nations of the globe, and for those acts of courtesy which it becomes our nation to extend to other nations in diplomatic affairs, these of course are pleasant and friendly formalities. A Government like ours, acting always on the principle of justice to other nations, a policy which has characterized our nation from the beginning, with no wars of conquest in contemplation, no king or emperor or prince whose ambition is to be advanced or gratified, with no motive for injustice or injury to any other people, needs a navy only for the purposes I have stated, and possibly at long intervals for one other, and that is, when any wrong shall be done to an American citizen anywhere, I do not care in what quarter of the globe, ships must be sent by our Government, backed by the moral power of this great Republic, demanding always and only justice; and when our ships appear in the port of an offending power demanding just reparation, the experience of more than half a century shows how promptly reparation will be made.

This nation is invulnerable! I mention two facts of recent history to show how invulnerable we are in the view of the great European powers. When the late war closed Maximilian was on the throne of Mexico, supported by France with the direct sanction of England and Italy. A word from your Secretary of State to those powers of Europe that were sustaining his throne, intimating that the occupation of Mexico by a European potentate was deemed an unfriendly act towards the United States, was all that was necessary. France abandoned that unfortunate monarch at once; England ignored him; and Italy left him to his fate.

Again. At the close of the late war this Government cited Great Britain to answer before a commission for unfriendly acts on her part to the United States during the progress of the war, by aiding the Confederacy in its war upon our commerce. Great Britain promptly submitted to answer the citation, sent her commissioners to act with ours in counting up the damage her policy had caused to our commerce; and was more than content to pay the fine of $15,000,000 imposed upon her. Would either of these great historical events have transpired if even those three great naval powers combined could have assailed us with impunity? No, sir; the mere suspension of commercial intercourse by the United States with those nations, while comparatively, for the time, harmless to us, would have been fatal to them. And yet now the American people, grown stronger and greater with every successive year, recognized by the statesmen of Europe, reluctantly it is true, as the foremost of the nations, are called upon, on the theory of their defenseless condition, to imitate the wretched policy of Europe and impoverish themselves by organizing a great navy at a time of secured peace. God in mercy to mankind has established the two great oceans as barriers of safety between us and the institutions of the nations of the Old World, and yet gentlemen, in the name of patriotism, demand that we shall imitate them in a policy which had its root in the low ambition and animosities of kings.

Let us look at this matter for a moment. While Europe is oppressing and impoverishing her people to construct and equip vessels of war, while the petty ambitions of princes and the miserable feuds of former ages, coming down to the present time, are cursing the whole land with poverty and wretchedness, inflicting inexpressible misery upon all classes of people, except the nobility and favored classes, we are preparing to imitate them instead of adhering to the policy which has made our country the pride of the human race.

How much money do gentlemen suppose is to be appropriated here for a single purpose, national defense, upon this suggestion of our defenseless condition? Let us see how and where we are drifting. Twelve years ago we appropriated for fortifications and the like $275,000. We appropriated for all purposes connected with the Navy $13,541,624.40. At that time, as gentlemen will remember, we were nearer by twelve years to the period of the late war. War always creates alarm and apprehension in the minds of the people, which do not at once subside; and it is not at all surprising that the appropriations then were beyond the actual wants of the country, as I thought then and think now. But the whole amount appropriated was only what I have named, for fortifications and Navy, in all, $13,541,624.40. Now this bill, with its $22,151,523, and the fortification bill, with $4,521,678 additional, involve the enormous sum of $26,673,201 to be appropriated by this session of Congress for purposes of national defense in time of profound peace! See how rapidly we are progressing. In 1878 for fortifications and Navy $13,541,624.40, for 1890–'91 $26,673,201, an increase in the enormous sum of $13,131,576.60. And yet not one of the forty additional ships recommended by the Secretary of the Navy taken into the account!

Now, sir, with the vast sums already authorized for the construction of war ships comes the following provision in this bill for a part of the forty additional ships.

INCREASE OF THE NAVY.

That for the purpose of further increasing the naval establishment of the United States the President is hereby authorized to have constructed by contract three sea-going coast-line battle-ships designed to carry the heaviest armor and most powerful ordnance upon a displacement of about 8,500 tons, with a coal endurance of about 5,000 knots on the total coal capacity at the most economical rate of speed, and to have the highest practicable speed for vessels of their class, to cost, exclusive of armament and of any premiums that may be paid for increased speed, not exceeding $4,000,000 each; one armored cruiser of about 7,300 tons displacement, at a cost, exclusive of armament, not to exceed $2,750,000, to have a maximum speed of not less than 20 knots.

This paragraph alone, which does not appropriate in terms a dollar, commits Congress to the expenditure of the enormous sum of $14,750,000 for ships alone without armament—the armament will be at least $5,500,000 more—not one dollar of which appears upon the face of the bill; all that is to be appropriated hereafter. There, sir, is the nucleus, if gentlemen are prepared for it, of that fleet

which at the beginning is to consist of twelve of these vessels on the Atlantic and eight on the Pacific, at a cost of $4,000,000 each without armament, and twenty other ships of war. Yet you have already in your service forty-one vessels of iron or steel of modern construction, forty-one iron and steel vessels without counting your equally valuable wooden ships, and twenty-two more in progress of construction or authorized by law to be constructed.

Gentlemen of course understand that this bill, large as it is, only covers $7,500,000 for ships now being constructed, and not a dollar for the three line-of-battle ships or the cruiser to cost without armament $14,750,000. That appropriation is left for next year and later.

Mr. DOCKERY. Will the gentleman from Indiana allow me to ask him a question there?

Mr. HOLMAN. Certainly.

Mr. DOCKERY. Do I understand the gentleman from Indiana to say this section authorizes contracts for the expenditure of $14,750,000 and does not appropriate a single dollar of that money?

Mr. HOLMAN. It authorizes contracts for the expenditure of $14,750,000 for the four vessels alone without armament and does not appropriate a dollar of the money. So that really to express what this bill amounts to you will have to add $14,750,000 and the cost of the armament of these four ships to the $22,151,523 covered by the bill.

Now, Mr. Chairman, I wish to know how much time I have remaining, as I have promised to yield ten minutes to the gentleman from Kansas [Mr. PETERS].

The CHAIRMAN. The gentleman has seventeen or eighteen minutes remaining.

Mr. HOLMAN. I hope the chair will call my attention when I have consumed my time with the exception of ten minutes which I desire to yield to the gentleman from Kansas.

Now, Mr. Chairman, the amendment I propose, if I have the opportunity to make it, is to strike out the paragraph of the bill providing for these three line-of-battle ships to cost $4,000,000 each without armament. I shall insist in the first place that the paragraph is not in order on an appropriation bill, for it is new legislation. From past experiences I am not hopeful that that point of order will be held good, but if the point of order is overruled I hope the committee will strike out the portion of the paragraph authorizing contracts for these three expensive line-of-battle ships.

If all of the twenty line-of-battle ships recommended, which will cost $80,000,000 without armament, and the twenty others named by the Secretary of the Navy in addition to our present respectable Navy, are to be constructed, then of course it is proper this paragraph should be retained; but, if the committee is not in favor of such a proposition, I hope they will strike out this opening measure and give the gentlemen controlling the Navy notice that, while Congress is willing to appropriate every dollar necessary for a respectable navy, not a navy to add strength and power to the Government, for if we owned all the navies in the world the greatness of our nation would not be increased, nor its power or safety, but a navy that is convenient and proper for our diplomatic intercourse with other nations, Congress is not willing to depart from our traditional policy—no great Army or Navy to eat up the fruits of the labor of our people!

There is another fact I ought not to overlook, which I do not refer to in any sectional spirit or in a spirit of partisan criticism. It is this: All these vast sums of money you are appropriating and binding Congress to appropriate for a great navy, for fortifications, and arsenals and armaments, under the plea of patriotism, are being expended in one section of the country, on the eastern seaboard. Congress is being committed, as all gentlemen must see, to a gigantic system hitherto without any example in our history. You have authorized the purchase of sites for fortifications; and you have commenced a system of expenditure in that field alone of unexampled magnitude.

It is well to remember that the sums of money Congress is called upon to appropriate for these purposes will be drawn from our people by excessive and exhaustive taxation, taxation not necessary for the national defense, and will be expended in a limited section of our country, a section said to be prosperous, drawing in the fruits of the labor of other sections of the Union for the local benefit of the favored section, and this, too, while the industries of the greater portion of our country, the great agricultural interests, are fearfully depressed.

I am glad to see every portion of the Union flourishing, but I do protest against the unnecessary expenditure of public money to foster the local interests of any section and expending these vast sums proposed in one section and impoverishing all the others. I wish to admonish my Republican friends that it is manifest great demands must be made upon our Treasury if justice is done to the soldiers of the Union Army, their widows and orphan children. It is very clear that under the present system of expenditure the great surplus in the Treasury will soon be a thing of the past, and you run the risk of placing it beyond the power of Congress to act justly without an actual increase of taxation. You ought not to deceive yourselves, gentlemen, on that subject. This gigantic scale of expenditure on objects which our people do not deem necessary for the public safety and neglecting just demands on Congress may and will result in fierce public condemnation.

Gentlemen, in passing this bill you not only commit yourselves to the payment of the amount appropriated in the bill, but you commit Congress by contracts here authorized to be made to the expenditure for those four vessels of $14,750,000 without armament, while the contracts for ships already authorized involve an expenditure of over $22,000,000 in addition to the $7,500,000 covered by this bill for increase of the Navy.

Mr. HILL. Has the gentleman any information in regard to the depth of water required by these battle-ships and how many ports of the Atlantic coast can be entered by them?

Mr. HOLMAN. There has been some inquiry upon that point since this bill has been pending in the House. It is doubtful whether these proposed line-of-battle ships could enter any of the important ports of the United States, except that of New York, at high tide. Gentlemen know how few ports there are on our coasts in which can be found safe shelter for these great vessels of 8,500 tons displacement.

Now, Mr. Chairman, I move to strike out of the paragraph all in relation to the three line-of-battle ships, leaving the provision as to the cruiser still in the bill.

The CHAIRMAN. There is a motion pending to strike out the paragraph.

Mr. HOLMAN. That is a motion to strike out the whole paragraph, but mine is an amendment proposing to strike out a part, and it therefore takes precedence. My proposition is to strike out all of this paragraph that applies to the three line-of-battle ships, and on that motion I wish to say a few words.

Gentlemen understand, I hope, the magnitude of our existing engagements without reference to the sums involved in the passage of this measure and the measures connected with it. No expenditure comparable to this for a navy has ever occurred in our history in a time of peace and scarcely in a time of war.

Now, sir, who are calling for this legislation, this enormous expenditure of public money? Not a petition in favor of it has been presented to Congress, not a resolution of a public meeting of citizens, so far as I am aware; while, on the other hand, gentlemen know that remonstrance after remonstrance has been filed in this House since the Congress assembled against the passage of any bill enlarging our Navy beyond its present proportions. I received to-day even from the State of Pennsylvania, a State which would be greatly benefited by the large expenditure of money contemplated, a remonstrance against the enlargement of our Navy beyond its present capacity. All the American people, of course, want a respectable navy, and we shall have that and much more than that when the vessels now authorized by law are completed. Beyond that there is no just reason for going. I ask again who are demanding this extraordinary legislation? Not the people, for a great army or navy is against our traditional policy. Who, then, are demanding a great navy?

I admit that timid people—but I am happy to say that very few of them exist in this country—would feel safer if we had a great army and a great navy. The men who are to make fortunes out of the expenditure of the hundreds of millions of dollars you are invited to expend are of course in favor of this policy. These great expenditures are of course beneficial to the section of country where it is expended, and I am sorry to say that there has grown up in this country during the last twenty-five years, aided by our legislation, a class of men, growing more numerous every year, who have lost faith in your form of government, lost faith in your Republican institutions, lost faith in your people, and who wish to see a stronger government, not stronger in the prosperity and happiness of the people, but in the direct resources of physical power, which will give more absolute assurance to overgrown estates. The natural timidity of great estates and the profits to be derived from the expenditure in a restricted section of the Union of millions of money drawn from the labor of the whole people seem to be at the bottom of this movement.

But the class of people who long for a strong government furnishes the most active and powerful advocates of a great navy, a great army, and a splendid government. Under such a government great estates feel a greater sense of security. A greater army and a greater navy are recommended, not merely an increase of ships in number and capacity, but an increase in the force of the navy that of course follows; and if that recommendation of the Departments is received favorably by Congress it will be followed by the policy which our fathers especially abhorred, a great army and a great navy in time of peace. I predict, sir, that if you allow this extraordinary scheme now presented, this unexampled increase of the Navy, to be carried out, the enlargement of your Army, now recommended, will follow, and this republican Government, in imitation of the European powers, will stand before the world, not great in the strength of a happy and prosperous people, but in the strength of its military establishment, its imposing standing Army, and its great Navy, a splendid Government in imitation of the low ambition of European powers. England impoverishes her people by maintaining a great navy to overawe her people at home and domineer over her vast outlying possessions. Have we any motive for imitating her wretched and despotic policy? Have we any outlying possessions to impoverish and oppress, or is this great navy we are to maintain to overawe our own people?

NOTE.—The motion to strike out the provision for three line-of-battle ships, to cost $4,000,000 each without armament, was adopted by the Committee of the Whole—yeas, 98, nays, 70; and afterwards, in the House, this action was reversed—yeas, 105, nays 131, and the provision was retained in the bill as passed by the House.

The Tariff.

"The Republican party would effect all needed reduction of the national revenue by repealing the taxes on tobacco, which are an annoyance and *burden* to agriculture."—*National Republican platform adopted at Chicago*, June 20, 1888.
Will the Republican party now in power redeem its pledge?

SPEECH

OF

HON. HENRY ST. G. TUCKER,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. TUCKER said:

Mr. CHAIRMAN: I offered the amendment on Saturday evening abolishing the entire system of taxation upon tobacco, and offered it in entire good faith. I represent, sir, upon this floor a hundred thousand white and black people, nine-tenths of whom are interested directly in the cultivation of tobacco. I have stood, sir, with the great party to which I belong for many years advocating the total abolition of this tax, and, by the efforts of that party, we at last got the tax reduced to 8 cents a pound.

When this bill came in I looked with anxiety to see if that measure of relief which was due to the agriculturists of the country was not to be given to the poor of Old Virginia and North Carolina who make their living by the sweat of their brow in the cultivation of tobacco, but was disappointed in finding that it only proposed a reduction in the tax to 4 cents per pound.

A great deal has been said on this floor about the question as to whether or not the consumer pays the tariff tax, but upon this question there is little doubt in my mind that the people who mostly pay the tax upon tobacco are the people that produce it; and this is admitted by the other side in the last national Republican platform; and yet we are met in this bill, which purports, gentlemen say, to aid agriculture, by the retention of the tax of 8 cents a pound upon it; while we find at the same time in the bill that the man who makes a pound of sugar shall be paid by the Government out of its revenues 2 cents a pound.

We are told that the sugar-producer shall have a bounty of 2 cents a pound on his product *out of* the Treasury and at the same time if we make a pound of tobacco we shall pay 4 cents *into* the Treasury for the privilege of doing so. Is that fair? Is that equal taxation? Is that just? Is it proper in a legislative measure of this character that you shall say to one agricultural interest, "We will give you 2 cents for making a pound of sugar" and to another "We will make you pay 4 cents for making a pound of tobacco?"

But we are met with another state of facts. There is another so-called agricultural product protected under this bill, namely, silk; and when I go back to my good people in Virginia along the Blue Ridge Mountains and they ask me if the tax on tobacco has been abolished, I will have to say no; but instead of that relief I can offer them the consolation that a Republican Congress has given them the privilege of paying $1 tax upon each pound of reeled silk and 7 cents on each pound of cocoons. [Laughter.] That is all. Agriculturists of the country cry aloud for relief, and you give them, not the relief that they ask for, but instead compel them to pay $1 a pound on reeled silk. [Applause on Democratic side.] Your answer to them is the same given by a mother to her little boy who was crying to go to the circus, when she said, "No, my son; but if you will stop crying and be a good boy you can go to your grandmother's funeral."

Mr. WADDILL. Will the gentleman allow me to ask him a question?

Mr. TUCKER. Certainly.
